NOTICE.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., must be addressed to the Editor of THE FISHING GAZETTE, *No. 12, Fetter Lane, London, E. C* and should reach the office not later than Tuesday morning.

Contributions are solicited, but the Editor will not undertake to return rejected MSS., unless accompanied with a stamped addressed envelope.

Correspondents are requested to write on one side of the paper only and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith Unless this rule be adhered to no notice will be taken of such communications.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls, and of the following, amongst other Fishing Tackle Dealers in London and the Provinces :—

Messrs. Alfred and Son, Moorgate-street.
Messrs. Price and Co., 8, Seymour-street, Euston-square, N.W
Messrs. Williams and Co., Great Queen-street.
Messrs. Gee and Co., St. Andrew's-street, St. Martin's-lane.
Messrs. Gee and Co., Gray's Inn-lane (near Holborn end).
Messrs. Little and Co., Fetter-lane, E.C.
Messrs. C. Kewell and Sons, 197, St. John-street-road, E.C.
Messrs. Kewell and Co., 1A, Conduit-street, Regent-street, W.
Mr. J. Richards, 97, Church-street, Paddington.
Mr. W. Leader, 30, Upper Marylebone-street, Portland-place, W
Mr. — Clark, 35, Wells-street, Camberwell.
Mr. Geo. Read, 91, Goldsmith's-row, Hackney-road, E.
Mr. A. Bulmer, 62, Wandsworth-road.

SATURDAY, JANUARY 7, 1882.

FISHING IN CORNWALL.

I DARESAY you have all felt, as I did in June of last year, when I knew I might throw work to the dogs and start for the haunts of the finny tribe. I am always a wee bit excitable, but when I begin fancying I am playing some monster of the deep, Oh, Lor! it's something awful. As I had some months wherewith to try my skill at luring the shining beauties from their homes, the question arose as to where I should wend my way. I bethought myself of Cornwall, and, like a child of nature, acted upon the impulse of the moment. I was not long in putting my paraphernalia together, and ensconcing myself, clay in mouth, in one of the carriages of the 8.10 from Paddington. When old friend Morpheus laid his hand on my shoulder I know not, but I awoke just as we were nearing Dawlish. What a sight to meet one's eyes !—surrounded on all sides by revelling nature, after for several previous months seeing nothing but innumerable chimney-pots and the cry of the milkman or sweep in your ears. We had to change trains at Plymouth, but it was not long ere we were off again, my next stopping and changing place being Par, from whence a railway runs to Newquay. This latter place I intended making my final resting place, and it was still early morn when we whirled into its rural station. My quarters were situated just above the beach, and the water on my arrival looked so blue and clear that I resolved to take a dip in the briny, and by the time I arrived back I was well nigh starving. I shall never forget the look of horror depicted upon the countenance of the Cornish maid as she saw rasher after rasher disappear. But at last the cravings of the inner man were amply appeased, and I began to have a look about. I wandered into the village, and found it consisted of one long, straggling street, terminating at the quay. Most of the houses were new, and of the ordinary brick and mortar stamp ; but here and there might be seen the more picturesque mud-wall, with their reed covering, which formed a home for innumerable varieties of beautifully coloured lichens. The village is situated in a slight dip of the land, at the western extremity of a wide bay, having Trevose Head for its eastern termination, and bounded on the west by Towan Head. Stretching from the quay to about three miles to the eastward, is at low water a wide expanse of sand, with curiously-shaped rocks and their surrounding pools scattered here and there, and having a background of sea-beaten cliffs, rising perpendicularly from 50 to 250 feet from the beach. The rock pools form a home for numbers of shrimps and prawns, the catching of which afford capital sport, which is enlivened considerably if you happen to be naked of foot, by the vigorous stab of the "bishop." This is a small fish, which secretes itself by burrowing in the sand, and whose dorsal fin resembles that of the perch. Running westward from the quay is the headland, separating the Newquay beach from the Fistral, another long expanse of sand, having a background of sand-hills, which afford a home to hundreds of rabbits. Capital sport may be had on both these beaches by placing at low water what is locally known as a "spiller," This consists of a long line, to which is attached at intervals of two feet other lines six inches in length, having hooks attached. The extremities of the main line are fastened to stones, which must be buried in the sand. The hooks should be baited either with the sand-worm, sand-eel, or pieces of fresh fish, and these should be covered with sand, or else the gulls will take the bait off the hook. The prey that generally comes to hand include bass, skate, plaice, cod, and the Fistral beach soles. Splendid fun may be had by fishing from the rocks at low water or just as the tide is rising. The best plan is to have a good stout rod—an ordinary jack-rod is the best—and about 80 yards of fine but strong line. I found the most killing bait to be Hearder's artificial sand-eel, which may be obtained in any of the shops in the village. Another equally good bait is a piece of soft crab, which is the ordinary crab whilst it is casting its shell. The fish that I caught were bass, averaging from $\frac{1}{2}$ to 4 lb., but they are caught much larger ; wrass, $\frac{1}{2}$ to 6 lb. ; pollack and rock whiting, locally known as blynn. All along the coast the grey mullet is found plentifully, and in the Gannel, an estuary of the sea, about a mile from Newquay, the pools are alive with them. They are very difficult to catch either with net or hook, but I believe the best bait for them is the sand-flea and sea-bug. These latter are found in large numbers on the beaches at high-water mark. Good sport may be had by netting the pools in the Gannel, but you should be careful that the net is well leaded, or else they will burrow under, and if one gets out the rest quickly follow like a flock of sheep, and the top of the net should be kept raised quite 3 feet above the surface of the water, or else they will jump over, a trick which they served us several times. Capital bream-fishing may be had about 4 miles off the coast, but it would be necessary to take a fisherman with you to show the places to fish. But to return to my favourite sport, viz.—trout-fishing. The first day I had with the spotted beauties was at Lower St. Columb Porth, a little hamlet situate on the coast about 2 miles east of Newquay. Here a small stream empties into the sea, but, although small, it abounds in trout, weighing from 4 oz, to 1 lb. ; and during the spring and autumn months is well stocked with salmon peel, For about two miles above the beach you can easily fish with the fly, and any day when there is a nice little ripple on the water you can depend upon catching from three to

844

four dozen fish. Farther up the river it is very overgrown, and you will have to resort to the use of the grasshopper, which I found a most killing bait. Another good stream is the Legonna, which empties into the Gannel about three miles from Newquay. Here the fish run to a much larger size, but you must fish with the worm or grasshopper, and with either on almost any day you can depend upon getting from two to four dozen nice fish, averaging from ½ lb. to 1 lb. Hearing several of the local Waltonians speak of the splendid sport to be had in a river at Mawgan, I determined to try my skill there; and started one morning about 4 o'clock, as I have found from experience that between daybreak and 11 a.m. is the best time to ensure success. I had a walk of about five miles to accomplish, but that itself was a pleasure, surrounded on all sides by such delightful scenery, and the air laden with the perfume of myriads of wild flowers. I only wished I had some companion who could with myself enjoy the beauty of the scene. At last I had reached my destination, and such a one, too! Never in after years, however dim my memory may grow, shall I forget the sensation that thrilled through my veins on entering that vale. But a few moments ago I heard the shriek of the gull, and the murmur of the waves as they broke on the rocks, in my ears; whilst here solitude and stillness reigned supreme, although broken now and then by the coo of the pigeon or the rippling music of the river as its water washed over its pebbly bed. A sea of mist filled the valley, but a movement soon began in the eastern clouds, and the sun peeped through, and, buried almost in a clump of majestic elms, whose branches found a home for a covey of rooks, was seen the "Lanherne Nunnery." This, in its earlier days, was one of the seats of the Arundel family, but during one of the French revolutions a score or more of Carmelite nuns made it their home. Just below is the river, over which is thrown a granite bridge, on the parapet of which I sat and smoked, all the while gloating my eyes with the surrounding beauties of old Dame Nature. The splash of a fish just below me brought back my wandering senses, so I put my tackle together and had my first cast in a pool almost underneath the bridge, and at the second throw made the first addition to my basket. I fished down the river as far as the beach, and on examining the contents of my creel found I had killed about two dozen, averaging 8 oz. I then tried another stream, which joins the main one just above the beach, making several additions to my basket, and found the fish were much larger. In a pool just where the two streams join I landed about 1 lb. 2 oz. The fly I found most killing was "Gain's peculiar," a fly with a thick buff-coloured body, and same coloured wings. On arriving back at Mawgan I was feeling peckish, so I availed myself of the hospitality of "Old Sam," as he is known thereabouts, and remained till the shades of eve bade me know it was time to start for home. This I did loathfully, every now and then heaving a sigh, and bemoaning that my lot was cast amidst such very different scenes, and to which in a few days now I had to return.

H. Boyle Bunnalls.

TROUT AND GRAYLING FISHING ON THE DOVE.

By R. B. Marston.

(*Continued from page* 564.)

The fishing immediately above the stream which I last described is very good indeed; in fact, between this point and the bridge is the best pool on the lower length of the Dove, before it joins the Manifold. The fishing is all open, and, as the banks in most places are high, I need hardly say that you must keep in the water and creep along the side if you want fish. I saw one or two anglers who were staying at Mr. Prince's, fish this water when standing on the high bank; although they thrashed most perseveringly they informed me they never rose a fish! I told them that even in a dark night they would not, if they went about it in that fashion. It cannot be too strongly impressed on the beginner in fly-fishing that unless you keep out of sight, you may throw your fly splendidly, but you will never experience that delightful burden—a heavy creel of trout.

It would be impossible to mistake the pool referred to above, as it is situated at, and in part caused by, the inflowing stream from the mill; the water is very deep, and well protected by submerged stumps and roots. To fish it you should cross the river and either fish from the bank under the big tree at the corner, or from the bushes at the back of the little spit of ground which juts out into the pool; in fact, I generally covered all the water I could from the first position, then crossed the mill stream, and threw over the lower part from the bushes. There are some very fine trout and grayling here, and however bad the day may be, if the water has not been disturbed, you may be sure of a fish or two I have christened this pool "Wisdom," in my note book I find in consequence of its being the last resting place of a very old friend of mine—a "wisdom" tooth—which had given me so much torture when fishing here one wet day, that I drove into Ashbourne and had it out; my friend the doctor, who acted dentist, packed it up, and the next day when fishing the same pool I had grim satisfaction in consigning it to the deep.

There are two or three fine streams between Wisdom Pool and the bridge. I got one of my largest grayling—over twenty inches—here one afternoon, and Mr. Bullock informed me he had taken many trout here, spinning. On arriving at the bridge the angler should walk along the road to the other bridge over the millstream, and getting into the water, fish down it; it is very narrow but rapid, and has many charming little pools holding very heavy grayling; I discovered this by chancing to see a big fish rise as I was crossing it one day to go down to Coldwall Bridge, to fish Mr. Roland's little meadows.

Between the bridges near the mill and the foot-bridge under Thorpe Cloud, the Dove runs through rich fields, and the stream has much of the nature of a Midland trout beck, quite different from its appearance in the rocky open dale above. It is somewhat difficult to fish, on account of the oaks, alders, willows and other trees, which fringe its banks, but for this very reason the chance of sport is greatly increased: and, as I said in a previous article, the fishing in these meadows is much better than any you will get until you leave Sedgy Pool well behind you, and come to the wooded stretches above. Anglers who may think of visiting the Izaak Walton should remember this, and, further, that these meadows should be worked systematically; some of the streams are best fished up, others, again, permit only of down-stream throwing. The water skirts the road, from the bridge up to a big pool, across the end of which a large tree has fallen. I always crossed at the bridge, and fished up from the mill side until I came to the dam where the mill stream is drawn off; the broken water below the dam holds good fish. To fish it properly with the fly the angler should stand at the mouth of the mill cut and throw a long line, so that the flies search every inch of the stream on the far side. You must throw within an inch of the opposite bank, for that is where the fish feed in this pool. Above the dam the water is sluggish for some distance, and, as such places invariably do, holds fine fat fellows, who lead an easy life by prowling about under the bushes lazily sucking in the flies. Put on a small winged fly, a quill gnat, a hare's ear, or a yellow dun; and, kneeling behind a bush, watch for a rising fish. Then drop your fly, but none of the line, into the splash he has made, and you may get him, but the chances are against you. The fish will rise and—look; but, in five cases out of six, that is all he will do. It is best not to waste time over dead water like this, reserve it for a much later time of the day. You may get a fish or two in the streams above the dead water, but your best chance will be when you reach the corner where the river leaves the road, and for fifty yards or so runs between the steep banks it has worn out of the meadow. This bit of water is one of the best on the whole river, and there is only one way of fishing it successfully; that is when the water is bright and low. You must cross the river from the road, and walk across the corner of the field to the end of the trees which hang over the deep pool at the corner. If you look over into the water here, you will see it coming pleasantly down its deep channel with gentle current to lose itself in the big pool below you. Get down into the water, wade straight across, and then creep carefully along the left high bank as far as you dare go. As you go, throw your flies on to the steep earth-side opposite, and pull them gently into the water. I have invariably found that the trout in this stretch feed within an inch or two of the right bank all the way along, though I have caught grayling here in the middle of the stream. You cannot fish this too carefully, and when you hook a fish keep him down-stream, to avoid disturbing the water. I got five fine trout in this way in less than an hour one day. As you wade, the water gradually deepens, until at last you find you are standing on some roots over deep water, and can go no further, but from this point with a long line—bearing in mind the high bank and long grass behind and above—you can reach the best spots. It was standing on these roots and throwing up stream under the bush above on the left bank that I got a magnificent grayling, full 22 inches long, and the very picture of what a grayling should be. He made a fine centre-piece in the dish of trout I got that day. I saw an amusing little encounter in this stream. I was lighting that soothing and ever welcome friend of the angler, a pipe of tobacco, when I saw two water-rats swimming along the opposite edge; there was a little projecting bank between them, and they were swimming towards one another. Thinks I to myself, thinks I, there will be a row, as sure as eggs is eggs, when those four pretty little bright black eyes come round that corner. Squeak, splash, dash, and in an instant one little brown coat turned tail and disappeared, whilst his victorious neighbour swam on to his next landing place, shook himself, sat on his haunches, washed his face with his paws and then plopped down to his hole to tell his wife about it. I like a river where there are plenty of voles, they are amusing little rascals, and thousands of times have I watched them. I was fishing the Severn many years ago, and had put my rod down to have lunch when a violent tug at my ledger told me to strike. Down went my lunch, and for the next few minutes I was playing an enormous perch, which made desperate efforts to bolt my coffin-shaped ledger lead; in fact so persistent was he that he followed it right up to the bank under my feet, every time I pulled the lead he dashed at it. I never saw a perch do this before or since, nor have I ever seen such a big perch at my own line. He must have been between four and five pounds if an ounce, and the way he tugged was so encouraging that I threw in again several times, but he could not bolt the lead, and disdained the lobworm, so I returned to finish my lunch. But I had been saved the trouble. Nothing was left but the paper and a few crumbs, which I traced to some rat holes in the bank. Moral: When the angler's away, the rats will eat his lunch—if they have the chance. By the way, talking of the Severn, reminds me that in the neighbourhood of Shrewsbury our crack pike-anglers would find some fish worth going for. I never saw so many pike feeding as I did one day when fishing in the Severn near Wroxeter (the Roman Uriconium —one of the finest remains of a Roman city in the country). They were chasing the roach and dace in all directions, and some were enormous fish, making waves which spread right across Severn's widest pools here. I wished I had had jack tackle with me. But to return to the Dove. I find this dear little stream wants a great deal more describing than I thought, if I am to make my description worth anything as a guide, and that is my main object; for I consider that any angler who will faithfully describe what he has found the best way to fish a stream is far more likely to please anglers than by giving merely pretty generalities about the scenery and his own catches, perhaps under exceptionally favourable conditions of water and weather.

Before closing this, I should just like to ask those gentlemen who have, on my recommendation, purchased Cutcliffe's "Trout Fishing in Rapid Streams" what they think of it? Is it not a capital little book?"

(*To be Continued.*)

PERCH AND PERCH-FISHING.

BY J. HARRINGTON KEENE.

(*Continued from page* 574).

THE making of the paternoster requires some skill and carefulness. It is not only necessary to throw the baits and plumb out with a gentle impetus, but it is imperative that it should be gently and decisively "nicked" By this I mean the whole line, between the plumb or sinker and the rod's point, ought to be quite taut, and immediately on the perception of the tug-tug indicating a bite, a little loose line may be conceded, and the strike thereafter made with sharp and instant effect. This strike must not, however, be too violent, for obvious reasons; indeed a really extravagantly vigorous hit at any fish is always to be condemned, especially if one is using light tackle, and I think that no fisherman worthy of the name of "Senior Angler" will use any other. Therefore I advise just sufficient force, after the interval for taking the bait before recommended, to cause the hook to enter beyond the bait and no more. This X, or unknown quantity, must be arrived at by practice rather than by theory or imagination; and the fact that this is so illustrates anew the impossibility of actually teaching fishing by words, an impossibility pointed out some considerable time ago by one Izaak Walton, by the bye.

I had almost forgotten to refer to the baits most useful in paternostering. Now, I emphatically pronounce in favour of small gudgeon for all sorts and conditions of perch. Minnows are certainly killing, but they are not nearly so hardy as gudgeon, unless used on a cold day, and previously got from a stream of very hard water.

In the latter case they are exceeding tough and enduring, and even surpass the gudgeon. Next to these baits come small barbel, a very rare fish, but unerring killer; and the fry of the other white fish, dace, chub, etc., also worms (lob and red), pieces of fresh meat, and the other foods I referred to in the first article on the "Perch's Natural History."

Live-baits, are, however, the most likely to ensnare our *perca fluviatilis*, and it may be useful to describe how they are best treated with. Having caught them, as Mrs. Glass would have said, they should be kept, to enhance condition and vigour, in the hardest spring water procurable, of course being careful that there is plenty of it. After several days, they become, as I have before intimated, so tough, and altogether improved both in appearance and physique, that it is quite worth while thus to prepare them. When baiting, it is better to pass the point through the upper lip, bringing it out at the nostril, than to hook it through the underjaw, the latter being very soft and liable to tear. Of course, handle the little fellow as if you loved him, always.

Minnows, etc., may be best transported alive in soda-water bottles of that kind, as Handy Andy would say, with "no bottoms to 'em to stand on,"—I mean of the ordinary oval shape. A dozen may safely be placed in each bottle rather more than half filled with water, and the cork may be safely inserted—as tightly as you like. Apparently this corking-up would be detrimental, but it is not so, unless the journey is an extra long one, as the oxygen of the air in the water is but slowly exhausted, and as slowly extracted from atmosphere present. The rocking motion caused by travelling, sufficiently aerates the water, and when the cork is tight no leakage can, of course, take place.

If worms are used as well as minnows on the paternoster, I advise for cockspurs a smaller hook, and for lobs a larger than No. 7 Dublin Limerick. In the former case this is how I bait the hook. Having a little tin with some silver sand in it, I roll the worm in the sand till it is not slippery in the fingers. I then, starting from the tail, pass the hook up half its length, and bringing out the point I push the worm up above the shank on to the gut. Starting with the next worm in an exactly opposite direction, I cover the bend, barb and point, and, bringing the first worm down, the bait presents a most attractive appearance—the two heads of the worms encircling and entwining around each other. With the lob the case is different, as one only is used unless the lob be small. I bait this worm from head to tail, threading it throughout its entire length.

Now a word as to the preparation of worms for perch-fishing. Let them be unbruised in the gathering process, and by no means allow a dead worm to remain in your worm-tins. As soon as a putrid worm is allowed to taint the moss its influence extends to all the rest of its fellows, and their attractiveness is remarkably less than if such an infection had not been effected. Pick them over, therefore, day by day, and remorselessly discard weakly or sickening specimens. The moss should always, if possible, be that known as *sphagnum*, or water moss, which is largely used by gardeners in which to grow orchids. It is clean and not too stimulating, or rather purging. If this cannot be got, however, the ordinary kind will do, or even an old clean house-flannel torn to pieces will serve; grass is too liable to putrefy. The moss, or what not, should be put in first, and the worms, cleared from soil, be poured in at top; thereafter a goodly sprinkling of water is necessary as much to damp the moss as the worms, to allow of their crawling through the interstices and so scouring themselves. The receptacle must now be placed in a moderate temperature, and protected from weather by means of an old piece of sacking or rough blanket over the top. If this precaution be not taken, the worms will sometimes escape also, on a warm night. A yolk of egg with milk is recommended by some as good for the worms, but I don't believe in it too much; the *homo* had much better swallow it himself, it will come to *lumbricus* after his demise perhaps. Seriously, however, a little fresh soil, or, better still, a nice rich grass sod, may be placed in the worm tub, if it be found that the worms are getting sickly and weak from over-scouring.

There is one way of perch-fishing I indulge in with very considerable success in summer time, and I venture to think it is rather novel than common. First, as to the bait. I get a goodly quantity of the freshwater shrimp from the Colne, where I have found them of the largest size, and keep them in water and gravel till required, selecting in a different receptacle some of the finest for the hook. Now as to place. I seek the osiers and boughs overhanging the water of the river, or the umbrageous lily leaves in the lake, and scatter a few of the *squillæ*. Then, with a fine gut-cast, fly-rod, and roach-hook, with a large live shrimp impaled through its back crosswise, I throw, as if worm-fishing for trout, artfully under the boughs or on the aforesaid leaves, in the latter case drawing the bait gently off into the water. Perch are remarkably fond of this bait, and so are trout, and many a goodly fish of both kinds have I caught by its agency. Of course, the precise moment of striking must be guessed, or, rather, found out by experience.

(*To be continued.*)

A SPLENDID TAKE OF PIKE.

WE have just returned from a flying visit to Mr. Alfred Jardine's City office to see a really splendid take of pike. There they were laid out in a row on a counter, a sight to make any angler wish for a chance in a water affording such sport. The weights of those we saw were, when caught, 9 lb., 10½ lb., 12 lb., 12½ lb., 13½ lb., 14 lb., 15 lb., 16 lb., 19½ lb. and 21 lb., and, in addition to the above, no less than thirty fish under 8 lb. were taken, all by Mr. Alfred Jardine and Mr. John Knechtli. All these fish were taken on single gut, either paternoster, or snap, or spinning. All fairly caught and in a flooded water. We may mention as a fact that in the very stream in which these gentlemen were fishing several local anglers were also trying and with but indifferent success. This is another proof that skill in pike-fishing must tell in the long run—or short one either, if there is to be a pike at the end of it.

A HISTORY OF FISHING TACKLE; WITH NOTES ON ITS AMATEUR MANUFACTURE.

By J. Harrington Keene.

No. 1. Ancient Tackle.

IN this short series (which I trust will prove interesting to the readers of the Fishing Gazette) I propose sketching—as far as the limited material on the subject will allow—(1) the primitive state of ancient tackle, and that of the middle ages and of the weapons dignified by the term in use amongst barbarous people. (2) The various distinctive tackles of to-day; adding to this latter division of the subject such hints and directions of a practical nature as my experience of amateur tackle-making will allow. At once, and at the outset, I disclaim all pretensions in this matter, and shall be glad of correction either as to history or manipulation.

Whether or not, as has been imagined by some of the writers of the middle ages, Seth was the first hook-and-line fisherman, it is certain that fishing with such implements was practised in very early ages of the world. The earliest mention of fish-eating, will be found in the eleventh chapter of the Book of Numbers, wherein is said how fish were served up—as we do salmon at this day—with cucumber. And, not to pass away from our Scriptural evidences, it may be added that references are made in several other books of the Old Testament to angling, or what was a very similar pursuit. Job, Amos, Isaiah, and Habakkuk, all have references; and in the splendid translation of Isaiah by, perhaps, that very finest of Hebrew scholars, Bishop Louth, the following very complete indication that the Hebrews used hooks and lines is translated.

> "And the fishers shall mourn and lament;
> And those that cast the hook in the river,
> And those that spread nets on the surface of the water, shall languish;
> And they that work fine flax shall be confounded,
> And they that weave network.
> And her stores shall be broken up,
> Even all that make a gain of pools of fish."

In this extract we have the hook and "fine flax" spoken of with unmistakable certainty as to their connection. Even the practice of getting gain from the fish-pools—analogous, probably, to the German fish-cultural industry of the present day—is referred to in terms leaving no doubt as to the certainty of their meaning.

The Jews, however, were probably not well versed in the actual science of fishes and fishing themselves, owing to their nomadic and wandering life in the desert—of course, I mean until a residence in the Promised Land had instructed them in the difference between its resources and the resources of the land of Egypt. In Nehemiah (xiii. 16) it is expressly said that another people, the Phœnecians of Tyre were the exclusive dealers, in Jerusalem, of fish. Of these, the Jews, of course, ate none without scales, owing to the Mosaic enactment (Lev. ii. 9-12).

The Egyptians, on the other hand, from the most remote times must have practised the art of angling, judging from the figures of persons fishing, drawn on many of the tombs. Bronze seems to have been the material from which their hooks were made; and Wilkinson, in his grand book on that ancient land of many mysteries, says they fished with a groundbait without any float. Mr. Moule says that the earliest form of weapon for taking fish used by the Nimrods of Egypt was the spear. This I think, with Dr. Badham, requires proof. Wilkinson refers to the many indications of its use, however, whether as of a single point or in bident or trident form. In spearing, the usual practice was to glide with silence over the surface of the water in a canoe-like boat, and spear the fish as they lay near to and under the water-lilies, lotus, and other aquatic plants.

On some of the monuments of Egypt it is plain that fishing was not thought unworthy of serious habits, and persons of consequence are often found seated on the bank with a rod and line, fishing. The material of the rod is not likely to be known, as there exists no specimen; but presumably, as no mention is made of joints nor rings, it was of some elastic wood, in one piece, and without a reel. On monuments brought also from Thebes and Nineveh, anglers with rods and lines, and even baskets, are represented, whilst some of the marbles exhibit exquisitely-cut representations of fish, similar in form to many known species of to-day.

It is thus perfectly clear that the angle, with its hook and line, as we know it, though probably rough and primitive, was known to the ancients of the remotest ages. What the line was composed of is matter for conjecture. Certainly gut was not used; but hemp, horsehair, and perhaps bysshus—the fibrous stuff by which some small fish are attached to the rocks—may have been the material employed. Dr. Badham says that this latter article has been long manufactured into silken stuffs, or knit into gloves and stockings, at Sicily and Tarentum; grass of a tough and tenuous kind may also have been employed by the anglers of the "very long ago."

The Greeks were acquainted with fishing tackle of a more or less refined nature. Homer tells us how

> "from some rock that overhangs the flood,
> The silent fisher casts insiduous food;
> With guardful care he waits the finny prize,
> And sudden lifts it quivering to the skies."

And 270 years before Christ, Theocritus, who was a native of Syracuse, and said by classic critics to be the founder of Greek bucolic poetry, speaks of watching

> "The fish that gambolled in the deep;

and

> "Suspended by rod I gently shook
> The bait fallacious which a huge one took."

Turning to the tackle known to the Greeks in later times, we find Oppian detailing it with great precision. Oppian was a native of Anazarbus, a city of Cilicia, and was born in the latter part of the reign of the Emperor Commodus. His work on the "Nature of Fishes, and the Fishing of the Ancients," was a most important and interesting book in five volumes. One passage is well worth quoting—

> "By those who, curious, have their art defined,
> Four sorts of fishers are distinct assigned—
> The first in books delight; here some prepare
> The angler's taper length and twisted hair;
> Others the tougher threads of flax entwine,
> But firmer hands sustain the sturdy line;
> A third prevails by more compendious ways,
> While numerous hooks one common line displays."

Of course the Romans were *au fait* of everything connected with fish-culture, but it is not quite certain what kind of tackle they used beyond nets. The well authenticated anecdote told about the fishing party at which Antony and Cleopatra were present, and where the latter played so rich a trick, indicates that the line and hook were known on the Euxine. That the Macedonians knew of artificial fly-fishing must also not be forgotten. Ælian refers to it in the following words, which I reproduce because they intimate a most important fact. "The Macedonians," he says, "who live on the banks of the river Astreus . . . . are in the habit of catching a particular fish in that river by means of a fly called 'hippurus.' A very singular insect it is, bold and troublesome like all its kind; in size a hornet, marked like a wasp, and buzzing like a bee. These flies are the prey of a certain speckled fish. . . . . The predilection of these speckled fish for their prey, though familiarly known to all who inhabit the district, does not induce the anglers to attempt their capture by impaling the living insect, which is of so delicate a nature that the least handling would spoil its texture and colour, and render it unfit for a lure. But adepts in the sport have contrived a taking device to circumvent them; for which purpose they invest the body of the hook with purple wool, and having adjusted two rings of a waxy-colour, so as to form an exact imitation of the hippurus, they drop these abstruse cheats gently down the stream. The scaly pursuers who hastily rise and expect nothing less than a dainty bait, snap the decoy, and are immediately impaled on the hook." It is also a curious fact that there is every reason to believe that these "speckled" fish were nothing less than our own particular fario—or trout.

On the excavation of Pompeii and Herculaneum large numbers of hooks of various sorts and sizes were found, and are now preserved in the Museum of Naples. They are of two materials, bronze and steel; the former of which, Pliny tells us, could be so hardened as to allow of its being drawn out to the fineness of a hair; it was of tin and copper. Most of these are of large size, and are flattened, like our own sea-hooks, at the end, thus indicating they were intended for sea-fishing only. Some are double-barbed; others fixed back to back, like a jack-hook; others are armed with wire; and there are specimens of leaded hooks, like our own gorge-hook. From the fact that they rudely represent the configuration of a dolphin, they are termed Delphini. Hence the well-known lines of Oppian—

> " He holds the labræ and beneath his head
> Adjusts with care an oblong shape of lead,
> Named from its form a dolphin."

Though these lines really apply to sea-fishing, those ensuing so accurately describe our modern trolling for pike that I will reproduce them.

> " plumbed with this
> The bait shoots headlong through the blue abyss,
> The bright decoy a living creature seems,
> As now on this side, now on that, it gleams,
> Till some dark form across its passage flit,
> Pouches the lure, and finds the biter bit."

(*To be continued.*)

ANGLING CLUBS—THEIR PROGRESS AND ATTAINMENTS.

FROM an independent, yet authentic and reliable source, I have been able to collect an amount of information which I think will enable me to form a very fair estimate of the probable number of members connected with the London and Suburban Angling Clubs. It has for some time been a matter of speculation as to the number of metropolitan anglers united to angling societies, and when a fairly correct opinion has been ascertained it does not give any proportion to the actual number of anglers residing in London and the suburbs who fish the metropolitan rivers. In the estimate which is now made there is, of course, a certain amount of deduction of members who are connected with more than one angling club. I have before me the returns of sixty angling clubs, which give an average of forty members in each; but as a number of these clubs are very small societies, of from twelve to twenty members in each, and allowing for the deduction previously referred to, the average of one hundred and fifty angling clubs, I should say, cannot be less than fifty members, thereby making a gross total of 7500 anglers. The lowest number in the clubs is twelve members, and the highest two hundred, and it is a striking fact that the latter is connected with a club which has barely been in existence twelve months—I refer to the Gresham Angling Society. There are other large societies which have between one hundred and two hundred members in each, such as the Piscatorial Society, the Richmond Piscatorial Society, and the Hoxton Brothers, and all these societies are constantly on the increase. If the progress goes on as rapidly as it has done the last year or two, the angling clubs of London and its suburbs will soon possess a body of not less than ten thousand anglers. The value and importance of angling clubs are immeasurably great, and much good can be accomplished by them when they are conducted with judgment, discretion and unity. In the general management of angling clubs important changes have taken place in late years. First of all, the introduction of musical evenings, now popularly called "smoking concerts;" and, I apprehend, there is no class of men that possess a better character for harmony than the anglers. My experience in the Larkhall Angling Society, the Piscatorial Society, and the Richmond Piscatorial Society, and other angling clubs, on those occasions, and at their annual dinners, is that the array of musical talent has always been of a first-class nature. Then, again, the revival in old clubs, and the introduction in new societies, of "readings," is calculated to instil a large amount of practical information amongst the members; and the Gresham Angling Society has set a grand example in the publication of papers which have been read in connection with it. These papers, which can be purchased by any one, have been so far of a thoroughly practical character, such as "The Scarcity of Fish in the Thames," "Jack Fishing," "The Sense of Pain in Fish," and "The Science of Angling," all bearing upon subjects closely connected with fish and fishing. After these readings, which generally occupy about twenty minutes, a friendly discussion is allowed, and opinions are expressed by the members as to their views on any points raised by the reader. Then, again, the example shown by the Richmond Piscatorial Society, the Gresham Angling Society, and some other clubs, in the punctual commencement of business at the hour fixed by the rules —in the first of these societies at eight o'clock, and in the other at seven. Nothing, I conceive, is more damaging to the true prosperity of a club than the lack of this business element. No matter whether the hour appointed to begin is seven, eight, or nine o'clock, the chair should be punctually occupied and all formal business commenced. I have just received an invitation for a musical evening on the 11th of this month from the Larkhall Anglers, and, as usual, the worthy president, Mr. G. F. Spencer, underlines the hour of commencement "eight o'clock precisely," and this is, I am happy to say, the rule there on all occasions. The introduction of cards is not of recent date, but is practised with a large amount of pleasure in some of the older clubs; and a quiet game of whist cannot be objectionable to any one, especially when it is commenced after the formal business is over—it is noiseless, and does not interfere with any one. The great advantage derivable from angling clubs in the present is that they have become schools of learning to the youthful anglers, by educating them in the true principles of sport, and generally amongst all anglers in maintaining the rightful principles of fishing laws. There are other points of usefulness in angling clubs which I need not revert to now, and prominent amongst them is what I have for years ventilated—the doing away of "gross-weight competitions." B.

"OUR TRAWL."

List of recently published New Works and New Editions

Henshall, Ja. A., M.D.—Book of the Black Bass: its Complete Scientific and Life-History; with practical treatise on angling and fly-fishing, and a full description of tools, tackle, and implements. Cincinnati: Rob. Clarke and Co., 1881. 463 p. il. 12mo. $3.

The publishers announce this volume as the most complete and exhaustive monograph ever published upon any "game-fish." The black bass is a game-fish of the highest order, and is pre-eminently American in its habitat and characteristics, its range now extending over the entire country east of the Rocky Mountains. Dr. Henshall has been well known for the past ten years as an authority on the black bass, and as an expert angler. His writings, published in the various journals of the country devoted to angling, field sports, natural history, &c., are constantly referred to as the only trustworthy data on the subject. (Am. Pub. Weekly.) [We shall notice this book more fully shortly.]

Manley, J. J.—Notes on Fish and Fishing. London: Sampson Low and Co., 1881. 372 p. il. 8vo. 6s.

Parliamentary Reports.—Herring Brand, Scotland. Report of Committee and Evidence. 1881. 3s. 3d.

Wheeldon, J. P.—Angling Resorts near London: the Thames and the Lea. London: Trübner, 1881. 226 p. 12mo. 1s. 6d. A new and cheaper edition.

Stevens, C. W.—Fly-fishing in Maine Lakes; or, Camp-life in the Wilderness (New Ed.) Boston: A. Williams and Co., 1881. 201 p. il. sq. 12mo. 1·25 dols.

Sketches descriptive of a fishing excursion to the Maine Lakes; and a chapter on pickerel fishing in winter. Illustrated by 38 vignettes and a coloured frontispiece, showing the best killing flies in vogue.

Benecke, B.—Fische, Fischerei und Fischzucht in Ost- und West-Preussen. Part III. Königsberg: Hartung'sche Verlagsdr. 1881. 8vo. 4 m.

By the publication of the above part, Dr. Berthold Benecke's important work on the Fish and Fisheries of the German Baltic provinces is brought to a close. Part I. treats of the seventy-three various kinds of fishes to be found in the maritime eastern provinces of Prussia, and describes their natural enemies. Part II. gives an explanatory and historical account of Prussian fisheries, considers their economic and national importance, and enters into minute details of the fishing-gear and tackle employed; while Part III. concludes this most elaborate and valuable book by traversing the whole subject of scientific fish-culture.

Borne, M. von dem.—Die Fischerei-Verhältnisse d. Deutschen Reiches, Oesterreich-Ungarns, der Schweiz u Luxemburgs. Part III. Berlin: Stuhr'sche Buchh., 1881. 4to. 1 m.

Forms the third part of an important statistical work on the present condition of German and Austro-Hungarian fisheries compiled for the *Deutsche Fischerei Verein*, and issued as a supplement to the Circulars of that Society; will be completed in five parts.

Fisher, J.—La Pêche à toutes lignes, théorique, practique et raisonnée, déduite de la connaissance naturelle, des moeurs et habitudes des poissons d'eau douce; ouvrage comprenant la legislation speciale et les principes d'art culinaire. Paris: Samson, 1881. 340 p. il. 12mo. 3·50 fr.

Graeffe, Dr. E.—Das Süsswasser-Aquarium. Kurze Anleitung zur besten Construction der Aquarien und Instandhaltung derselben, sowie Schilderung der Süsswasser-thiere. Hamburg: O. Meissner, 1881. 50 ill. 8vo. 1·50 m.

Gressy, Dr.—Les huîtres métisses; par un ostréiculteur à Carnac (Morbihan). Vannes: imp. de Lamarzelle, 1881. 8 p. 8vo.

Yhlen, G. v.—Die Seefischerei an der Westküste Schwedens. Gothenburg: Pehrson, 1881. 8vo. 4·50 m.

RIVER REPORTS.

MID-THAMES.

> "Our doubts are traitors,
> And make us lose the good we oft might win
> By fearing to attempt."
> —SHAKESPEARE.

THE Thames has nicely dropped from flood, and although still somewhat highly coloured, is in good roach, jack, chub and perch trim, and the lack of sport in all districts is purely and simply the consequence of "fearing to attempt." Roach are feeding at anything, from minced lobs to pastry, and have no objection to an *entrée* of either cockspur or brandling. Chub are best approached with nervine matter or cheese, the diet of worms seemingly just now being too serious a bait for the volatile loggerheads. Jack are in the eddies, and are best fished for paternoster fashion. Perch are taking minnows best, but in the absence of this difficult-to-obtain bait, a red worm will be found as attractive, now the fish are really hungry after their three weeks' fasting. At Streatley, some splendid perch have been taken, and at Sonning and Wargrave excellent samples of roach—all had with lob-worm tail. At Warley, Messrs. Harrison, Lumley, Smith, Jacques and Co. have been well on the roach, the former gentleman on one occasion getting six dozen and eight roach and thirty perch. Mr. Mead, with Coster on Saturday, captured a pretty jack of 12½ lb. in the Hurley district. From Marlow, Cookham and Maidenhead items of sport are meagre, but anticipations of success in the fining-down water sanguine in the extreme.—MARLOW BUZZ.

Thames.

I am sorry to say the prospects for the next few days look bad again for the roach and jack angler in the Upper Thames. I have just returned from Pangbourn and Goring. The river is again rising and becoming the colour of clay mixed with chalk. The fish that had been feeding well for some days previous are now again dead off.—CRYSTAL HOOK.

Thames (Goring).

Water came down to-day very thick. If we get it fine we will do for roach by Sunday. Prospects for this looks bad. Water was in good order here on Monday for jack and perch, but we have had a lot of rain again. Have had two days since my last report; best day, 10 lb. of roach.—JOHN RUSH.

Thames (Kingston).

The water has been rising the last two days about 18 inches upright, and thick as mud; and I think that we have not had all the up-country water yet. The bank-fishers have had all the fishing. I have seen some good roach, from twelve to eighteen fish a day. I had thirteen brought to me—nine of the roach from 8 oz. to 1 lb. 2 oz. each, and all the rest fair fish. I have seven such lots this last week. The punts have done but little—a few perch and a small jack or two, nothing over 2 lb.—so much stream.—JOHN JOHNSON.

Thames (Walton).

After the heavy rains of Sunday and Monday the water has risen here at least 6 inches, and the current is very strong. The water has clouded a trifle, but nothing to speak of. Wednesday morning brought a frost, which I think is likely to turn to rain. There is good fishing for jack in the back waters for any one who likes to try, and if the frost continues the water will fall, and there should be both perch and jack fishing in the stream. No anglers down here till Monday, when Mr. Wingrove, with Geo. Rogerson, had a very pretty jack of 4 lb., and John Rosewell another of 2½ lb. On Tuesday Mr. Abbitt, with Geo. Hone, had a jack of 2 lb., and lost one that was quite 7 or 8 lb.—a plucky fish bit the gimp.—HENRY WOOD.

Thames (Windsor).

Water this last week has been in nice order. but this morning is thick and rising. Some good perch and roach have been had, and had water kept in condition, doubtless good chub and jack might have been taken. Mr. King, of the Royal Oak, Windsor, tried the former, and had a nice little fish of 3 lb. 5 oz.—B. R. BAINBRIDGE.

Ancholme.

The beautiful and spring-like weather of the past week has proved very beneficial to the few anglers who have visited the waterside during the Christmas recess. Here and there a small pike or two have been caught, whilst coarse fish have taken both paste and worm very fairly. I fully intended having a day myself this week, but the presence of visitors, and the taking of ova from my trout ponds, have frustrated my intention.—THOMAS FORD.

Dove.

There has been very little doing on this river since I last wrote. Most of the Christmas holiday makers have now resumed business, and there have been but few rodsters out. Saturday last was a most miserable day, a thick fog prevailing, with a drizzling downpour of rain. It was hardly possible to see three yards in front of you, so that it is not surprising that scarcely an angler made his appearance at the water-side. Since then we have had alternately rainy and boisterous weather. The water has been running at a great height and out of colour, and fish have been by no means well on the feed. I hear of one dish of grayling, nine fish, being caught, and that is about all, for not a solitary capture of pike has been reported to me. The last-named fish have been very shy all through this winter, and remarkably few have been taken. Trout are getting rapidly over spawning, and I believe they will be found extremely forward in condition when the season opens. There has been lots of natural fly on the river, but grayling don't seem much inclined to take them, and they will not until their appetites get sharpened up by a good frost or two. —THE SPLODGER.

Ilfracombe (N. Devon).

The weather this week has been very squally, so that boats have not been able to venture far from the harbour. Several of the fishermen have lost their spillers, which were torn to pieces by the force of the sea, others have caught a start while it was a little moderate, and have brought in some fine cod, averaging from 15 lb. to 20 lb. each, also a few conger and ling. On Wednesday a cod and ling were caught from the jetty with hand-line, weighing about 20 lb. each. A skate was brought in on Thursday morning weighing about 50 lb., and a lobster, caught on the spiller, weighing 5 lb., also two cod weighing about 20 lb. each. The weather at present is very unsettled, blowing strong from the north, with drizzly rain.—E. COMER.

Medway (Tonbridge).

Just as the water was in first-rate condition and the disciples of the gentle art were preparing for the fray, down came the rain, with the result that in a very few hours the river was stirred up and now resembles pea-soup. It will not be fishable for some days.—YE MEDWAY WATER-RAT.

Norfolk.

As I take up my materials for the purpose of contributing to this week's issue, my eye alights upon a picture hanging in my sanctum, entitled "The Enthusiast," and in which is depicted an old gentleman evidently a victim to the rich man's malady—the gout—but, being an ardent angler and determined not to be outdone by his painful enemy, seeks his revenge by having an immense tub placed in his drawing-room, stocked with fish, and, seated by a good fire with his medicine bottles hard by, there plies the "gentle art" intent as if seated in a cosy punt surrounded by reeds and rushes and all the glories of a summer's day. Such an one as this I have not chanced to fall in with myself, but many a one during the last few weeks I have seen seated in a boat with face pinched and nose red, seemingly enjoying the sharp bracing December air, and though at the close of the day they have not been rewarded by a decent take they have at least gained a fairish appetite, and over their glass of grog are delighted to relate to relate to their brother fishermen the adventures of the day. Jack are feeding well now, and reports of some good fish are coming in from various parts. Those, as I before observed, who have had nerve enough to venture out for roach have succeeded pretty well. But the most important part of my report this week rests not with the fish but more especially with the fishermen who during the year angle on our river Yare. Whether they be strangers or whether they be citizens of Norwich, I think they are in duty bound if they use the stream for the purpose of angling to help to support the society who preserves the good sport thus afforded them. Since the formation of the Yare Preservation Society much has been done towards the privileges and benefits of the angler; illegal fishing, netting, and every other illegitimate means have been put a stop to—and for what purpose? Solely to protect the fish for the genuine and legitimate fisherman. Now, ye anglers, attend—at five stations, or rather public inns, on the river Yare are placed subscription boxes of the Y.P.S., in which it is left to the generosity of gentlemen not actual subscribers to the society, and who frequent our waters during the summer months, to contribute their mite to the funds, and thus enable the society to continue to prosecute the good cause thus begun. Last week the boxes were cleared, and of course the society no doubt anticipated, after the good season which has been experienced, to have realised a tolerable sum towards aiding them in still continuing their good work for another year; but, alas, in the five boxes was found the enormous sum of seven shillings and five pence farthing, six shillings and five pence being the result of one box; and herewith I wish to show to your numerous readers the analysis:—Surlingham Ferry, 3d.; Brundall, 1d.; Buckenham Ferry, 6s. 5d.; Cantley Red House, 8d.; Reedham Ferry, ¼d.—Total, 7s. 5¼d. Of course, when good societies are supported like this, they must prosper. I trust anglers who have enjoyed their week or fortnight's sport at the society's expense, will not forget, in future, to put in their golden coin, and so make up for past deficiencies; for it is indeed hard upon us who provide good sport and plenty of it, and then leave it to the generosity of the sportsman to contribute whatever he may think fit, to see him go off without contributing a farthing, when at home he is glad to pay an enormous sum in order to be allowed even to fish in waters at which we ourselves should be disgusted to even "wet a line in." Apologising for my lengthy report, I am still a good ANGLER.

Ouse (Littleport).

Water getting away very slowly, owing to rather heavy rain on Sunday, and still rather too thick for angling. If the weather continues fine, and we do not get much frost, I hope, if anyone comes down, to see some fair takes in two or three days. I quite thought I should have nothing worth mentioning this week, though we have been catching just sufficient to swear by. But Mr. C. Sell, of Bassingbourne, came down yesterday, and got one and a half dozen of roach, silver bream, dace, and one fish called an eel pout, in the Fen district. I think I have heard that the proper name is burbot. It weighed 8 oz. I mention this as I never saw one taken by rod and line before. He is going to have it set up as a curiosity, not for its size, as I have taken as many as three on eel lines in my life, one of which weighed over 1 lb. I caught to-day 4 lb. roach, and one bream, 1½ lb.—CHARLES SOUTH.

Ouse and Ivel (Blunham).

These rivers are now in fine fishing condition, and for the last week some fine baskets of pike and roach have been made, the roach varying from 1 lb. to 1¾ lb. each.—E. B.

Trent (Newark).

Jupiter Pluvius seems to have made up his mind to disappoint the anglers, for the water had hardly got into trim by the beginning of the week when, owing to the downpour that fell on the uplands in the higher districts of the Trent, down came another high and thick water. At the time of writing (Thursday night) the river is nearly bank-full, and, I think, is rising a little still. It will be a few days before it is in anything like form. A few fish have been taken, principally roach and dace, with the little cockspur worm, which bait, under the present circumstances, will be found the best for the next week.

Mr. Curtis captured a nice jack, 10½ lb., out of the waters of the Newark and Muskham Fishery last Friday, I believe. On Saturday I and a patron were out jack-fishing, but only landed two, best fish, 5 lb., live baiting. Weather very mild for the time of year; blowing quite a gale last night and to-day from the west. Nothing of importance to communicate this week, only the angler who visits the lower Trent within the next few days must not be disappointed if he finds the water high and thick, and a disposition to grumble on the part of THE TRENT OTTER.

Trent (Nottingham).

Angling prospects in this district just now are not at all favourable. Rain has fallen during the week, at times very heavily, and on Thursday the river was running at almost flood height. When the water was fishable anglers mustered in moderate force, and a very good take of bream and roach came from Weston on Tuesday. All the fish—and they weighed close on 30 lb.—were caught with the maggot, which proved useful in other parts. Before the discoloration was encountered pike were running well, and a Sheffield enthusiast, essaying his skill in the Blackpool underneath Weston Cliff, was rewarded with a splendid fish of 15½ lb. His intention was to fish for a few days, but on getting the one in question he packed up his traps and hastened homewards as proud as any lord. Nine fish have been shown by Messrs. Davis and Sibley from Hoveringham, and amongst five caught in the Stoke allotment was one of 9½ lb.—THE MAN AT THE CLUBS.

Wye and Derwent (Derbyshire).

The new year opened with a very great quantity of rain falling, chiefly in the night time, which caused the Derwent to have a very large flood on it last Monday morning, which quite put a stop to some good bottom fishing in various parts of the Derwent. Both on last Friday and Saturday some good baskets of roach and dace, and a small barbel of 4 lb., were killed in the Derwent, between Bromford and Ambergate, one old veteran having eleven brace of roach and dace, and one brace of chub. The roach and dace were killed with maggots, and the chub with worms. Yesterday (Wednesday) was a fair day in the Slacks which runs into the Derwent, and some good coarse fish were killed, also a few pike, one angler having both roach, dace, grayling, and a pike of over 9 lb. This pike was the best well-fed fish I ever saw in all my life—such a thick one; it was killed by live bait-fishing, with small dace for bait; and close to Whatstandwell to-day (Thursday) we had another flush on the Derwent, which has put a stop to angling for a short time. The bottom fishers ought to do well next week with both gentles and brandling-worms. No fly-fishing on either rivers for some time.—G. J. EATON.

Starkholmes, Matlock Bath.

NOTICE TO OUR SUBSCRIBERS.

WE shall be much obliged if all subscribers who wish to continue to receive the GAZETTE from the office by post will send in their subscriptions at once. All newspaper subscriptions are due in advance. The terms are, including postage, for three months, 2s. 8d.; for six months, 5s. 4d.; and for twelve months, 10s. 6d. Foreign subscriptions at the rate of 12s. 6d. for twelve months.

THE RIVERS, &c., OF ENGLAND.

BY CREEL.

UNDER this head it is purposed to give a short but trustworthy account of the British streams, their extent, the fish they are famous for, waters open or preserved. Clubs, annual charges of membership, whether day tickets are issued. When seasons commence and end. Distance from nearest railway station and what conveyances can be had. Hotels, inns, or lodgings, in the neighbourhood; and all which the angler may desire or expect to know concerning the aquatic resources of the country.

In order to perform our task with the better effect and simplicity we shall, each month publish the names of those rivers we intend to dilate upon, or, if necessary, personally to visit; and would therefore ask, as the undertaking is for the good of all anglers, that they will kindly give what assistance is in their power to render our exertions—necessarily a heavy and responsible one—as light as possible.

We further intend publishing these articles alphabetically. Thus we shall begin with the Adur Aëron in South Wales, the Aire in Yorkshire, the Alde in Suffolk, the Allen (of the South Tyne), the Allwen in North Wales (a feeder of the Dee), the Alne, Northumberland.

Any information respecting these rivers of interest will be acceptable.

TENCH SENT TO AMERICA.—On the 2nd of December, Captain Auguste Briand of the French steamship "St. Germain," presented to Mr. W. A. Conklin, Superintendent of the Menagerie at Central Park, New York city, twenty tench—*Tinca Vulgàris.* The fish had been twenty-five days from the ponds in France and the passage had been stormy, yet they were in good condition. This fish is a cyprinoid, and, like the carp, loves warm, still water. It has very small scales, it is of a dark olive colour, and seldom exceeds 2 lb. in weight. In Europe it is quite a favourite food fish, especially on the Continent, but in England it is not ranked very high. The flesh of those we have eaten was rather muddy in flavour and not equal to the carp. Captain Briand has brought over many fish, as well as taken some of our catfish and other species to France, and takes great interest in the exchange of valuable species.

NOTICES OF BOOKS, &c.

THE ANGLER'S COMPLETE COMPANION AND GUIDE. Being a Practical Treatise on Angling and its Requirements. With Coloured Plates of Flies and Wood Engravings. By G. Little. Published by the author, 15, Fetter Lane.

MR. LITTLE has been so long before the public as one of our leading fishing-tackle manufacturers that when we heard he was engaged in producing a work on angling we felt certain, when it made its appearance, it would be in every way well worthy his reputation. He evidently has spared no expense in getting it up, and we may say at once that the instructions and information, which cover every description of freshwater angling, are thoroughly sound and practical. The wood engravings are, for the most part, good; and, indeed, some are very good. The chief feature of the book is undoubtedly the series of plates, giving hand-coloured representations of some seventy-six standard artificial flies. With the exception of about a dozen or two, these flies are fairly well done, and in nearly every instance the drawing is very good indeed. It is, of course, a somewhat dangerous matter to entrust the colouring of some four hundred thousand flies to the human hand—and, in the large edition he has printed, this must be about the number that has been done—and in his next edition we hope Mr. Little will make use of the more satisfactory and certain process of chromo-lithography. In colouring by hand, mistakes are inevitable; the colour is sometimes too thick and at others too thin. With the exception of some of these coloured plates, we can strongly recommend the book, which contains much matter interesting to anglers regarding the fence months, the Thames fishing stations, &c., and has a most valuable and suggestive appendix in the shape of tables of fish, giving descriptions, where found, tackle and baits to be used, &c. These tables Mr. Little found amongst some old manuscripts in his possession, and he states they were drawn up by Fitzgibbon ("Ephemera"). They would be more useful if they had been revised, and such unlawful baits as salmon roe (!) cut out. Mr. Little tells us in his preface that "these pages have been written with a view of setting plainly and succinctly before anglers the chief and best styles of the tackle of the day and the methods of their use." And it is but justice to say that this he has faithfully carried out. Indeed, in face of the fact that Mr. Little has been so long before the public as one of our leading tackle-manufacturers, it would have been strange had it been otherwise. It must occur to all acquainted with angling literature that the obligation of bringing out any work possessing new features would be no easy task. Yet Mr. Little has achieved this, to a certain extent, and by doing so secured the important feature of simplicity. His chapters on each fish are divided into paragraphs, with appropriate headings. Thus, the Dace (we open the book at random): first gives its natural history and habits, where found, &c. Next we have "The Rod for Fly-Fishing," then "The Reel and Line," and "The Tackle;" followed by "The Rod for Float Fishing," "The Reel and Line," "The Tackle," "Ground Bait and Hook Baits," ending, with reference to this fish, with "Remarks on the Above and How to Use Them." It must be obvious that by such a formula great perspicuity is secured, and the remarks and suggestions, being the experience of the writer, are free from the stereotyped platitudes too often characterising the manufacture or compilation of angling books, rendering such works nothing but slightly varied copies of those that have preceded them. The title of the work is far from new, there being more than one other, if we mistake not, existing "Angler's Companion and Guide" in the *Biblio Piscatoria.* But as that before us will be better known as "Little's," perhaps confusion will not arise from any similarity of title.

The tabulated sheet termed "The Anglers' Vade Mecum and Remembrancer," showing at a glance all necessary to be known, may not, useful as it is, be exclusively claimed as the compilation of "Ephemera," for similar broadsheets (the shape in which they were issued) are extant, with evidences of publication long before Mr. Fitzgibbon was born; and after that period, and when that gentleman contributed to *Bell's Life,* they became common, being sent forth by Ustonson, and other tackle-makers of Bell Yard, Fleet Street, and Crooked Lane, London Bridge. Amongst "The Angling Axioms" (p. 157), No. 1 tells us to "keep as far as possible from the water and from your brother bobs (thirty feet)." Surely, for "feet" we should read "yards." The proximity of the former distance would most assuredly not only cause the disturbance of one or the other's swims, but cause the entanglement of each other's lines, more particularly if one of them proved to be a left-handed angler. With these remarks we can confidently recommend the work as one of the most concise and practical of the many which so loudly claim public appreciation.

The Blue Book of the Thames Angling Preservation Society, 1881. London: Offices of the Society, 7, Ironmonger Lane, Cheapside, E.C. (Price 6d.)

This annual blue-book of the T. A. P. S.—an indispensable publication to every Thames angler and London Angling Club—contains the society's annual report presented to its members on the 5th of July last, the forty-third anniversary of its existence, and a large amount of highly-valuable information, compiled expressly for its pages. In it will be found extracts from Acts of Parliament and fishery bye-laws, weights and sizes of fish, pleasure-boat tolls, and river-distance tables; above all, a complete list of fishing-stations between Richmond and Staines, the preserves and their limits, names of fishermen, angling hotels, lock-keepers, river-keepers, and railway fares.

The report of the committee having already found a place in the columns of the Fishing Gazette, there is no need to dwell upon the amount of good work performed by the society in the last, as in all preceding years. But one paragraph of the report deserves particular comment. It is that in which the society appeals to those anglers who, whilst ready to enjoy the benefits provided by the T. A. P. S., lag behind with their support. At present, for every one angling club that subscribes to the society's funds, there are five that do not. This is not at all as it should be, and every member of a non-subscribing club will, we feel sure, now that it is brought before him, take diligent care that his club shall in succeeding years be found numbered amongst the regular subscribers to the T. A. P. S. The legitimate objects of the society include not only the preservation, but the production of fish; though how this last is to be adequately effected without undivided support from the whole body of metropolitan anglers, appears likely, we fear, to remain an unsolved problem for ever. Again, if every club made it a point of honour not to reap where it did not sow, but to restore to the water in due season a fixed proportion of young fry for every pound weight of sizeable fish caught during the year, the impetus given to fish-culture would be immense. Not only would sport thereby increase, but under proper treatment and judicious crossbreeding, great improvements in fishes, as regards their size and edible qualities, might be looked forward to with certainty. Quite recently a piscicultural society has been formed in Japan, which, amongst other things, confidently aims at producing perch six feet in length, and lobsters whose solid claws shall not measure less than four feet and a half. The boundless enthusiasm of an English fish-culturist shrinks to nothingness before this; nevertheless the fact remains that fishes, like domestic animals, are undoubtedly susceptible of improvement under the fostering care and well-directed intelligence of man.

JOHN RIDD'S ADVENTURE WHILE LOACH-CATCHING.

From "Lorna Doone" by R. D. Blackmore.

(*Continued from page* 640).

For more than a mile all down the Lynn stream scarcely a stone I left unturned, being thoroughly skilled in the tricks of the loach and knowing how he hides himself. For being grey-spotted and clear to see through, and something like a cuttle-fish, only more substantial, he will stay quite still where a streak of weed is in the rapid water, hoping to be overlooked, nor caring even to wag his tail. Then being disturbed he flips away, like whalebone from the finger, and hies to a shelf of stone, and lies with his sharp head poked in under it; or sometimes he bellies him into the mud, and only shows his back-ridge, And that is the time to spear him nicely, holding the fork very gingerly, and allowing for the bent of it, which comes to pass, I know not how, at the tickle of air and water.

Or if your loach should not be abroad when first you come to look for him, but keeping snug in his little home, then you may see him come forth amazed at the quivering of the shingles, and oar himself and look at you, and then dart up-stream, like a little grey streak; and then you must try to mark him in, and follow very daintily. So after that, in a sandy place, you steal up behind his tail to him, so that he cannot set eyes on you, for his head is up-stream always, and there you see him abiding still, clear, and mild, and affable. Then, as he looks so innocent, you make full sure to prog him well, in spite of the wry of the water, and the sun making elbows to everything, and the trembling of your fingers. But when you gird at him lovingly, and have as good as gotten him, lo! in the go-by of the river he is gone as a shadow goes, and only a little cloud of mud curls away from the points of the fork.

A long way down that limpid water, chill and bright as an iceberg, went my little self that day on man's choice errand—destruction. All the young fish seemed to know that I was one who had taken out God's certificate, and meant to have the value of it; every one of them was aware that we desolate more than replenish the earth. For a cow might come and look into the water, and put her yellow lips down; a kingfisher, like a blue arrow, might shoot through the dark alleys, over the channel, or sit on a dipping withy-bough with his beak sunk into his breast-feathers; even an otter might float down stream, likening himself to a log of wood, with his flat head flush with the water-top, and his oily eyes peering quietly; and yet no panic would seize other life, as it does when a sample of man comes.

Now, let not any one suppose that I thought of these things when I was young, for I knew not the way to do it. And proud enough, in truth, I was at the universal fear I spread in all those lonely places where I myself must have been afraid if anything had come up to me. It is all very pretty to see the trees big with the hopes of another year, though dumb as yet on the subject, and the waters murmuring gaiety, and the banks spread out with comfort; but a boy takes none of this to heart, unless he be meant for a poet (which God can never charge upon me), and he would neither have a good apple, or even a bad one, if he stole it.

When I had travelled two miles or so, conquered now and then with cold, and coming out to rub my legs into a lively friction, and only fishing here and there because of the tumbling water—suddenly, in an open space, where meadows spread about it, I found a good stream flowing softly into the body of our brook. And it brought, so far as I could guess by the sweep of it under my knee-caps, a larger power of clear water than the Lynn itself had; only it came more quietly down, not being troubled with stairs and steps, as the fortune of the Lynn is, but gliding smoothly and forcibly, as if upon some set purpose.

Hereupon, I drew up and thought, and reason was much inside me, because the water was bitter cold, and my little toes were aching. So, on the bank I rubbed them well with a sprout of young sting-nettle, and, having skipped about awhile, was kindly inclined to eat a bit.

Now, all the turn of all my life hung upon that moment. But, as I sat there, munching a crust of Betty Muxworthy's sweet brown bread and a bit of cold bacon along with it, and kicking my little red heels against the dry loam to keep them warm, I knew no more than fish under the fork what was going on over me. It seemed a sad business, to go back now, and tell Annie there were no loaches; and yet it was a frightful thing, knowing what I did of it, to venture, where no grown man durst, up the Bagworthy water. And please to recollect that I was only a boy in those days, fond enough of anything new, but not like a man to meet it.

However, as I ate more and more, my spirit arose within me, and I thought of what my father had been, and how he had told me a hundred times never to be a coward. And then I grew warm, and my little heart was ashamed of its pit-a-patting. And I said to myself, "Now, if father looks, he shall see that I obey him." So I put the bag round my neck again, and buckled my breeches far up from the knee, expecting deeper water, and crossing the Lynn, went stoutly up under the branches which hang so dark on the Bagworthy river.

I found it strongly over-woven, turned and torn with thicket-wood, but not so rocky as the Lynn, and more inclined to go evenly. There were bars of chafed stakes stretched from the sides half-way across the current, and light outriders of pithy weed and blades of last year's watergrass trembling in the quiet places, like a spider's threads on the transparent stillness, with a tint of olive moving it. And here and there the sun came in, as if his light was sifted, making dance upon the waves, and shadowing the pebbles.

Here, although affrighted often by the deep, dark places, and feeling that every step I took might never be taken backward, on the whole I had very comely sport of loaches, trout and minnows, forking some, and tickling some, and driving others to shallow nooks, whence I could bail them ashore. Now, if you have ever been fishing, you will not wonder that I was led on, forgetting all about danger, and taking no heed of the time, but shouting in a childish way whenever I caught a "whacker" (as we called a big fish at Tiverton); and, in sooth, there were very fine loaches here, having more lie and harbourage than in the rough Lynn stream, though not quite so large as in the Lowman, where I have even taken them to the weight of half a pound.

But in answer to all my shouts there never was any sound at all, except of a rocky echo, or a scared bird bustling away, or the sudden dive of a water-vole; and the place grew thicker and thicker, and the covert grew darker above me, until I thought that the fishes might have a good chance of eating me, instead of my eating the fishes.

(*Conclusion next week.*)

For the outcome of this adventure, which we shall finish quoting next week, and all the rest of the delightful story, we must refer our readers to the book itself, the matchless "Lorna Doone," as it was called only the other day by the *St. James's Gazette.* "Lorna," is the noblest, bravest, sweetest and most womanly heroine, that ever figured as the central star of a romance. But you shall find in "Lorna Doone," such a galaxy of characters as will astonish you, and yet so powerfully is each drawn, that they live in your remembrance like the familiar faces of friends or foes. We owe many of the most delightful trouting rambles we have ever had to the perusal of "Lorna Doone." It invests the enchanting North Devon scenery with an intensified interest, and we can, with the utmost confidence, recommend every angler, and especially every trout fisher—who of all anglers sees the cream of country scenes, and so ought the more to love a noble book like this—to read it; he will feel, as we do, that he cannot speak too highly of it.

THE LIFEBOAT SERVICE IN 1881.

THE frequency, determination, and gallantry of the Lifeboat Service during the storms of the year that has just closed have been unparalleled in the annals of the National Lifeboat Institution; and no one, surely, can peruse the following record without instinctively experiencing feelings of gratitude and of satisfaction at the great amount of success which continues to accompany, day and night, the operations of the Lifeboat Institution. These services are more in number than in any previous year, yet each one of them has a history of its own, the lifeboat-men having, on more than one occasion, sacirficed their own lives in the performance of their duty. An idea of the magnificent services rendered by the servants of this splendid institution, may be gathered from the fact that no less than 966 lives and 33 vessels were saved by the lifeboats last year. Besides these services, the institution granted rewards last year for saving 155 shipwrecked persons by fishing boats and other means, making a grand total of 1,121 lives saved during the year. Since its establishment in 1824, the Lifeboat Institution has contributed to the saving of 28,724 lives from various shipwrecks, a number equal to one-half of what is required to man the British fleet. It is, therefore, manifest that a Society like the Lifeboat Institution, possessing so national a character, and dependent entirely on the support of the public for the maintenance of its life-saving fleet of 270 boats, must necessarily have a large annual income, if its beneficent work is to be carried out with the same amount of success which has hitherto fortunately characterised the services of its lifeboats. We will only add that contributions are received for the Lifeboat Institution by all the London and country bankers, and by the Secretary, Richard Lewis, Esq., 14, John Street, Adelphi, London.

THE ANGLER'S SOLILOQUY.

(AT THE SEASIDE).

The earth is sad, mists dark and grey
Enfold her ancient breast!
The waves all wearied with their play,
Have trembled into rest!
And silently the God of Day
Is sinking in the West!

Now dead delights like ghosts, arise
Within my haunted brain!
The tender blue of April skies,
The sound of April rain!
The foaming beck, the gentle rise—
The princely pounder slain!

* * * * *

Then fade the flowers from my sight
And darkened in the stream,
As yonder, through the waning light,
The pier lamps faintly gleam!
Thus in the drear November night,
I waken from my dream!

Bournemouth. F. B. DOVETON.

MY FIRST BIG TROUT.

I HAVE been extremely fond of fishing from my childhood, and by the time I was fifteen years of age there was hardly a bit of free fishing within ten miles of London that I had not visited. Travelling was not so cheap thirty years ago as at present, and, pocket money not being over plentiful, my excursions were made on foot. Being a good walker this was scarcely a drawback, and in the midsummer holidays, starting early in the morning, I could enjoy a long day's fishing at Tottenham, Edmonton, or even Ponders End. My takes were, of course, nothing wonderful, but for a boy they were as good as could be expected. On a memorable occasion, just before the Easter holidays, I received an invitation from a relative to join her sons and some friends in a week's fishing. This was an annual meeting established during college days, and although the men forming it had separated to their various vocations in life, a few still managed to assemble under the hospitable roof during the mayfly season. I was intensely delighted at being permitted to form one of a party consisting of first-rate fly-fishers, and the intervening days were spent in looking up and repairing tackle and adding such items as I could manage to buy. I had a very fair fly-rod given me a short time previously, but had never had an opportunity of using it, and my only reel line was an undressed eight-plait silk; however, I got together the best equipment I could, and, full of eager expectation, took my place in a second-class carriage at Nine Elms Station (the then terminus of the South Western Railway), *en route* for Salisbury. I arrived at my destination safely, received a cordial welcome, and after dinner my tackle was produced for inspection. The reel line was, of course, pronounced quite unfit for fly-fishing, and the flies not such as were wanted. These deficiences were immediately supplied from the stores of my friends, and after an evening spent in conversation on fish and fishing, I went to bed, to dream of wonderful fish to be caught on the morrow. I was no sluggard next day, and after an early breakfast a start was made. The party consisted of four besides myself, and we were to be joined by another fisherman at the water side. It was a lovely morning in May, mild and balmy, and the spring being a forward one the mayfly was well on. I shall never forget my first experience of a trout stream—the water seemed alive, fish were rising everywhere; in some parts the noisy splash proclaimed the little skipjack, and in others the big fish were rising quietly and sucking in the flies as they floated down the river. I soon had my tackle rigged up, and after watching my mentor (one of the best fly-fishermen it has ever been my good fortune to meet with) for some time I essayed my first cast. Need I say it was a failure? I tried again, and this time a sharp crack told me that my fly was gone. I persevered, however, and although many more flies were whipped off, I managed before the day was out, by watching my instructor carefully, to throw the line without losing the fly, and to secure two or three large dace and a small trout. My instructor had excellent sport, and the way in which he handled his tackle was a marvel to me; no cast seemed too long or difficult, and the flies came down on the water as lightly as a bit of down. When a big fish was hooked, he was under control at once, and, however hard he might fight, the slender strand of gut kept him in check and brought him to the landing net. During the next two or three days I improved in my casts, and managed to secure a good many dace and a few trout. On the fourth day my friends were unable to go out, and had, as a great favour, obtained permission for me, as a youngster, to use a worm in a portion of the water; I therefore obtained a supply of lobs, and fitted up a fine gut line with a tolerably large hook and two shots about a foot above it. The day was perfection for fishing, warm, with a south-westerly wind, and occasional light showers. I commenced fishing at the head of the water, and although I tried carefully in all the likely places could not move a fish. I had nearly reached the limit to which my permission extended, when I came on a most tempting spot—the river, after a succession of rapid shallows, contracted to a comparatively narrow channel with overhanging banks, and the current, although strong, was quiet, and the water deep. I immediately thought, if there is a big fish in the water this must be his home. I therefore picked out a clear lively lob, threadled it carefully on the hook, and creeping stealthily towards the water, dropped the bait close under the bank; the current carried the line out into the stream, and it had barely reached the centre when I felt a slight vibration, followed by two or three strong pulls. I waited a moment or two, and then struck. I found at once that I had hooked a fish such as I had never hooked before. He darted down the stream like lightning, making for a heavy bed of weeds lower down; and for a moment or two, owing to my inexperience, he had it all his own way. I, however, soon recovered myself possession, and finding the fish determined to get to the weeds, put a little pressure on him; this had the effect of checking his rush, and he leaped clean out of the water and dashed up the stream as quickly as he had gone down. I had the greatest difficulty in preventing the line from getting slack as a quantity had been run out, and it was not until he had fought for nearly half an hour that I succeeded in getting him into the landing net. I then saw what a prize I had obtained—a splendid trout, short, thick, and in the very pink of condition from the may-fly diet, and when weighed, a few hours later on, he turned the scale at 4 lb. My friends were as pleased at my success as I was myself, and insisted on the fish being packed and sent to London by the night train. I have taken hundreds of trout since then, and although many have been well over 3 lb., I have never caught one so large as my first big fish. A. H.

GREGORY'S SPINNING BAITS. "The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[ADVT.]

GEORGE JAMES EATON, of Starkholmes Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d, per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[ADVT.]

CLUB AND OTHER JOTTINGS.

By L. B.

On Monday evening last, January 2, the monthly meeting of the United Central Committee was held at the Baldfaced Stag, Worship Square, Finsbury, Mr. Samuel Morgan presiding. After the reading and confirming the minutes of the previous meeting, the secretary, Mr. R. Ghurney, announced the granting of further concessions on the Great Eastern Railway, full particulars of which appeared in a previous number of the Fishing Gazette. The secretary then gave the details of a recent conviction obtained for taking undersized fish from the river Lea, through the agency of one of the committee bailiffs, full particulars of which were also reported in the Fishing Gazette. Some remarks were next made by Messrs. Murphy and Millais, respecting the transfer of privilege cards to members joining a new society without having settled up their indebtedness to the old one.

The sum of 10s. was voted and handed to the waiter as a Christmas box. Increased remuneration to Lea bailiffs. This matter was brought on by Mr. Munro, and after a long, interesting, and, in some respects amusing discussion, in which Messrs. Millais, Manning, Bayley, Ghurney, High, Stevens, Phillips, Murphy, and others, took part, it was carried, "that the remuneration should in future be at the rate of 5s. per day, when on duty during the general fishing season, but to remain the same; viz., 2s. 6d. per day during the close season."

With regard to the renting of suitable waters as fisheries, Mr. Theobald said, that though his name was connected with the motion, he regretted to say he had not that evening come up as fully prepared to go into the subject as he would like to have done. He, however, ever since their last meeting, a month ago, had had fresh proofs of the absolute necessity for a movement of this kind, indeed he had no hesitation in saying that unless active steps were at once taken, in the course of a few years—with the exception of the Lea and the Thames—there would be no water free to them to angle in. Seeing the lateness of the hour (11.15), he would ask the Chairman of the West Central Association, Mr. L. Bonvoisin—who had seconded the motion—and he knew had the subject thoroughly at heart, to say a few words; after which, perhaps, the better plan wou'd be to adjourn the considering of so important a subject till another evening, when time would allow of its being properly dealt with.

Mr. Bonvoisin said that at a recent meeting of the West Central Association this important question, and the kindred one of "Coarse Fish Culture," were eagerly discussed, Messrs. R. B. Marston, Fishing Gazette; P. Geen, President W.C.A.; F. C. Clench, President Richmond Piscatorial; and other well-known gentlemen, being present; and it was ultimately resolved to refer the matter to a committee, who were to solicit the co-operation of this (the United London Anglers Central Committee), and of the third association. He thought such a committee would be far better able to collect evidence, go thoroughly into the question, and ultimately make out some simple and effective scheme for the approval of the representatives of club anglers generally. He would therefore ask them, as the chairman of that association, if they approved of such a course, to choose some twelve or fourteen gentlemen to represent them on the joint-committee. The invitation was cordially and unanimously accepted, the requisite number of delegates elected, and some routine business transacted, the meeting terminating with the usual vote of thanks to the chairman.

During the recent push of water some big roach have bitten their last bite in Godfrey's pretty reach of the Colne at West Drayton, and Mr. Lancaster tells me he has had one sent to him to preserve weighing nearer two pounds than one pound and three-quarters. I believe it was taken by a member of the Westbourne Park Piscatorials.

A capital article appears in the current number of the "Cornhill Magazine," treating of the "Boke of St. Albans," and its latest published reproduction by "an indelible photographic process." The review is full of lengthy quotations, among others the famous preface to the "Treatyse on Fysshynge with an Angle," which, however, did not appear till the second edition of "Ye Boke," issued from Wynken de Worde's press at Westminster in 1496, than which nothing can be grander in its very simplicity and freshness, or truer in its substance.

Several new societies are talked of at the West End of London. Mr. T. Hoole is anxiously watching and assisting their efforts at hatching, and in every case they have promised to acknowledge his kindness by adding their names to the already long list of societies affiliated to the West Central Association. The usual monthly meeting of the working committee of the West Central Association will take place on this (Friday) evening, January 6. The attendance of committee men is particularly requested. I mix perhaps more frequently and freely with anglers of all classes than any other man in London, and from each I hear nothing but words of praise when "A Thames Fisherman's" capital letters are referred to, to which I very heartily add, "Hear, hear!" These are the kind of articles we want—plain, sensible, dealing with facts, and having for objects the practical advancement of the sport, quaintly relieved by occasional touches of dry humour.

TO ANGLERS.—W. J. Cummins, Fishing Tackle Maker, Bishop Auckland, is now prepared to forward to anglers his Illustrated Catalogue, which is not only a Trade List but is interspersed with practical hints, useful directions, and valuable information gathered by the river-side from twenty years' experience. The stock consists of his unrivalled Salmon, Trout, Grayling, and Pike Rods, Lines, Reels, Baskets, Artificial Baits, Fly-books, Landing Nets, Gaffs, and last, but not least, his celebrated Trout Flies which for killing powers stand unequalled. Every article kept in stock is of the very best description.—[Advt.]

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents*]

CLUB ANGLERS AND PRIVATE ANGLERS.

Sir,—Being a non-member of clubs, I am about to give a calculation showing if a London angler fishing Shiplake or Henley saves anything during the course of a year by being a member of the associations, and going out once every week during the fishing season.

14 weeks from mid-March to mid-June
20 weeks from mid-June to end of October (he can get an excursion, 3s. 6d.).
18 weeks no excursion, but can go from Saturday to Monday for 5s., 2nd class (including the Underground).

Club Angler's Expenses.

38 weeks' privilege ticket at 4s. a time	£7	12	0
Cost of P.T.	0	1	0
	£7	13	0

Private Angler's Expenses.

Excursion (including the Metropolitan Railway) 20 times at 3s. 6d.	£3	10	0
18 times at 5s.	4	10	0
	£8	0	0

If we add the club expenses, and the cost of travelling on the Metropolitan Railway, the balance will be against the club man or privilege ticket holder.—I am. &c., A. J. Porter.

17, Chapter Road, Lorrimore Square, S.E., Jan. 1.

HARD FACTS FOR MR. J. H. KEENE.

Sir,—On reading Mr. Keene's article in this week's paper, I find that he refers to the spawning of dace and expresses doubts as to those fish recently taken. I think this matter is of such importance, now that the propagation of coarse fish is being so much advocated, that I venture to ask you to reprint the enclosed cutting from L. B's. jottings of Oct. 22, in which certain facts are very concisely stated:—"Nothing like facts, dates and figures to prove a case. Have dace two spawning seasons, or, rather, are there dace which spawn in the spring and others which spawn in the autumn, as stated by the chairman at the recent meeting of anglers in the Society of Arts Room? On Thursday last, October 13, Mr. Walters, while fishing in the River Colne, at Uxbridge, succeeded in taking thirty-three dace, weighing 11 lb. 15 oz., which, in my opinion, conclusively proved Mr. P. Geen's statement to be correct, as these fish were taken from a shallow, sandy-bottomed eddy in about a foot of water. The fourth of them had just completed the act of spawning, and were, on being opened, found empty; their scales were rough, their flesh flabby, and their vents distended. About one half had evidently been caught while in the act of shedding, as the slightest touch caused the fully developed spawn to come from them. The remainder were extraordinarily full, and on being opened clearly showed that they were on this particularly favourable spot for the purpose of there depositing their spawn. The chairman, the secretary, indeed the whole of the members of the Club (Hammersmith United) present carefully inspected the fish, and saw them opened."

No doubt Mr. Keene's opinions would carry more weight if they were expressed subject to such facts as these, and I would beg to add that I have now preserved in spirits two specimens of these fish, one having just completed spawning and the other in course of shedding its spawn.—I am, &c. R. W. Hobden.

23, Blemfield Road, Shepherd's Bush.

[Until it has been satisfactorily proved that the *same* dace spawn *twice* in the same year, we shall hold to our opinion that these late spawners are fish which from some cause or other were prevented from spawning with the general body in the spring.—Ed.]

EDITIONS OF "WALTON'S ANGLER."

Sir,—I am most anxious personally to examine copies of the undernoted editions of Walton, and would esteem the permission to do so a great favour; or I would purchase the volumes, should it be more agreeable to the possessors of them, at a high price:—

Chambers, 1833; Fraser, 1834; Simpkin and Marshall, 1835; Tegg, 1835; Allan Bell, 1836; Fraser, 1836; Manchester, Johnson, 1844, 1846, 1857, and no date; Liverpool, Johnson, 1848; Dublin, Curry, 1847; London, Johnson, 1849; Halifax, 1857; and Maunder, date unknown.—I am, &c., Thomas Satchell.

Downshire Hill House, N.W.

A SUBSCRIPTION FROM IZAAK WALTON TO THE ANGLERS' BENEVOLENT FUND.

Sir,—Enclosed is two shillings' worth of stamps given by my son Izaak Walton, and I, hoping you will accept the small amount for the Anglers' Benevolent Society. I will keep the burbot until you send for it; it is not a good specimen to set up, but I will try and get you a good one; and if I can get a few I will write you, as I shall be glad to please you and any other sportsman.

I was out pike-fishing on Friday last with some gentlemen from Nottingham, and had good sport, thirteen in all, ranging from 3 to $9\frac{1}{4}$ lb. I went out on Monday, but did not make a good beginning for the new year of 1882.—I am, &c., JOHN FOSTER.

Caythorpe, Lowdham, Notts, Jan. 2, 1882.

[Many thanks for the stamps. We will send them to Mr. Ghurney.]

THE BLACK BASS.

SIR,—There is a large quantity of this fish at Whitewater, Burghley Park, near Stamford, Northampton, the seat of Lord Exeter, by whose orders the fish were brought over in 1878 and 1879. From what I hear on good authority, they have thriven well and spawned last year. Some few have been transferred to Colonel Goodlake's, but now, I believe, there is some difficulty in catching them with the net, owing to the harbourage. Thus it may not be necessary to send all the way to America in order to obtain the fish for stocking water. —I am, &c., EDWIN SACHS.

22, Hyde Park Place, Jan. 2.

[The last time Mr. Silk advertised black bass for sale in our paper the price was 10s. each. We hope by this time they are cheaper. We must have the black bass; from recent investigation we find it will thrive in any water, and is a superb fish in every respect.—ED.]

ACORN ANGLING SOCIETY.

SIR,—At a meeting of our society last night one of the members mentioned to me that we were returned in your paper as being defaulters to the Hendon Tournament. I am sorry that this should have occurred, as we are above such a mean act. I will explain to you how the omission of not returning the tickets unsold occurred. They were left at the society's house and offered by me for sale. I sold only one, and the remainder were left behind the bar, as I supposed to be called for, no letter or intimation of any kind having accompanied them when sent. I return you herewith the four unsold tickets, and 6d. in stamps, and shall be glad if you will insert either this letter or an acknowledgment, in your next edition, and clear our society of the accusation.—I am, &c., WM. FOE, hon. sec.

46, Gerrard Street, Islington, N, Jan. 5. 1882.

NEW YEAR AT THE GRESHAM.

GREAT SHOW OF LARGE PIKE.

AT the meeting of this society on Thursday evening, Messrs. Jardine and Knechtli weighed-in ten pike, which, when taken, represented an aggregate weight of no less than 150 lb., all of them being in splendid condition; Mr. Jardine giving particulars of their capture, and both anglers being present. This was undoubtedly the finest sample of pike ever shown at any society. Some were taken spinning, others on snap-tackle, the remainder with paternoster, and in all cases on a salmon-gut trace. In addition to the ten specimens shown, these well-known anglers captured about thirty others; ranging from 3 lb. to 7 lb., the smaller being returned to the stream, the others given to their friends in the neighbourhood. Such a capture is unprecedented in angling history, and on the motion of Mr. Crumplen, seconded by Mr. Bentley, the society resolved to mark its sense of the skill and kindness of Messrs. Jardine and Knechtli, by passing a special resolution in the following terms—"Resolved, that this society congratulates Messrs. Jardine and Knechtli, and tenders them its hearty thanks for weighing-in the magnificent collection of pike shown this evening, such a collection being unparalleled in the history of any angling society." Messrs. Jardine and Knechtli having replied, Mr. Jardine announced that they were willing to present the society with the three largest pike for preservation, and the Society thus becomes the possessor of three pike, weighing nearly 60 lb., and which, placed in one case, will form a pleasing memento of the achievements of "The Gresham," and serve to stimulate even the activity of its members in the coming year. The chair was ably occupied on this occasion by Mr. Crump, whose services in regard to the question of Thames rights are so well known and appreciated by the great angling community.

The decoration of our dining tables has been much improved of late years and those who wish to see what the utmost skill and taste can accomplish should pay a visit to Messrs. Osler, in Oxford Street, and see the magnificent design in glass which they have just completed for His Majesty the King of Siam. This consists of a plateau of looking-glass, which is ornamented with candelabra, fountains, receptacles for ferns and palms and dessert dishes, and is surrounded by a border of flowers. The design, as it stands, is intended for the royal dinner table, and is some fifty-six feet long, thus it will run the whole length, but it is made of separate pieces and will form a variety of designs for the pleasure of those who preside over such arrangements in Siam. A feature of the decorations is the appearance at intervals of the royal arms, tastefully executed on glass, while it is needless to say anything of the admirable quality of the material used, and the precision with which it is cut and otherwise manipulated, for no name stands higher than that of Osler in this particular branch of manufacture.

DEATH OF A FRENCH FISH CULTURIST.—Mr. A. Colombe, Administrateur-Directeure of the Societe Anonyme Francaise, died a few weeks ago. The Society is largely interested in fish culture in both France and Belgium and has a capital of 200,000 francs. It was to this society that Prof. Baird sent 100,000 eggs of the California salmon last October, former shipments of these eggs having been received by the well-known Societe d'Acclimatation. Mr. Colombe is succeeded by Mr. Osiris Mendes, France, who will now fill the office of Director. The Paris office is 17, Rue Chateau d'un.

CLUB REPORTS.

ACT-ON-THE-SQUARE ANGLING SOCIETY.

Owing to the Christmas holidays, and also to the water being so out of condition, I have had nothing to report, excepting that Messrs. George and Chapman had some very nice roach and dace on Boxing-day—one roach going nearly 1 lb.—from the water which belongs to where their club is held, viz., the Ferry Boat, Tottenham, and on Thursday Messrs. W. Stone and W. Mead had roach and jack from the Lea. On Saturday the members fished for a prize at Waltham, being the third occasion on which the members have gone out to fish for it. On the first occasion it was snowing and no fish taken; on the second the floods were out, but on Saturday victory rested with Mr. H. Chapman, although closely pressed by Mr. Money.—A. GEORGE, hon. sec.

Jan. 2, 1881.

ANCHOR AND HOPE ANGLING SOCIETY.

Very few of our members were out during the holidays; Bro. T. Bowling being the only successful member, weighing-in a show of roach from Wraysbury. Wednesday, the 27th ult., being quarterly night, the annual and quarterly prizes were distributed, the following being the successful members:—Bros. R. Smith, gross weight and largest bream; W. Salmon, largest jack; D. Liston, largest dace; H. Scott, largest chub; A. Shakel, largest barbel, a handsome pair of Parisian figures; D. Davis, set of vases and pair of glass lustres; B. C. Booth, tea service. Members will please note that our annual prizes will commence on June 16th and end March 14th, not January to December, as before. Several prizes are to be fished for before the close season, including two gross weight prizes, particulars of which can be had at the club. Sunday the 1st instant, several of our members were out, but met with indifferent luck, Bro. Summers saving the club from a blank with a nice perch and a few roach from Datchet.—DANIEL DAVIS.

BRIGHTON ANGLERS' ASSOCIATION.

On the 1st, being the first of the year, Mr. Anscombe, Mr. Tree, Mr. G. Saunders, Mr. Hassell, and Mr. A. Cardy made a beginning for jack, but only one was killed, and that was by G. Saunders. On Monday evening the members made a present of £1 1s to Mr. Billinghurst, the water bailiff, for good attention to his duties through the past year, and with the hope that the same will be done this year. Weather fine, wind north-west.—GROUNDBAIT.

CAVENDISH ANGLING SOCIETY.

The majority of our members were anything but successful on Sunday last. Mr. Lee had a pretty jack from the Lea, scaling 5 lb. $1\frac{1}{2}$ oz.; Mr. Tallman succeeded in taking one from the Thames, 1 oz. heavier; Messrs. Chambers and Drieson weighed roach and dace.

Jan. 3.

CITY OF LONDON ANGLING SOCIETY.

Only two of our members weighed-in on the 1st inst. Mr. Mortimer, roach, from the Rye House water, winning the Secretary's prize, and Mr. Castell, roach, from the Roding. We had no one out in the Christmas week.—CAS.

EDMONTON AND TOTTENHAM ANGLING SOCIETY.

The members of the above club went out on the 26th for a series of special prizes with the following results:—Mr. Stephens, 1st, with a fine show of roach; Mr. Briton, 2nd, running very close to 1st, within a few ounces; Mr. Cottam, 3rd, with a very pretty jack; Mr. Holdsworth, 4th, roach; Mr. Darter, 5th, roach. On the 28th Messrs. Stephens and Briton showed another very fine tray of roach; Mr. Ames show of perch. On the 1st January four of our members contributed a splendid show of perch, completely filling the trays. Mr. Dyson with 3 doz. and 4; Mr. Mole, 1 doz. and 3; Mr. H. Ames, 11; Mr. E. Ames, 9; Mr. Hasler, 2 doz. and 1, all nice fish. The roach rod was at a discount, as none of them had any worth speaking of, for, one day's fishing, I got one weighable roach.—G. STEPHENS.

GOOD INTENT.

We had a good show of fish at our club on Sunday last. Mr. Edward Sanders brought up a good show of perch from the Lea, twelve fish from $\frac{3}{4}$ lb. to 1 lb. each; Mr. G. Hughes, roach and dace; Mr. Gadbury, roach; Mr. Donovan, roach; Mr. Maybury, roach; R. Murphy, roach. On Tuesday evening, we had one of the largest meetings of members that we have had for a long time; our large club room was filled. We had two applications from our benevolent fund, and granted £1 to each. Our members are going to Boxmoor, to fish for twelve prizes, all pegged-down, on Sunday, January 15.—R. MURPHY.

Jan. 4.

GRESHAM ANGLING SOCIETY.

The first supper of this society took place at their rooms on Wednesday evening, Mr. C. Graham Bennett presiding, Mr. S. C. Harding occupying the vice-chair. The tables were very tastefully arranged, and the good fare so bountifully provided more than sustained the reputation already acquired by Mr. Thompson at the City of London Tavern. The cloth having been cleared, the Chairman gave the toast of the Queen and Royal Family, which was duly honoured. Mr. Crumplen followed with "The Gresham Angling Society," which was drunk with much enthusiasm. In proposing this toast Mr. Crumplen remarked that the society had certainly something to say for itself, for it had not yet completed its first year, yet it had over two hundred members on its books; rented water of its own, which it purposed to stock as a fine museum with some unique specimens adorned its walls; it had a good library, and had already added to our stock of knowledge by the papers read and discussed at its meetings. It had contributed liberally to many benevolent objects, dear to the hearts of anglers; and given such a marked impetus to kindred societies, that its establishment and development really constituted the great event of 1881, so far as angling societies were concerned. Dr. A. C. Tucker proposed "Success to all Angling Associations," coupling with it the name of the Piscatorial Society, which he remarked was the oldest London association. The Gresham had no other object than to advance the common art, and the society, be it large or small, old or young, which did the most in that direction was always sure of a welcome at the Gresham board. The absence of Messrs. Jardine and Knechtli, who were away in the west on the war path, was greatly regretted. Captain Alfred, in responding for the Piscatorial Society, said he was sure they would appreciate the compliment so warmly offered, for they were not rivals, but should be mutually helpful to each other, and do their best to promote the common weal. Little jealousies, if they existed, must be set aside, and all must work together in conjunction with the central associations to effect a satisfactory solution of the many important questions now pending. Mr. Leo Bonvoisin (who had just entered) also said a few words, thanking the society for the good wishes expressed to all angling societies, more especially to the West Central, which he represented. Mr. Crumplen, in proposing the "Chairman," remarked that he had known him more or less as a good and true angler for nearly twenty years, and it was gratifying to know that he not only worked hard in the committee room, but had frequently filled the society's trays with good specimen fish, like the 14 lb. of roach he had shown on Monday last. "The Press" was proposed by Mr. S. C. Harding in a very pithy speech, and duly responded to, after which Mr. Parker gave "The Officers of the Society," coupled with the name of the vice-chairman, to which that gentleman and others replied. It only remains to add that the rooms presented a very gay appearance, Captain Alfred contributing a selection of the choicest examples of his genius, which were much admired. The speeches were well interspersed with musical pieces, Mr. J. E. Harding, Mr. Young, Mr. Buckworth, Mr. Parker, Mr. Winterbottom, Dr. Brunton, and others, taking part, Mr. Winterbottom being accompanyist, and displaying his accustomed skill. A fine tray of pike, taken by Mr. G. R. Hunt, Mr. F. S. Barnard, and others, was on view, the weights running from about $3\frac{1}{4}$ lb. to $10\frac{1}{2}$ lb. each. The evening closed with "Auld Langsyne" and the National Anthem. Particulars of the extraordinary show of pike at the society's rooms last evening by Messrs. Jardine and Knechtli will be found in another column.

HAMPSTEAD ANGLING SOCIETY.

Mr. J. Woodward, a member of the Hampstead Angling Society, brought home a nice lot of roach, weighing 16 lb., one of over 1 lb. 7 oz., from the Chelmer, Chelmsford, on the 27th December. Anglers visiting there will do well by calling at Mr. Joslings, the Half Moon, High Street, Chelmsford, who will put them on some good swims. Messrs. W. and C. Messenger had some good trays of roach and dace from Bourne End on the 1st January.—J. H. HAYWARD, sec.

Jan. 4.

JOVIAL ANGLERS.

Last Sunday's contest for the rod, winch, and 100 yards of line, resulted in Mr. Clarke being declared the winner, with 1 lb. $2\frac{3}{4}$ oz.; it was a great misfortune the weather changed, as from the beautiful morning we all anticipated a very good show of fish. A special general meeting of this club is called for Friday the 13th of this month, and it is hoped that all the members that can possibly make it convenient will attend, as business of great importance to the club will be brought forward on that night.—H. W. PLATT, sec.

LITTLE INDEPENDENT ANGLING SOCIETY.

The members of the above society were out on Sunday, and met with glorious sport—a handsome show of fish being put on the trays, including roach, perch; dace, chub, iack.—H. MOORE, sec.

Jan. 5.

THE NEWARK PISCATORIALS.

The half-yearly supper in connection with the above society took place last Tuesday evening, Jan. 3, in the club room of the society, Horse and Gears Inn, Portland Street. About fifty members sat down to a capital spread, drovided by Host Slater, the worthy treasurer. After full justice had been done to the good things provided, and the cloth removed, toasts, speeches and harmony were indulged in—Mr. Brooks, the president, in the chair, and Mr. Johnson in the vice. Capital songs were sung by several members, Mr. Seagraves fairly "bringing down the house" by his capital rendering of the Lancashire song, "'Twas on one Tuesday Afternoon"; Mr. Bailey amused and delighted his audience with a display of his powers as a ventriloquist—his conversation with an imaginary Jim up the chimney being very amusing. The healths of the "Worthy Host and Hostess," and also "The Secretary," were proposed and acknowledged in suitable terms; Mr. Slater stating that in addition to the first prizes for the specimen fish, he should present each lucky first-prizeman with one of his best centre-pin reels—a remark that was greeted with considerable applause. In the half-year just concluded, Mr. Slater has given to each of the six first-prize winners one of his best Nottingham roach rods. The following report shows that all the prizes of this society are for specimen fish; Mr. A. T. Allcock weighing-in no less than four of the heaviest fish, viz., dace, chub, barbel and bream; but, according to rule, no member can take more than one prize. The following are the prize winners for the last half-year:—Roach: first, T. Proctor, 1 lb. $5\frac{1}{4}$ oz., 3 shots; second, W. Bulman, 1 lb. 4 oz., 6 shots; third, T. Rushby, 1 lb. 2 oz., 8 shots. Dace: first, A. T. Allcock, $13\frac{3}{4}$ oz., 8 shots; second, W. Singleton, 9 oz., 9 shots; third, G. Johnson, 9 oz. Bream: first, R. Dale, 3 lb. 8 oz., 3 shots; second, H. Cubley, 3 lb. $4\frac{1}{4}$ oz., 4 shots; third, J. Mountney, 3 lb. $1\frac{3}{4}$ oz. Chub: first, T. Mills, 2 lb. $7\frac{1}{2}$ oz.; second, D. Slater, 2 lb. 7 oz.; third, J. Hopkinson, 1 lb. $10\frac{1}{2}$ oz. Barbel: first, W. Thompson, 3 lb. $14\frac{3}{4}$ oz.; second, W. Atkinson, 3 lb. 14 oz.; third, J. Hammond, 3 lb. $12\frac{1}{2}$ oz. Bleak: first, T. Hinds, 2 oz., 3 shots; second, J. Wheeldon, $1\frac{3}{4}$ oz., 6 shots; third, W. Brooks, $1\frac{3}{4}$ oz., 1 shot.—THE TRENT OTTER, reporter.

ORIGINAL CLERKENWELL PISCATORIAL SOCIETY.

We have very little news to chronicle this week, as the trays of the above society were not overburdened with fish. Messrs. Laundy and Obbard weighed-in roach from the Lea. Members are particularly requested to attend next Monday to hear the delegate's report from the central committee.—THOS. WM. LUCY, sec.

Jan. 5.

ORIGINAL ALEXANDRA SOCIETY OF ANGLERS.

We had nearly the whole of our members out on Sunday last. Mr. E. Brockett, sen., a nice show of roach; Mr. W. Fligh, roach, from the Stort; Mr. E. Dymond, sen., jack, from the Lea; Mr. Stanton, roach, from Sunbury-on-Thames; Mr. Morton, jack, from the Forty Guinea water; Mr. E. Brockett, jun., roach, from Ponder's End; Mr. C. Newton, one jack, from the Lea; Mr. Ardley, Mr. Lardell, of the City of Paris, Old Ford Road, and Mr. Cammack have been doing well among the jack at St. Alban's.—E. DYMOND, sec, pro. tem.

SIR HUGH MYDDLETON ANGLING SOCIETY.

The members of the above society mustered very few on New Year's Day. No doubt they had not quite recovered from their Christmas festivities. Only two members went out. Mr. Sacanville, one of our new members, visited the river Brent, but the fish would not feed, consequently, it was a blank day. Your humble servant saw the Colne about 12.30 p.m. The weather and water were all that could be desired by an angler. I was soon at work, and found out that gentles were the favourite bait. I stuck to work till 3 p.m., when I found I was getting wet about the legs—the rain coming down rather freely. I had a very pretty show of roach and dace, scaling 10 lb. 6 oz.—not a bad start for the commencement of the new year.—G. CABORN, sec.

P.S.—The members of the above society intend fishing for a series of prizes, at Boxmoor, on Sunday next, the 8th inst. All start by same train, from Euston Station, at 9 a.m.

Jan. 2.

SOCIETY OF CAXTONIAN ANGLERS.

The usual meeting of this club was held on Friday last. Several members were present, but in consequence of the recent floods no fish were weighed-in. In the course of the evening a member introduced the subject of the "Pollution of our Rivers," as acting to the great detriment of the angling fraternity, inasmuch as the fish in several of our rivers were killed by the refuse daily discharged into them. The subject so much riveted the attention of this meeting that it was arranged for a special meeting to be held for the purpose of enabling the speaker to go further into detail; such special meeting will be held on Friday, the 13th inst., and is looked forward to with much anxiety. The committee, we understand, is likely to bring the matter under the consideration of Government. It is quite clear, from what was shadowed forth at the meeting, that unless the pollution is stopped the several growing and influential societies of anglers will in a little time have no fishing occupation, the fish being either killed or driven from our rivers.

Jan. 2.

UNITED BROTHERS.

Although several members of the above society went out on New Year's Day, only two succeeded in taking anything worth mentioning—W. Tyler roach, and H. Tyler perch—from the Thames.—WILLIAM BELTON.

Dec. 4.

WALTHAMSTOW ANGLING SOCIETY.

This club has been doing pretty well since the run of water, Mr. D. Casey, treasurer, being out twice last week roach-fishing, taking 16 lb. and 10 lb. respectively. Mr. J. Latham, sen., out Saturday and Sunday last, having a good show of jack, heaviest fish nearly 8 lb., total, $30\frac{3}{4}$ lb.—W. HOWSE, hon. sec.

WANTED.

A QUANTITY OF GOOD-SIZED

PERCH, BREAM and OTHER

COARSE FISH

FOR STOCKING PURPOSES.

Price and particulars to

MR. J. T. HARDY,

Secretary, Leicester Angling Society,

LEICESTER.

FISHING TACKLE, &c.

DEVONSHIRE FLIES (GOOD in ANY STREAM), 1s. 6d. per dozen. Flies made to pattern. A large stock of Rods and Tackle of all kinds. Some choice SPLIT CANE RODS by "Copham;" bargains. The Devon and other artificial Baits, Reels, Lines, Gut Casting Lines, Fly Books, Wading Stockings and Trousers, Baskets, and every other requisite. Address, WILLIAM MUDFORD, Fore Street, Tiverton, Devonshire Ticket depôt for the Tiverton Fishing Association.

TROUT FRY.

THE SALTAIRE ANGLING ASSOCIATION has a choice lot of Ova (*Salmo Ferox*), also some brook trout ova (*Salmo Fario*), from trout of a large size. The price for Fry will be £2 10s. per 1000. Persons wanting any should apply early to

GEO. E. BOLTON, Secretary
SALTAIRE, YORKS.

WANTED.

WANTED a Person who understands the Fishing Tackle Trade, to take charge of the Fishing Tackle Department in a provincial town.

Apply to
A. M., FISHING GAZETTE OFFICE,
12, FETTER LANE,
LONDON.

BROKEN!!
DAVY'S DIAMOND CEMENT.

Securely and neatly mends
CHINA, GLASS,
CABINET WORK,
AND FANCY ARTICLES.

Of all Chemists in 1s. bottles.

See the name "E. DAVY," the original Inventor, is on the label, and also that of

BARCLAY & SONS, 95, Farringdon St., London.

FISHING TO BE LET TO THE END OF SEASON at GREAT MARLOW, one minute from the river. A superior double-bedded room for two Gentlemen only, with use of rowing punt, and plain breakfast. (No other attendance—no extras.) Terms 49s. per week. Arrangements can be made with different parties for specified times of engagement; reference required.—Address J. T. SCOTT, Marlow, Bucks.

WANTED.

A ROD MAKER, who can make best RODS, for a provincial town.

Apply to
A. M., FISHING GAZETTE OFFICE,
12, FETTER LANE,
LONDON.

NOTICE.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., must be addressed to the Editor of THE FISHING GAZETTE, *No.* 12, *Fetter Lane, London, E.C* and should reach the office not later than Tuesday morning.

Contributions are solicited, but the Editor will not undertake to return rejected MSS., unless accompanied with a stamped addressed envelope.

Correspondents are requested to write on one side of the paper only and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith Unless this rule be adhered to no notice will be taken of such communications.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls, and of the following, amongst other Fishing Tackle Dealers in London and the Provinces :—

Messrs. Alfred and Son, Moorgate-street.
Messrs. Price and Co., 8, Seymour-street, Euston-square, N.W
Messrs. Williams and Co., Great Queen-street.
Messrs. Gee and Co., St. Andrew's-street, St. Martin's-lane.
Messrs. Gee and Co., Gray's Inn-lane (near Holborn end).
Messrs. Little and Co., Fetter-lane, E.C.
Messrs. C. Kewell and Sons, 197, St. John-street-road, E.C.
Messrs. Kewell and Co., 1A, Conduit-street, Regent-street, W.
Mr. J. Richards, 97, Church-street, Paddington.
Mr. W. Leader, 30, Upper Marylebone-street, Portland-place, W
Mr. — Clark, 35, Wells-street, Camberwell.
Mr. Geo. Read, 91, Goldsmith's-row, Hackney-road, E.
Mr. A. Bulmer, 62, Wandsworth-road.
Mr. F. Oliver, 188, Great College-street, Camden Town.
Mr. J. E. Gold, 284, Waterloo-road.
Mr. D. W. Willoughby, 21, Lombard-market, Battersea, S.W.
Mrs. F. Y. Brocas, 4, Mill-street, Conduit-street, Hanover-square, W
Messrs. Gillett and Co., 40, Fetter-lane, London.
Mr. Alfred Young, "The Golden Perch," 174B, Oxford-street, W.
Mr. T. Barnett, 26, Church Street, Lisson Grove, N.W.
Mr. J. Smith, 7, Tottenham Court Road, London.
Mr. Edwin Stevens, Newsagent, 220, Kentish Town Road.

or

Mr. B. R. Bambridge, 74 and 75, High Street, Eton, Bucks.
Mr. Cowan, 33, South Frederick-street, Edinburgh.
Mr. H. Whitty, 15, Basnett-steet, Liverpool.
Mr. C. J. Greene, 54, London-street, Norwich.
Mr. R. Ramsbottom, 81, Market-street, Manchester.
Mr. James Gregory, Vyse-street, Birmingham.
Mr. Wm. Bailey, Jun., 1, Sabina-street, Nottingham.
Messrs. Nutting and Co., 70, Edgbaston-street, Birmingham.
Messrs. W. C. and J. Penny, Booksellers, Froome.
Mr. E. Perks. Evesham-street, Redditch.
Mr. J. Walsh, Bookseller, 5, Harpur-street, Bedford.
Messrs. H. and C. Treacher, Booksellers, Brighton.
Messrs. Gaynor and Son, 10, Royal-terrace, Richmond, Surrey.
Messrs. O'Handlen and Co., 48, Victoria and Temple-streets Bristol.
Mr. Wilkes, Gunmaker, Leeds.
Messrs. Cayless and Sons. Midland Tent Works, Loughborough.
Miss G. Wells. 1, Sussex-street, Nottingham.
Mr. Wm. Atkinson, Fishing Tackle Maker, Lancaster and Kendal.
Mr. John Wells, 4, London-road, Nottingham.
Messrs. Mitchell and Co., 50, Market-street, Manchester.
Mr. J. Croisdale, 56, Briggate, Leeds.
Mr. John Keeling, the Golden Salmon, 7, Digbeth, Birmingham.
Mr. John Heywood, Manchester.
Mr. John Cocks, Baker Street, Weybridge, Surrey.
Mr. Wm. Reid, Northgate, Darlington
Mr. R. Pearsall, 11, Great Western Arcade, Birmingham.
Mr. G. T. Gibbons, 10, Bridge Street, Salisbury.
Mr. Thos. Heppleston, Manchester.
Mr. J. Perry, Minster Parade, Reading.
Mr. S. Dale, 7, St. John Street, Nottingham.
Mr. H. Booth, 88, Prospect Street, Hull.
A. W. Warner, 121, Broad Street, Birmingham.

Newsvendors can obtain the journal through their London Agents.

⁂ The "FISHING GAZETTE" SPINNER (Registered) is sold by all the above firms.

ANNUAL SUBSCRIPTION.

The Annual Subscription, payable in advance, for the United Kingdom is 8s.; or post free, 10s. 6d.

To any part of Europe, the United States, and Canada, the Annual Subscription, including postage, is twelve shillings and sixpence.

ADVERTISEMENTS.

All communications respecting advertisements must be addressed to the Manager of THE FISHING GAZETTE, *No.* 12, *Fetter Lane, London, E.C.*

N.B.—All Remittances must be sent, and all Cheques and Money Orders must be made payable to Messrs. SAMPSON LOW, MARSTON AND CO., the Proprietors.

The Fishing Gazette.

SATURDAY, JANUARY 14, 1882.

ARTIFICIAL SPINNING BAITS.

THERE are probably some hundreds of different kinds of artificial spinning baits for the capture of fresh and salt water predatory fish, and to attempt to bring out anything of the kind as a novelty is almost useless. The most that can be done is to improve on old forms. The most scientific, and, in our opinion, the best principle of imparting a spin, is by curving the tail. Yet this plan is perhaps the most ancient of all. The use of side fins answers well enough in small baits, but not so well as the curved tail. Mr. Gregory, of Birmingham, makes the best artificial metal baits, and we have frequently spoken highly of some of his specialties; but we have found others of his make do not spin well, and this, in our opinion, is owing simply to the fact that the metal fins which are to impart the spin are wrongly shaped, and so great loss of power occurs. One of the most killing baits in the market is the old Devon or Totnes minnow; and if any one wants to know what the correct form of metal fin is, let them examine a good Devon, such as is sold by Mr. Bowness in the Strand, for there are good Devons and bad Devons. As we mentioned recently, Mr. Gregory is now making an artificial bait fo us which we feel certain will be appreciated by anglers. There is nothing new in the shape—merely in the details of manufacture.

If he makes it to our design—and we have no doubt he will—it will be made thus: a hollow metal fish, without side fins or hooks attached, has a brass tube through it protruding slightly at the mouth, and again at the narrow part just above the tail; a strong brass wire is passed through the tube for the bait to revolve on, and at the head and tail on this wire there is a solid metal bead, which also revolves on the wire. There are loops at each end of the wire for attaching the trace and the tail hooks, the latter being two triangles, one below the other, the lower one having a red tassel on it, or, better still, a tassel made of peacock feather mixed with red ones, like the Alexandra fly. The spin is obtained by bending the broad, salmon-tail shaped tail. Now the whole secret of the spin lies in *how* this tail is bent. We received a sample bait from Mr. Gregory in which the tail was forked, and much too large, and hardly bent at all. After cutting off half an inch of each fork, we tried it in a lake, and, as we expected, the bait would not spin in the least. With a pair of pliers it was an easy matter to bend it more. The first trial gave a wobbling spin, very slow; the second was better, and the third produced a perfectly straight and most rapid spin, even when pulling slowly in perfectly dead water. The curve should be made thus: hold the upper side of the tail between the pliers and bend it round boldly, so that the point forms a right angle with the body; now bend the lower side round in the same direction, but so that its point only forms an obtuse angle with the body. In fact, the bend of the upper part should form a segment of a circle, and the bend of the lower part should form a segment of an oval. If the tail were bent equally, a line from either point of it to the mouth of the bait would be equal; but if it is bent as we have endeavoured to describe, this line should be longer from the mouth to the end of the bend of the lower part of the tail than to that of the upper. In bending the metal, the curves must be carefully preserved. The water is thus thrown off the tail in the direction of least resistance, and forces the bait round on the powerful principle of the screw. But if, as is usually the case, the tail is bent equally, the water is thrown off equally, and the bait simply comes through the water at an obtuse angle with the direction of the pull, and does not spin.

We should very much like to have the opinions of some of our readers who have made experiments with spinning baits as to what they think the best curve. We only give the result of our own experiences, and if Mr. Gregory will faithfully copy the curves in the bait we have sent him we are certain the spin will be perfect. The bait is to be coloured dark green on the back, silver on the sides, and white on the belly. As regards the hooks, we prefer a flying triangle, fixed to the ring at the head and the two triangles at the tail, but the angler can please himself about these; but no hooks should be soldered or in any way fastened to the bait itself. They only interfere with the spin. This bait hardly turns the line at all, as it revolves on the brass wire, and a lead is hardly necessary, though we always prefer one on the trace, as it prevents kinking, adds weight, aids the strike, and makes the bait travel steadily and level. The "Fishing Gazette lead," which can be shifted without reference to swivels or undoing the trace, and taken off and put on in a moment, will be found very useful. Anglers who cannot get them of their tackle-makers should apply to us. We mention this because we have cause to complain of some tackle-makers decrying this lead. Messrs. S. Allcock and Company, of Redditch, are the sole wholesale makers of all the FISHING GAZETTE specialties.

DINNER TO THE THAMES RIVER-KEEPERS.

IT is now about fifteen years ago since the idea was first conceived of bringing the river-keepers of the Thames Angling Preservation Society together to a seasonable entertainment, and the movement at that time received great encouragement from the Baroness Burdett-Coutts, who for some time annually contributed the sum of five pounds ; and this her ladyship is always ready to renew when an application is made, but it is not considered desirable to do this only when some extra funds are required. As time wore on, it was suggested to extend these dinners to the keepers employed by the Thames Conservancy, who have instructions to act in union with those belonging to the Thames Angling Preservation Society, which was adopted ; and as the lock-keepers, under the recommendation of the latter society, have since been supplied with deputations to act as river-keepers, they are now entertained out of the funds raised by the secretary (Mr. W. H. Brougham), which fund is realised by contributions of half-a-crown from the members and donations from a few of the angling clubs. There are also three or four others who are always ready to assist the river-keepers, altogether representing a staff of twenty-five active and intelligent men, who are interested in the protection and preservation of the Thames fishery. These entertainments are, as a rule, confined to Thames-side hostelries, and this year a capital selection has been made at the head-quarters of the Richmond Piscatorial Society, the Station Hotel, Richmond, where the proprietor, Mr. John Munro, is a liberal supporter of Thames angling, and has rendered himself famous as a first-rate caterer, thereby ensuring to the staff of river-keepers a splendid entertainment. Mr. Thomas Spreckley, the president of the society, kindly undertook the duties of chairman, supported by several members of the committee and friends, who were all present at their own expense, and whose presence enhanced the pleasure of the dinner. In the immediate vicinity of the chair were Messrs. Joseph Andrews, F. C. Clench, H. B. Eyre, P. Geen, A. J. Little, T. R. Sachs, C. P. Wheatstone, W. H. Brougham, J. P. Wheeldon, Henry E. Woods, F. G. Pearce, &c. Amongst the river-keepers and assistants were Alfred Thompson, R. Relf, George Hone, William Milbourne, John Johnson, David Hackett, Alfred Trodd, Lewis Gibson, John Bushnell, G. J. Rough, John Milbourne, James Deane, John Smith, Palmer Scott, J. Tame, D. Phillips, Henry Joist, James Newble, and W. Watford. The dining-room was beautifully decorated for the occasion, and the tables were most tastefully laid out. Everything indicated the prospects of a first-rate feed. And so it proved, the *menu* including codfish and oyster sauce, fried and stewed lamperns, boiled leg of mutton and caper sauce, roast round of beef, an old York ham of 36 lb., roast chickens, plum puddings, mince pies, maids of honour, all beautifully served up under Mr. Munro's personal superintendence. The real York ham was brought into the room with great ceremony, Mr. Spreckley claiming the privilege of its being placed on the table for his special carving, and it need scarcely be added all did justice to it, and declared they had never eaten such a ham in their lives. Of the dinner altogether, Mr. Munro won golden opinions, and there has scarcely been an occasion when the men enjoyed a better entertainment. The declaration of John Milbourne, who has the credit of being a first-rate feeder, " he had never before had such a good dinner " was endorsed by all present. Only a few toasts are proposed on these occasions. The Chairman gave " The Queen and the Royal Family." Mr. F. G. Pearce proposed "The Thames Angling Preservation Society," and in responding, Mr. Spreckley made a very practical and useful reply, full of encouragement and advice to the men, contrasting the real happiness of the poor man's dwelling to that of the rich man, who was burdened with thought and anxiety, his remarks being listened to with wrapt attention and the warmest expressions of satisfaction, giving the toast of the evening, " The Thames River-Keepers and their Assistants," coupling with it the names of Messrs. G. J. Rough, John Milbourne, R. Relf, and Alfred Thompson, who each made suitable replies. Mr. Lewis Gibson, on being called upon to say something, remarked, in reference to the desired extension of angling water in the tideway, his name had been attached to the counter-memorial without his consent, and he should render the Thames Angling Preservation Society all the assistance he could in support of its memorial. Mr. F. C. Clench gave the toast of "The Chairman," in complimentary words, and Mr. Spreckley replied. Mr. Geen, in a capital speech, proposed " The Press," which was replied to in his usual good style by Mr. J. P. Wheeldon. Mr. Joseph Andrews gave "The Secretary," in very happy remarks, to which Mr. W. H. Brougham responded. The last and not least important toast was that of " Mr. Munro," which was given by Mr. W. H. Brougham, whose remarks on the excellency of the dinner were loudly applauded, and on Mr. Munro rising to reply, he was received with such hearty cheers, that must have assurred him of the general satisfaction they conveyed. There was some capital singing amongst the men, including Messrs. Lewis Gibson, G. J. Rough, George Hone, J. Tame and others. Mr. Horne, the Egham lock-keeper, gave a first-rate recitation, and Messrs. T. Spreckley, J. P. Wheeldon and Joseph Andrews, also contributed to the harmony. Mr. Thomas Spreckley presented to each of the men a box of splendid tobacco, which was highly appreciated. There has never been a more enjoyable evening ; the only regret, at a late hour, was that it must be brought to a close. There was nothing to flag the harmony and proceedings of the entertainments, and all appeared to be united in the common bond of union.

ANCIENT TACKLE.

I FEEL extremely grateful to Mr. Harrington Keene for reminding me, in his very interesting article of Jan. 7, of a passage in Homer which has often puzzled me greatly. Unfortunately the translator whom he quotes shirks the difficulty by substituting a line entirely his own for one in the original. The passage runs literally thus :—(Odyssee, xii. 251—4.) " As when on a projecting rock a fisherman with a very long rod, casting down bait as a snare to little fishes, lets down into the sea the horn of a rustic ox, and having caught a fish, throws it out all quivering."

Now, what can he mean by the horn of a rustic ox ? The scholiast says that " Aristarchus explained it as a small pipe of horn to prevent the line being bitten through by the fish ; but some think the hair-line itself." It was evidently some part of the regular tackle of an angler, for in Iliad xxiv., 80, Iris takes a header into the sea, and goes to the bottom " like a plummet, which, attached to the horn of a rustic ox, goes down to bring death to ravenous fishes." I used to think it might mean a hook made of horn, as hooks are made of bone by some savages, but that is hardly likely to have been used by people acquainted with the art of working metals.

The lines used by the anglers of those days must have been pretty strong, for in Euripides (Helena, 1614) a shipwrecked sailor is landed by one which is thrown to him.

The delightful idyll of Theocritus (xxi.), also quoted by Mr. H. Keene, deserves to be known to all professors of the gentle art. Two fishermen are sleeping in a miserably poor hut :

> About them lay the tackle of their trade,
> Creels, rods and hooks, and bait in seaweed stored;
> Lines, weels and lobsterpots of osiers formed,
> Cords, oars, and an old boat.

One of them wakes his mate and tells him his dream :—

> As I slept yesternight amidst my toil,
> (I had not eaten much—we dined betimes
> You know, and gave our stomachs holiday)
> I saw myself all eager on a rock
> Sitting and fishing, while my jointed rod
> Waved the deceitful bait. Anon, I thought,
> A plump fat fish ran at me (for in sleep
> Each hound dreams of the chase, and I of fish).
> He seized the hook, the red blood flowed : the jerk
> Curved the whole rod. Stretching my hands I found
> I had to fight a monster. How can I
> With feeble hooks bring a big fish to land ?
> I gently pricked him, just to let him feel ;
> Then gave him line : when he no longer fled
> I drew him in, and so achieved my task.
> A splendid golden fish I hauled on shore,
> Golden all over. Terror seized my heart :—
> " This fish, perhaps, is Neptune's favourite,
> Or a pet treasure of his sea-green spouse."
> Gently I loosed him from the iron hook ;
> (For fear his mouth might of some gold be robbed ;)
> With a thick cable then I lugged him home,
> And swore I ne'er again would go to sea,
> But stay on land, and with my gold be king.

He then asks his friend his opinion about the validity of the oath. To which his mate very sensibly replies :—

> Don't be afraid—you swore not, nor did'st find
> The golden fish you saw. Dreams are but lies.
> But if it was a vision, wide-awake
> Fish well that ground all over. There's some hope
> From dreams like this. Seek for a fish of flesh,
> Or golden dreams may death by famine bring.

C. C. J.

A LADY ON FERNS.

IT is probably the fact that the majority of fern lovers and fern growers in this country are ladies. The present writer can at least state that, so far as his host of correspondents is concerned, numerical superiority is on the side of the gentler sex. Like the gentleman angler, the lady fern-hunter is generally an enthusiast. " Ferning " (to use a lady's expression) is her " gentle craft," as fishing is his. May not our married anglers, by the way, take note of this circumstance with advantage, and endeavour to cultivate a love of ferns in their wives? Their absence on many a fishing excursion would then be condoned; for whilst the husband would take pleasure in watching, with subdued excitement and commendable patience, the relative position of the water and his float, the wife could pleasantly employ the time in scouring every nook and corner of the adjoining country-side. (Perhaps the editor of the FISHING GAZETTE will set the example, and "lead" so useful and desirable a fashion.) Or, by a species of "natural selection," anglers who desire to be fishers of women might choose their *fiancées* with a *penchant* for ferns, and the respective tastes might be transmitted even to "the third and fourth generations," by the judicious association of fish and ferns in drawing-room aquaria.

But to return especially to ferns. The love of a lady for the beautiful and graceful forms of the flowerless plants, affords a pretty illustration of the natural bent of a lady's mind. *Le style c'est l'homme même* cleverly said Buffon. A man is known by the books he reads; a woman by her tastes; and it is according to the fitness of things that she should love ferns. If she loves ferns, why should she not write about them?

Some of the most sensible and some of the pleasantest fern books we have had have been written by ladies. The present writer remembers a charming little volume, now, he fears, out of print, called "Ferny Combes," by the late Mrs. Chanter, a daughter of Charles Kingsley. This small volume helped largely to inflame his own love of ferns. Some delightful fern gossip, too, he has read in more than one little volume by Nona Bellairs, whom he believes to be a lady, though "Nona Bellairs," he suspects, is a *nom de plume.* And now Miss Marian Ridley has written, and Mr. David Bogue has published, "A Pocket-Guide to British Ferns"—a pretty little volume, with a cover evidently designed by the lady author. But Miss Ridley's principal object is to make her volume useful, and she has certainly succeeded. She says that to tabulate "by words without figures such of the features as alone are absolutely necessary to identify a fern, even if never previously seen, is the sole merit of this little guide-book." But the small book has other merits. It explains "the general division of flowerless plants," describes "the different parts of ferns," gives "terms applicable to the shapes, &c., of fronds," defines "the growing of ferns," and details their genera, and then proceeds to give briefly descriptive "tables" of British ferns, adding "a key to the genera," and a "list of British ferns;" and it has appended to it, as a "happy thought" of the author, printed labels to be cut out for use in the fern herbarium. Miss Ridley's nice little book is very sensible; it is thoroughly practical and conveniently "portable," and deserves cordial recommendation.

FRANCIS GEORGE HEATH.

THE STEREOSCOPIC COMPANY'S "GUINEA BOX" OF AMUSING NOVELTIES.

THIS wonderful guinea's worth contains the following charming novelties, which cannot fail to afford endless amusement:

THE PHANTASCOPE. Produces a series of grotesque apparitions varying in hue. At the bidding of the "little magician" a transparent phantom suddenly appears within the charmed circle, as if from space, and as it vanishes is succeeded by another, different in form, which in turn gives place to a succession of others. These marvellous results render the instrument a permanent source of entertainment and surprise.

THE LITTLE CAXTON PRINTING PRESS. A unique and interesting novelty. Not only affords great amusement, but is an article of utility combined with instruction. Includes a complete font of ornamental type.

THE PROLIFIC TOP. The latest and most wonderful. Evolves a series of spinning discs of varied colours. A most interesting game for two or more players.

LUMINOUS STARS. An elegant application of Balmain's Patent Medium. Affixed to the ceiling or walls of an apartment they gather light during the daytime, shining brilliantly when the room is darkened.

THE FERRY BOAT PUZZLE, or Five Jealous Husbands. New combination puzzle game. Hours of mirth for old and young. With ten medallion photographs, boat, &c., complete.

THE MAGIC BARREL. A novelty in legerdemain. The contents appear and disappear in manner most mysterious, and in full view of the audience.

GRESHAM ANGLING SOCIETY.

THE annual banquet of this society will be held during the month of March, when the Rt. Hon. Lord George Hamilton, M.P., will preside. Full particulars will be duly announced.

THE CRYSTAL ROACH HOOK.

MORE than two years ago we sent a few of the crystal roach hooks, made by Mr. Williams, Great Queen Street, Lincoln's Inn, to a friend who lives at Renishaw, near Chesterfield. He wrote soon afterwards about them, but we lost his letter until the other day, when it turned up unexpectedly. Here is what he says:

"I went out purposely to try the crystal roach hook the other day, and in this case practice has proved a better test than theory. Before using them I was rather of opinion that they were too long on the shank, An hour's practice has proved they are all that could be desired for paste fishing or single maggot (and no good roach-fisher uses above one gentle). This hook is the best I have yet used. I struck 15 roach in succession, never missing a fish, and in each case the point of the hook was just where it should be, inside the ring of the top lip.—Yours, &c.,

ROTHERWOOD."

We wish Mr. Williams would get the crystal hook made in all sizes; it is a splendid hook for the artificial fly in our opinion, and we feel sure it would answer well on the spinning flight.

MESSRS. HARDY'S PATENT WINCH-FITTING.

IT is with much pleasure that we direct the special attention of our readers to the illustrated advertisement of several novelties in the way of angling apparatus, which is inserted this week by the Messrs. S. Allcock and Co., of Redditch. Messrs. A. and Co. are always alive to the necessity of improvement in fishing tackle, and they never spare pains or expense to bring out anything they take in hand. At the Norwich Exhibition, Mr. Allcock saw Mr. Hardy's patent winch-fitting, and was so pleased with it, that he gave a hundred pounds for the sole right to manufacture it, and has since spent hundreds of pounds in taking out patents for it in foreign countries. He was perfectly right in doing so, for the simple reason that it is a thoroughly good thing. Mr. Francis, of the *Field*; Mr. Wheeldon, of *Bell's Life*; Mr. Ffennell, of *Land and Water*; Mr. Mather, of the New York *Forest and Stream*; and many other prominent anglers and authorities, have spoken very highly of it. We had the pleasure of noticing it before any of these gentlemen, and are not a little gratified to find our opinion backed up by theirs. In noticing it, we suggested that its usefulness would be vastly increased if it could be made to fit on to any rod, and fit any winch. We are glad to say that this has been accomplished, and, as will be seen from the cuts in the advertisement, it is made in two shapes. The cost has been reduced to a few shillings, and as it can be purchased separately, we are certain that—in spite of trade opposition—it will soon come into general use amongst English and foreign anglers. We can easily understand trade opposition, because tackle-makers want to sell their own goods, but those who take it up at once will soon reap the benefit; if anglers cannot get it at one shop they will at another, and probably transfer their custom as well. It is in every way such a vast improvement over the old rings that it must sell.

THE "FISHING GAZETTE FLOAT."

THIS is the invention of an Austrian angler, Herr Emil Weeger, president of the Brunn Piscatorial Society, and one of the most ardent and accomplished anglers living. We are bringing it out through Messrs. Allcock and Co., in conjunction with him (he is also the inventor of the "Fishing Gazette Spinner" which we brought out some time ago. If properly made, it acts perfectly, and he has killed thousands of fish with it). This new float is so made that it can in an instant be taken off or put on a line without unfastening the line in any place. It is so extremely simple and effective that we have every confidence in recommending it. It can at present only be applied to large floats such as live-bait floats; but we have another plan of our own in hand which can be applied to a roach float.

In conclusion, we will only add that it is not likely we should bring out any bait or other tackle in connection with this paper unless we had proved its usefulness, and also had the opinions of competent critics on it. If any angler finds any difficulty with anything we bring out we shall be only too glad to do our best to remove it.

THE "FISHING GAZETTE WINCH."

THIS new winch will also be found illustrated and advertised in Messrs. Allcock and Co's. page. We have registered it at considerable expense, and are bringing it out through Messrs. A. and Co., in conjunction with its inventor—Mr. J. T. Harris, of Eastwood House, Hanley, Staffordshire. The advantages claimed for this winch over the ordinary kinds are, first, that by its peculiar shape, it gets rids of those dangerous angles between the rod and the winch in which the line so frequently catches, secondly, its peculiar shape imparts great strength to it. Every angler knows that the ordinary winch with wear and tear very often becomes rickety, caused by the great strain on the screws set close together at the fastening of the winch to the winch plate. A glance at the illustration will show that in the "Fishing Gazette winch" there is no central point—or pivot, as it often becomes—the screws which holds the winch plate to the winch are far apart, like the bolts in the iron chair which holds the rail to the sleeper. There can be no rocking or getting rickety; and further, this plan permits of the doing away with all the side bars, thus preventing friction, and permitting the line to be freely handled. Have not many of our readers often been bothered by the old-fashioned side bars preventing their getting at the line on the winch and undoing a "catch" when the line has been "over wound" or wound up loosely? The winch will be made of all sizes, and of brass and ebonite, with check and without. We trust all anglers will examine it for themselves, and not listen to the objections of a tackle-maker, who naturally wishes to sell his old stock.

Of course, there are many tackle-makers who are above this sort of thing; but we know, from practical experience, that there are others who will "run down" any novelty, however good, if they think it will injure the sale of their own goods.

KING'S LYNN ANGLING ASSOCIATION.

THE first annual meeting of the members of this association was held at the Town Hall, Lynn, on Wednesday evening. Mr. F. Ludby, the president, took the chair, and called upon

Mr. H. Bradfield (hon. secretary), who read the following report:—

The committee have much pleasure in reporting to the members at the close of the first year of the association. The year has been eminently successful, and they believe the association has been established upon a sure and sound basis. They take this the first public opportunity of acknowledging the many kindnesses shown, and the help so freely given on all sides, since the commencement of their term of office in January last.

The first work of the committee, after organising the association, was the provision of angling for the members, and they at once entered into negociations for the hire of about ten miles of the fishing in the Middle Level Main Drain, which they secured for the year to March, 1882, at £10; and they look upon this hiring with some degree of satisfaction, as it has been much fished by the members, and has been productive of what may be considered good sport, if the generally unfavourable season for angling is taken into consideration,—the reports from all parts of the country showing that the past season has been anything but a favourable one for sport.

The next work of the committee was the securing of the fishing in the waters of the Corporation, and an agreement was entered into with the Corporation for the hire of their part of the Gaywood river at a nominal rent for the first two years, subject to certain conditions as to stocking the same with trout.

The riparian owners of those parts of the river above the part owned by the Corporation were then asked for their support and co-operation, which they most readily promised; and offers of help towards stocking the river with trout were received by the committee. During the past year presents of trout were received from Mr. C. W. Harding and from Mr. B. Littlewood, of Huddersfield; and promises for this year have been received from Mr. Burkitt and Mr. Archer. The committee feel sanguine that, with this help, and the number of trout they will be able to hatch and turn into the river themselves, there is every prospect of this part of the work proving a success, and they believe that the river will be productive of good sport in the course of fifteen months from the present time. The Marquis of Cholmondeley has very kindly made over to the association his fishing rights in the river at Grimston, &c., and this has enabled the committee to protect the river at a part where it is of vital importance that it should be thoroughly protected, viz., on the spawning beds. Hitherto this part of the river has been seriously poached, but the committee now believe that to be all at an end, as the Earl of Romney's and Mr. Anthony Hamond's keepers will protect it against poaching.

The agreement with the Corporation also gives to the association the control of the fishing in the Walks Rivulet, the Long Pond and the Loke, and it is provided that the association shall stock, and keep continually well stocked, the same, for the angling of inhabitants of the borough generally, free of charge. It has been the desire of the committee to loyally observe and carry out this provision; and in March last the Gaywood river was dragged, and the fish then obtained were turned into the ponds and rivulets, with the result that, notwithstanding the unfavourableness of the season, the fishing, so far at least as the Long Pond is concerned, has been far better than previous years.

In addition to the fish obtained from the Gaywood river, a handsome present of golden tench was received from Lord Walsingham, and turned into the Long Pond. They were a splendid lot of stock fish, and the committee feel satisfied that if they are properly protected for a time, the pond will be found to be well stocked with them.

It may be as well to mention here the subject of protection of the fish in the rivulet and ponds, as complaints have reached the committee that the association have not done anything to enforce their rules, regulating the fishing, or taken any steps to punish any infringement of them; but the committee having stocked the waters, and put up notice boards regulating the fishing in the interests of the public in general, the public should see to it that their part of the obligation is fulfilled, by insisting that all who angle in these waters shall conform to the rules, and by immediately reporting to the association any breach of them. During the past year two or three cases were reported to the committee, but the information was so vaguely and tardily given that it was found to be useless to proceed against the offenders. The committee would strongly impress upon the minds of all who angle in these waters, that it is absolutely necessary for their own interests that they should see the rules strictly observed and carried out by one and all. In consequence of an unfortunate accident on the railway, the fishing in the lower part of the Walks rivulet has been utterly ruined for the present, but it is hoped that the water can be restocked in the course of a few months at a small expense. The committee take this opportunity of acknowledging the promptness with which the Great Eastern Railway Company made recompense for the damage caused by the accident, and, although it has been very much the fashion to decry the Great Eastern Railway Company, the committee can speak in far different strains, as the company have readily met their wishes in every way, by stopping trains at Middle Drove station for the convenience of anglers, and by granting return tickets at single fares to many of the stations round Lynn, and the same privileges are promised for 1882.

The committee have received the permission of several gentlemen in the neighbourhood to take trout ova from their trout streams for artificial hatching, and Mr. C. W. Harding has undertaken the obtaining of the ova, and has put up an additional apparatus for the hatching of it when obtained. Trips have been made to Heacham, Castleacre and Westacre, but at present without success, owing to the want of knowledge of the habits of fish by the keepers. It is necessary that the fish should be very carefully watched to hit the right time for obtaining the spawn, but reliable information as to the time of spawning is not to be obtained; and to show this, the committee may state that two authorities on the same river, and only two or three miles distant from each other, differ to the extent of three or four months in fixing the time at which the trout spawn.

Although Mr. Harding has so kindly offered to hatch off a large quantity of ova for the association, the committee have deemed it advisable to put up a hatching apparatus of their own, and this they have done at the Lynn museum, where they trust it will prove a source of attraction and instruction.

It will be remembered that one of the principal reasons for the formation of an angling association for the borough was that the fishing in the Nar should be secured on the completion of the Nar Valley Drainage Scheme. There is now every probability of that scheme being carried out, and the committee have therefore sent in an application to the Commissioners for the hire of the fishing, and they trust that before the end of 1882 it will be secured to the association.

The committee have much pleasure in reporting that the members numbered 132 in 1881; and they trust that all those who take a delight in angling, or wish to encourage the pursuit of the amusement in others, will heartily give their support in 1882, and so enable the association to extend their sphere of usefulness.

The Secretary, continuing, said: That is the report of the committee, but I would like to supplement it by a few remarks. If the members wish to see the association a great success, they should not only join it themselves, but induce their friends and others to join also; there must be many in a town like Lynn who will gladly assist us if the matter is only brought to their notice personally. The committee have done, and I have no doubt will continue to do, what they can in this way, but what is wanted is the earnest assistance of each member. The degree of success is governed by the means at the disposal of the association, and if members will endeavour to place larger means in the hands of the committee, so as to enable them to take advantage of the many opportunities open to the association, the result will be that anglers will have everything in the way of sport they can desire. Within the last few days I have received a letter from the Marquis of Exeter's pisciculturist, informing me of his intention to start for America in August next for the purpose of bringing over some more black bass, and offering to bring some for us at the sams time. This is an opportunity for obtaining this really excellent fish—both from an edible and a sporting point of view—that may never occur again; but I imagine the committee, bearing in mind the probable requirements of the future, will hardly be in a position to avail themselves of it, unless there is a large increase in the income of the present year over that of last year. It will be matter for regret if this is so, as there is some probability that Mr. Harding would be able to obtain a present of black bass from Professor Baird or Mr. Fred. Mather, of the United States Fish Commission, and so save the association the cost of the fish and their capture in America. Some people express their anxiety about the Nar, and say: "Oh! I'll join when you've got the Nar." Well, that is all very good as far as it goes, but why not join at once, and put the matter beyond doubt by putting the committee in such a position that they can not only hire the Nar but other waters also? (Applause.) I beg to call the attention of the members to the notice on the back of their cards as to the issue of anglers' tickets by the Railway Company. In addition to the stations there mentioned, the company have agreed to issue anglers' tickets to North Wootton and Heacham. These tickets to the latter place will effect a saving on spawning trips, and the addition of North Wootton to the list will probably be appreciated by several of our members. (Applause.) I have also been in communition with a postmaster in the town for the purpose of obtaining similar privileges on the hire of traps as the Railway Company give in railway tickets, and I have great pleasure in reporting that he offers to the members conveyances on very reasonable terms. (Applause.) I think I may say that we are now fairly started on our hatching operations; 5000 trout eggs were sent off from the Howietown fishery, Stirling, yesterday afternoon at 5.19, and were received at Mr. Harding's office at 11 this morning. Mr. Harding will hatch off 3000 of these, and the remainder, 2000, have been put in the hatching troughs at the museum. (Applause.)

The Chairman said he thought it was a very satisfactory report for so young an association. He hoped they would gather strength in the future; and all they needed to ensure success was unity of action.

Mr. J. T. Lindsey then read the statement of accounts which showed a balance in hand of £11 9s. 8d. The total amount of receipts during the year was £49 12s. 6d.

The Chairman moved the adoption of the report, which was seconded by Mr. I. Rix and agreed to.

Various alterations having been made in the rules, the meeting next proceeded to the election of officers, Mr. Ludby being re-elected president, Mr. Weston Jarvis treasurer, Mr. Fitt auditor, and Mr. Bradfield hon. secretary. A committee of twelve was also chosen. Hearty votes of thanks were accorded to Mr. Ludby and Mr. Bradfield for their past services; and it was agreed to hold an anniversary dinner during the present month.

A vote of thanks to the chairman terminated the proceedings.

Reference was made during the meeting to some unpleasantness with Mr. Baker, of Wisbech, the hirer of a portion of the fishing in the Middle Level, which he had sublet to the association at £10 per annum. It appeared that Mr. Baker had since netted the waters, for which the association claimed compensation. The difference, we are told, was amicably settled on Thursday morning.—*Lynn Advertiser*.

JOHN RIDD'S ADVENTURE WHILE LOACH-CATCHING.

From "Lorna Doone" by R. D. BLACKMORE.

(*Continued from page* 8).

FOR now the day was falling fast behind the brow of the hill-tops; and the trees, being void of leaf and hard, seemed giants ready to beat me. And every moment, as the sky was clearing up for a white frost, the cold of the water got worse and worse, until I was fit to cry with it. And so, in a sorry plight, I came to an opening in the bushes, where a great black pool lay in front of me, whitened with snow (as I thought) at the sides, till I saw it was only foam-froth.

Now, though I could swim with great ease and comfort, and feared no depth of water, when I could fairly come to it, yet I had no desire to go over head and ears into this great pool, being so cramped and weary, and cold enough in all conscience, though wet only up to the middle, not counting my arms and shoulders. And the look of this black pit was enough to stop one from diving into it, even on a hot summer's day with sunshine on the water, I mean if the sun ever shone there. As it was, I shuddered and drew back, not alone at the pool itself and the black air there was about it, but also at the whirling manner, and wisping of white threads upon it in stripy circles round and round; and the centre still as jet.

But soon I saw the reason of the stir and depth of that great pit, as well as of the roaring sound which long had made me wonder. For skirting round one side, with very little comfort, because the rocks were high and steep, and the ledge at the foot so narrow, I came to a sudden sight and marvel, such as I never dreamed of. For lo! I stood at the foot of a long pale slide of water, coming smoothly to me, without any break or hindrance for a hundred yards or more, and fenced on either side with cliff, sheer, and, straight, and shining. The water neither ran nor fell, nor leaped with any spouting, but made one even slope of it, as if it had been combed or planed, and looking like a plank of deal laid down a deep black staircase. However, there was no side-rail, nor any place to walk upon, only the channel a fathom wide, and the perpendicular walls of crag shutting out the evening.

The look of this place had a sad effect, scaring me very greatly, and making me feel that I would give something only to be at home again, with Annie cooking my supper, and our dog, "Watch," sniffing upward. But nothing would come of wishing, that I had long found out; and it only made me one the less inclined to work without white feather. So I laid the case before me in a little council—not for loss of time, but only that I wanted rest and to see things truly.

Then says I to myself: "John Ridd, these trees, and pools, and lonesome rocks, and setting of the sunlight, are making a gruesome coward of thee. Shall I go back to my mother so, and be called her fearless boy?"

Nevertheless, I am free to own that it was not any fine sense of shame which settled my decision, for indeed there was nearly as much danger in going back as in going on, and perhaps even more of labour, the journey being so round-about. But that which saved me from turning back was a strange inquisitive desire, very unbecoming in a boy of little years; in a word, I would risk a great deal to know what made the water come down like that, and what there was at the top of it.

Therefore, seeing hard strife before me, I girt up my breeches anew, with each buckle one hole tighter, for the sodden straps were stretching and giving, and mayhap my legs were grown smaller from the coldness of it. Then I bestowed my fish around my neck more tightly, and, not stopping to look much for fear of fear, crawled along over the fork of rocks, where the water had scooped the stone out, and shunning thus the ledge from whence it rose, like the mane of a white horse into the broad black pool, softly I let my feet into the dip and rush of the torrent.

And here I had reckoned without my host, although (as I thought) so clever, and it was much but that I went down into the great black pool and had never been heard of more; and this must have been the end of me, except for my trusty loach-fork, for the green waves came down like great bottles upon me, and my legs were gone off in a moment, and I had not time to cry out with wonder; only to think of my mother and Annie, and knock my head very sadly, which made it go round so that brains were no good, even if I had any. But all in a moment, before I knew aught, except that I must die out of the way, with a roar of water upon me, my fork, praise God, stuck fast in the rock, and I was borne up upon it. I felt nothing except that here was another matter to begin upon, and it might be worth while, or it might not, to have another fight for it. But presently the dash of the water upon my face revived me, and my mind grew used to the roar of it, and meseemed I had been worse off than this when first flung into the Lowman.

Therefore, I gathered my legs back slowly as if they were fish to be landed, stopping whenever the water flew too strongly off my shin-bones, and coming along without sticking out to let the wave get hold of me. And in this manner I won a footing, leaning well forward like a draught-horse, and balancing on my strength as it were, with the ashen stake set behind me. Then I said to myself, "John Ridd, the sooner you get yourself out by the way you came the better it will be for you." But to my great dismay and affright, I saw that no choice was left me now, except that I must climb somehow up that hill of water, or else be washed down into the pool, and whirl around it till it drowned me. For there was no chance of fetching back by the way I had gone down into it, and further up was a hedge of rock on either side of the water-way, rising a hundred yards in height, and, for all I could tell, five hundred, and no place to set a foot in.

Having said the Lord's Prayer (which was all I knew), and made a very bad job of it, I grasped the good loach-stick under a knot, and steadied me with my left hand, and so, with a sigh of despair, began my course up the fearful torrent way. To me it seemed half-a-mile, at least, of sliding water above me, but in truth it was little more than a furlong, as I came to know afterwards. It would have been a hard ascent even without the slippery slime and the force of the river over it, and I had scanty hope indeed of ever winning the summit. Nevertheless, my terror left me now I was face to face with it, and had to meet the worst, and I set myself to do my best with a vigour and sort of hardness which did not then surprise me, but have done so ever since.

The water was only six inches deep, or from that to nine at the utmost, and all the way up I could see my feet looking white in the gloom of the hollow, and here and there I found a resting-place, to hold on by the cliff and pant awhile. And gradually, as I went on, a warmth of courage breathed in me, to think that perhaps no other had dared to try that pass before me, and to wonder what mother would say to it. And then came thought of my father also, and the pain of my feet abated.

How I went carefully, step by step, keeping my arms in front of me, and never daring to straighten my knees, is more than I can tell clearly, or even like now to think of, because it makes me dream of it. Only I must acknowledge that the greatest danger of all was just where I saw no jeopardy, but ran up a patch of black ooze-weed in a very boastful manner, being now not far from the summit.

Here I fell very piteously, and was like to have broken my knee-cap, and the torrent got hold of my other leg while I was indulging the bruised one. And then a vile knotting of cramp disabled me, and for awhile I could only roar, till my mouth was full of water, and all of my body was sliding. But the fright of that brought me to again, and my elbow caught in a rock-hole, and so I managed to start again, with the help of more humility.

Now being in the most dreadful fright, because I was so near the top, and hope was beating within me, I laboured hard with both legs and arms, going like a mill and grunting. At last the rush of forked water, where first it came over the lips of the fall, drove me into the middle, and I stuck awhile with my toe-balls on the slippery links of the pop-weed, and the world was green and gliddery, and I durst not look behind me. Then I made up my mind to die at last, for so my legs would ache no more, and my breath not pain my heart so; only it did seem such a pity, after fighting so long, to give in, and the light was coming upon me, and again I fought towards it. Then suddenly I felt fresh air and fell into it headlong.

GEORGE JAMES EATON, of Starkholmes Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[ADVT.]

RIVER REPORTS.

MID-THAMES.

My business in this state
Made me a "looker-on."

—SHAKESPEARE.

Thames fishermen can only look on despondingly at the river, which is now, as per usual at this time of the year, of the proverbial pea-soup consistence—its thickness being daily added to by continuous rains. Anglers have come and anglers have gone from most of the best stations on the upper and mid-Thames during the past week, and left not a trace behind them, except possibly a cuss deep, but not loud, a box of gentles, and a squashy bran-besprinkled quagmire behind a bush. I have infinitesimal takes of roach and chub sent to me to report, but the items are not worth recording, unless I was "raving in the lunacy of ink," which I am not at the present moment, in consequence of having to contend with bad materials all round. The river is really fishable for bankmen, but I cannot conscientiously advise a long journey this way—which might certainly only end in discomfiture. Another week without much rain and the river will be in superb order for winter fishing.—MARLOW BUZZ.

Thames (Goring).

Water very high and thick, shall have a flood again. Prospects for the next few days look bad unless better weather. Nothing has been doing here this week, water has been too thick.—JOHN RUSH.

Thames (Richmond).

The river, since my last report, has been very high and thick in colour, but has made a start to abate now, and by Sunday will be in fair fishing order if we get no more rain to upset it again. The bank anglers have had a good time of it, some of them getitng some very good roach out of the eddies along the banks. The punt fishing during the week has been as follows:—C. Brown, two days, best day, 3 dozen roach and dace; H. Mansell, two days, 5 dozen dace; H. Howard, one day, 2 dozen dace; H. Wheeler, two days, 4 dozen roach and dace; Toby Brain, two days, 12 lb. roach; J. Bushnell, three days, best day 15 lb. bream. On Tuesday evening, the Thames Angling Preservation Society gave a dinner to their keepers and those who assisted them in their duties in preventing the illegal fishing in the Thames, and to all the lock-keepers and Thames Conservancy river keepers, as far up the river as Bell Weir Lock, at the Station Hotel, with Mr. Spreckley in the chair, and Mr. W. H. Brougham in the vice-chair. Mr. Monro put a good old-fashioned dinner before the keepers of the fishes, which I believe every one enjoyed; after which a very enjoyable evening was spent in harmony. When the Act of Parliament was called, at eleven o'clock, it seemed too early to leave such good company, but it was as well, perhaps, as some of the keepers had a long way to go to their homes. Hoping to have the pleasure of seeing the same faces again for many years to come.—JOHN BUSHNELL.

Thames (Walton).

Water rising all the week; wind, S.W. to W., and in turns N.W. Water rather thick, but in good condition for jack and perch if they would only bite. Water falling and clearing a bit; with slight frosts and dry weather the water will be in good condition for anything, and this, I think, will be the latter end of the week. Wednesday, Thursday, Friday and Saturday no fishing. Sunday, off the bank, one jack, 2 lb., 1 do. 3 lb., 1 do. 4½ lb.; Monday, Mr. Mackerell, with Geo. Hone, one bream, 4 lb. (a beauty), and one chub, 1 lb.; water rising knocked them off; Tuesday, no fishing; Wednesday, bank, two perch, undersized, put back.—HENRY E. WOOD.

Thames (Windsor).

Water still very much discoloured, but has quite left the banks, so that bank anglers can get about now. If we have no more rain, the water will be in excellent trim next week, and good jack fishing will be had, also perch and roach, though some of our best water for chub has suffered severely from the taking away of the overhanging boughs, &c. At present the tail end of a lob worm is the best all-round bait. Sport has been poor here; only small bags of roach, perch and chub being had, and a friend of mine has lately had few small barbel.—B. R. BAMBRIDGE.

Ancholme.

Though the continued fine weather has been all that we could desire for angling at this season of the year, I have not heard of a single rod being out during the past week. The pike ought now to run pretty freely at the spoon or natural bait There is sometimes a difficulty in getting natural bait when wanted. It is a good plan for anglers who come from a distance to bring suitable live or dead baits with them. There is then no delay in commencing operation.—THOMAS FORD.

Dove.

Though we have had no frost, grayling fishing has improved since I last wrote. This week the fish have been rising well to the rough bumble and the February reds. The latter flies are now on the water, which is much before their usual time, and is accounted for by the extraordinary mildness of the weather. The baskets during the last few days have averaged from five to eight brace. I should not be at all surprised if the present warm temperature of the weather continues to find the blue duns out before long. The river has run down into very nice fly-fishing order, but I cannot hear of any great quantity of coarse fish being captured. The best dishes have consisted of roach, bream, and perch, which are taking the cockspur worm best. Pike are not running in anything like their usual form, and our jack fishers are loud in their complaints about the badness of their luck amongst the genus of this water. Let us hope matters will improve before the close season puts a stop to angling.—THE SPLODGER.

Ilfracombe (N. Devon).

Streams are very high for any fresh-water fishing, and in sea-fishing there is very little doing, a few fine cod has been taken with ground lines, also a few conger and ling. Two large skate was brought in on Tuesday weighing about 60lb. each, a crab was caught with hook and line weighing 5lb., there have been a few conger and ling caught from the pier and jetty with hand lines, one boat was out Wednesday morning and had a short drift with three nets and brought in two herrings, plainly showing they have taken their departure for this season, weather mild for the present.—E. COMER.

Lea (Rye House).

The water has been very thick the last three days, but it is clearing off now, and it will be fit for fishing by Saturday or Sunday. Wind south-west and very mild. There were some nice roach taken out of the Stort on Sunday.

Medway (Tonbridge).

The river, true to its name, is still the Mudway, and there will be no fishing for a week at least.—YE THAMES WATER-RAT.

Trent (Nottingham).

There have not been many anglers out on the Trent during the past week. Heavy rains on Sunday brought down a big rise, and until Wednesday the river was scarcely fishable. On that day—and a glorious spring day it was—some small lots of roach and dace were taken with the cockspur worm at Radcliffe bend and in the quiet nooks at Wilford. Considerable curiosity has been evinced at the clubs to get a glimpse at a very large pike which, accounts go to prove, was killed on Tuesday in a private lake in the Worksop district. The fish weighed 26¼ lb., and measured round the girth 23½ inches. The actual length measurement being 3 feet 5 inches. Mr. Stanley, the well-known animal and fish preserver of this town, is now busily engaged in setting it up; and, in addition, he has three others, weighing in the aggregate upwards of 43 lb. The recent warm nights have set lamprey eels running, and large quantities continue to be taken on the weirs in this neighbourhood. On Thursday the water was improving, and prospects are more favourable.—THE MAN AT THE CLUBS.

Trent (Newark).

The river has been in a state of flood all the week, and nothing much has been done in the way of sport. I heard of one of our anglers having 10 lb. of roach last Friday; but I have not seen a catch anything like that, a few roach and dace have been had with cockspur worms for bait, but the numbers have only been very meagre. I got a 5 lb. jack last Saturday, live-baiting, out of a backwater. At the time of writing, Thursday night, the water is going down very nicely, and if the present condition of things should continue, and the wind and weather as at present, it ought to be in fairish condition by Saturday, and anglers who have a few gentles, ought to get a few roach and dace, only they must use groundbait very sparingly, a little bran and bread mixed will be the best; failing gentles, a few cockspur worms will be nearly as good. Chub fishers can renew operations in a few days, the last heavy floods have driven many of the jack into the backwaters, and anglers will have to look for them there, and try them live-baiting, but only for another week or two; they are very forward this year, and ought very soon to be let alone and left to follow their domestic operations in peace. Thursday night, water improving nicely; if only Jupiter Pluvius will grant us a truce, I think we shall be able to have a little sport.—THE TRENT OTTER.

Tweed and Teviot.

During the past ten days both these rivers have, owing to the openness of the weather, afforded excellent opportunities for bait-fishers enjoying their pastime, and many have taken advantage of the chance. Fair baskets have been got in both rivers, and the floods of the past week have very materially helped the angler to fill his creel. Although angling with roe is strictly prohibited and against the Act of Parliament, still it is very much used in this neighbourhood, and as it is a most deadly bait, many baskets said to be killed with worms, are got with "putty." These roe fishers are every now and again caught by the water bailiffs, but many get off scot free, as it is a most difficult duty to get near these persons when angling with the "doctor," as it is locally called. The work of salmon spawning goes on apace, the "beds" being literally covered with fish, all bent on nature's duty, and should the present great show of fish be any criterion for the forthcoming season, great hopes are entertained that the salmon angling of 1882 will be as successfnl as that of 1881. The fungoid disease, which was very prevalent about a month or six weeks ago in the river, has greatly abated, and the frequent floods we have had have been of great benefit in clearing the river of the disease and weak fish, and also of taking the early spawned ones down to the sea. Of course the weather has had much to do with the early and successful spawning of the salmon (and I may here state that the spawners have all but completed their work, and spawning for this season will be all over in about a fortnight), as up to the present time we have had neither frost, snow or ice, this being a different state of things from last season, when the Tweed and Teviot had at this date been ice-bound from bank to bank for nearly a month.—ANGLER.

Wye and Derwent (Derbyshire).

The weather during the past week (with the exception of to-day, Thursday) has been more like the middle of April than the second week in January. What with the weather being so delightful and the river in fair order for all kinds of angling, a good many anglers have been out, and most of them have made a very good beginning, both with fly and bottom fishing. Last Saturday a Nottingham angler killed 6½ brace of grayling and eight brace of nice roach and dace, on the Derwent, with maggots for bait; and several other anglers have been killing a great quantity of roach and dace, and a few grayling and perch, with both brandling worms and maggots, the gentles taking the greatest quantity of fish. The fish have fed the best in the swims close to the rough streams, with a gravelly or sandy bottom, and have taken a swimming bait the best. Yesterday, Wednesday, there was several of the old hands out trying their skill with the fly, both on the Wye and also on the Derwent (Chatsworth fishery), and most of them succeeded in killing a few brace of grayling with furnace and dyed hackle flies. The fish rose the best in the deep, slow runs, and in the tails of the stream, and rose the best from one to three. The pike fishers on the Derwent have taken a few pike round and about Whatstandwell, with both trolling and live bait fishing, with small dace for bait. Good sport ought to be had next week on the Wye with the fly.

Yore (Yorkshire).

Still nothing doing in this district, as during the past fortnight a succession of heavy floods have prevailed; even the bottom fishers have not had a chance of getting to the river.—Francis M. Walbram.

CLUB AND OTHER JOTTINGS.

By L. B.

Most anglers one meets are wearing very long faces. "Very worst season I ever knew," says each, adding dolefully, "and this is a lively look out for the finish, isn't it?"

With rivers in heavy flood, water the colour of clay, meadows and lowlands adjoining the said rivers all under water, it is quite a treat to have a few recent good takes to chronicle.

Mr. Wainwright, of the Dalston Angling Club, is credited with the capture of a 20 lb. pike.

Mr. Latham with that of nine perch from the Ouse, weighing in the gross 32 lb.; this gives an average of about 3 lb. 9 oz. per fish. Query.—Are they entitled at that weight to rank as pike, or are they still "jack"?

Among the Good Intents again I hear of Mr. Saunders having 12 lb. of handsome perch. But the best bit of news comes for Hurley, where in one day's fishing from a punt Mr. ——— managed to well 50 lb. of handsome roach and perch; a brother bob, hailing from the same society, fishing from the bank, succeeding in basketing 29 lb. of roach and perch. There have been a number of good takes from here lately, though, of course, the above two stand a long way ahead of anything else at present. I cannot help doing a mild crow over Hurley, it has been my tip to the readers of the F. G. all the season, and that a good many were aware of it besides myself is evident from the fact that during Christmas week, at the inn where my informant put up, there were over thirty anglers staying, for whom beds had to be made up on the floor, tables, &c. Remember, however, that Hurley is nearly six miles from Maidenhead; the price asked my informant and friends for a trap being 7s. 6d.; though, for the return journey, they were informed they could procure one for 5s.

Now for the history of two sad failures. I give no names, doing so might seem like putting pepper and vinegar into an open sore.

1st scene, Tring Reservoir; piscators in punt some considerable distance from bank, pike-fishing in very deep water. 1st piscator, with heavy fish on: "Now, put the gaff together and stand ready." 2nd piscator, or keeper, I am not sure which: "Oh! no, I have a net here big enough to land the heaviest fish in the water." Fish fairly killed, netted, and lifted some inches above the surface of his native element; net was very rotten, fish fell through, broke away. He is said to have measured quite—really I am afraid to say, lest the readers of the F. G. should think I am romancing—and, as to his weight, the lowest estimate is 30 lb. The moral to be drawn—but no, the moral is self-evident, rather let us draw the curtain.

About the second failure I will quote from a contemporary, though I have heard accounts of it from other quarters:—"At St. Margaret's an angler, who was live gorge-bait fishing, hooked what he thought was either a pike or a bullock, and was so excited that he called loudly for assistance. Several anglers near quickly made to the spot, and, his rod being seized by Mr. Flymey Da Bosta, that excitable piscator cleverly brought it to the side, and it proved to be a trout that all over would have weighed 12 lb. or 14 lb. Not liking the look of the company, his troutship gave a last despairing leap, and, presto! snap went the gimp. The party who hooked it repeated the Commandments in six different languages, and when he was sufficiently composed remarked that, as he found the fish he certainly ought to have some of the pleasurable pain of losing it."

A trout with a live bait gorge-hook in his gullet stands a poor chance, and is almost certain to die a miserable, lingering death.

The St. Margaret trout seem very unfortunate. I recollect some years ago, one bitterly cold winter's evening, being shown one in Mrs. Durnell's cottage, it was a long, thin, ill-coloured fish, which, speaking from memory, weighed 7½ lb., and should, if in condition, have weighed 10 lb. It had that day been taken paternostering at the mouth of the Magnum Stream, by Mr. Imey da Costa—beyond doubt the same gentleman above referred to. The reason given for its retention being that the hook was deeply embedded in the gullet. Howbeit, that trout haunted me all night; laid in a white cloth, it looked more like an ugly, gunpowder-blackened corpse in its winding-sheet, than anything else.

Undismayed by their previous want of success, at least in the case of the two last-named gentlemen, Messrs. Hobden, Geen and Pitts determined upon another trip to Evesham. With what result may be judged from the following extract from a letter just received from Mr. Hobden:—"Wednesday, the 4th, was a grand day, and on our journey down we noticed that wherever we sighted the river it was well within banks, and of a good colour; but above Oxford we found it all over the meadows and in flood. Now the moral of this is that the condition of the water below is no criterion of what it is above Oxford, and the information may be of use to many anglers, as it does not seem a fact generally known even to very experienced Thames anglers. Mr. Geen, for instance, would not hear of its being a flood above until he saw it by means of a punt, with which we reached the lock. Messrs. Geen and Pitts managed slyly to annex my favourite swim, where there was a coign of vantage in the form of a bit of dry bank. Retribution followed sure and quick, for the punt having drifted away, they had to wade back to the lock, a distance of nearly half a mile. Sweet, however, are the uses of adversity, for when the two above-mentioned anglers reached terra firma, and had got their boots on again, they discovered that their previously numbed extremities were now warm as toast. Just as well, as on this occasion there was no kind-hearted Mrs. Sawyer handy to supply hot water and nice dry, warm stockings." About half-a-dozen roach and perch constituted the two days' joint take of the worthy trio.

On Tuesday, 17th, the annual supper of the Westbourne Park Piscatorial is announced to take place at their headquarters, the Pelican, All Saints Road, Wesbourne Park, and after the spread the Westbourne Park Piscatorials will be glad to welcome any brother bob who can spare time to drop in and sing, or listen to, a good song.

Haslett, the well-known Chertsey pro., writes:—"There has not been much doing, old 'Father Thames' changes his moods so often one scarcely knows when to have him. Fishing at odd times with Mr. Allen I have had some good roach and a few perch, some of the former going 1 lb. and over. The water came down thick again yesterday (Tuesday), but if we have no more rain it should be right by the beginning of next week.

On Monday evening next a joint meeting of the committee of the East and West Central, and it is hoped of the Central, or Third, Association, will be held at the Portman Arms, Great Quebec Street, to consider what united action should be taken by London club anglers to further the proposed scheme for the culture of "coarse fish," and the renting of suitable waters within a reasonable distance of London.

Re the spawning of dace. I don't wish to go at length into this question, as I feel convinced in my own mind that there are two sets of spawning fish, and for once I cannot agree with our editor "that these late spawners are fish which from some cause or another were prevented from spawning with the general body in the spring," for is it probable that fish which had been maturing spawn for several months, and had only been prevented from shedding it "from some cause or another" with the rest of their kind in the spring, should retain it some four or five months and quietly deposit it in the autumn? No, I am strongly of opinion that the regularity with which this late contingent spawn year by year points clearly to the fact that they were never intended to spawn, nor were they ready to, in the spring, and that doing so in the autumn is in accordance with a doubtless wise law of nature, though the benefit thereof is not as yet understood. I have not as yet heard any one advance the theory that the same fish spawned twice, and all who have written in the Gazette have carefully guarded against anything which could be so construed.

All who know Mr. C. P. Wheatstone, the president of the Stanley Anglers, a thorough sportsman, and ever foremost in anything having for object the advancement of angling interests, will be very grieved to hear he is laid-up from an accident resulting in a broken rib, dislocated shoulder, and injury to the muscles of the chest, and will wish him an easy and speedy recovery.

It is with feelings of deep sorrow all who know Mr. Greville Fennell will hear of the sad loss he has sustained by the death of his wife, who had been the sharer of his joys and sorrows for over 50 years.

MR. GREVILLE FENNELL.

Just as we are going to press, we hear the sad news that Mr. Greville Fennell has lost his wife. Every angler will share our sympathy for one who thus loses the loving companion of fifty years of married life.

UNITED BROTHERS.

Several of our members were out on Sunday, the 8th inst., but only one turned up in time to weigh—W. Tyler, with a few very handsome roach, from the Thames. The members will fish a pegged-down match on Sunday next, the 15th, for five very useful articles, given by members. Water to be named on Saturday, the 14th.—William Belton.

Jan. 11.

SECRETARY WANTED.

An angler to take the secretaryship of an angling society already formed and enrolled, situated in the neighbourhood of the Hackney Road. For further information apply to R. Ghurney, 10, Baches Street, Charles Square, Hoxton, N.

Billingsgate Market.—Messrs. Hewett and Co's steamers only are now running to Billingsgate. A correspondent says that when they convey their fish to the market at Shadwell, which they contemplate doing, there will be obviously little or no necessity to retain Billingsgate as a water-side market.—*City Press.*

Gregory's Spinning Baits. "The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by he press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived. Address, James Gregory, Vyse-street, Birmingham.—[Advt.]

ANSWERS TO CORRESPONDENTS.

F. HUGHES.—We have made inquiries and cannot find that the address you give is correct, and your name is not in the Directory. Under these circumstances we must decline to insert your remarks; but for your own edification may inform you that Mr. Jardine is strongly against the use of two rods, and both he and Mr. Knechtli took their splendid lot of jack all in two days, and on single gut traces, using only one rod apiece, and picked their fish out of clear though flooded water by hard fishing, mostly from eddies and corners. The fish were caught either by spinning or paternoster, or by live-snap. It reminds us forcibly of the fable of the fox and the grapes when we hear anglers running down a successful take, which everybody knows they would sell their clothes to be able to equal.

PISCATOR, Nottingham.—The longest throw with the pike-bait at the FISHING GAZETTE Tournament was made by Mr. Little.

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

WANDERINGS—VERY MUCH WANDERINGS.

BY A THAMES FISHERMAN.

SIR,—I have wasted the past half hour the victim of a severe fit of indecision as to which of the many reaches where the swims are familiar to me, shall be the subject of this letter. I have now so far recovered as to be able to determine that I must, to be methodical, start from one of the ends of the stretch of water which I have already written you a description of. Shall it be up, from Old Windsor Weir towards the river's rise; or down, from Egham Lock towards its fall? That's the question, to decide which I may yet have to consult a flight of birds, draw lots, or spin a copper. Down stream is homeward to me; down past Staines, the Hook, Laleham, Borough Head, Chertsey weir and bridge, past Domsey, Hatches Boughs, Docket, and on to Shepperton, Halliford, and Walton; at each of these places every tree, bush, gate, or other landmark, is occasionally requisitioned to aid me in fixing my poles in the exact spot necessary for the successful fishing of each pitch. Let it be a shallow, a deep, a straight run, or an eddy, its depth and the nature of its under crust are as well known to me as the particular fish which they are most likely to produce. Yes, down-stream letters will be an easy pleasant task, and I hope they may prove interesting to my readers; but, before I decide to go down, let me just think a moment or two of the many happy profitable days that I have spent between the beautiful banks of the up-stream reaches. Up through Datchet, noted for its drain-fed, dropsical roach, and the first of that much-loved human species, the riparian owner, in the person of Her Most Gracious Majesty the Queen. When His Royal Highness does me the honour to have a a day with me, I shall do my very best to give such a jolly good Prince a day's sport: but, by all that's in me, I shall try ever so much harder to induce him to ask his royal mother to give the word that shall open the towpath between the Albert and Victoria bridges, for, so long as this remains closed, we are in imminent danger of being ordered off from some other portions that I could name.

Up through Windsor, with its unrivalled walks and scenery, its first-class barbel, jack, and chub fishing; its numerous bank swims; its choice of railways, and its indifferent preservation society. Through Maidenhead, Cookham, and Marlow, the much-frequented haunts of oarsmen, artists, tourists, and pleasure-seekers of all sorts and conditions, from the boisterous beanfeasters to the "too-too" loving couples discovered here and there, hid away amongst the osiers and bullrushes. On to Henley for its monster chub, Sonning for its barbel, Pangbourne for its roach, Goring for its perch, Moulsford and Wallingford for its jack, and Shillingford for another grand day amongst the barbel, which are veritable innocents compared with those down Chertsey way. At Clieveden, we must have a few hours amongst the shoals of big perch, but we will quickly pass the much-poached waters of Abingdon. A day we will spend—if it please you —at Oxford, and then on to the strictly preserved waters of Eynsham; a day or two here if you can spare them, and, if possible, let's on to Lechlade. Then right-about-face homewards, fishing each and every good swim discovered during the up-stream travels.

Shall I ever do this journey o'er again, except in my smoky musings or in my pleasant dreams? It's no longer the correct thing to spend a holiday like this; slaves of fashion have no choice, they must rush here and there, doing ever so many thousands of miles in no time. Just fancy the horror of a modern somebody at having to admit to an inquiring friend that he had not seen the briny or gone one hundred miles from home. I can, and do, forgive the pretty vain ladies who lace a little too tight; but, by Adam, I have only pity for the man who maps out his holiday trip with both eyes shut to what would be best and happiest for him.

Come, ye old patrons and lovers of the Thames, let the week preceding your next autumn holiday find you in correspondence with myself or some other professional, for an up-Thames voyage. Come singly, come in pairs, come as you will, but come. Forget, for once, the charms of Margate, Ramsgate, Brighton, and other seaside resorts; come and sniff the fresh, delicately-scented morning air, and see the sun rise in its splendour to gild the glorious panoramas of nature which will unfold themselves to your view. Trust me to know the swims for this particular season. I will put you into many a gentle, straight-run, sandy-bottomed, five-feet, rush-fringed pitch for roach; we will fill the well with these fish, and then pack a basket of the best for London. We must direct them; What name? What club? Shall I say A. J., Esq., The Gresham Ghost? Good name, yet I fear his pikey wrist has forgotten its once clever roach-strike.

The chub shall find us busy, to their great cost; we will search for them in the shallow scours underneath the trees and bushes, and a basket of them shall soon be ours.

I will have good store of minnows and you shall have perch galore; every little opening round the sedgy osier-clad islands we will try with care.

Jack you shall have. Can you spin, sirs? If not, let it be gut with a snap, as we can then return the small fish, and the large ones will give us play; don't let us sculldrag them with gimp.

I pride myself on being able to select, bait, and fish a barbel swim, therefore, rest easy on their account.

Trout you would like to fish for? So should I, but not too often, or some day I may catch one and then, what then? Why it will be a chub or jack.

Come, ye Piscatorial, Gresham, Stanley and Larkhall men, say you will for once forego the pleasures of crowded apartments, bad cooking, and a thronged beach, for the quiet health-giving up-stream reaches of Father Thames.

I remember to this day every little incident of my first fishing trip to Lechlade; how I thought each scene more beautiful than the previous one, and how each day provided a series of pictures, the faultless and striking features of which would sure to be detected and pointed out to me by my considerate customer, who, I am sorry to say, has long since done his last journey to where a written character is of no avail. But who knows that the good wishes of all those whose path he brightened may not have preceded him and made his way smooth? Picture him, kind reader, at full length along the bottom boards, his head resting on a rug, inviting me to put myself at ease. Our punt is fastened to the stern of a horse-towed barge, and, as we travelled slowly up, he said:—

"I have wandered rod in hand in many countries. I have seen much to astonish, much to admire, many scenes that were awe-inspiring, grand, and beautiful; but during all my wanderings to and fro I have never witnessed such exquisitely beautiful scenes as those we have passed through to-day, and never have I felt more supremely, lazily happy than I do at this present moment. I have fished in most of our English rivers; the Taw, Torridge, Lynn and Exe, have given me creels full of their plucky diminutive trout, and the Test has added many a dozen of grayling to my long score of captures. On the banks of the Trent I have tried my hand among the roach, chub and barbel; and in a flat-bottomed, equilateral triangle-shaped boat, locally called a raft, I have sat many a night out on the breamy Bedford Ouse, with a lantern fixed in each of the two angles facing the stream, the third angle or point being pushed into the sedges, which, fostered by the muddy banks and sluggish stream, grow to an extraordinary height. When the swim has been judiciously selected and carefully baited, the fun will be fast and furious between dark and dawn. You may safely reckon that as soon as the sun peeps out the bream will go dead off; then for breakfast and a well-earned rest.

"On the Norfolk Broads I have spent a week or two vainly hoping and trying to secure one of the mighty pike or perch which we hear so much of and never see; many health-giving days have I passed on the Lea, but I must confess that the canny fish of that river have suffered little diminution by my skill.

"I am at home on the banks of the Colne, whether it be Hythe End, Heath's, Wraysbury Mill, Walker's, Horton Mill, Dr. Meadows', Ghurney's Mill, Ward's Mill, Poyle Mill, Longford or Harmondsworth—(the two last places are not so famous for fish as for fish-poachers; here the latter are to be found as clever as generations of judicious marriages between the poaching inhabitants of the two villages, and constant practice, can make them; their skill is likely to be maintained, as a certain amount of practice is assured to them by kingly charters)—at Hubert de Burghs', Godfrey's, Iver, Uxbridge, Rickmansworth, or never-to-be-forgotten Mercers' Mill, at West Drayton, where, as a lad, my uncle, a clever angler, gave my cousin and I our first lesson in angling. I was not so unmindful of hunger at that time while the fish bit as now, and about twelve I persuaded my relatives that it was time to lunch. A veal and ham pie was produced and placed upon the low wall overlooking the mill tail; just then our tutor hooked a large chub, and as I rushed to pick up the landing net I quite forgot my hunger and the means of satisfying it; unfortunately, I touched that veal and ham pie with my elbow, and it toppled over into ten feet of water. My hunger instantly revived, and you might have heard my boyish heart go thump, thump, as I watched the swinging motions of the slowly sinking dish. A grand river for fish is the Colne, and lucky is the man who can afford to pay £30 per annum for one side only of less than half-a-mile, as does the renter of Cudham Mill water.

"The old river Wey, with its tortuous windings, poaching-proof rooty haunts, and old-fashioned scaly inhabitants, has helped me to much priceless pleasure. On many a bright autumn day I have laid me down for shade and rest between the trees that so gracefully robe its, here and there, high banks, and witnessed that which was far more pleasing and interesting to me than a Lord Mayor's procession. First to be detected by the weak eye is the chub, as it rises to be near the falling insect; and as I have stretched my neck to peer deeper, these fish have darted off, and a shoal of roach have come sailing by, the old and lazy bringing up the rear; then came a bream, the scout, no doubt. Yes; the shoal followed, demure, stately, and solemn, as the good sisters of Nazareth House. Next, a troop of minnows came gambolling in, as if just escaped from the restraint of a board school; with one solitary exception, they were as unmindful of my worm-baited hook as their predecessors. This little exception meant business, and had succeeded in getting the tail into him when some half score or more of perch chose to pass that way; need I say that the entangled minnow was cruelly deserted by all the rest, and that there was a rush at him by his five-barred enemies, the biggest of which succeeded in carrying him off—a little way.

"The sly, foxey Mole bream have put me on my mettle. Once I determined to wait upon them in a certain hole at Cobham until I did get them. Three long days I assiduously courted them, and never a bite rewarded my early, late, and constant attentions. The fourth day was preceded by a severe thunderstorm, and on reaching the river and seeing it discoloured, I considered myself released from my rash determination. Just to prove how useless it would be to fish, I put my tackle together for a swim. A couple of sweet-smelling brandlings were soon upon the hook, and, as I lowered the rod into the rest, the float cocked, and, strange to say, it immediately came up upon its side, and then slid up stream and down out of sight. It was a whacker! The bank was high, and my friend had deserted me, after the first day, with the opinion that if I kept my resolution I was settled on that swim for a month, at least. What a grand day I had, and all good fish! I went to bed that night a tired, happy man.

"After all my wanderings, numerous successes, and numberless failures, I am pleased to return to grand incomparable Old Father Thames, where I need not seek for order or rent; where all are at liberty to wet their lines in peace so long as they do not infringe those good rules laid down in the interests of fair sport.

"I sometimes ask myself if it can be possible that there are millions of toiling men whose love of nature would be as great as mine were not the beauties of spring, the fragrance of summer, and the splendour of autumn, unknown to them. Had I pen that would write, or voice that could speak, I would use them, hoping to hasten on the day, which is coming, when slavish unceasing toil will no longer be the price demanded for the bare necessities of life. Science, machinery, emigration, combination, and education, more merciful than man, are at work; and will most assuredly work out their task of lightening and redistributing the labour necessary for the life and comfort, if not of all, why then of the great majority instead of the small minority.

"Stupid fears, selfish interests, class prejudices, cruel indifference, robbery and jobbery, are clogs upon the wheels; but the wheels turn, and are bringing the day when men shall no longer live, slave, and die, without occasional communion with nature's truthful preachers.

"Can any one have witnessed, as you and I have done these ten days past, the hills, dales, woods and meads, all clothed in their gayest, pleasing at every turn—and sometimes so grouped as to cause us to stand and wonder at their beauty and grandeur—without feeling that of a certainty an all-wise Creator must have meant these scenes for truer, better men, or for all? That they may have been intended for all, and that the day may soon come when all shall have opportunities of enjoying them, is my earnest, humble, prayerful hope."

Rat tat; that's the postman, and he has brought me news that prevents my thinking or writing of anything else. For, so long as I can remember, I have derived pleasure, instruction and pluck from the writings of one of the oldest and best friends we fishermen and anglers ever had. He was, and is always, to be found fighting for the right, no matter the odds. On Saturday last he penned a letter which clearly shows his anxiety to take an active part in the coming work of remedying my "queer complaints." It was signed Greville Fennell.

"I should much like to come amongst my brother anglers, the more so as the days are getting longer, but fogs and mists tell me, at my age, that I ought to be at home. If, however, there are any early birds on your twigs which do not entail late hours, let me know and I will come. I feel, after a long life devoted to angling interests, that there is much to do, but I have the pleasing conviction that there are sincere hearts who can and will carry on the good mission." On Monday morning the following postscript was added:—"My beloved wife, after fifty years with me, died yesterday, Sunday, without a sigh."

I can only add, sir, my warmest sympathies are with Mr. Greville Fennell in this his new affliction.—I am, &c.,

A THAMES FISHERMAN.

P. S.—Permit me to thank Mr. L. B. for his kind notice of my letters. I am greatly gratified to learn through such an authority that my brother anglers are interested in my facts, incidents and "queer complaints."

MR. SACHS AND THE UNION JACK.

SIR,—In reply to Mr. Edwin Sachs' letter in FISHING GAZETTE Dec. 31st, relative to F. Buckland's last-published work, "The Natural History of British Fishes," a note appended to the preface says: "that some errata may remain uncorrected." Being the one most interested in the "weighing-in" of the 36lb. and 37lb. pikes, I can state that there is an error in Frank Buckland's article—pages 155 to 158—on "Jardine's Monster Pikes." For, as to the 36lbs., I caught it before 11 a.m. January 23rd, 1877—fished up to the evening of 24th—and then travelled fifty miles home to London with "the pike" and fifteen others weighing 80lbs., and conveyed the 36-pounder to F. Buckland's, not immediately, but fifty hours after its capture. With respect to the other pike of 37lbs., I caught it about 10 a.m., November 12th, 1879, and did not weigh it in at the "Piscatorial Society" till past 5 p.m. November 13th. Thus these two pike are credited with a loss of only 4½ *per cent.* in weight during the lapse of two and three days between catching and weighing-in, and we see from FISHING GAZETTE of December 24th, that Greville F—— says: "the loss is 15 per cent. during the first twenty-four hours after death."—I am, &c.,

A. JARDINE.

38, Old Change, E.C.

"THE UNION JACK."

SIR,—Wandering on the "Stygian shore," I met the "Ghost of Sir Thomas Gresham," and was told of the controversy in the FISHING GAZETTE relative to my own poor self. To vindicate my character as a respectable pike, enjoying the acquaintance of my grandfather of 36 lb., whom one Jardine translated to a better world—viz., his office at 38, Old Change, E.C.—I must state that, though sometimes keenly pressed by hunger, I never "gobbled up" a juvenile relative; and, with all deference to Mr. Edwin Sachs—who possibly knows much more about hunting after "mythical man-monkeys" in the Eastern Archipelago, than the catching of pike—it is, nevertheless, *a fact* that *when caught* I only weighed 21½ lb.; so perhaps Mr. Edwin Sachs (who may be a clever young naturalist) can explain how the jack in my inside could be "partly digested."—I am, &c.,

"THE GHOST OF THE UNION JACK."

From Hades, Jan. 10, 1882.

THE "F. G." TOURNAMENT TICKETS.

SIR,—I see two or three clubs demur because they are mentioned as not having sent in their tickets for the "Anglers' Tournament." Perhaps the following letter, received by me last night, from Mr. Ghurney, will explain why some of the tickets have not reached me. Our stamp was upon each wrapper that enclosed the tickets sent, so that it should have been known they came from me and returned accordingly. Then I should have been spared a lot of work and the causing offence, although none was intended; the insertion was merely to wake the clubs up to the necessity of sending the tickets in at once, so that the books might be closed.—I am, &c.,

T. HOOLE.

Anglers' Benevolent Society.

Dear Mr. Hoole,—I beg to inform you that I have received 6d. for ticket from Mr. Marston from the Acorn, he also has received stamps from the Social Brothers and the Hampstead. Tickets returned from The Anglers' Pride and The Havelock. This society has been defunct two years.—Yours truly,

R. GHURNEY.

Jan. 10.

HOW TO KILL TROUT.

SIR,—Will you, or one of your able correspondents, explain the best and quickest method of killing trout, and oblige yours, to a dead certainty, should you happen to practise the deceptive art near my quarters,

A DOOMED FISH.

[First catch your trout, then, if he is under 20 oz, hold him firmly in the left hand, belly up; put the thumb of your right hand into his mouth, and you can then instantly kill him by bending the head back and snapping the spine. This is the quickest and surest way. If the fish is over 20 oz. push a knife blade well into the top of the head an inch or so behind the eyes and the fish will quickly die. Fish killed as soon as caught keep fresh longer and eat better than when allowed to gasp their life out.—ED.]

THE PISCATORIAL SOCIETY.

THE half-yearly general meeting, or what is really the annual meeting, of the members was held in the club room, Ashley's Hotel, Henrietta Street, Covent Garden, on Monday evening last. Mr. R. S. Fennings occupied the chair and there were present on the occasion Messrs. W. B. Adlington, J. G. Andrew, C. Bates, H. H. Brown, W. H. Brougham, Dr. Brunton, J. Ross Faulkner, E. Foreman, G. Gillatt, T. Gillatt, D. Goodger, Henry Gray, Thomas Huggett, E. Vaux Huggett, A. G. Hammack, M. Hazeland, Alfred Jardine, James Lander, F. H. Lemann, N. F. Harrison, B. Perelli-Rocco, F. C. Hatfield, F. G. Pearce, T. Vaughan Roberts, E. Russell, T. R. Sachs, Edwin Sachs, E. Walker, C. P. Wheatstone, E. Wilkinson, H. Wilkinson, &c. Amongst the visitors were Messrs. Thomas Crumplen, S. C. Harding and C. S. Bentley, of the Gresham Angling Society. After the confirmation of the minutes of three previous meetings, the formal business commenced. Mr. James Lander, the honorary secretary, read out the audited balance sheet, which showed the receipts of the last half-year to have been, including a balance of £14 0s. 10d., the sum of £81 15s., and after payments of bills, exhibited a balance in hand of £16 15s. 4d. In addition to this, the society had a reserve found of £78 2s. 6d., and collectable arrears of £17 6s. 6d., making altogether when collected £112 4s. 4d. Mr. F. G. Pearce, the father of the society, who has just completed his 73rd year, expressed great satisfaction at the successful position of the society, which was cordially endorsed by all present; and after eulogising the labours of their honorary secretary, proposed that the usual honorarium of £20 should be given to Mr. James Lander, which was seconded by Mr. Alfred Jardine, who regretted they were not in a position to give a larger sum, and the resolution was enthusiastically carried. Mr. F. G. Pearce then suggested that as much work and time had fallen on the Librarian in the hanging of the cases;

first in their temporary removal from that room and then through the Norwich Exhibition ; he proposed a honorarium of £5 to Mr. Henry Gray, which, being warmly seconded by Mr. T. R. Sachs, was unanimously voted. The sum of half-a-guinea was also given towards the dinner to the Thames Riverkeepers. The meeting proceeded to the election of the officers and committee. Mr. F. G. Pearce was re-elected treasurer, Mr. Henry Gray librarian, Messrs. T. Gillatt and James Pattisson auditors, and Mr. James Lander honorary secretary. The appointments of a committee had to be made by voting papers, in consequence of several resignations and the displacement of others through not having attended the stipulated number of meetings. There were sixteen candidates, out of which twelve had to be chosen, and the following were elected :—Messrs. W. B. Adlington, J. G. Andrews, Dr. Coates, R. S. Fennings, E. Foreman, J. Ross Faulkner, D. Goodger, T. Huggett, N. F. Harrison, H. J. Inderwick, Edwin Sachs and Dr. Brunton. The annual dinner was fixed to take place on Wednesday, the 15th of February, at Holborn Restaurant, where the society for many years has satisfactorily held its banquets. Mr. Edward Birkbeck, M.P., has consented to take the chair, and Mr. F. G. Pearce, the respected treasurer, the vice-chair. In taking the customary vote of £14 as club prizes, Mr Thomas Huggett proposed that it should contain an additional prize for salmon over £10, but after some discussion, and being put to the vote, the proposition was not carried. Somewhat later on in the evening, Mr. Thomas Huggett announced that he had raised the handsome sum of six guineas in the room to be given in two salmon prizes, his efforts being highly appreciated. The consideration of some alterations in the rules were discussed, and one which was suggested in the committee by Mr. Thomas Huggett, as to no member being eligible for any office who occupies a position in another angling club, was, on the proposition of Mr. James Pattisson, seconded by Mr. T. Gillatt, unanimously carried ; as was also one by Mr. Alfred Jardine, seconded by Mr. James Pattisson, disallowing fish to be weighed-in, that were going to be, or had been, weighed-in at another society. Votes of thanks were given to the officers, and then Dr. Brunton read a very clever paper on "Grayling Fishing," which was highly approved and appreciated, and for which he received a very hearty vote of thanks. The meeting, which was kept up to a late hour, concluded with the usual eacknowledgments to the chairman.

THE LARKHALL ANGLING SOCIETY.

ONE of those pleasant Smoking Concerts, for which this society is famous, took place in the club room, the Larkhall, Larkhall Lane, Clapham, on Wednesday evening last, under the presidency of its chairman, Mr. G. F. Spencer, under whose auspices they were originally commenced, and through whose exertions such first-rate musical talent is always introduced. The club room, as usual, was filled to overflowing. Mr. Mallett, the new honorary secretary, was unremitting in his attention to all. The Thames Angling Preservation Society was represented by Mr. W. H. Brougham, and the West Central Association by Mr. Leo Bonvoisin. The proceedings opened with a finely executed solo on the pianoforte, and the vocal portion of the evening was commenced by Mr. F. Croutel, who is an energetic working member of the club, and rendered "The Minstrel Boy" in good style. Mr. J. Edmondson gave his "Tale of Woe" with great effect. Mr. Mallett, in "Ah! che la Morte," displayed excellent taste. Mr. W. Spencer, for the first time, appeared as a comic singer, and sang "The Happy Family" with great humour, the chorus of "We are, we are, we are," never losing its impression all the evening. Mr. J. M. Brougham narrowly escaped an encore in "The Divers," and his rendering of the low bass notes were loudly applauded. Mr. Alfred Glover was undoubtedly the lion of the evening, and was vociferously encored in both his songs of the "The Old Brigade" and "The White Squall," a special vote of thanks being accorded to him for his valuable musical services. Sergeant-Major Hemms was highly appreciated in "The Good Rhine Wine," and this may be said of all who followed. Messrs. John Lovatt, R. Edmondson, Ayling, Roberton, Hassell, and others all kept up the *prestige* of the society, and it may truly be said of the Larkhall Anglers their musical talent is of the most unique character, and that their success on these occasions cannot possibly be better. During the evening, Mr. G. F. Spencer called upon their good friend, Mr. W. H. Brougham, to say a few words, as he was certain the members would not like him to leave the room without saying something, as they were always so glad to get him amongst thom. Mr. W. H. Brougham, on rising, received an ovation, and in thanking them, expressed his satisfaction at their recognition of his presence in the club; it strikingly evidenced to him that his position in going amongst the angling clubs was identical with his duties in the Preservation Society, and to leave the clubs alone and confine himself to the other work would be only half doing what the interests of angling required from him. These remarks called forth great expressions of approval. The meeting was afterwards addressed by Mr. Leo Bonvoisin, whose practical and eloquent speech was warmly acknowledged and appreciated.

THE MANUFACTURE AND CARE OF GUT.

We notice the following interesting letter in the American *Forest and Stream* :—

Redditch, England.

(To the Editor, *Forest and Stream.*)

In your issue of Nov. 17 I notice the correspondence respecting silkworm gut. I have for the last thirty-five years purchased and sold large quantities, and always have at our works an extensive stock, which has had my personal supervision, my firm having in Murcia, Spain, a manufactory of silkworm gut. I have been in Murcia superintending the manufacturing and have discovered two causes which make gut brittle, and have instructed our manager in Murcia to see all the producers of the gut and impress upon them the importance of keeping the gut out of the sun.

The great evil is this : After the worm has been drawn out it is put in the sun to dry, and the great heat of the sun takes the moisture out of the gut and makes it brittle. I also discovered another danger in the manufacture of it, In bleaching it, if the bleaching-oven is too hot, and the gut is too long in the oven, it makes the gut brittle. If gut is made without an excess of heat it will be more pliable ; consequently, more strong. I have never found gut get brittle by keeping. The best way to keep it is in wash-leather. If large stocks, in drawers or rooms which are not over-heated. Some tackle dealers will expose gut, gut leaders, &c., in their windows. The sun gets on it, and consequently takes the nature out of it, and it becomes hard and brittle.

The cause of flat gut is disease in the worms. Healthy worms produce round gut. The manufacture of gut is very simple. The gut from the worms is bought from the small country people, who breed the worms in their houses. The first process in making is to put the gut in a furnace with water, a little soda and soap. After boiling a short time the outer skin comes off it. It is put in yellow and comes out white, after it is put in the bleaching ovens. Then girls rub it straight with wash-leather, holding one end in their teeth. The next process is to sort out the different strengths. It is then rubbed again ; counted into bunches of one hundred, then a man puts in the red jute on each bunch, and then ties it in bundles of one thousand.

This may interest your readers and prevent gut being spoiled by exposure to the sun. S. ALLCOCK.

CLUB REPORTS.

ACT-ON-THE-SQUARE ANGLING SOCIETY.

The members of the above society fished for another of their series of prizes on Saturday afternoon last, at "Ye Old Ferrie Boat." The conditions were to start at two o'clock, and to weigh-in at the club house above named at 5.30. But, most of the members being late, fishing only lasted about two hours and a half ; the prize, a very handsome biscuit box, given by Mr. T. H. Clark, being won by the secretary with four very nice roach, weighing 2 lb. 5 oz. Water in splendid condition for roach and chub fishing ; and, if we have no more rain for a few days, the jack are sure to be on the move, as they must be nearly starved, owing to the continuous floods.—A. GEORGE, hon. sec.

Jan. 9.

ACTON AND EALING ANGLING SOCIETY.

On referring to weight book I found that the following members have weighed-in fish since my last report :— Mr. Slatter, 10 lb. 14¾ oz. roach and dace ; Mr. Cook, 13 lb. 10¼ oz. do. ; Mr. Howell, 9 lb. 11 oz. do. ; Mr. Simpson, 1 lb. 10¾ oz. do ; Mr. Dean, 3 lb. 1 oz. roach and chub ; Mr. Head, 6 lb. 11¾ oz. roach and chub ; Mr. A. Eydman, bleak. We fish a match at West Drayton, Godfrey's water, next Sunday, for a plated tea and breakfast service. The first supper will take place at the George and Dragon Hotel, on Wednesday evening next, when we hope to have the pleasure of Leo Bonvoisin and T. Hoole's company ; also some of the Richmond Piscatorials. We shall I hope shortly issue a challenge to fish the Portsmouth Waltonians before the Hammersmith United do, who still owe them a return match.—BLACK BAG.

January 10.

AMICABLE BROTHERS ANGLING SOCIETY.

Mr. Larkman commenced the new year by weighing in roach, followed by Messrs. Arnold and Hunt. Mr. Geo. Carrington had a very nice show, comprising roach, dace and perch, gross weight 8 lb. 5½ oz., a brace of the perch, weight 4½ lb.. has been sent to Mr. Cooper, Radnor Street, St. Luke's, to be preserved. A pegged-down match will take place in the river Stort on the second Sunday in February. Members will kindly observe this and come up to the club to get full particulars. The new prize list will be shortly issued, and they are well varied for all members to contest for.—T. WORLEDGE.

ANCHOR AND HOPE ANGLING SOCIETY.

On the 8th inst. our members showed up in good numbers, with the following result : Mr. A. Shakel, roach and dace ; Mr. T. Bowling, perch; Mr. W. Salmon, a pretty jack, weighing about 4 lb. from the Lea ; Mr. C. Daniels, perch, from Pulborough ; M. J. Summers, dace, from Datchet ; Mr. A. Glass, roach and dace, from Windsor, one nice roach turning the scale at 1 lb. 2½ oz. L. DAVIS, sec.

BRIGHTON ANGLERS' ASSOCIATION.

Nothing but floods and rain ; not a line met in the Adur, Ouse or Cuckmere since last week. At Chichester, where the water is always clear, two well-conditioned jack were taken, one 6 lb. and the other 5 lb., by Mr. G. H. Salter. The members meet now only to do business for the coming season, and on Saturday evenings the harmonic meetings are still held. Wind S.W.; great show for more rain.—GROUNDBAIT.

BURDETT ANGLING SOCIETY.

The members of the above society met in general meeting on Wednesday, January 4, to select prizes to be fished for on Sunday, January 15. Whilst so engaged a member came in with the best show of roach this club had witnessed. Mr. Lamb, for that was the member spoken of, had 26 fish, all roach, weighing 16 lb. 1 oz. ; 7 fish weighed 6 lb. 11½ oz., 17 others weighed 4 lb. 13½ oz., whilst the remaining 12 weighed 4 lb. 8 oz. The largest fish weighed 1 lb. 4 oz., and the smallest weighed 3¾ oz. well. The same gentleman had a good show on Wednesday, January 11—18 fish, all roach, weighing 9 lb. 4 oz., the smallest went 3¾ oz.—F. G. WALKER,

CITY OF LONDON ANGLING SOCIETY.

We were just saved from a blank on the 8th by Mr. Castell weighing-in a very small take of roach and gudgeon from Boxmoor.—Cas.

CITY OF BRISTOL ANGLING ASSOCIATION.

On Monday, December 12, the annual general meeting was held; the secretary being absent on this occasion, the vice-president, Mr. J. H. Champion, did duty for him, when the election of officers took place. The following officers were re-elected:—Mr. J. A. Jones, president; Mr. J. H. Champion, vice-president; Mr. H. G. Lewis, treasurer; Mr. J. H. Stantial, hon. secretary; Messrs. Hobbs and Miller, auditors; and the following members to serve on the committee:—Messrs. Edwards, Billingham, Oxenham, Lynch, Parsons, Iles, Perrett, Parrey, Skuse, Hill, Stafford, Sheppard. It was also resolved at this meeting to discontinue the system of paying monthly, and to adopt one payment of 2s. 6d. for the year, and no member to receive his tablet until he has paid. On Monday, December 26, the third contest that has taken place since the formation of the association came off at Limply Stoke, for prizes to the amount of £5, when about twenty took part in the contest, but the catch of fish was not very great on this occasion. In the evening the prizes were presented to the successful competitors by the president. On Monday evening, January 2, the first annual dinner took place, at the club house, when about fifty members sat down to a capital dinner, served up by our respected treasurer, which gave great satisfaction to all present. In the unavoidable absence of the president, who did not arrive until late in the evening, the secretary, Mr. J. H. Stantial, was unanimously voted to the chair. After the removal of the cloth, the chairman gave the toast, "The Health of our Most Gracious Majesty the Queen," which was unanimously drunk, after which some capital songs were sang by members of the association, by which time the president had arrived, and was well received by the company. The chairman then asked the members to drink to the health of the president, vice-president, and treasurer, which they did with musical honours. The vice-chairman then gave the health of the secretary, which was drunk with musical honours; and the health of the host and hostess was also drunk; some more songs were then sung, which brought the first annual dinner of the association to a close. On Monday, January 9, the first meeting of the new year took place, Mr. J. A. Jones presiding, when the secretary read the balance sheet for the past half-year, which was approved of, after which the new tablets were issued, the secretary intimating that members not present could obtain them by applying to the secretary or treasurer, at the club house any time between the meeting nights, which are held the second Monday in every month.—James H. Stantial, hon. sec.

GOLDEN BARBEL.

It seems quite true to me that fish can be got, if you only know where to find them, and some of the members of this society have gained that knowledge for "let the weather be wet or fine, stormy, foggy, or hazy," there is always a show of fish to be seen on Sunday evenings (bar those during the fence months). On the 1st, the following courted Father Thames, and succeeded in getting New Year's gifts of different sorts:—Mr. J. Green, roach; Mr. Goudge, roach and perch; Mr. T. Lee, roach and perch; Mr. C. Lumby, roach and dace; E. Henries, roach; Mons. Gourquet, roach; and E. Harrison, 12 lb. of roach, the gross weight going about 35 lb. On the 8th, Mr. Goudge visited another river, and after fishing six hours succeeded in weighing-in 22 lb. of very handsome roach; C. Harrison had roach. Mr. T. Lee, "still on with the old love," managed to get over 3 lb. of roach. "Johnny my Boy," allow me to congratulate you with your Christmas present, and may it be as comforting to your father's eldest son as that son has been to his father.—Pixie.

Jan. 12.

GRESHAM ANGLING SOCIETY.

The usual weekly meeting of this society, held on Thursday evening, was of an exceptionally interesting character, a deputation of the Good Intent anglers being present, accompanying Mr. Brookwell with his splendid case of trout taken at Flanders Weir, on the Lea. This case is, without doubt, the finest yet seen, and was greatly admired; so much so that Mr. Brookwell, to whom a very hearty vote of thanks was accorded, very kindly consented to leave it, by request, at the society's rooms for one clear week, to give all the members an opportunity of inspecting it. Messrs. Murphy, Beckett, and Tippetts, who were warmly welcomed, addressed the society in response to several toasts given during the evening, and the true goodwill and reciprocity which should, and does, exist between all really true anglers was clearly demonstrated. Mr. Brookwell was introduced very pleasantly by Mr. Jardine, who, in the course of a humorous and telling speech, expressed the opinion that Mr. Brookwell's display would be certain to stand a good chance for a prize of importance in the International Exhibition of 1883. Mr. Crumplen and other members also spoke, pointing out in the strongest terms that unanimity amongst anglers generally, quite irrespective of social position (which ought never to enter into angling questions), would assuredly bring about numerous reforms, and secure in the future the sport anglers so much desired. The hon. secretary announced that the President, Lord George Hamilton, M.P., would take the chair at the annual banquet of the society, to be held in March next. Two new member having been proposed, the first batch under the new regulations with an entrance fee, a very cordial vote of thanks was accorded to Mr. W. T. White, who had ably occupied the chair, thus terminating the business portion of one of the most pleasant evening yet held by the society. The chair was afterwards occupied by Mr. Crumplen, and the harmony of the proceedings was fully sustained until an advanced hour.

HULME ADELAIDE FISHING CLUB (AMALGAMATED).

The members of the Huime Adelaide Fishing Club, Jolly Angler, Erskine Street, Hulme, Manchester, on their annual distribution of prizes, were enter-ained, on the 2nd instant, to a substantial dinner, by Host Taylor. After dinner, Bro. W. H. Atkinson was voted in the chair, and the usual loyal and patriotic toasts were given. The business of the club was then proceeded with, nd the prizes distribuied to the successful members, of which the following is n extract:—A trout, 3 lb. 13½ oz., caught by W. H. Atkinson; a pike, 2 lb., aught by W. H. Atkinson; a roach, 1 lb. 6 oz., caught by J. Newton; a hub, 1 lb. 6 oz., caught by Henry Taylor; a bream, 2 lb, 14½ oz., caught by . Lees; a perch, 14½ oz., caught by F. Lees. The club broke up at 11 p.m., fter having spent a very pleasant evening.—W. H. Bardsley.

January, 4, 1882.

IZAAK WALTON ANGLING SOCIETY.

Two special prizes were fished for on Sunday last, the 8th inst., but owing to the inclement weather and the bad condition of the water only one of them was taken, Mr. T. Ward being the successful member. Three special prizes will be fished for on Wednesday, Jan. 25, all fish weigh; nothing under 1 lb, weight to take a prize. Competitors to choose their own fishing water; no competitor to leave London before the morning of the competition. Three special prizes will be fished for on Sunday, Jan. 29, same conditions as above, excepting that nothing under 8 oz. to take a prize. Messrs. G. Wood and G. Bliss showed roach and dace this week.

KING'S CROSS UNITED ANGLING SOCIETY.

Several members of this society were out on the 8th inst., but, owing to the unfavourable weather, the takes were small. There were, however, some capital roach on the trays. qaality making up for quantity, Mr. Davis and Mr. Treadwell divided the honours of the evening. The finny-uns of the Thames must look out for themselves next week, as a veritable giant is off on the war path.—Quill Pen.

Jan. 10.

KINGSWOOD AND DISTRICT ANGLING ASSOCIATION.

This association was formed on November 7. The want of a society of this kind having been felt in this neighbourhood for a considerable time, an effort in that direction was made by a few devoted anglers, which led to a very hearty response. The chief objects of this society are the securing of fit water for angling purposes; stocking the same to secure legitimate angling, and also to obtain railway privileges enjoyed by kindred societies. Between thirty and forty members have already joined, and it is anticipated that the numbers will be considerably augmented in a short time. The first angling competition for prizes took place on Thursday, December 29, at Kelston, near Bath, when five prizes were given by friends of the association, amongst whom were Mr. Frost, of Bristol, and Mr. Bulwer, of London. The capture of ten nice fish secured the first prize. It is hoped that these competitions will be numerous, as they will help to keep up the interest of a society of this kind, especially in its early stages of existence.—A. J. Bridges, hon. sec.

LITTLE INDEPENDENT ANGLING SOCIETY.

Mr. G. Atkins, of Cross Gun renown gave a series of prizes which were fished for last Sunday, and caused the members to muster in strong force; and after a very exciting struggle Messrs. Parker, Harwood and Wightman were adjudged the lucky winners, but were closely pressed for honours by Messrs. Humphreys, Heelas, Raine and Petrie. Mr. H. Moore went to the Colne on Tuesday and got a few nice roach. Mr. J. Blenham was also there on Wednesday and bagged a handsome show of 9½ lb. Through the pressure of business during Christmas holidays we failed to notice in your paper the kindness of Mr. J. Goodes, one of our members, in getting up a subscription list for Mr. Wey, of the Phœnix Angling Society, who was, and is now, in needful circumstances through bad health and got him the handsome sum of £3 5s. Mr. H. Moore has been elected secretary in the place of Mr. W. Brown, who has resigned, aud all future communications will be addressed to him at the club house.—H. Moore, sec.

Jan. 12.

ORIGINAL ALEXANDRA SOCIETY OF ANGLERS.

We had nearly all our members out on Sunday last, but only one weighed-in fish and that was Mr. W. High, our bailiff, with roach. Mr. J. Cammack wishes me to state that he will fish Mr. C. Fardell, of Old Ford Road, a pegged-down match, change swims every hour, at the Rye House water.—E. Dymond, sec. pro tem.

ROYAL PISCATORIALS.

This society commenced the year with some glorious shows of fish. On the 1st there was exhibited 40 lb. of jack, the largest weighing 16 lb. On the 4th 45 lb. of jack decorated the trays, and on the 8th the show was truly magnificent, and was well worth going a mile or two to see, it consisted of three jack weighing 30 lb., and 12 lb. of roach, taken by Mr. T. Hughes; 30 lb. of roach and two jack of about 6 lb., taken by Mr. G. Hockley; and 30 lb. of roach and two jack of about 7 lb., was also exhibited by M. J. Frith. The roach were in splendid condition, and averaged 1 lb. 8 oz., the largest weighing over 2 lb. During the second week in February a competition will take place for £10 10s. dressing case, given by Mr. Robert Grant; a case of champagne and several other valuable prizes given by different gentlemen. Additions are constantly being made to the already extensive collection of piscatorial trophies in Mr. T. Hughes' possession; another large jack has just been added, and I have been informed that a well-known naturalist not many miles away from Southwark has a dozen cases of fish, consisting of roach and jack, in hand for Mr. T. Hughes now, and when they are finished will form one of the largest private collections in London.—Pixie.

SOCIAL BROTHERS.

I am glad to say that the last day or two of the old year and the commencement of the new proved very favourable to the few that were able to go out, over 41 lb. of fish being taken as follows:—Messrs. Valler and Lee, 7 lb 11 oz. roach and dace on the 29th; on the 30th, Mr. Irons, 2 lb. 14 oz. roach and dace; on the 31st, Mr. Bird, one jack, 3 lb. 2 oz., and Mr. Lockyear, 2 lb. 10 oz. roach and dace; on the 1st, Mr. Lee 5 lb. 6 oz. roach and dace, and Mr. Bromhead, 12 lb. 6 oz. roach; on the 6th, Mr. Irons 1 lb. 11 oz. roach and dace; on the 8th, J. Goubot two small chub; on the 9th, Messrs. Valler and Lee, 4 lb. 11 oz. roach and dace; on the 10th, Mr. Monk 1 lb., 7 oz. bleak. All the above taken in the Thames, except the jack.—J. Goubot.

SURREY PISCATORIALS.

A competition took place this day at Richmond among the members of the above society for the following prizes:—1st, £2 2s., given by Messrs. Whitby and Duck; 2nd, £1 1s., given by Mr. Elliott; 3rd, a punt rod, given by Mr. Brydges. Result: Messrs. Boalch and Meadway with C. Brown, fisherman, of Richmond. The first-named had about 4 lb. 12 oz. of roach and dace, which entitled him to the first prize, and the second prize fell to Mr. Meadway, who had about 3 lb. of roach and dace. Messrs. Duck and Beckett, with Bushnell, of Richmond, succeeded in getting among the bream and roach; the former took the third prize.

Jan. 11.

WALWORTH WALTONIANS.

A special meeting was held at the head-quarters of the above society, on the 6th, to consider which evening would best suit the members for meeting, Friday being inconvenient to a large number of the members. The following gentlemen were present: Messrs. Bansback, Bayley, Beale, Boalch, Cain, Curtis, Delehaye, Fieullade, Russell, Renault, Fox, and several others. Mr. C. Beale presided. Several of the members having stated the inconvenience of Friday evening, the evening most suitable to the members was put to the vote, and it was decided that on and after Thursday, the 12th January, 1882, the business of the society will be carried on on Thursday evening, and not on Friday as hitherto. And please to bear in mind all ye members that could not attend this meeting that the time for business will in future be from 9 till 10.30 p.m. "Punctuality is a jewel;" I hope the members of this society will wear it so that it can be seen, as I know it will be a great improvement to them. The next thing brought forward was Mr. L. B. testimonial. Mr. Bayley and Mr. Boalch having spoken as to the work done by Mr. L. B., 10s. 6d. was at once voted. "There, my bold Leo, is another straw to the load." I have been informed that a few members of the South London would like to have a friendly competition with some of the Walworth Waltonians for a supper. Gentlemen desirous of entertaining this competition please step to the front and see.—PIXIE.

Jan. 12th, 1882.

G. LITTLE, FISHING TACKLE MANUFACTURER, 15, FETTER LANE.

Now ready, crown 8vo, cloth, extra price, 7s. 6d.

THE ANGLER'S COMPLETE GUIDE AND COMPANION.

Being a Practical Treatise on Angling and its Requirements. With Beautifully-executed Illustrations, in Colours, of the Artificial Flies for the different months, and highly-finished Engravings of all other necessary Tackle.

By G. LITTLE.

A FEW OPINIONS OF THE PRESS.

THE FIELD, Nov. 26, 1881.—"Mr. Little's remarks upon rods and tackle in every branch of angling are, of course, entitled to special consideration, being the work of so practical an author. If he does not know what is good, bad, and indifferent, who should? The special feature, however, is a series of illustrations of seventy-six artificial flies, very neatly drawn and coloured by hand, the object being to use these cuts on a fly book, which Mr. Little shadows forth, a coloured plate of each fly being stamped on the page opposite to the pocket which is to contain that particular fly. The book is nicely got up, and artistically decorated."

THE FISHING GAZETTE, Jan. 7, 1882.—"Mr. Little has been so long before the public as one of our leading fishing-tackle manufacturers, that when we heard he was engaged in producing a work on angling we felt certain, when it made its appearance, it would be in every way well worthy his reputation. He evidently has spared no pains in getting it up, and we may say at once that the instructions and information, which cover every description of freshwater angling, are thoroughly sound and practical. . . It must occur to all who are acquainted with angling literature that the obligation of bringing out any work possessing new features would be no easy task. Yet Mr. Little has achieved this, to a certain extent, and by doing so secured the important feature of simplicity. . . . . We can confidently recommend the work as one of the most concise and practical of the many which so loudly claim public appreciation."

LAND AND WATER, Dec. 3, 1881.—"Among the innumerable guides offered to anglers from timr to time we feel almost inclined to say the latest, which is now lying before us, is the best and most practical we have ever seen. The title promises not a whit more than the performance warrants. The illustrations of fishing appliances, winches, baits, &c., are clear and good; and the short instructions for the benefit of the tyro are plain, complete, and practical. The book is a capital little guide."

THE SQUIRE, Dec., 1881.—"Mr. Little, at the outset, decides to deal plainly and practically with his subject, and has succeeded admirably. Every important piece of tackle is illustrated by careful woodcuts, and the directions for selection of tackle and the taking of fish are compressed and eminently to the point. Undoubtedly the feature of the work are the seventy-six illustrations of the flies known to be killers. They are beautifully drawn, and in each case coloured by hand. The work is tastefully produced in a very handsomely designed cover."

"Will bear favourable comparison with any other work that has gone before."—SPORTING LIFE, Dec. 7, 1881.

"It is a handsome little work—the coloured flies are finely executed."—NEW YORK FOREST AND STREAM, Dec. 15, 1881.

"Being thoroughly reliable, may, with every confidence, be recommended to anglers of all stages of proficiency."—LAND, Dec. 10, 1881.

Square 8vo, Price One Shilling, just ready,

LITTLE'S ANGLERS' ANNUAL,

COMPRISING

ARTICLES AND PRACTICAL INFORMATION

ON ALL MATTERS RELATING TO

FISH AND FISHING,

BY THE ABLEST WRITERS,

Illustrated with Portraits of Gentlemen Eminent in the Fishing World, and many Engravings.

An Almanack, with Notes of Special Interest, is added.

PREFACE.

THE ANGLERS' ANNUAL is a novelty in the literature of the gentle craft, but the Editor trusts that this fact will rather add than detract from its popularity amongst anglers and other interested in fishing and fish culture.

The intention has been to supply agreeable and instructive reading of a practical nature, and to furnish an album of the celebrities of the fishing world, as well as a calendar to which notes of especial interest to those concerned in the chronicles of sport are added. Whether this ideal has been reached the Editor confidently leaves to the verdict of the reader.

Mr. Spencer Walpole, Professor Huxley, Mr. T. Spreckley, and Mr. W. H. Brougham are names familiar as household words to every intelligent angler. These gentlemen have kindly allowed facilities for reproducing their "counterfeit presentments," and these will be considered, without doubt, by our readers as special features in this our new venture.

London: Wyman & Sons, 74, 75, Great Queen Street, W.C.

THE CHEAPEST ROACH ROD,
Used by all Noted Anglers.
BOOTH'S FIVE-JOINT BAMBOO ROACH ROD,
12 feet stand-up rings. The lightest rod in use.
Winch fitted Brass Bottom and Bag complete, packed in Box.
PRICE 4s. 6d. STAMPS, 4s. 8d.
H. BOOTH,
Fishing Rod Maker,
88, PROSPECT STREET, HULL.

FISHING TO BE LET TO THE END OF SEASON at GREAT MARLOW, one minute from the river. A superior double-bedded room for two Gentlemen only, with use of rowing punt, and plain breakfast. (No other attendance—no extras.) Terms 49s. per week. Arrangements can be made with different parties for specified times of engagement; reference required.—Address J. T. SCOTT, Marlow, Bucks.

TO ANGLERS.

If requiring the **latest improvements** in the art, and **quality,** send to

R. B. BAMBRIDGE,
74 & 75, HIGH STREET, ETON-ON-THAMES,
Practical Angler and Maker (on the premises) of perfect-action Fly, Spinning, Trolling, Bottom, &c.,
RODS AND TACKLE.

The "**Bell's Life**" Spinner has **proved** itself to be the most killing bait for Trout, Pike, Perch, &c., and is undoubtedly the nearest approach to nature ever produced. Price, 3s., 3s. 6d., 4s., 5s., and 6s. 6d. Post free on receipt of P.O.O.

For Angling improvements, write for price list gratis. Established 1790.

WANTED.

A ROD MAKER who can make best RODS, for a provincial town.

Apply to
A. M., FISHING GAZETTE OFFICE,
12, FETTER LANE,
LONDON.

(THE DEVONSHIRE RIVERS.)

FISHING TACKLE, &c.

DEVONSHIRE FLIES (GOOD in ANY STREAM), 1s. 6d. per dozen. Flies made to pattern. A large stock of Rods and Tackle of all kinds. Some choice SPLIT CANE RODS by "Copham;" bargains. The Devon and other artificial Baits, Reels, Lines, Gut Casting Lines, Fly Books, Wading Stockings and Trousers, Baskets, and every other requisite. Address, WILLIAM MUDFORD, Fore Street, Tiverton, Devonshire, Ticket depôt for the Tiverton Fishing Association.

TROUT FRY.

THE SALTAIRE ANGLING ASSOCIATION has a choice lot of Ova (*Salmo Ferox*), also some brook trout ova (*Salmo Fario*), from trout of a large size. The price for Fry will be £2 10s. per 1000. Persons wanting any should apply early to

GEO. E. BOLTON, Secretary
SALTAIRE, YORKS.

WANTED.

WANTED a Person who understands the Fishing Tackle Trade, to take charge of the Fishing Tackle Department in a provincial town.

Apply to
A. M., FISHING GAZETTE OFFICE,
12, FETTER LANE,
LONDON.

NOTICE.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., must be addressed to the Editor of THE FISHING GAZETTE, *No.* 12, *Fetter Lane, London, E.C* and should reach the office not later than Tuesday morning.

Contributions are solicited, but the Editor will not undertake to return rejected MSS., unless accompanied with a stamped addressed envelope.

Correspondents are requested to write on one side of the paper only and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith Unless this rule be adhered to no notice will be taken of such communications.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls, and of the following, amongst other Fishing Tackle Dealers in London and the Provinces :—

Messrs. Alfred and Son, Moorgate-street.
Messrs. Price and Co., 8, Seymour-street, Euston-square, N.W
Messrs. Williams and Co., Great Queen-street.
Messrs. Gee and Co., St. Andrew's-street, St. Martin's-lane.
Messrs. Gee and Co., Gray's Inn-lane (near Holborn end).

The Fishing Gazette.

SATURDAY, JANUARY 21, 1882.

CANAL-FISHING IN HERTFORDSHIRE.

By CHUB CHAVENDER.

WALTON has very justly commended the London roach-fisher of his day, and the commendation might, at the present time, be greatly intensified. The angler of this genus is a species by himself. His occupation in life is chiefly that of the citizen whose daily bread is earned truly by the sweat of his brow, and whose only relaxation is his Sunday excursion, where, by river, lake, or canal, he can hold "communion with dear Nature's self," none the less sincere because he does not clothe it in poetic rhapsodies—pursuing all the same a gentle sport, the chief attributes of which are quietude, patience and perseverance. Peaceable and order-loving he is of a natural necessity; interfering with no one, jealous of none, self-contained, and sober. These, I assert, are the characteristics of the generality of anglers, and especially of the London roach-fisher.

The majority of anglers one meets at the canal side are London roach-fishers, hence my introduction of the species to my readers. That some of them may derive benefit from my experience, which has been protracted, of a certain part of the Grand Junction Canal, is my only desire in writing this article. I shall therefore plunge *in medias res* of the subject set forth in the heading, and shall be glad to continue it at some future time if it be found acceptable.

It matters not at what place I begin, so I will take the vicinity of Boxmoor, as being that of which I have had the most recent practical experience. About three miles can be comfortably fished, using Boxmoor station; and judging from the number of anglers which one meets on the platform on a Sunday night during the season, it is well appreciated, if sport is at times indifferent, owing to ignorance of the locality or of the most advantageous methods of angling.

I have not the A B C time table at hand at the moment, but I think I am right in saying that Boxmoor station is 23 miles from Euston, on the North-Western Railway, and, as concessions to societies have been made, every angler attached can get there and back for about a couple of shillings. Its distance from town is therefore no objection.

Supposing the angler desires to stay on the Saturday night, in order to be up betimes in the morning, there are several hostelries, which I shall point out as being appropriate for the different parts of the three miles to which I have referred. Winkwell is the highest point I shall talk about now, and we will suppose the fisherman intends fishing it early, as he ought, and so runs down on the Saturday evening.

Before leaving town, let him secure half a dozen nice dace and a few small other baits, in case of a pike or trout obtruding himself too obviously. Of course, live-bait tackle must be taken. Next let him lay in a stock of redworms, a few lobs, some gentles, bran, and old crusts of bread for ground bait, and some flour-made, as well as bread-made, paste. I need not remind him of the tackles necessary for roach, excepting in regard to a few hair-hooks. Curiously, I have found these kill when the finest drawn gut seemed absolutely deterrent.

Well, he arrives at Boxmoor, and, as soon as he emerges, his first course lies almost immediately before him to Crouchfield, to mine host Pearce, who keeps a pretty little house about half-a-mile as the crow flies from the station, and who, with his wife, is ever ready to welcome and comfortably put you up for the night at prices which would astonish you for moderation, considering the comforts one gets. Pearce is himself a capital angler, and if other duties do not engage him, he is only too glad to attend one by the waterside, after showing the nearest pathway to the Winkwell lock and its many attractions.

From Crouchfield to Winkwell is about twenty minutes' walk—not a moment more for the average walker—and when you get there you find that, immediately below the lock, the little river Bourne runs from a slight eminence, forming a pretty cascade about three yards across. Within the running water and hereabouts are some very respectable trout. I took two one day, fishing with the redworm for roach, and one went 2½ lb. and the other ¾ lb., both in splendid condition. There yet exists a fine old fellow, who invariably shows himself at the tail of the stream during the day. He is at least three pounds in weight, and comes up after a bait almost at your feet, not two yards in front of the iron post below the lock gates. Roach swarm this piece of water, and its eddies are also full.

In September, fishing with Mr. King's natural bait paste, I took 28 fish going 18lb. Some of them over a pound each. It is, of course, necessary to rise very early, so as to get your fish together before many of the boats pass, as these are the bugbear of the canal fisher; and if you ground bait whilst they are in full swing, coming through every ten minutes, your ground bait is likely to be washed all over the place. This being so, I advise that a good hard clay ball be always used, and if possible a peck of fresh brewers' grains should be put in overnight. Pearce will always get them if you give him notice.

There are excellent pitches right down to the railway bridge from the lock, the best are on the side opposite to the path, which is quite accessible, and not private. Jack also abound, especially in the reach to which I am referring, and there are legends of 20-pounders being bagged, though I never saw one over five pounds, which I took myself paternostering. With the stream to which I referred as coming in below the lock, Nottingham running tackle is quite permissible; indeed, I prefer it, though the ordinary tight line can be used as usual.

Now, before going further, a word as to the rod. A seventeen or eighteen foot bamboo, as stiff and light as can be got, is necessary for canal fishing. It is often necessary to fish in the deeper water invariably navigated by the boats, and constituting what is termed on the Thames the "channel." The rest of the tackle must be of the very finest, and the float especially should be either of pointed deal or of porcupine, so shotted, that the slightest nibble—which really often means a good bite—be perceived and acted upon.

However, to resume the description of the water. There is a capital spot for roach and dace just outside the bridge, and a good seat can be made on the side coping opposite the towpath. I have seen some splendid dace taken as well as roach from thence. Passing over the railway and descending the other side, there is a ploughed field, through which, by the side of the water, however, a right of way is preserved, and here some capital chub, roach, and dace, as well as pike, have fallen to my rod. Near here the river Bourne passes out of the canal and flows—filled with trout—through private property on towards the moor, and so on to the mill. Until it reaches the moor proper, it is strictly preserved by one of the grumpiest old proprietors it has ever been my misfortune to run against. He does not want his fish, but he will see you to &c., &c., he says, sooner than give permission for fishing.

When it reaches the moor, however, there is an occasional trout, and lower down, just above the first paper-mill (Messrs. Dickenson's), some capital roach are often taken from comparatively shallow water.

We must get back to our canal, however. Right away down by the lock, by the side of which stands the Fishery Inn, capital roach-fishing is to be had if it be pursued with great perseverance and copious baiting. A little bridge spans the water here, and underneath it I have had capital sport when the weather has been favourable.

Talking of weather, this reminds me that this is a most important item to be considered when you seek sport in a canal. Comparatively, the water of a canal is of small volume, and as it is also comparatively stagnant when the traffic is not excessive, it simply becomes of the exact temperature of the air. Moreover, a snow, hail, or rain storm, affects it instantly, and consequently, of course, a cold wind or frost does so similarly, Now my experience is that roach do not care about feeding when the temperature of the water is very low; and very thick water in consequence of rain, or, what is much worse, snow broth, are both inimical to good sport. For these reasons I ever keep a sharp look out on the weather and temperature, and I am persuaded many a day's disappointment would be saved if my example were followed.

The next notable places for fishing are termed "Two Waters," because it is here that the river Gade runs through the canal and joins with the little Bourne passing onward through the first of Messrs. Dickenson's paper-mills, and afterwards at Frogmore End doing a similar service. The Gade in its upper part abounds in trout, but it is extremely difficult to obtain permission from the proprietor, and so I may dismiss its higher portions as being inaccessible. Just at the bridge where the Gade traverses the canal at right angles, some capital sport has been from time to time, obtained, though in winter I cannot say I ever did much. As you near the mill-head, however, the aspect improves, and there are some good jack here as well as "wopping" roach. By the bye, these roach are early spawners, and their broad silver sides, grass green backs and bright hued fins, make a fish of a pound, in autumn and winter a real eye-restorer to behold. In this spot, where the Bourne and Gade coalesce, they are especially handsome, and, as far as I am concerned, will only take a paste well made of bread or the "natural" bait; sometimes it is advantageous to colour it with a little vermilion.

As we are referring to the "Two Waters" perhaps it may be advantageous to follow the stream till it has done service for the lower Frogmore Mill, and passes into the canal about half-a-mile down. Immediately below the "Two Waters" Mill it is rather shallow, and, as far as roach are concerned, almost unproductive; but I have seen some bonny jack lying in the sunshine, and doubt not that they could be brought to bank by an experienced troller. The Bell at Two Waters, is where I have stayed for this stream, and just about two hundred yards lower down I have had some good roach, on the side opposite to the main road. Here is a wooden bridge, and only a Sunday or two since an old friend of mine got some ten pounds of beautiful fish. Unfortunately, I am sorry to say, a quantity of esparto "broth" blackens the water and kills the fish, or at any rate debilitates them, otherwise the spot would be uniformly of a good character. The Frogmore Mill is now reached, and after the water has done service it passes out into a stream some ten yards across, and of a uniform depth of about six feet. This stream is about a hundred yards long before it reaches the canal below the lock, and I can testify to some parts of it containing some remarkable specimens of *rutilus* as well as jack. In particular there is a hole at the end of the foreman's garden from which I have derived some very fishy solace; and one gentleman, who has been fortunate enough to secure permission to angle from the garden, has gone home laden. It can be fished with a long rod, however, from the public side, and the angler will not be long in finding its precise locality, if he be commonly observant. Two large posts are driven in the water close by the deep referred to.

Just at the juncture of this stream with the canal is some very good fishing. The water is of a very respectable depth—somewhere about six feet, and as the stream aforesaid carries itself forward for some distance, a good swim can be secured for the running tackle. Let us now return to where we left the canal, viz., on the little brick bridge crossing it on the road to "Two Waters."

Just on the other side of this bridge, down stream, there is a coal and timber wharf, owned by Mr. Balderston. Some rafts of timber still lie in its basin, and it is camp sheathed all round. Perch and pike inhabit it, and a civil and courteous request to be allowed to fish would, I doubt not, be accorded. This is approached from the side opposite the towpath, and has, to my knowledge, produced jack and perch of remarkable size. All along the towpath to the next lock, or pound, is good fishing, and a nice, clear bottom; though, sooth to say, I have known it to be fished by a London club, numbering forty anglers, "from morn till dewy eve," with scarce a pound of fish as result. Still, the fish are in the water, and given suitable weather, you are sure to get some.

Near the next bridge is a capital little beerhouse—I forget the sign—selling some of the best stock ale I ever tasted. This is a fact worth knowing in a place where, as a rule, all the beers are execrably bad.

Just before you get to the pound, which is about three hundred yards below this, the water widens considerably. I have taken jack of good size and have seen trout which had been secured from the opposite side to the towpath, where the boats do not disturb the water. I am doubtful if one can get to fish from the side referred to, but a good spinner can easily get his bait across, the distance not being twenty yards at most.

Now comes the best reach I know of in all the three miles of water, except Winknell, which I must give the palm to. Between the pound we are now at and the next, the bottom seems to be considerably an improvement on the upper parts, and I have secured roach of splendid size, and more than this, have seen others do the same. Another little bridge spans the water just below this pound, and under it I have seen such fish in the clear water as would send an enthusiastic angler to a lunatic asylum could he get but one of the shoals even. My plan of fishing was to stand with my Nottingham tackle and running tackle on the pound gate, and thus keeping well out of sight, to let the light quill float down, which it would slowly do, because of the overflow of water at the gate. Sometimes I found that it was necessary to bait some days before I could fix the wandering attentions of my fish; but when I had done so the response was fast and furious. And further on, down to the next lock, on either side, some capital spots are to be found. In fact, between these two pounds, I am constrained to think that there are more roach and dace than at any other part of the canal whatever. Immediately beyond this last pound the "Two Waters" join the canal, and my description of the waters for three miles is done.

As I before remarked, I think very highly of the character and behaviour of the canal anglers, but there is one great fault with them, which I have very frequently observed and deplored. They very seldom return a fish to the water. There being no restrictions as to size, etc., all is fish that comes to the rod with them, and thus it is that undersized fish—fingerlings—are killed in common with their larger-sized brethren. This is not as it should be, and at any rate the clubs should never allow the weighing-in of miserable little roach and dace, or allow them to count in any way at all.

The scenery of the canal and rivers we have thus traversed together, good reader, is very beautiful and slightly hilly. Crouchfield is especially well-wooded and verdurous, and in the summer time I know of no more pleasant resort, or a more health-giving journey than the three miles between Winkwell and Frogmore End. The land, I am told, is about 350 ft. above the level of the sea, and its bracing qualities and cool breezes (especially in winter) are well known to the inhabitants. To those who do not know the spots I have spoken of, I would say "Go, take your fishing-rod, and enjoy a day, with every prospect of sport an' you be ordinarily lucky."

THE POLLUTION OF RIVERS.

(Being a Lecture delivered before the Caxtonian Angling Society by COMPTON READE, M.A.)

HE who is justly deemed the greatest of philosophers formulated as an axiom the obvious truth that "nature makes nothing in vain." It is not easy, I will grant, always to apply this axiom; but, speaking generally, I believe when we cannot perceive the use of any created object, the error lies in our lack of knowledge, and not in Aristotle's grand aphorism, which, however, in most nstances, is simply self-evident. I presume, therefore, that it would be difficult to discover that perverted intelligence which would seriously deny the value of a species designed, apparently, as a staple article of food, I mean fish; and though the fish of he sea may be more useful to man than the fish of the river, still he very fact of our finding such noble varieties as the trout and he eel, not to mention the pike, perch, gudgeon, and others that inhabit the fresh water, goes to prove that these species ought to serve a useful purpose. We can easily imagine that when the world came into existence, it might have so happened that the streams and rivers should have been but so many drains to carry off the superfluous water from terra firma to the ocean. They might have been mere aqueducts and their waters might have contained no living creatures. The contrary we know to be the case. Our streams and rivers abound with fish, except where, owing to avarice or stupidity, the waters have been poisoned, and this very abundance in itself constitutes a sound argument in favour of the poor fish. I myself, some years back, hooked no less than 17 trout, averaging half-a-pound each, in the Island of Mull; in other words, the little mountain torrent, from which I took these trout, yielded, exclusive of bone and refuse, from five to six pounds of solid wholesome food. That stream, I may mention by way of illustration, runs for about a mile and a half, its average width being not more than thirty feet. Now, assuming that it yielded but five pounds of solid food nett per diem, for six months out of the twelve—and this, I am confident, does not represent a tithe of the actual yield—and putting the value of such food at only 6d. per pound, this narrow strip of water would supply the human family with nearly £25 worth of sustenance. Taking the meadows on either side of its banks, I question whether the same number of square feet of grass would produce so good an average.

I have ventured these few remarks, because it is clear to my mind that the public, and more particularly its reflex, the legislature, will never be influenced by any other than the argument from utility; and one incontrovertible reason, though not by any means the only one, why rivers should be preserved is that freshwater fish form an item of our food supply, and that reason, I should remind you, constitutes the sheet-anchor of the angler, so far as preservation goes—I am not now speaking of pollution. To take a parallel case, if it were not that pheasants, hares, and partridges provide some of us with a substitute for beef and mutton, do you suppose the game laws would continue to exist for an hour? In the present temper of the country, the very fact of angling or shooting being privileged sport seems to excite an ill-conditioned sentiment of jealousy, and to militate against proper preserving. For my own part, I shall be equally grieved when trout, woodcock, grouse, pike, and pheasants, become extinct species; and I am sure that the evil day may be indefinitely deferred if only sportsmen and anglers will take the trouble to prove by statistics the actual dietary value of those species. And here, before I approach more directly the subject of my lecture, you will pardon me if I remind you that man is the emperor of creation. Now there have been in the history of the world emperors and emperors. And among these supreme beings we find such monsters as a Nero or a Caligula, who condemned to torment the noblest spirits of their age. Is man, I would ask, exercising his empire over the humble fish after the fashion of a moral and responsible agent, or is he not, rather, a very Nero, when he either nets them, or, worse still, poisons them wholesale? Mr. Ruskin, I maintain, was more than justified in raising his protest against the sacrifice of all the beauties and all the advantages of nature on the altar of commercial greed. True, we must, things being as they are, submit to a portion of the surface of nature being relegated to manufactures, but, on the other hand, we do not desire that all England should become the Black Country, still less, that all our rivers should be as dark and devoid of life as the Dead Sea.

With this preface, I proceed now to address myself to a particular phase of fish-destruction, with which we individually are in a greater or less degree concerned; I may say, however, *in limine*, that a society bearing the name of Caxton and withal devoted to the gentle art of Izaac Walton, will naturally be disposed to handle our friends, the paper-makers, even when we have spitted them on a logical hook from which they cannot escape, very much as the literary fisherman handled his worm—as though he loved him. For my own part, my pen has contributed for many years, though in an infinitesimally small degree, towards keeping the paper-mills going, and I am quite sure that the paper-maker is far more an essential to me than I ever could be to the paper-maker. I am not, therefore, about to quarrel with my best friend, albeit, I shall not shrink from indicating the extent of mischief whereof that estimable individual is guilty. In the first place, then, let me enter a protest against the bare supposition that I or my auditory are desirous of anything so chimerical and quixotic as interference with the paper trade beyond a certain reasonable limit. We, indeed, are not the aggressors. It is not the anglers, Caxtonian or otherwise, who interfere with the trade, but the trade that interferes with our pastime, our profession, if I may so term it. I must premise, moreover, that this interference with angling on the part of the trade is of comparatively recent date, and this, for reasons known to most of you, but which, for the sake of perspicuity, I will here recapitulate.

Upon the removal of duty from paper there occurred almost a revolution in the trade. At once every class of journalism was lowered in price, readers became more plentiful, and the demand for paper was indefinitely multiplied. Hence rags, whether English or foreign, failed to supply the necessary amount of material wherewith to feed the mills, and the manufacturer had to go far afield for new fibres. At that moment my father happened to be Chairman of the London and Lisbon Corkwood Company, and I remember well a statement of his, to the effect that if the demand for esparto kept increasing it would pay the company better to import that article than to import corks. Of late years, the American paper-makers have come into our markets and purchased extensively our already limited supply of rags, which, I may add, has yet further been curtailed owing to the vagaries of fashion. Twenty years ago, print dresses, and white petticoats were in vogue: now our womankind arrays herself in wool, silk, any and every garb except cotton, the result being a considerable diminution in the rag supply from this source, for I need not tell you that wool is worse than useless in a paper mill. Again, in the palmy days of the Great Exhibition, and even later, mechanics were content with fustian and corduroy, and the relics of these give the paper-maker his heaviest and best rags. Needless is it to remark on the change that has come o'er the hand-workers' dream, or on the singular illusion that possesses him, viz: that by wearing indifferent broad-cloth, he mounts one rung higher on the social ladder. The result of this deficieney of rag-supply, was the employment in huge quantities of such coarse fibre as, for example, those of esparto grass and palm leaves, and this brings me at once to my point. Rags are reducible to the proper consistency with a comparatively small quantity of chemicals, and this is why the Americans, whose paper is the admiration of the journalists of either Continent, come to us for rags. They do not lack fibres in their vast territory—indeed they must enjoy a plethora of grasses suitable for paper manufacture on their broad savannahs and prairies—but they have no chemicals; and I believe I am correct in stating that they find it cheaper to import rags and use a small amount of chemicals, than to import a large amount of chemicals and turn their grasses to account—this probably because of the heavy duty, and because of the volume of chemicals required to reduce their indigenous fibre to a pulp. Here in England we have no lack of cheap chemicals, and inasmuch as Spain and Africa are within measurable distance of this island-home of ours, esparto can be procured cheaply enough, Now in the event of caustic alkali being the medium used for reducing esparto, seven cwt. of that chemical compound will be necessary to reduce the two tons of esparto which go to make one ton of paper, and these seven hundredweight of poison—for such it is—will be dissolved in the two thousand gallons of water wherein the same esparto is steamed. You have thus a simple arithmetic sum in river pollution. If a mill manufactures ten tons of paper—representing, perhaps, the circulation of a not very Jupiter-like journal per diem—it will cast into the stream which feeds it a grand total of twenty thousand gallons of poison! Perhaps, if that stream chanced to be the Mississippi, Missouri, or the Amazon, the mischief done would be imperceptible. But to a sluggish river like our royal Thames, and *a fortiori* to such streamlets as the Darenth, the Cherwell, and the Wey, this quantity of pollution means death and destruction to fish, disease to all those, whether men or animals, who drink the defiled water, while the watershed itself, which in its pure and natural state is beneficial, becomes transformed into a veritable Styx, spreading miasma and blood-poisoning in its course. The banks of this Stygian stream you may see to be covered with the corpses of fish, the cattle that taste its waters writhe within a few hours in internal agony, the very herbage refuses to grow, flowers there are none, and, from its dull, darkling mud banks, you would judge it to be a tidal river in lieu of being an inland stream. If it be true that God made the country and man made the town, it is doubly true that the art of man can succeed in marring that glorious silent highway, which has so often been the theme of poets, those rivers that seek their rest in the bosom of the sea. Alas, man is the wolf of his fellow; and not content with devouring his species he must needs mutilate the divine face of nature. We may condemn Cromwell for stabling his horses in a church, yet, after all, the iconoclasm of trade is as fierce and destructive as that of fanaticism. To my mind the waters of the exquisite Darenth should be held as sacred as the precincts of the noblest temple ever raised by the reverent self-sacrifice of Christians.

To revert, however, after this too ideal parenthesis, to sober prose and commercial commonplace. There is a yet more destructive medium than caustic alkali in common use for reducing esparto. I refer to what is known technically as bleach, and to the public generally as chloride of lime. I am informed that it takes from 150 to 200 lb. of this noxious compound to reduce one ton of esparto, and, to pile up the agony, I have to add that a much larger amount is requisite when straw is used instead of esparto, while the proportion of caustic alkali, when that same tough material is employed, stands at five per cent. in excess of that which suffices to reduce esparto. A friend of mine, well versed in the secrets of the paper trade, assures me that a large mill, with the working of which he is familiar, discharges weekly an average of 75,000 gallons of poisoned water into a little streamlet that shall be nameless, which is thereby being converted into a running pestilence, deleterious in the highest degree. And here I pause to ask a pertinent question: Are we living under the feudal system? Are not our modern lords-paramount, not, as of old, the belted earls, but the magnates of commerce? Seriously, the country is in a far greater degree enslaved by the mighty dollar than the people wot of. Listen to this one fact, which can be verified. A large firm of paper manufacturers expended recently a sum approximating a quarter of a million sterling on their works, which are situate on a once lovely stream not a thousand miles from the metropolis. Of course they poisoned with their vile chemicals the fish, which were the glory of that little river. That goes without the saying. But I am told that they had provided against all contingencies by buying up the fishing rights below their mill. They thus constituted themselves the suzerains of the country through which that stream meanders, and it may be that they are fortified legally. I must protest, however, in the name of the people, against the damnable doctrine and position that any citizen of this country can purchase the right of poisoning a running stream. There are things that money cannot buy, and among non-purchasable commodities I certainly include the privilege of injuring your fellow-creatures for your own advantage. You will perceive that this problem of river pollution is not one altogether of sport, not one altogether of food supply, but chiefly a sanitary problem. You may abolish the fish, but if in the process you poison your water-meadows, injure your flocks and herds, and affect deleteriously the health of your riverain population, you may possibly have purchased your tons of paper in too dear a market. The angler's interest and the angler's sentiment may be treated by the oligarchy of the paper trade with contempt, but when the health of a whole district is menaced, our small gravamen as anglers becomes included in a larger and an unanswerable indictment. I am quite aware that the Pollution of Rivers Act was only passed by a Government, which took for its motto "Omnia Sanitas," with extreme difficulty, and that its main object was to divert sewage from the rivers, and not the preservation of fish. But I am satisfied that whatever Government be in office, be it in complexion High Tory or Ultra-Radical, when statistics are brought forward to show that the poisoning of rivers, either directly or through their tributaries, does affect a section of the people injuriously, that Government cannot, if it would, turn a deaf ear. The *onus probandi*, however, rests with us; I mean with those who, like ourselves, are desirous of saving the beautiful rivers of our native land, and especially those within range of London, from what we believe to be unnecessary pollution, and their finny treasures from utter annihilation. And further, while on the legal aspect of the question, we must not forget that it is easy to drive a coach and six through an Act of Parliament. For instance, the piece of legislation to which I have just alluded is almost feminine in its mass of contradictions. Not to weary with dry-as-dust details, I cannot refrain from calling attention to this bright specimen of the wisdom of Parliament. The Act opens with the usual preamble that it is "expedient," &c. I wish I could add that the expediency insisted on in the preamble led up to a thorough and drastic measure of reform. Unluckily it does nothing of the kind. Part 3, section 4, contains this simple and satisfactory clause, which hits the paper trade straight: "Every person who causes to fall or flow, or knowingly permits to fall or flow, or to be carried into any stream, any poisonous, noxious, or polluting liquid, proceeding from any factory or manufacturing process shall (subject as in this Act is mentioned) be deemed to have committed an offence against this Act." Clause 6 further enacts that proceedings cannot be taken to enforce this clause except by two parties: (1) the Local Sanitary Authority, with the sanction of the Local Government Board; or (2) the Local Government Board itself; so that, you will agree with me, the Act is accurately well tied up with red tape. Most tender care, however, is taken to render the Act wholly inoperative, for, as a rider to this yard of red tape, I find superadded a clause that practically upsets the whole Act. It runs thus: "The said Board in giving or withholding their consent (to proceedings for infringement of the Act) shall have regard to the industrial interests involved in the case, and to the circumstances and requirements of the locality, and shall not give their consent to proceedings by the Sanitary Authority of any district which is the seat of any manufacturing industry, unless they are satisfied after due enquiry that means for rendering harmless the poisonous, noxious, or polluting liquids proceeding from the processes of such manufactures are reasonably practicable and available under all the circumstances of the case, and that no material injury will be inflicted by such proceedings on the interests of such industry." How, in the teeth of such a clause, a conviction could be obtained for such river pollution as I am now referring to, surpasses my small comprehension. It seems to me that the manufacturer would only have to advance a plea that he is employing so many hands, or to urge the difficulty of dealing with his waste water, in order to gain his case. Indeed, as I read the Act, it appears as though a man might be punished for such an accident as that which occurred at Wycombe, and which was threatened with prosecution by the Angling Society of that town—where a small slate tank gave way and discharged about 60 gallons of chloride of lime into the river, causing the destruction of some 50 sovereigns' worth of fine fish—while for wilfully and systematically polluting the stream he would go scot-free. I may be wrong, but if I am not so, then it will take a very powerful leverage to set in motion so badly worded an Act against the individual or collective potentiality of the members of the paper trade; the more so because the Act allows an appeal from the decision of the County Court to the High Court of Justice, so that the cost of a test-case, supposing a verdict were obtained in the inferior court, would be heavy, so heavy as to be almost deterrent to any Sanitary Authority, or Local Government Board, the only possible prosecutors, you will remember, under the pro, visions of the Act. I have heard it suggested that the Public Prosecutor, a functionary created since the passage of this Act, would have power to take up a case of river pollution, but this suggestion requires verification, and, *prima facie*, I am inclined to believe that the Public Prosecutor has enough to do with criminal offences, and that he is not required to discharge the duties of an inspector of nuisances, or of a Sanitary Authority.

I trust, gentlemen, that I have, albeit in the fewest words, demonstrated that the Act, professedly designed to protect our rivers from pollution, in reality has saved them only from sewage pollution, a form of qualification which is indeed harmless if contrasted with that effected by such chemicals as caustic alkali or chloride of lime. The Act was obviously directed against the urban authorities of such towns as Oxford, Abingdon, Reading, and Windsor, and though it professes to be genuine and to deal with the whole problem of river pollution, there were inserted, as you perceive, saving clauses in the interest of trade. Indeed, I am doubtful whether under the old principle of equity, that a man had no right to defile his neighbour's water-course, the rivers were not better protected against poisoning by chemicals than they are under this special, and very specious, Act. Evidently, therefore, if the denizens of districts watered by rivers and streams desire to preserve themselves, their children, and their cattle from poison; if, again, the various angling associations of this country are resolved to retain that heritage of piscatorial rights which we have had handed down from generation to generation unimpaired, then we must combine and agitate for fresh legislation. Of course, if it can be shown that the purity of our rivers is protected under the existing Act, then by all means take steps, if you can, to enforce it. The difficulty of doing so, consists in the machinery provided by Parliament. You may, as has been suggested to me by an enthusiastic disciple of Izaac Walton, resolve yourselves into a sort of working committee of investigation, and if you have not the fear of rheumatism before your eyes, spend your evenings in punts, somewhere in the vicinity of mills that you know to be offending perpetually against the spirit if not the letter of the Act, in order that when the stream is flushed with poison, you may bottle off so much liquor as proof positive of a violation of the Act. And, I may remark in passing, that such information obtained by reliable persons representing an organisation of the character of the Caxtonian Angling Society would carry weight before a Committee of the House. But whether you would succeed in inducing a Sanitary Authority, or a Local Government Board, to saddle their overburdened ratepayers with the expenses of a cumbrous prosecution, that I must leave to conjecture. Perhaps the attempt should be made, the more so because there is one more argument on our side which I have reserved as a *bonne bouche*.

The greatest sinners against public sanity and private angling are, I fear, our good friends the paper-makers; at all events, I am conducting at present a sort of moral analysis of their sin, which affects the anglers of London in a very perceptible degree. Now just as theologians teach that all sin is superfluous—that everybody can be virtuous, and will be all the happier and richer for the exercise of virtue—so it may fairly be urged that the error of the paper-makers is not only pernicious but unnecessary. In a word they might, if they chose, with benefit to themselves, discharge their waste water into the streams and rivers in a comparatively innocuous condition.

Before the duty was taken off paper, when mills that are now turning our fifty tons per week turned out but five, and when the staple material in use was the British white rag, which, having already been bleached, needs but little chemical interference to reduce it to a pulp, the refuse water might have been cast into the rivers without causing any appreciable damage. But, when esparto was first used, coarse chemicals advanced in price, and the mill-owners then began to erect evaporators, so as to recover the chemicals. It was found, however, that the cost of evaporation was so considerable as to yield no gain to the manufacturers, in fact, the recovered chemicals represented exactly the cost of the coal used in evaporation, and nothing more. Hence evaporation gradually diminished. This, I maintain, ought not to have been the case. Manufacturers are under a moral obligation to the country not to pollute the river unnecessarily; and further, I am assured by a practical man that if evaporators were compulsory in every mill, the paper-makers would soon enough find out that recovery was a paying process, or, in other words, to revert to my former contention, they would be taught practically that useful lesson of our copy-books "virtue is its own reward."

Oddly enough, manufacturers, of all traders the most wasteful and shiftless (except where the wage-rate is concerned, when they are commonly stern economists), have invariably been benefited by the interposition of Government, and so far as the paper-makers are concerned, they would certainly be none the worse off, and probably effect a saving, by adopting evaporation as a *sine qua non*. At all events, we have a right to demand that they shall not be encouraged by Act of Parliament to waste such valuable chemical substances as caustic alkali, and to pollute and render pestilent the crystal streams of old England. I do not exaggerate, gentlemen, when I call it tyranny on the part of traders to convert the pure waters of a sweet stream into the vilest and most pestilential of open sewers, so that the humble folk dwelling on its banks are compelled to fetch from a distance water, not only for themselves, but for their cattle. And yet this is the state of things on the silvery river Wey, where the poor people may be said to cry

> "Water, water everywhere
> And not a drop to drink!"

One's natural indignation, too, is appreciably augmented by the reflection that this cruel defilement of the Wey with a mixture that I will call "esparto broth" might be stopped to-morrow with advantage to the paper-makers. If we could not enjoy the blessing of cheap paper except by a sacrifice of our freshwater fish and our lovely streamlets, then perhaps we might cultivate a spirit of resignation. But, gentlemen, the mischief is preventible. The remedy is at the disposal of those who cause the mischief, and if they persist in refusing to avail themselves of that remedy, you will agree with me that we must endeavour to apply the gentle persuasion of an Act of Parliament.

I have to confess, in conclusion, that I have been able only to touch, as it were, the fringe of a great subject. For that I tender you my apologies, while at the same time thanking you for the compliment you have paid me in giving your attention this evening. If the few words that I have strung together clumsily should lead others who are more competent than I am to investigate the serious question of river pollution—above all, if this Society should be encouraged to take the initiative in an agitation for the reform I have indicated—then, gentlemen, I shall not have altogether wasted either my breath or your time.

SILKWORM GUT.

IT is a bold act for a man to differ with the dictum of a member of so eminent a firm as that of Messrs. Allcock and Co., of Redditch; but the detail of the treatment of silkworm gut, as given in the American *Forest and Stream*, in your issue of the 14th inst., as emanating from that gentleman, is in many respects so totally opposed to what I have been assured are the proper preparations for this product, that I dare not suffer the statement altogether to pass without challenge. Mr. Allcock says he has been in Murcia, Spain, superintending its manufacture, and has discovered two causes which make gut brittle, and has instructed the managers there to see all the native producers of gut, and impress upon them the importance of keeping the gut out of the sun.

Are we to conclude that Mr. Allcock has only now, after "thirty five years' experience," discovered that the sun has been the cause of the complaint at present so general respecting the inferiorite of this product? I will grant, for the nonce, that the sun may b one of the causes of the present deterioration; but, if so, we have been in error from the first application of this most useful production, as the sun has not ceased to shine, nor has it diminished the power of its rays. Then how does this tally with the positive knowledge that at one time gut was of the best, no complaints were heard of its strength and endurance, and it is now charged with abuses directly opposite to those which contributed so greatly to the excellence of the material? We admit that the gut is worse now than heretofore, but we do not admit that the sun has had anything to do with it. In case, however, this indictment against the grand luminary should require proof, Mr. Allcock says that, after the silkworm has been drawn out, it is put in the sun to dry, and the great heat of the sun takes the moisture out of the gut and makes it brittle. Here we have, according to the above, that the sun is not diminished in its powers of heat, and instead of doing its task in a steady workman-like manner, overbakes the gut; therefore, we must conclude, it is not the want of the solar rays that is the cause of the deterioration. He goes on to say that in bleaching it he discovered another danger in the manufacture. If the bleaching-oven is too hot, and the gut is too long in the oven, it makes the gut more brittle.

Thus we find that, firstly, the sun had overdone the process, and, in the next, that the excess heat of the bleaching-oven had caused the same effect. But it does not seem to have occurred to Mr. Allcock, how simple was the remedy: a thermometer, at the cost of one shilling, would have determined under the sun or in the oven the proper degree of heat.

Toffee is pliable, hardbake is brittle, both closely allied sweeties. Mr. Allcock seems, however, to have discovered this, for he says, in the next paragraph, gut, if made without an excess of heat, may be more pliable and consequently stronger. Who says it would not? He says that he has never found gut get brittle by keeping. Hence we find that the fierceness of the sun, and overheating of the bleaching-oven are detrimental; but how does this agree with the following, if we are to take the process as that endorsed by Mr. Allcock? The manufacture of gut is very simple. The gut from the worms is bought from the small country people who breed the worms in their houses. The first process in making is to put the gut in a furnace with water, a little soda and soap, after boiling a short time the outer skin comes off it. It is put in yellow, and comes out white after it is put in the bleaching-oven.

For our own part, we are inclined to believe, subject to correction, that the furnace, the boiling and the baking, the bleaching, the soap and soda, have more to do with the recent deterioration of gut than the poor slandered sun and atmosphere. Mr. Allcock speaks of the moisture being taken out by the sun. I presume he means it solidifies the gum, the most vital portion of the gut that holds together the many threads of silk which form the strand. But, surely, soap and soda, boiling and bleaching, &c., is most likely to extract both moisture and gum, than any of the old processes from which we got the best material.

We have in England tried the following receipt with silkworms bred by ourselves. Steep silkworms, when just ready to spin, in strong vinegar for twelve hours in warm weather, or two or three in cold; then take them out, break them in the middle, stretch them out as far as possible on a board furnished with slits or pegs to hold them, and dry them in the sun. The worms may be known to be going to spin by refusing food, and by having a fine silken thread hanging from their mouths.

The only failures that we have had have been when the sun has not been sufficiently hot; but even then, by artificial heat, we have produced average samples of gut. We should add that, after it is dry, we wipe it with olive or sweet oil, and put it away in Russia or wash leather.

Creel.

Gregory's Spinning Baits. "The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[Advt.]

RIVER REPORTS.

MID-THAMES.

> " My business in this State
> Made me a looker on."
>
> —SHAKESPEARE.

Nothing of note has occurred during the past week in the fishing line, on the Upper or Mid-Thames to warrant a detailed account; men have come and men have gone, but fish certainly have not been of so locomotive a turn of mind, and no bait, however attractive, has weaned them from their aqueous retreat. The river as I write is dropping down to its normal height, and getting from clay to mignionette tint, so, by the time this is in print, I should say roachmen bound for the Thames will be able to exclaim " I've got 'em on." A grand old Marlow fisherman named Rockwell has recently gone to rest. As usual with his profession, he has not left a large balance in the bank, which he will honour no more, but he has left a widow and children to mourn their bread winner. A fund is being formed for the benefit of the same, and I beg earnestly that patrons and others who may have ever had the good luck to have had a day with this rare old bird, not to begrudge a *mite* or a *mightier* into the stocking of his orphan and widow. Subscriptions will be gratefully received by Mr. Maskell, the George and Dragon, Great Marlow.—MARLOW BUZZ.

Thames (Goring).

Water in good order for all sorts of fishing, in good order for jack, perch and chub, could not be better. Prospects at present good for this week. Saturday and Sunday a bank fisherman from Woolwich took about 9 lb. of roach. Monday I was out, took about 10 lb. of roach; Wednesday, one jack 6 lb. and some good roach and a few good perch.—JOHN RUSH.

Thames (Kingston).

I have not been out for some time, having met with a bad fall. John has been getting some few perch and a jack or two, nothing of any size, jacks 2 and 3 lb. and a few roach and dace; the bank fisher now and then gets a nice lot of roach. The water is in good form for perch, jack or chub; I should say that chub ought to be got at.—JOHN JOHNSON.

Thames (Richmond).

The river is now in splendid order for fishing, it has not been in such fine order since October as it is now, and the fish are feeding well, especially the dace, which are running a good size; there has not been so many bream taken as I should have thought, considering the state of affairs. The sport of the week has been as follows:—C. Brown, 3 days, 35 lb. roach and dace; H. Mansell, 2 days, 23 lb. roach and dace; H. Howard, 2 days, 9 doz. roach and dace; H. Wheeler, 2 days, 19 lb. roach; Job Brain, 3 days, 29 lb. roach; J. Bushnell, 3 days, 40 lb. roach and dace. Those who want to have another turn before the season closes should come now, as they will not have a better opportunity.—JOHN BUSHNELL.

Thames (Walton).

The water has been falling all the week, and is now only about 9 inches above last summer level. It is now in capital condition and clear. If we are not visited with the storm promised on the 20th and 21st inst., there will be plenty of sport in a day or so. The weather is dull and foggy, and the wind, if anything, S.W. Nothing at all whatever, and nobody out fishing except on Sunday, when a few bank fishers tried their luck, but I did not hear of any take. Yesterday, Geo. Hone and Rogerson were out and tried for perch, but had nothing. To-day, Geo. Hone out with two gentlemen had eight perch, and lost as many more. Jack are well on the feed, but, owing to being able to get well supplied off the flooded meadows, &c., they are overfed, and before taking kindly to the bait they must be allowed a day or two, when they, and perch also, will bite well.—HENRY E. WOOD.

Ancholme.

My sons had a run over to one of the tributaries of this stream on Satudray last, but though they tried the whole range of customary baits one small roach was the only reward they received for several days' preparation. The day was dull and murky, and this may in a measure account for their want of success, as I have generally found at this time of the year that the absence of sunshine has an injurious effect upon the appetites of the fishes. If, however, they were disappointed, I had a perfect piscatorial feast. Two years ago I placed seventy *Salmo Fontinalis* fry in one of the feeders of this river, at the very fountain head, so on Saturday last, being in want of a few for stocking purposes, I thought I would run up to see what I could find. For this purpose I took a little can and landing-net only. I was most agreeably cheered and disappointed to find five of them within 200 yards of the spot where they had been placed two years ago. There were two pairs and one(add one—the sixth fish having escaped me. It is noteworthy that, in trying one of the little pools on the way up, the male fish made a bolt down the stream for some considerable distance. So I said to a friend who was with me that we should find it again in the same place on the way back. On our return this prediction was verified. It was again in the old spot seeking its mate, which it found not there but in my water-can. Of course these fish had duly spawned, but they are now added to my stock at the Manor Fishery where I hope to utilise them with others next season. To show how fast these fish grow, I may state that they were each about nine inches long, and in every respect prettier than the common trout. Rather more than twelve months ago I read an article in the *Norwich Argus* by a local M.P. of a considerable fishing authority, in which he gave these beautiful fish the character of runaways. I am delighted to controvert this theory. They must have remained where I placed them from the first, as there is a fall about a mile below which they could hardly have mounted. I put twenty times as many common trout fry in the same place but not one of these remained above the fall I have mentioned. I trust these notes will be of some service to gentlemen who think of stocking places with this fish. It is to me the most interesting report that I have sent for months, but I hope to do better things when the trout-fishing opens.—THOMAS FORD.

Dove.

At last we have had several real hard night frosts. The sun, however, has been shining so brightly by day that every morning before eleven o'clock all has been in a state of thaw. Our river has been in grand condition since I last wrote, and there has been a nice rise of grayling on every day. The frosts have made matters much better for fly-fishers, as they have killed off a great lot of naturals, and the grayling with their appetites sharpened up by the cold have been taking the artificial flies freely. The February red has been killing best, but it is now off the water. The takes during the week have numbered in many cases eight brace per rod. The best sport has been obtained about Ilam, Uttoxeter and Dovedale. Some of the cleach-net fraternity have, I am happy to state, just been heavily fined by the Ashbourne magistrates. Mr. Eddowes, of the Trent Fishery Board, prosecuted the fellows, and I congratulate him upon their conviction. Coarse fish are biting eagerly at the cockspur; many good catches have been made almost daily since my last. I fancy the colder weather now prevailing will soon send them on to the maggot. Pike are running more freely; a seven-pounder was caught on Tuesday near the Dove's junction with the Trent by a Nottingham rodster using the live minnow.—THE SPLODGER.

Exe (Exeter).

The weather during the past week has been so very spring-like that many rods have been taken from their various winter quarters to commence their actual spring avocations, and in reality before we have had the slightest indication of winter. The pike fishermen have done but little to what they usually do at this season of the year, when the weather is generally much sharper, and the roach, dace, perch and chub are literally swarming in the lower waters, where some very fine perch have been taken. In the upper portion of the river some magnificent roach have also been secured, many of them over one pound each, and salmon are seen (as our river-watcher informed me) like flocks of sheep, scrambling and tumbling one over the other, as if keeping up unusual festivities with the coming in of the new year. A few kelts have been seen going down, but owing to the river being moderately high, not so many are seen as the case would be were it otherwise. Weather bright and mild wind S.S.W.—FRANK GOSDEN.

Ilfracombe (N. Devon).

There has been quite a variety of fish caught this week of different kinds, but few in number, consisting of cod, conger, ling, skate, codlin, whiting pout, dabs, thornback, &c. A few conger, the largest weighing 45 lb.; also some cod, from 15 lb. to 20 lb. each; one ling, 15 lb.; a few skate, averaging about 56 lb. each; and some small codlin and whiting pout. A few dabs and whiting, caught with hand lines from the pier and a rock, known as Britton's Rock, a first-rate rock for amateur fishermen. Weather at present moderate, but very cold.—E. COMER.

Lea (Rye House).

The water is in good order for all sorts of angling now, the wind south-west On Saturday Mr. Swarbeck hooked a trout, weighing 5 lb., and he returned it to the water again directly, and it went boldly off. There have been some nice roach taken this week.—WILLIAM COWELL.

Medway (Tonbridge).

We have seldom seen the river in better condition than it is at the present time for angling, but the fogs have prevented many from venturing after the finny tribe. However, a few jack and roach have been grassed. Now's the time, with a bright Thames dace, to kill a big jack or two. A well secured worm would prove an acceptable tit-bit for roach, chub, and perch, while pith and brains would not be objected to by Mr. Leathermouth.—YE MEDWAY WATER RAT.

Ouse (Littleport).

Water is a good colour again, and is getting back into the bed of the river again. It looks good for fishing in a day or two, and I hope by that time to send out invitations to some of my patrons, who are waiting very impatiently for a chance to wet a line. I did not report last week, as it would have been a waste of paper. This week again I have had no one down, as it has not been good enough. I have tried two or three times, and got a few each time. On Monday I got twenty-five roach and silver bream in about two and a half hours, largest roach going just 1 lb.; the others were all weighable fish.—CHARLES SOUTH.

Trent (Nottingham).

The Trent in this district has fined down rapidly, and is in rare trim for the votaries of pike and chub. Reports go to prove that a number of pike have been brought to bank since my last. From the back water at Thrimpton two fish killed with the livebait on Tuesday, weighed 24 lb., and in a noted length four or five miles below, one of 11½ lb. was taken by a friend of the writer. Eleven fish were also killed last Saturday, and singularly enough a barbel of 8 lb. 14 oz. succumbed to the skill of a rodster in the Shardlow allotment. Barbel very rarely feed in January, and the only reason assigned for the capture of the fish named is, or was, the extreme mildness of the weather. The cockspur worm proved the tempting lure. In the low waters a few fish have been brought up from Stoke. There has not been much doing at Weston, although the keeper informs me that five pike were killed in the Blackpool on the 13th. —THE MAN AT THE CLUBS.

Trent (Newark).

The water is now in better condition in the Lower Trent than it has been for some months past, especially for pike and chub fishing. Worm fishing for roach and dace will, I believe, be rather at a discount; although, possibly, bags of those fish may be taken with the maggot. Chub fishers should at once break the pipe of peace, and go on the war path, for the chances are about ten to one that the water will not again, this season, be in the condition it now is. Pith and brains will be the most killing bait; but, failing to procure those, a bit of nice white scratchings will kill. Pike have been driven into the backwaters, eddies, and corners, away from the main stream, partly with the late floods, and partly as their first upward shift for domestic purposes, and anglers who wish to trouble them should try the live bait in all those places. The youthful Duke of Newcastle has been having capital sport with the pike in the lake at Clumber this last week or two, hardly a day passing but what he has, among others, succeeded in taking a twenty-pounder, and one day getting one that bumped the scale at 23 lb. Several nice catches of various fish have been had this week; but, if anyone was to ask me what would be the best fish to go after now. I should certainly say chub. Thursday night—Water clear and in beautiful condition for chubbing.—The Trent Otter.

Trent (Caythorpe.)

Weather and water is all that a pike and chub fisher could hope for. I have been out to day with a gentleman but only got four pike; lost two and returned one. The same gentleman went home delighted, as I taught him to untwist his line, that is by reversing the tackle or hooks on the bait; and if this is done, there need not be any kinking of line when spinning for pike or any other fish; if spinning with a large bait and a big curve, then you will have to reverse the curve often. If this teaches any one to keep his line from kinking I shall be pleased, same as the gentleman I showed it to to-day.—Sportsman's Friend.

[A very useful plan.—Ed.]

Tweed and Teviot.

The last ten days of open weather have been of great benefit in these rivers in the way of improving the condition of the trout, and a few good baskets have been got with worm, and many of these speckled trout have been firm and hard, excelling any in point of condition that have been got for some years past at the same period of the season. One angler who, for an experiment, tried fishing with the fly this week, found that the trout rose to his cast, but not in a taking fashion. This rising to the fly so early in the year is pronounced by old anglers as a prognostication of a good and early spring time, and should we not have any very severe weather during the ensuing month rare sport is expected during March with the March brown, woodcock, and greenwell. Salmon Disease.—Since last week, this most destructive and loathsome disease has reappeared in these rivers with great virulence, and there is scarcely a fish to be seen that is not, to a greater or a lesser degree, affected with it. On Saturday last, at the stretch of water below Kelso Bridge, the water bailiffs took from the river Tweed forty or thereabouts of dead salmon, both male and female, that had succumbed to the disease. One very strange circumstance in connection with the female fish that were thus taken out was that they had been cut open and their ova abstracted. The hypothesis in this case is that the poachers had been at work, and, finding that the fish were not saleable, had killed the fish and ripped them open, taking the ova for the purpose of manufacturing it into "putty" or paste, which is greatly used for trout-fishing in flooded water, although it is strictly against the statute. On a stretch of water of about one mile in the Duke of Roxburgh's water, I noticed, one day this week, fully a score of salmon lying close to the edge of the water, some dead and others affected in all stages of the fungus—in fact, as I said before, nearly all the fish in the river are diseased, both spawned and spawning; and what must naturally be the consequence in a season or two, and years hence, when the produce of these diseased spawning fish return to the river as grilse? Salmon Spawning.—The work of the spawners on the "redds" is proceeding apace—in fact, it may be said to be just about over, and certainly will be so in the course of the ensuing fortnight. Many salmon have, of course, finished their work, and a good rattling flood would, at the present moment, be of great benefit in removing to the sea those fish that have completed Nature's duty. The water to-day (Thursday) is low and clean, and the weather gives no prospect of an immediate flood.—Max Wheel, Kelso.

Wye and Derwent (Derbyshire).

Both the above rivers are in first-class condition for fly fishing, and I am pleased to say that some nice little baskets of grayling have been killed off of both rivers since my last report, chiefly with furnace, dyed hackle, and bumble flies; the furnace fly killing the most fish. Sport with the bottom has also been very good on various parts of the Derwent, both chub, perch, roach, dace, and a few grayling (of small size) having been killed, chiefly with maggots and small brandling worms. The coarse fish have fed the best in deep water, viz., from 6 to 8 feet, and grayling have taken the groundbait in the swims the best, in water from 3 to 4 feet deep. Several pike of small size have been killed in the Derwent between Cromford and Ambergate with live bait fishing, with both small roach and gudgeon for bait. Both on Wednesday and again to-day the weather was thick and murky, a hazy fog hanging about till afternoon, when the sun brightened up and brought a good number of natural flies out on both rivers, the grayling rising nicely for about half an hour, from half-past one to two.—George James Eaton.

ACTON AND EALING ANGLING SOCIETY.

The first dinner of the above society was held at the George and Dragon Hotel, on Wednesday, January 18; Dr. Lingham in the chair and Mr. Bocking in the vice. Thirty members and friends sat down to a capital spread. The usual loyal toasts having been honoured, letters regretting their not being able to attend were read from the Rev. A. H, Dunn, Mr. Marston (Fishing Gazette), Mr. Leon Bonvoisin, and Mr. Hoole. The toast of the evening, "Success to the Acton and Ealing Angling Society," was then given by the chair, who said that every man was, in his opinion, in this high-pressure age, better for having some hobby or recreation, and, in a humorous speech, recommended angling as one of the most health-giving amusements to be obtained. Three new members were enrolled by Secretary Williams during the evening. The secretary then gave in his report, stating that thirty-seven members were now on the books; 350lb. of fish had been weighed-in since the formation of the club in August last; and that the banking account was in a flourishing state. The health of the officers of the club was then drunk with musical honours. "Success to the West Central" was then drunk, and responded by Messrs. Bocking and Cooper, delegates. The two prize winners' (Messrs. A. Eydman and C. Simpson) healths were drunk, and the prizes presented—28s. to the first gentleman, and a handsome breakfast and tea service to Mr. Simpson, who won it at Thorney Broad with two jack, on Tuesday last, beating fourteen other competitors. The health of the President. Dr. Lingham, was then drunk with musical honours. The Secretary was then given, and responded to by him in a neat little speech. The Visitors was then given, also Mr. and Mrs. Brooks. Mr. Cooper exhibited some curiosities, especially a novel groundbait bag from the Trent. Some capital songs were given during the evening, by Messrs. Bocking, Cooper, Eydman, Head, Clifton, and others, and everyone enjoyed the evening, especially—Black Bag.

RICHMOND PISCATORIAL SOCIETY.

The half-yearly meeting of the members of this large and flourishing society was held on Tuesday evening last in the club room, Station Hotel, Richmond. There was a large attendance on the occasion, including Mr. F. C. Clench (chairman), Major Bull, (vice-president, chairman of the Richmond Vestry, &c.), Mr. H. P. Dickenson (vice-chairman), Messrs. T. Abbott (treasurer), A. J. Little (T.A.P.S.), Towell, J. H. Gaunt (secretary), H. Gaynor, H. Nattrass, R. Rowe, Griffiths, Houghton, Giles, Taman, Tyrrell, Keyes, and about forty others. On taking his accustomed seat as chairman, Mr. F. C. Clench announced that the committee appointed for the revision of the rules had presented their report, with the necessary alterations, which were accepted by those present in their entirety. It was then unanimously agreed that half-a-guinea from each member should be contributed for the purpose of acquiring private waters as well as the propagation of coarse fish. This will enable the members to spend some £60 a year on that project alone, and no doubt with considerable success. The salary of the secretary was raised to eight guineas, and various sums were voted for piscicultural purposes. The chairman, having announced that the next business was the election of officers for the ensuing year, vacated his seat, which was taken by Major Bull, who stated he had much pleasure in occupying that post for a few minutes during its vacation by Mr. Clench. They were all aware, and none better, they had in Mr. Clench a gentleman who was not only a capital angler but one who had endeared himself to them all by his kindness, urbanity, and unfailing courtesy. He had attained eminence in the angling world by his exertions on behalf of anglers generally, and notably for the Richmond Piscatorial Society, which he had raised from a local club into one that embraced anglers from the entire valley of the Thames. He had now the pleasure of calling upon Mr. A. J. Little to say a few words. Mr. Little, in proposing the re-election of Mr. F. C. Clench as chairman of the Richmond Piscatorial Society, remarked that they knew there had been some difficulty in getting that gentleman to undertake that office for another year, but he was glad to say they had succeeded in doing so; and he was sure, under his sound and energetic management, the ensuing year would be a prosperous one for the society. Mr. Taman, in seconding the motion, spoke most highly of Mr. Clench's valuable services. On being put by Major Bull to the meeting, it was unanimously and enthusiastically carried. Mr. Clench, on again taking the chair, was loudly cheered, and after thanking the members for his re-election, said he would do all he possibly could for the welfare of the society. He was glad to find that what he had done was so highly appreciated by them all. He had only one object in view, and that was the true advancement of angling interests; and whether in that society or outside in the piscatorial world, he should continue to labour with all diligence and earnestness in bringing about all changes that would be desirable to elevate the science of angling, and to make all anglers in every part of the country thorough and upright sportsmen. The following officers were then elected:—Mr. Dickenson, vice-chairman; Mr. Houghton, treasurer; Mr. J. H. Gaust, secretary; Mr. Gaynor, curator; and Mr. Rowe, librarian. The following gentlemen were appointed as the committee:—Messrs. Giles, Taman, Tyrrell, Field, Nattrass, Keyes, Goodales, Crew and Hayward, the auditors being Messrs. Plant and Ford. A cordial vote of thanks was proposed by the chairman to Major Bull, expressing a hope that as he was one of the representatives of the vestry in the Thames Valley scheme of drainage, he would look after the interests of anglers, and so promote the purification of the Thames. Major Bull, in returning thanks, said he would do all he could to help the anglers, but he thought that from what he saw in the river they specially selected the vicinity of sewers to fish. He supposed the fish had a sewer flavour, but he trusted before long this would be remedied. And he was at all times glad to come amongst the Richmond Piscatorials. They were all genial men, with the best of feeling, and he regarded the club as a haven of rest after a hard day's work. He knew something of the trouble of working a society, and he was quite satisfied, under the guardianship of Mr. Clench, their present chairman, it would become not only the largest, but the most influential club in London. The annual dinner was fixed for the 26th of January.

We regret to learn that Mrs. Greville Fennell, wife of the veteran angling writer and painter, expired last week after a long and painful illness. Mr. F.'s family have been singularly unfortunate in the matter of accidents; we remember visiting the genial scribe at his eyrie on the banks of the Thames a few years ago, when his poor wife lay injured in one room through being knocked down by a runaway horse and cart, his daughter was suffering from serious contusions caused by another runaway—this time the carriage in which she was riding near Piccadilly, while Greville Fennell himself had just slipped down the steps leading to his breakfast room and painfully hurt his back. We sincerely condole with him on his loss. The happy pair had been married over fifty-two years.—*Norwich Argus.*

George James Eaton, of Starkholmes Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. . No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[Advt.]

WORMS IN DOGS.—Mr. James Doughty, Author of "Art of Breaking and Training Dogs," says: "I have used Maldire's Worm Powders for Dogs for many years, and they have always proved successful." Maldire's Worm Powders are sold by all chemists price 1s., 2s., 3s. 6d. and 5s. per packet, or sent post free (on receipt of Stamps) by Barclay and Sons 95, Farringdon Street, London.

RAMBLES WITH THE FLY-ROD ON VARIOUS STREAMS.

II.

> "Mid pleasures and palaces, tho' we may roam,
> Be it ever so humble, there's no place like home."

RETURNING from wandering amongst coarse fish in the far South, I found myself, in 1874, once more in the "bonnie brown Norland," on the banks of the beautiful streams of my fatherland—streams that are matchless, in comeliness at least, amongst all the proud rivers of the land.

In the North there are several Greatas, and it was not far from the banks of one of these, on the breast of a mountain of the boldest outline and descried from afar, I found my footsteps retracing the homeward path. Two rivers formed the arena of my operations, rivers notable for shy fish and indefatigable anglers, who fish with fly, minnow and worm. The two rivers are the Greata and Doe, whilst the confluent waters retain the name of the former. There is an association in the place which extends over nine or ten miles of a lovely stream, containing trout that are famous in the market for their beautiful condition. The tickets are only five shillings for the season; the cost of the ticket may easily be defrayed in a day, even at low water. Notwithstanding all this, the fish are delightfully shy, and afford the most exquisite opportunity to the strategist angler for the exhibition of skill.

And now to the river. I extract notes from my diary relating to four consecutive days of fly-fishing in these streams, in July of the year already mentioned.

The first of these days was July 1. The barometer, after falling, had just begun to rise; the wind was up-stream, but the water very low, heavy, and rain was descending. The rod I employed was my 12-ounce hickory implement, with rent-cane top, by Blacker. The cast was of the finest slate-coloured drawn gut, and I used no hand net. The scene of encounter was the Greata, but on my way to this stream I had to wade across the Doe, close to some slate quarries, about a mile above the junction. This is a lovely place, and here I caught two trout, and then went forward. I struck into the former stream above Thornton foss, and procured seven fish in the quarter of a mile of rapid river below the ford. I then entered the upper basin of the valley, called Kingsdale. Here the river is much less rapid, flowing between earthy banks several feet high, but usually low and shelving on one side. There is a fair amount of weed in the various reaches of this section of the waters, which effectually prevents much successful poaching. I now encreeled 32 captives from the lagoon reaches above the ford. Dubs eight and nine were not in fishing trim, as the wind did not curl the water. However, I had already got two fish at once in the twelfth dub, and now two more came in company from a streamy nook below the rail, just above the head of the third pool. One fish, on being removed from the hook, disclosed a half-vomited, semi-digested bulhead in its capacious jaws. On returning, I took one more fish below the ford, when a sudden rush of road washings and rising flood stopped further onslaught for the time; so I left the banks with a heavy creel. The flies employed were fatal in the following proportions: black palmer, 7; red palmer, 4; whirling dun, 13; hawthorn fly, 18. The trout numbered 42 in all.

The following day, July 2, I went to the Greata alone, and fished from the foot of Swilla-Bottom Gill, beginning at a place called Creeping-stones, half-a-mile above the junction. In this romantic gill, I took 22 trout before reaching the slate quarries on the right bank of the stream. I then obtained two more below Thornton foss, whilst nine were added between the waterfall and the ford above. Sixteen more came to creel in going up Kingsdale, and two at the stream by the fence, below Keldhead, on coming down again. The barometer was 29·575, and falling, the wind upstream, whilst it was fine most of the day. There was a little rain with strong wind after 5 p.m. A good number of fine fish were caught out of the second pool. The first stinting was of fine-drawn gut; with this I fished until it became so frayed and thin that it would not keep straight, but incessantly curled on itself. One medium-sized fish showed good fight and doubled up the rod in fine style. The second cast employed was of hair. Black palmer, 7; red palmer, 2; grousefly, 13; whirling dun, 9; hawthorn fly, 4; this fly was then replaced by "The Francis," which took one. The second cast killed thus: golden dun, 3; iron blue, 4; peacock fly which was soon lost, 1; July dun, 6; black palmer, 1. There were 51 trout in all, which more than filled my pannier.

The third occasion, July 4, was in the river Doe. This time, two fish came from a short distance below the lower slate quarries. I then passed Baxen-gill full of stupendous falls, which lies above the quarry. The tumultuous career of the stream is comparatively calm half a mile higher up, but is still rapid and flexuous, and much more stony and varied than in Kingsdale. In the first pool I got two fish, and afterwards added 36. The wind was up-stream, and so strong as to spoil the fishing on some of the best dubs. However, by casting directly up-stream, I got a good many trout from close under the steep banks of the great sheep-dub, where the froth gathered together. The barometer was 29·79, and was rising. There was little or no rain, but it was very sunny at noon; afterwards cloudy. During the course of the day I lost the cast which had been used on previous occasions, after it had caught 114 fish. As on the first ramble, I caught a trout with another half-digested bulhead in its jaws. Three casts were employed, one of which took 36 of the 40 fish, the result of this day's sport. Black palmer, 5; red palmer, 2; grouse fly, 7; whirling dun, 15; Francis, 1; this fly was then replaced by the hawthorn fly, which secured 3; three other fish fell off the hook in landing.

The last of the four days found me again, on July 6, by the banks of the Greata. From the Creeping-stones to the quarry nine was the number encreeled. I then assaulted the hole at the foot of the great waterfall, when I deluded successfully six beautiful fish in the heavy rippling water. On this occasion only four more came to basket before reaching the ford. Nine were added between that point and Keldhead, where the river debouches from the innermost recesses of the mountain to see daylight after two miles of subterranean course. Before arriving at Thornton foss, on the homeward route, two more fish swelled the number, where, as a last resort, in the gloom of twilight the rebellowing pool was once more attacked and made to deliver five of its occupants. The tax I had levied upon it this day had been heavy, considering the splendid quality of the fish.

One of the 35 trout obtained was of remarkably burly proportions; for, although only measuring 12 inches long, it weighed 1 lb. 1 oz., and fought vigorously on hair tackle, though unavailingly. Four casts were employed; the July dun was the most deadly lure; one of the casts secured 18 fish. Golden dun, or iron blue, 5; peacock fly, 2; July dun, 7; black palmer, 4.; Besides the fish already mentioned, there was another amongst the number 11 inches long, weighing as much as 13 oz., and showing the remarkable condition of the trout of this stream. The water was now very low again; the breeze only slight, with the weather bright. The barometer was at 30·1, but falling, yet without rain. Though the creel contained the smallest number of fish on this day, yet the average size of the captives was much greater than that of those taken on the previous occasions.

So much for the streams of Yorkshire. Let the angler visit scenery unrivalled, with angling of a quality sufficient to impart to the fly-fisher, let loose from the trammels and exhaustive anxieties of the city,

> "A braw light of mountain and muirland"

to dissipate for many a long day the cares of a busy life. Such angling is to be found within easy and accessible distance of any of our great towns, and if the fly-fishers who live therein do not despoil the waters of their noblest and most wary denizens, the fault is no longer mine. Try, then, the Greata; fish when you will, it is impossible to "fish out" either this stream or its sister branch, the Doe. If you catch no fish the fault is yours. Fish the streams of my fatherland as you will, their trout defy the "fished out" theories. No other groundbait than practical craftsmanship will we allow amongst our silent hills and thundering glens. As much of this as you may possess, use unstintingly; and, if you prove the owners of a degree sufficient to render you happy amongst anglers on the days of trial, one other will not on that account be less blithe, for he knows there will always be a goodly residuum of trout welcoming

The Raven.

(*To be continued.*)

THE EAST ANGLIAN HANDBOOK,

THE present is the twenty-third annual issue of this most valuable handbook, published at the small price of 6d. by Mr. P. Soman, at the *Argus* Office, Norwich. The East Anglian is by far the best of all the publications of the kind, and this year every angler ought to buy it, and especially all who are interested in Fisheries Exhibitions, as it contains more than a hundred closely printed pages descriptive of the Norwich National Fisheries Exhibition, and all that was to be seen there. This article alone is worth the money, and in addition to it, the purchaser will find the other 200 pages full of most interesting reading. The article on cigars and tobacco is very cleverly done, and if our readers will try a pipe of the new "Barley White" tobacco over it, we feel sure they will thoroughly enjoy both. "Sport on the Wensum," will be found well worth another pipe. Then we have a tale by Cyril Hathway. "Fish Culture," by Charles C. Capel, &c., &c. In fact, the *East Anglian Handbook* is really worthy of the great success it has attained.

NOTICES OF BOOKS, &C.

A PLEASANT BOOK ON ANGLING.

ANGLERS' EVENINGS: PAPERS BY MEMBERS OF THE MANCHESTER ANGLERS' ASSOCIATION. Second series. Manchester: Abel Heywood and Son. London: Simpkin, Marshall and Co. 1882.

> "Whanne that April, with his showers sweet,
> The droughte of March hath perced to the root,
> And bathed every veine in such licour,
> Of whiche engendered is the flower;
> Whan Zephirus eke with his sweet brethe
> Enspired hath in every grove and hethe
> The tendre croppes, and the young sonne
> Hath in the Ram his halfe cours yronne,
> And smale foules maken melodie,
> That slepen alle night with open eye,
> So priketh hem nature in hir corages,
> Than longen folk to gon on pilgrimages."—CHAUCER.

THE "young sonne" has run his course through the Ram more than five hundred times since Chaucer penned his immortal "Canterbury Tales," and each time the "sweet brethe" of spring has made anglers long to go on pilgrimages after trout. It is to this longing that we are indebted for the charming literature of angling—a literature far surpassing in extent and interest that of any other field sport.

Two years ago, the members of the Manchester Anglers' Association gave the angling world a description of their pilgrimages, and very heartily was it welcomed—in fact, the whole edition was exhausted, and, as the preface to this new volume informs us, "a second edition might well have been issued, but as time went on, and the monthly meetings of the association supplied material that had at least the merit of novelty, it was resolved to bring out a second series, not perhaps so much instead of a reprint of the first as in anticipation of it. This resolution has now been carried out, and here is the result."

It is a result of which the Association may well be proud, and not they only, but the whole angling community. We devoutly hope the time is not far distant when every town in the kingdom will have an association founded on the same principles, and carried out in the same spirit, as the Manchester Anglers' Association; then we shall see what we trust has already commenced, the decadence of pegged-down matches, of gross-weight competitions, of prize-fishing, and pot-fishing generally.

This second series of "Anglers' Evenings," is in many respects an improvement on the first—good as that was. The *Field* of February 28, 1880, speaking of the constitution of the Association generally, said: "If they had two or three artists affiliated with them, their organisation would be complete." We are glad to see that this valuable hint has not been thrown away, for the volume before us is most charmingly illustrated by means of photographic reproductions, and wood engravings from sketches made by some of the members, who, if they can use the rod as well as they do the pencil, must be very clever anglers. Mr. George Sheffield's four carbon sketches are real gems, though we should imagine they are hardly done justice to by the autotype process—or rather by the great reduction they have evidently been subjected to. This is more especially noticeable in the illustration of Herrick's lines "Rockie are thy wayes all over;" which is not many degrees removed from that "utter indistinctiness," which requires the artistic perception of a Whistlerite to decipher. But the frontispiece, "The Salmon Pool," is a really exquisite bit of drawing.

The papers are all of them good, but those we like best are Mr. John O. Mackenzie's "Tweedside, with a few practical hints;" Mr. George Sumner's "The coach, the coached, and the coachman;" Mr. George Davies' "The meres of Shropshire;" Mr. George Sumner's "The Wye and the wherefore;" and Mr. Henry Vannan's "Fishing days on the Aberdeenshire Don." We must also mention specially the kindly lines on the late H. L. Rolfe, "In Memoriam" by Mr. Francis Francis. Every one who knew Rolfe will thank Mr. Francis for his graceful words, and acknowledge their truth and appropriatiness; here are a few extracts:—

> H. L. Rolfe, ætat 57, died on Monday, the 29th of August, 1881. Art loses a devoted follower, and the whole angling fraternity experiences a loss which cannot be replaced. We may have another fish artist, but another Rolfe we certainly shall not soon find.
>
> There was no pleasanter lounge, or place of gossip, than the little studio of "the scaly painter" (as his familiar friends pleasantly called him), in Nicholas Lane, City. . . . Peeping in at the open door, inside, beyond the *entresol*, you would see a small apartment, to which the window pertained, thronged with pictures of all sorts and sizes. If you were known and had the *entree*, or if you desired to transact business with the proprietor, you would enter and see, beyond a half-drawn curtain, the studio, a wee cozy nook, with "the Baron" himself (as he was called), seated at an easel, touching and re-touching, a noble salmon, which is bounding from the water with a fly in his mouth and a broken cast attached, and which is entitled "A Leap for Liberty," probably, for he was fond of apt titles for his pictures, and very clever in devising them. The glittering scales came out life-like and clear under his skilful touch, as he chats away pleasantly with some old friend the while, smoking the inseparable pipe, without which he never did anything, and on his head the almost equally inseperable fez, a striking figure, much over six feet in height, with very handsome features, which a grave kindly smile from time to time overspread, rarely deepening into anything approaching laughter. Let us listen to the conversation. His companion, probably some angling friend or fellow clubbist, or haply a customer from one of the great business centres adjacent, is speaking.
>
> "I tell you, Baron, he behaved shamefully, and I will never look over it."
>
> "Now, now, now, look here, old fellow. I know B—— well, and I have known you for years; you are two good fellows, and you two shouldn't quarrel and be ill-friends; I will not hear of it. If he said anything of the sort I'm sure he never meant it unkindly, or as you take it; I'm sure you're mistaken; why should he say a thing like that? You had not given him any reason?"
>
> "Not I, not a bit, and I never" ——
>
> "No, no, of course not, nor did he, you may depend on it; there is some misunderstanding. Don't fall out, you'll both be sorry for it afterwards, if you do. I shall see him at the club to-morrow, and I will talk to him," &c.; or ——
>
> "Well, if so and so did so and so, I am sorry for it; I don't want to remember it, and, if he speaks to me at the dinner, I shall take no notice of it. It is a pity there should be any ill-feeling."
>
> He hated scandal, and always put it aside. He could not abide quarrelling or ill-blood, and if two friends fell out he was quite unhappy until the breach had been healed again.

There was indeed, as Mr. Francis says, "a great deal of the simple, kindly, Waltonian feeling in the dear old painter, which made him beloved by all who came in contact with him." And it is a double pleasure to us to find this fitting tribute from Mr. Francis in this little volume, which is itself so full of true "Waltonian feeling." Every angler will find material for many a pleasant evening in this volume, and we venture to think a perusal of it would make a man who knows nothing about angling desire to equip himself with rod and tackle, and, with some master of our art as companion, explore our delightful haunts. It is impossible for one who is not an angler to fully understand the thousand and one delights which the sport affords. Every fly in our treasured fly book, every rod hanging in our fishing den, can conjure up memories which are the pleasantest and sweetest to look back upon;—the ordinary events of life are forgotten but that visit to "breezy Berwickshire," as Mr. Sumner so aptly cally the lovely county, those days on the glorious Eden in Cumberland, and a multitude of others like them, stand out fresh and green in memory. There is no pleasure like the angler's, and no holiday like the trout-fisher's; and we may truly say no anglers so keenly appreciate the pleasures of angling as we townsmen do. What, will you dwellers in rural districts, true lovers of the rod though you may be, dare to assert you can appreciate the art as we do! impossible. Come and live all but a week or two of every year of your lives in a town like London or Manchester, get "kippered" in our smoke and fog, get dazed with the noise and whirl of existence here—then, and then only, will you know what your country scenes, your gentle brooks, grand rivers, hamlets, hill-lands, mountains, valleys, moor-lands, are to us.

> "The green woods laugh with the voice of joy,
> And the dimpling stream runs laughing by."

So sings Mr. Sumner, as he passes through Lancashire and Yorkshire on his way to the Whitadder—loveliest of trout streams.

Then listen to others of these Manchester anglers describing their feelings when off to some favourite haunt. Mr. Abel Heywood, jun., in his too short description of "One way to the Tweed," says:—

"To attempt to describe your sensations as you emerge from the station, and climb on to the 'bus, must result in miserable failure. . . . It is a good long time since I was at school, but, as far as I remember, the feeling I have been speaking of is nearest to that of the schoolboy home for his holidays, who has just caught sight of the dear old walls that shelter mother and sisters. I am afraid that the dear old hills would, under circumstances such as I am writing about, appear to me dearer than the schoolboy's home. Were I not past skipping and jumping, I should dance; but it is only my heart now that can indulge in such antics, and may *it* never fail in its joyful performances in the presence of springtide and the loved mountain scenery. . . . As the 'bus rolls on, how delightful is every remembered object that comes in view. . . ."

Mr. George Davies' rattling angler's song, "We'll all go a-fishing to day" breathes the same spirit.

Mr. J. L. Wilson's views may be guessed from the closing lines of his "Week in Mid-Wales." . . ". . so ended our short holiday, and we went our monotonous business ways once more."

In his "Chronicles of Pen-y-Bont," (which, by the way, is illustrated by a capital sketch by Colonel Mawson), Mr. David Reid breaks out as follows :—

"What an inspiring thought—a first spring fishing day ! Is there an angler, worthy the name, whose heart does not leap responsive to the sound ? The 'Pleasures of Hope' he has been feeding upon for weeks. The 'Pleasures of Memory' he will feed upon for the weeks to come. Mark his eager steps, as he sees from the crest of the hill the river at his feet, and feels that he is to wave once more the favourite wand o'er pool and stream. . . ."

But we could go on quoting in this way from the whole book. We shall hope to refer to it again, especially to what we may call its scientific side, represented by a most careful and thoroughly sound paper on "The Conditions of Vision in Fishes," by the hon. sec., Mr. Abel Heywood ; and Mr. Estcourt's "Analysis of Fishing Waters." In conclusion, we most heartily thank the Manchester anglers for their pleasant and practical papers. Long may the association flourish. We can promise certain success and a warm welcome to all such handsome volumes as these "Angler's Evenings"* that they will delight us with.

THE "FISHING GAZETTE" BAIT NET.

We are glad to see that Messrs Cayless and Sons, of Loughborough, have adopted our suggestion, and brought out a bait-net similar to that recently described in the Gazette as in use in Germany ; they give it the above title, and inform us they have sent one for notice. We shall hope to speak well of it when we see it, as, if it is properly made, it will prove a grand boon to all anglers.

Since writing the above the net has come to hand, and we must congratulate Messrs. Cayless on the perfect manner in which they have carried out the idea. This net is so cheap, so simple, and so effective, that it must have a large sale.

A HISTORY OF FISHING TACKLE, WITH NOTES ON ITS AMATEUR MANUFACTURE,

By J. Harrington Keene.

No. II.—Tackle of the Middle Ages.

By the middle ages I, in this connection, refer to the period between the birth of Christ and the publication of the first treatise on fishing, which, as my readers are aware, was that published in the Boke of St. Albans, in 1496. This period of 1496 years is by no means fruitful of angling literature ; and, judging from the work just adverted to, the anglers of any period after the departure of the Romans, must have possessed execrable tackle. Of course, fish-culture was actively pursued, chiefly by the monastic institutions in the later days ; and, indeed, it is probable that until the Roman missionaries arrived in our land, at least angling was not, and even net-fishing unknown. Beda tells us that St. Wilfrid taught the people of these islands how to catch fish, before which time they could take only eels, which were vastly more plentiful in the early ages of the Christian era than they are now.

Of course, in other lands, a sort of reorganisation and disintegration was going on, and the palmy days of the seven-hilled city (Rome) were fast departing. Pliny, A.D. 20, in his "Historia Naturalis," treats of the nature, habits and localities of fishes, with his accustomed clearness. He speaks of the mode of catching eels, which in Lake Benacus, was by means of *leapneeles* and *weanets*, which were so cleverly made, as to entrap a thousand of fishes in one haul. The frequent mention of angling, fishing and tackle in the four Gospels, of course, also gives an insight into the sort of implements in use. In a comparative sense, however, the ages were veritably dark thereafter following, so far as my subject is concerned ; and the first burst of light comes when, in the fourth century, we find Ausonius writing his poem "Mosella," in which he speaks of perch, tench, &c., and salmon, under its present name.

> "Nec te punicio rutilantem viscere *salmo* transierum."

Of fishing-tackle, however, Ausonius has little to say, and though the fathers of the Church frequently refer to fish-catching, they furnish no enlightenment as to the actual apparatus in use.

So also, though the Welsh bards made fishing a theme until the year one thousand, no treatise describing baits, fish, and angling appeared. Even at that date, it is supposed that a MS. work found in the Abbey at St. Butin's, at St. Omer, was only written.

Du Cange, from what source I cannot say, has certainly described the various modes and instruments of fishing in the middle age. Says Mr. Blakey, "There was the *pirvene*, that round net, which he thinks had leaden globules on the lower part of it, the upper ending in a horn ; the *scortiare*, for taking sea-fish near the level shore, the trammel net of triple meshes of regulated sizes ; the *transferserium*, a net for the use of rivers ; another net called *alcipites*, a double kind of one to be used both for large and small fish, the *froncanezze*, a public net belonging to the community, and the *rivale*, the modern landing net . . . an instrument made of rushes was also used, and a *kedullus*, the beetle and weir; the *nasa foliaria*, a thing uncertain, but by which people fished on foot under sluices in the 12th century, the *precaptura*, a series of pales so disposed in the rivers that the fish might be readily taken and preserved in nets, the *poeta*, a method of fishing by a net fastened at one end to a stake with which the fishermen made a circuit . . . the *Romata* composed of branches of trees thrown into the water . . . by the *Vena*, an enclosure to intercept fish." It will be observed that no mention of the angle, or hook or line, is made in the foregoing, and the presumption naturally is that angling proper was little practised in the earlier period at least of the Christian era.

Mr. Blakey inserts in his "Angling Literature" a curious old tract, supposed to have been written about the year 1420—seventy-six before the appearance of the "Treatyse of Fysshynge with an Angle," in which the following passage occurs :—

> "But none other that use anglyng ten or twelff,
> Wyth water hookys and certaine bayt,
> * * * * * *
> But in rennyng ryvers that bee commone,
> There will I fisshe and taake my fortune,
> Wyth nettys and wyth angle hookys."

Hooks were certainly therefore known, and, as we have seen, written about. But the exact form we know not, and can only form an idea from the Dame Julyana Berners' "treatyse," where those in vogue in the then latter part of the fifteenth century are represented by rough, though amply detailed, woodcuts.

(*To be continued*).

CAPTURE OF A LARGE NET ON THE RIVER LEA.

At the Worship Street Police Court, before Mr. Bushby, Jacob Tyrrell and Frederick Hearne, were charged by the Lea Conservancy with illegally netting in the River Lea on Thursday morning, January 12, between 4 and 5 a.m. Constable Taylor, N.R., was on duty at Clapton, near Horseshoe Point, and he saw the defendants setting a net twenty-five yards long. After setting the net they proceeded towards Tottenham in a boat, during which time Taylor procured the assistance of two other constables, and on their return took them into custody, and secured the net with about 2 cwt. of fish, consisting of jack, barbel, bream, roach, dace, and chub. The net was produced in court. Hearne having been convicted for a similar offence in 1877, Mr. Bushby convicted them in a penalty of £5 each and costs. The net was destroyed.

CLUB AND OTHER JOTTINGS.

By L. B.

On Monday evening next, January 23rd, a West Central Association, No. 1 district visit, will be paid the Bostonian Angling Society, the Dalby Tavern, Dalby Street, Prince of Wales Road, Kentish Town, N.W. A large muster is anticipated.

A capital review of "Anglers' Evenings" appeared in Tuesday's issue of the *Daily News*. It treats principally of the Manchester anglers and their doings, but in such a vein as to prove interesting to anglers all round. With the exception of two-legged poachers, fresh-water fish have, perhaps, no greater foe than the otter. Two of these rapacious and wasteful beauties are at present terrorising finny ones in the neighbourhood of Pangbourne and Mapledurham. They have been shot at several times, and have left scraps of fur in the traps set for them. As the spawning season, when fish are not only most valuable but most helpless, is drawing near, let us hope a stop will shortly be put to their predatory career. Meanwhile, scarce a day passes but sundry unfortunate chub, roach, and even eels, fall victims to their wanton destructiveness. I say wanton, because in each case only a comparatively small portion of the fish is eaten. Mr. C. P. Wheatstone showed me, the other evening, scales as large as a shilling, from a carp which they had tackled and partly eaten. I should think the fish from which they were taken must have weighed 8 or 9 lb.

"The Thames Rights Defence Association is very quiet," said a friend to me the other day ; "has that body gone to sleep, or is it pulling itself together for a 'grand coup ?' "

On Friday evening last the monthly meeting of the Central and Third Association took place, Mr. Murray in the chair, faced in the vice by Mr. J. Fitch.

Among the correspondence read by the hon. secretary, Mr. R.

---

*An index, giving names of rivers, places, &c., mentioned in the work would be a great boon.

Stebbings, was a letter from the secretary of the West Central Association, Mr. T. Hoole, inviting this association to send representatives to a joint committee meeting of the West and East Central Association, whose object was the consideration of many matters of serious importance to London club anglers. Among others, those of coarse fish culture, legislation for the better protection of coarse fish, renting and preserving waters.

Mr. R. B. Marston—whose kindly volunteered good offices in smoothing over any little difficulties in the way of an amicable junction between the West and Central Associations, had been most delicately and successfully exercised — Messrs. Geen and L. Bonvoisin, president and chairman respectively of the first-named body, and Mr. C. P. Wheatstone, president of the Stanley Anglers, formed the deputation, whose business it was to lay before the meeting the objects the joint committee would have to consider.

Mr. R. B. Marston, having spoken briefly *re* "Coarse Fish Culture," his remarks being listened to very attentively, and received with frequent "hear hears," the necessity for a thorough understanding was then strongly urged by Mr. P. Geen, in his usual earnest and forcible manner, who, speaking of the desirability of renting waters, observed:—"Gentlemen, there are unfortunately several clubs whose members take no interest in our doings; their only object in joining us is to obtain the privileges of travelling at reduced fares, by doing which they are able to save a considerable sum annually, and, in several cases, I could instance—What use is being made of the money so saved? Why, I will tell you. With it waters are being rented and preserved by these gentlemen for their exclusive use; so that, in practice, the boon of cheap travelling we tried for again and again, and only obtained after great loss of time and much anxiety, extending it freely to all, including those who, though repeatedly urged, have again and again refused us their assistance and ridiculed our efforts, is now being used as a weapon to deprive us (though in a strictly legal manner) of the privilege of angling in waters where many of us have followed our sport from boyhood. Now, gentlemen, whose is the fault? I answer, unhesitatingly, ours. We, who number several thousands, and boast of a most thorough organisation, should be prepared to take up every available yard of water worth having within get-at-able distance of London, and every day we delay doing so some fresh reach is lost to us—to-day a stretch of the Colne or Lea, to-morrow of the Ouse or Canal—the gain that of the few and generally well-to-do, the loss that of thousands, nearly all of the humbler classes. It rests entirely with you to decide whether this state of things is to continue or not." (Hear, hear.) After a remark from Messrs. Stebbings, Hatfield, Fitch, Murray, the proposition that the invitation to meet the representatives of the other two associations to confer with them on matters of general interest, be cordially accepted the best thanks of this meeting being tendered to Messrs. Marston, Geen, Bonvoisin and Wheatstone for their attendance here this evening being passed unanimously.

On Saturday last Mr. Cousins, at Staines, fishing for roach with a gentle, succeeded in capturing a handsome 3 lb. 2 oz. I am informed that the river Thames is now in prime order and of a beautiful colour.

On Tuesday evening, the 17th, the fourth annual supper of the Westbourne Park Piscatorial Society took place at their headquarters, the Pelican, all Saints' Road, Westbourne Park, about 50 members sitting down to do ample justice to host Millhouse's capital catering.

After the removal of the cloths, toasts, songs, and the distribution of a number of valuable prizes, made time pass merrily. Among the visitors were Messrs. Bonvoisin, Beckett, Osmon (W.C.A), Green (H.U.A.), and Godfrey (West Drayton). In reply to the toast of the West Central Association, Mr. Bonvoisin made a few remarks very much in the same sense as those made by Mr. Geen and quoted above. Mr. Beckett made a telling little speech, in which he pleaded with great earnestness and eloquence the cause of the Anglers' Benevolent, and I shall be disappointed if the result of that speech is not to make the members of Westbourne Park join that excellent institution *en masse.* Jolly Mr. George Evans presided, Mr. Pink, senr., making an excellent vice.

Next Friday, 20th, is the monthly meeting of the West Central Association, and a special one; it is expected business of the utmost importance will be brought on for discussion, and that all delegates will attend.

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents*]

GRESHAM ANGLING SOCIETY,

Sir,—It would be interesting to your readers if some gentleman connected with the Gresham Angling Society would kindly give a slight sketch of its origin and the names of the gentlemen who have the honour to be the founders, more especially since it has attained such marked success during the few months it has been established; and, judging from the reports of its proceedings we get in the Fishing Gazette week by week, I think it will be conceded that there is scarce another society that has done so much good in the cause of angling in so short a time.—I am, &c., Angler.

RARE FISH.

Sir,—On December 31, 1881, I found a specimen of the Gemmesus Dragonet—*Callionymus Lyra*—in a herring net, and this morning discovered another in the same boat.

As these fish are generally, even in summer, found in deep water, their capture in the winter near shore is, I think, worthy of notice. The master of the boat informs me that on neither occasion was he driving over a greater depth than eleven fathoms.

The mildness of the season may perhaps account for their presence.

A friend has just shown me a specimen of the Flying Squid, which he picked up from the deck of a vessel in the South Pacific. In appearance it much resembles the common squid—*Soligo vulgaris*—it is about 6 inches in length. Will some one give me the scientific name? It must have been possessed of considerable powers of flight to have landed itself on the deck of a large steamer. It is certainly of a different species to the small flying squid common in the Mediterranean.—I am, &c., E. Gosling.

Budleigh Salterton, Jan. 16, 1882.

BONVOISIN TESTIMONIAL FUND.

Sir,—Mr. Greville Fennell has painted a picture, as a contribution to the above fund. It has been decided that it shall be drawn for on the "Art Union principle." The picture, which represents a scene on the Lea, is one which, I am sure, anglers would wish to possess, and the tickets at 1s. each bring it within the "distance" of even the humblest. I have decided to show the picture for a week, and any gentleman who can make it convenient to call at my offices, 39, Liverpool Street, E.C., between 9 a.m. and 4.30 p.m. can see the picture and purchase a ticket.—I am, &c.,

Fred. C. Clench,
Treasurer Bonvoisin Testimonial Fund.

January 16th, 1882.

COOK'S WATER AT HODDESDON.

Sir,—Will you kindly inform me through your valuable paper whether Mr. Cook's Water, Hoddesdon, is to be fished by daily subscription.—I am, &c., Pike.

[This water is rented by a body of gentlemen from Messrs. Cook, who reserve the sole right of fishing to themselves and their friends. Day tickets have not been granted for some time.—I am, &c., R. Ghurney.]

CLUB REPORTS.

ANCHOR AND HOPE ANGLING SOCIETY.

Several members of this society were out on Sunday, the 15th inst., and although the takes were small the quality was exceedingly good. Mr. A. Shakel taking first honours with 3 lb. 1½ oz. of roach; Mr. B. C. Booth, roach, from the Lea; Mr. T. Bowling, roach, from the Stort: Mr. D. Liston, dace, from the Thames.—D. Davis, sec.

ANGLERS' BENEVOLENT SOCIETY.

Since my last report I beg to acknowledge with thanks the receipt of donations from W. H. Brougham, Thames Angling Preservation Society, 10s. 6d., and Izaak Walton Foster, of Caythorpe, Lowdham, Notts, 2s.

N.B.—Annual subscriptions are now due, and the smallest donations will be thankfully received and acknowledged by—R. Ghurney, gen. sec.

10, Baches Street, Charles Square, Hoxton, N.

Jan. 18.

BERMONDSEY BROTHERS.

We had a decent show of roach from old Father Thames. Messrs. Frost, Conn, Gaffney and Harry being best men. A complimentary visit will be paid to the above society on Tuesday, January 31.—W. Allen, sec.

Jan. 17.

BOSTONIAN ANGLING SOCIETY.

The first return visit of the season, No. 1 district (W.C.A.), will be to the above society on Monday, January 23, when we shall be pleased to see all brother anglers as can make it convenient to attend.—H. Taylor.

January 16.

BRIGHTON ANGLERS' ASSOCIATION.

On Monday, by a meeting of several of the members, it was decided to hold a competition in the Ouse, on January 21st, weather permitting. Mr. Anscombe went out on Monday last, and had two runs with jack, but unfortunately lost both. He reported the Ouse as fishable, which at once put the members on the move after a long rest. Conditions of the competition—All fish, bar eels; weather foggy; wind N.E. The Cuckmere is also settling down.—Ground Bait.

BURDETT ANGLING SOCIETY.

The members of the above society went out on Sunday, Jan. 15, to Rye House to fish for a series of prizes. Nine members on their return weighed-in, six of whom were winners of prizes, viz., Mr. Lamb, roach; Mr. Elliss, jack; Mr. Weeks, roach; Mr. Hastings, roach: M. B. Smith, roach; and Mr. Britt, perch. The match was a pegged-down one.—T. G. Walker.

CAXTONIAN ANGLERS' SOCIETY.

At a large meeting of this society, held at the Falcon Tavern, Gough Square, on Friday—Mr. W. Cate, president, in the chair—Mr. Compton Reade read a paper on the pollution of our rivers from the deleterious materials now used in the making of paper. Several experiments were made with the water from certain polluted rivers. After the subject had been discussed by the members present, it was resolved, "That the matter be referred to the committee to take such steps as it thinks proper, and to avail itself of the services volunteered by Mr. Compton Reade, with power to communicate with the several angling societies throughout the kingdom, in order to obtain their aid and assistance in the movement for the suppression of the pollution of our rivers.—S. J. Field, hon. sec.

Jan. 14.

CITY OF LONDON ANGLING SOCIETY.

The following members weighed-in on the 15th:—Mr. Mortimer 3 lb. 1 oz. of roach, from St. Margaret's, one fish over a pound; Messrs. Pratt and Warner, roach, from the same water; Mr. Castell, roach and chub, from the Thames, at Wraysbury, nearly 3 lb.; and Mr. Plumstead, sen., one roach, from Rickmansworth, 14 oz.—Cas.

EDMONTON TOTTENHAM ANGLING SOCIETY·

Nothing of any note since my last report, one or two who are fighting for the perch prize are about the only ones that are making a show. Messrs. Ames, Hasker, Whale and Cottam contributing some very nice shows of perch every Sunday evening, and very nice they look. On the 11th we were honoured with a complimentary visit from the Dalston Angling Society who came in strong force, with a contingent from the Norton Folgate and Never Frets. The business of the club was soon got over and harmony prevailed.—G. STEPHEN.

GREAT NORTHERN BROTHERS' ANGLING SOCIETY.

We fished at Bourne End on Sunday last for eight prizes. Twenty-nine members competed. Mr. Theobald won the first, 5 lb.; Mr. J. S. Fitch, second, 4 lb. 4 oz.; Mr. J. Dingley, third, 3 lb. 13 oz.; Mr. Young, fourth, 3 lb. 12 oz.; Mr. R. Watling, fifth, 3 lb. 4 oz.; Mr. C. Watling, sen., sixth, 2 lb. 15 oz.; Mr. J. Watling, seventh, 2 lb. 15 oz.; Mr. J. K. Fitch, eighth, 1 lb. 9 oz. We have just completed our half year. Total weight of fish weighed-in, 608 lb. 13 oz.—J. S. FITCH, jun., sec.

GRESHAM ANGLING SOCIETY.

The usual meeting of this society took place on Thursday evening—Edwin Frost, Esq., in the chair. Reports were read from Mr. Wood, of Walton; Mr. King, of the Royal Oak, Windsor; Bartholomew, the fisherman of Goring, and others, all stating that the Thames was now in good condition for all-round angling. The society's trays were well filled, Mr. Graham Bennett weighing-in 10 lb. 7 oz. of roach, from the Lea; and Mr. Field, 16lb. of roach, from the Thames; Messrs, G. Austin and T. Crumplen had also good perch, earlier in the week, from Goring, with Bartholomew. Dr. Lloyd, W. B. Adlington, Esq., and A. Paterson, Esq., have added several volumes to the society's library, and the purchase of others was also decided upon. The case of trout taken by Mr. Brookwell, with so much skill at Dobbs Weir (not Flanders Weir, as erroneously reported), were still on view. The next musical evening of the society will take place on Thursday, February 9th, when a large attendance is anticipated, and visitors from any angling society are welcome to attend. The annual banquet was fixed for Wednesday, March 22nd, when Lord George Hamilton presides. Several new members stand for ballot at the next meeting.

HAMPSTEAD ANGLING SOCIETY.

Mr. Blatchley brought some fine roach, and Mr. G. Glowser, hon member, 3 lb. of fine roach and a 3 lb. jack from Chelmsford last week.—J. H. HAYWARD, sec.

IZAAK WALTON ANGLING SOCIETY.

On Friday last, 13th inst., Mr. A. C. Critchfield had a tray of beautiful fish, the particulars of which are as follows, 14 roach which weighed 13 lb.; 3 chub, 5 lb. 5 oz.; 3 perch, 3 lb. 8 oz.; 2 dace, 14 oz., making a total of 22 lb. 11 oz. Mr. G. Wood had some roach on Sunday, 15th instant, Mr. H. Butt also had roach, Mr. G. Bliss had roach and dace.

JOVIAL ANGLERS.

At a special meeting of the above society, held at the Club House on Friday evening January 13, 1882, it was proposed, at the earnest desire of all the local members, that a weekly meeting should take place on Thursday evenings; carried unanimously. It was also carried that there should be certain prizes for punt as well as bank angling, and that two prizes should be offered, of equal value, for bank and punt angling for gross weight up to the end of the fishing season. Other rules were also altered and amended. On Sunday last we had a very thin attendance, but Mr. Koleman weighed in 4 lb. 14 oz. of very fine dace, and Mr. Steade 2 lb. 10 oz.—H. W. PLATT, sec.

LITTLE INDEPENDENT ANGLING SOCIETY.

Our members were out in strong force on Sunday, and brought home a splendid show of fish; Mr. Letch heading the list with 9 lb. 10 oz. of roach. Mr. Pitrie also had roach and one dace which scaled $\frac{1}{2}$ lb.; Mr. Harwood, roach and chub; Mr. Humphreys, roach, jack, and perch; Mr. Wightman, roach, chub, and gudgeon; Mr. Scott, perch; Mr. Raine, jack; Mr. Goodes, jack; Mr. Thomson, roach; Mr. Heelas, roach and dace; and Mr. Atkins, roach and chub. Our worthy host, Mr. Loomes, and Mr. Brown, Chalton Street, Euston Road, fished a friendly match last Monday, the 16th inst., at Cookham, for £5 a side. Mr. Loomes was the conqueror till half-past four p.m., with four roach, but Mr. Brown came in at the death by landing a jack about 2 lb., and so gained the victory.

THE ORIGINAL ALEXANDRA SOCIETY OF ANGLERS.

We had only two of our members weigh fish on Sunday last. Mr. W. High had a nice show of roach and bream, and Mr. C. Hewett had roach. We have seven prizes to go out for next Sunday, all fish weigh, go where they like. So I expect to see a good show of fish.—E. DYMOND, sec.

ORIGINAL CLERKENWELL PISCATORIAL SOCIETY.

We had a fair show of fish on Sunday last, several members being out. Mr. L. Gorsuch having perch, Mr. Obbard, roach, dace, and perch, both from the Thames. Mr. Neagus had a nice tray of roach from the Stort. On Sunday, January 30, the members fish a peg-down match at Burnt Mill for three valuable prizes. Quarterly night, Monday, January 30.—THOS. WM. LUCY, secretary.

PECKHAM BROTHERS ANGLING SOCIETY.

A benefit in behalf of Tom Woods, an old pal ef the "Generals," will take place under the auspices of the above club, on Friday, the 27th, when the chair will be taken by W. H. Page, faced by Charles Carter, an old member of the North-Western, when we shall be pleased to see any anglers who feel disposed to assist this truly deserving case, and I shall be pleased to acknowledge any sums sent to the club house from those who cannot attend.—W. H. PAGE, hon. sec.

QUEEN'S ANGLING SOCIETY.

Several members were out on Sunday, but with no great success. Mr. Cotsford had some pretty roach from Harefield, weighing about 5 lb., one scaling 1 lb.; Mr. Wallford had a show of roach from the same place, weighing 9 lb. $5\frac{1}{2}$ oz.—H. MUSGROVE.

SECOND SURREY.

This society is making rapid progress. On Sunday next, the 22nd, about 20 members will compete at St. Margaret's for a silver cup, given by Mr. G. Hockley, and several other useful articles given by members, consisting of rods, fire-irons, bait kettles, &c. At the meeting held on the 18th, it was arranged that a conveyance be in waiting at the Elephant and Castle at seven o'clock on Sunday morning to convey the members to Liverpool Street, and the same conveyance will be at Liverpool Street at an appointed time in the evening.—PIXIE.

January 19, 1881.

UNITED BROTHERS.

The members of the above society fished a pegged-down match on Sunday the 15th at St. Margaret's, with the following results:—First prize, handsome marble clock, given by Mr. G. Robinson, taken by W. Tyler; second, copper kettle, given by W. Bolton, taken by J. Payne; third, table lamp, given by T. Warren, taken by J. Currans; fourth, tackle book, given by G. May, taken by F. Watts; fifth, fancy basket, given by J. Freeman, taken by H. Tyler.—WILLIAM BELTON.

January 18.

WALTHAMSTOW ANGLING SOCIETY.

Mr. Berry, on the 2nd inst., a nice show of roach, 11 lb. 7 oz., on the 6th 11 lb. 8 oz.; Mr. Casey being very close with 11 lb., two fish weighing 1 lb. each. The latter was out again on Monday and Tuesday, weighing-in last night 21 lb. 9 oz. of roach in fine condition.—H. HOWSE.

Jan. 13.

WALTONIANS.

Have had hardly anything to report lately. On the 4th Mr. Malcom had a show of roach from Pangbourne. It was only 4 lb., but the fish were very fine. A prize was fished for on Sunday last, and taken by Mr. Storr, with 5 lb. $10\frac{3}{4}$ oz. From Pangbourne Mr. Roland had 5 lb. $10\frac{1}{2}$ oz. From the Lea the other shows were very small. Hope to have something better to report before the season finishes.—A. J. MARRIOTT.

WALWORTH WALTONIANS.

The members of this society met on the 12th, at 9.30, for the purpose of business, which consisted in arranging prizes for the 20th, for which Mr. Bayley gives a guinea hat, Mr. Delehaye, a set of hair brushes, and Mr. Bansback, two brass winches—this having been got through, the rest of the evening was devoted to the harmony of a "round robin," which created much amusement. On the 15th, Mr. Bayley visited Twickenham for a few hours; he succeeded in getting some roach and dace. Members are requested to attend on the 26th, to decide as to how, where, and when the two pictures of the birds of Great Britain, and the salmon, perch and trout, after the late H. L. Rolfe, presented by Mr. Hart, sen., shall be competed for.—PIXIE.

Jan. 18.

LONDON and COUNTY ADVANCE and DISCOUNT COMPANY (Limited).

Cash advances from £10 to £500, without preliminary fees or deduction for interest, for short or long periods, repayable by easy instalments, at moderate rates, upon personal security, life policies, furniture without removal, deeds, shares, bonds, &c. Bills discounted. Forms gratis. Offices, New Courts Chambers, Nos. 57 and 58, Chancery Lane, E.C.

JOHN STONE, Secretary.

TO ANGLERS.

If requiring the **latest improvements** in the art, and **quality**, send to

R. B. BAMBRIDGE,

74 & 75, HIGH STREET, ETON-ON-THAMES,

Practical Angler and Maker (on the premises) of perfect-action Fly, Spinning, Trolling, Bottom, &c.,

RODS AND TACKLE.

The "**Bell's Life**" Spinner has **proved** itself to be the most killing bait for Trout, Pike, Perch, &c., and is undoubtedly the nearest approach to nature ever produced. Price, 3s., 3s. 6d., 4s., 5s., and 6s. 6d. Post free on receipt of P.O.O.

For Angling improvements, write for price list gratis. Established 1790.

WINDSOR BRIDGE (Eton Side).

The Old-established (1790) FISHING TACKLE SHOP to be LET on Lady-day next.

ADDRESS:

MR. GOODMAN, Boatbuilder, ETON.

TROUT FRY.

THE SALTAIRE ANGLING ASSOCIATION has a choice lot of Ova (*Salmo Ferox*), also some brook trout ova (*Salmo Fario*), from trout of a large size. The price for Fry will be £2 10s. per 1000. Persons wanting any should apply early to

GEO. E. BOLTON, Secretarv

SALTAIRE, YORKS.

DRIED RAY-SKINS Wanted to Purchase.

Address:

ARONSOHN, 68, Rodingsmarket, Hamburg.

HOLBROW AND CO.,

111, JERMYN STREET, ST. JAMES'S, S.W.

Every kind of Fishing Rods and Tackle of the best quality, and flies specially dressed for all parts of the world. Speciality in glued-up cane rods. Separate department for Polo.

THE CHEAPEST ROACH ROD,

Used by all Noted Anglers.

BOOTH'S FIVE-JOINT BAMBOO ROACH ROD,

12 feet stand-up rings. The lightest rod in use.

Winch fitted Brass Bottom and Bag complete, packed in Box.

PRICE 4s. 6d. STAMPS, 4s. 8d.

H. BOOTH,

Fishing Rod Maker,

88, PROSPECT STREET, HULL.

FISHING TO BE LET TO THE END OF SEASON at GREAT MARLOW, one minute from the river. A superior double-bedded room for two Gentlemen only, with use of rowing punt, and plain breakfast. (No other attendance—no extras.) Terms 49s. per week. Arrangements can be made with different parties for specified times of engagement; reference required.—Address J. T. SCOTT, Marlow, Bucks.

NOTICE.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., must be addressed to the Editor of THE FISHING GAZETTE, *No. 12, Fetter Lane, London, E.C* and should reach the office not later than Tuesday morning.

Contributions are solicited, but the Editor will not undertake to return rejected MSS., unless accompanied with a stamped addressed envelope.

Correspondents are requested to write on one side of the paper only and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith Unless this rule be adhered to no notice will be taken of such communications.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls, and of the following, amongst other Fishing Tackle Dealers in London and the Provinces :—

Messrs. Alfred and Son, Moorgate-street.
Messrs. Price and Co., 8, Seymour-street, Euston-square, N.W
Messrs. Williams and Co.; Great Queen-street.
Messrs. Gee and Co., St. Andrew's-street, St. Martin's-lane.
Messrs. Gee and Co., Gray's Inn-lane (near Holborn end).
Messrs. Little and Co., Fetter-lane, E.C.
Messrs. C. Kewell and Sons, 197, St. John-street-road, E.C.
Messrs. Kewell and Co., 1A, Conduit-street, Regent-street, W.
Mr. J. Richards, 97, Church-street, Paddington.
Mr. W. Leader, 30, Upper Marylebone-street, Portland-place, W
Mr. — Clark, 35, Wells-street, Camberwell.
Mr. Geo. Read, 91, Goldsmith's-row, Hackney-road, E.
Mr. A. Bulmer, 62, Wandsworth-road.
Mr. F. Oliver, 188, Great College-street, Camden Town.
Mr. J. E. Gold, 284, Waterloo-road.
Mr. D. W. Willoughby, 21, Lombard-market, Battersea, S.W.
Mrs. F. Y. Brocas, 4, Mill-street, Conduit-street, Hanover-square, W
Messrs. Gillett and Co., 40, Fetter-lane, London.

Newsvendors can obtain the journal through their London Agents.

*** The "FISHING GAZETTE" SPINNER (Registered) is sold by all the above firms.

ANNUAL SUBSCRIPTION.

The Annual Subscription, payable in advance, for the United Kingdom is 8s.; or post free, 10s. 6d.

To any part of Europe, the United States, and Canada, the Annual Subscription, including postage, is twelve shillings and sixpence.

ADVERTISEMENTS.

All communications respecting advertisements must be addressed to the Manager of THE FISHING GAZETTE, *No. 12, Fetter Lane, London, E.C.*

N.B.—All Remittances must be sent, and all Cheques and Money Orders must be made payable to Messrs. SAMPSON LOW, MARSTON AND CO., the Proprietors.

The Fishing Gazette.

SATURDAY, JANUARY 28, 1882.

PERCH AND PERCH-FISHING.

By J. HARRINGTON KEENE.

(*Concluded from page 3.*)

YET another style of snare have I for the capture of Gossip Perch, when, perchance, he is a two-pounder haunting a particular spot in solitary autocracy, as does the large-grown trout or pike—and this is a modification of the so-called "Nottingham" live-bait method, which is so deadly in the pursuit of the great Thames *fario.* I remember me of the capture of a perch going slightly over 2 lb., by this means, from the Old Windsor Fleet, which afforded more gratification than a bag of fifty pounds' weight taken under any other circumstances would have done. But let me spin you the yarn, good reader.

Time: late summer in 1879; scene: the Old Windsor Fleet. On the right-hand bank going down stream, about thirty yards above the concrete overflow weir, the course of which passes round behind the lock, the osiers dip over from the bank, and beneath them are six or seven feet of water passing over as good a gravelly bottom as ever delighted the thick-headed wattle-mouthed barbel. Beneath this umbrageous shelter lie at certain parts—or did, perhaps I ought to say—great chub and some goodly shoals of barbel, not to speak of large dace, gudgeon, and roach. At the time of which I am speaking there also fed a trout of some six or seven pounds; and at morning, when taking up my eel lines, and at night, when setting them, I had seen his glorious vigorous form, roll over in the water with a resonant sound, making a music of peculiar charm to the fisherman's ear. Yet he would take no bait spinning, though I flogged the water with a perseverance worthy of better results; and, in brief, I may say I never so much as hooked the wily old rascal at any time.

One evening I sat smoking the tranquilising weed with the punt moored close in the bank, about twenty yards above his covert. I had geared my Nottingham dace-rod with its hundred yards of fine twist silk, a yard length of fine gut, and a single No. 2 hook, and baited the latter with a small brilliant bleak. Waiting was I, as erstwhile, for the first strike of the trout to lower the seductive bait down to where he would break the water. About ten minutes before I expected him—and your Thames trout is pretty punctual—I suddenly heard the peculiar rush and sucking noise of a perch feeding right under near the boughs; and, in a second, a splendid fellow, with back fin extended like an enraged porcupine, and back also entirely out of water, darted out streamward after a bait which, paralysed with fright, seemed to be also seeking the atmosphere of safety. Gobble! gobble! chuck! and the poor little beggar entered the jaws of Mr. Perch, whence no fishy traveller returns.

"Oh, ho!" said I, to the best of all companions—myself—"that proceeding of thine, friend of the horrent fin, suggests an idea; and he who cannot dine on trout or perch may very well fast, especially when such a one as thou art inflameth the ichthyophagous desires of the emperor of creation. By the beard of the prophet, thou diest."

The trout I had expected came not to divert my attention. So, carefully manipulating the bait and line, I suffered the former to wander at its own sweet will—under the governance of my own, of course—until it penetrated beneath the water-dipping branches. Then, fearing it might, with the known perversity of all live baits, catch something more wooden than a perch, I withdrew it with gentle haste, until, just as it emerged—roosh!—out rushed the fish, seizing the bait and retiring shorewards, right under the matted willows, before I could do anything, and snapping the fine line as if it were burnt thread. Hook, gut, bait, and three yards of line, were gone; and, if ever-well. The hook had pricked him, no doubt, for I could see nothing of him again that evening, nor, indeed, for several evenings afterwards.

After ineffectual endeavours to come to close quarters with Goodman Perch for several evenings I gave up the idea, and, instead, I busied myself with the barbel and chub in other parts of this delightful water. Slowly floating down one evening, however, I perceived the fish feeding again. The sun had disappeared behind the horizon, and the evening was fast verging into night. However, I decided to repeat my former tactics, and gently pushing my light little punt across, I secured it to the bank and quietly sat down to wait till the possible disturbance caused by the punt had subsided.

And while I am waiting, indulgent reader, let us indulge in a quiet fisherman's contemplation of the manifold charms of such an interval and its surroundings. The fragrant smoke from my pipe slowly ascends, and is wafted away by the ethereal summer breeze. The shadowed landscape, with its coronals of pearly haze, gives forth voices of the night to mingle with the glorious carol of the nightingale, whose every varying tumultuous cascade of melody is proceeding from the wood near Old Windsor churchyard. Near to me, as I sit, the pretty little sedge warbler raises its quaint chirrup. All these, and the hum of the beetle, lowing of cattle, and the weird cry of the heron travelling outward from the heronry of Windsor Great Park, have merged and mingled in a sort of lotos-eating dream of tranquillity and peace, which——

But we have waited long enough, and I fix the hook through the lip of a lively half-grown gudgeon, and fastening a mite of cork about three feet from him up the line—this to keep the little fellow from following his instincts and seeking the bottom. Down, down floats the cork, and, as it nears the spot where I have cause to believe *perca* dwells, I feel a silent tug! tug! and, with a smart strike, I know I am in a good fish who strives hard to get in shore, but, failing, sails out into the stream.

How shall I describe the struggle? Imagine it, oh! appreciative reader! Neither a fool at one end nor worm at the other, but an angler who can use fine tackle and a perch of a couple of pounds and over. Up and down, fins erect, with the pluck of a five-pound trout, and an almost equal strength, he struggled and fought, and at last succumbed. As he lay on the floor of the punt, gasping out his life, yet clothed in his magnificent dusky and vermilion beauty, to which the brightening moonlight added a silvern charm, I wonder if any monarch ever rejoiced in his supremacy as did I. Next morning, however, the glamour had vanished. I had him for breakfast

Thus endeth perch and perch-fishing. If any reader be amused or benefited by this short series I am more than rewarded. *Vale!*

TROUT AND GRAYLING-FISHING IN THE DOVE.

By R. B. Marston.

(Continued from page 3.)

". . . . . As to its poetical relations, angling carries us into the most wild and beautiful scenery of nature; amongst the mountain lakes, and the clear and lovely streams that gush from the higher ranges of elevated hills, or that make their way through the cavities of calcareous strata. How delightful, in the early spring, after the dull and tedious time of winter, when the frosts disappear and the sunshine warms the earth and waters, to wander forth by some clear stream, to see the leaf bursting from the purple bud, to scent the odours of the bank perfumed by the violet, and enamelled, as it were, with the primrose and the daisy; to wander upon the fresh turf below the shade of trees, whose bright blossoms are filled with the music of the bee; and on the surface of the waters to view the gaudy flies, sparkling like animated gems in the sunbeams, whilst the bright and beautiful trout is watching them from below; to hear the twittering birds; who, alarmed at your approach, rapidly hide themselves beneath the flowers and leaves of the water-lily; and as the season advances, to find all these objects changed for others of the same kind, but better and brighter; till the swallow and the trout contend, as it were, for the May-fly, and till, in pursuing your amusement in the calm and balmy evening, you are serenaded by the songs of the cheerful thrush, and melodious nightingale, performing the offices of paternal love in thickets ornamented with the rose and woodbine."

—From Sir Humphrey Davy's "Salmonia."

TO attempt to paint the glories of autumn after those of spring and summer have been so pleasantly described by Sir Humphrey Davy would be impertinent; but even the most matter-of-fact angler could not roam through Dove-dale in September without being struck with its surpassing beauties, and I trust I shall be excused if I attempt faintly to pourtray some few of these as I take my angling reader with me from the foot of Thorpe Cloud to Mill-dale—some five miles of most varied scenery.

In my last I left the river just below the footbridge; but before starting on our five miles of walking and wading, let us get a morning draught in Mr. Prince's cool retreat, and examine the new lot of flies which he brought over from Ashbourne last night.

"Good morning, gentlemen; you mean to try them again, I see," is Mr. Prince's cheery salutation, as we enter, our nether lengths clad in waterproof.

"Have you seen the river this morning, Mr. Prince; and what are those flies you brought from Ashbourne?"

"The river is right enough, and you ought to get some fish to-day. Mr. ———, will you just hand those flies this way?"

Mr. ——— is a little man, with a short, bushy, ginger beard, a frequent visitor at the hotel; he is the essence of good-nature, in fact the sole object of his life seems to be to make himself amusing. He pushes the packet of flies across the table, and then, taking a long clay from his mouth, stretches over and points with the stem of it to some grey palmers.

"That is the fly; I could kill a basketful of trout with that to-day if I wanted to, could not I, Mr. Prince?" He invariably appeals to Mr. Prince to substantiate any statement he makes, and Mr. Prince as invariably shakes his head with a dubious smile. "What time did I go to bed last night, Mr. Prince?" says our loquacious friend, for he is always flying off at a tangent, and then, as he lights his pipe for the third time in five minutes, we slip out, and in a few minutes are down at the water's edge.

There is a very fine deep pool right under the bridge, the best way to fish it is to cross the bridge, go down the left bank, keeping well away from it, and then get down into the water and wade up, throwing first, directly in front of you, near your own side, then into the middle, and then across right under the opposite edge, then advance a few steps and repeat the process. In this way you will cover all the best of the water, the high bank screening you from the fish. I should mention that as you near the head of the pool you will find the stream comes down very strongly, and when you throw over it to reach the quiet water under the opposite bushes you must lift your line the instant the flies touch the water, or the mid-current will cause it to bag and prevent you striking your fish.

Above the bridge the fishing is all open for a long distance; there is a carriage-drive along the left bank, looking up stream, and a foot-path along the right. Now, this footpath is the only way through the Dale that is open to the public, and all through the season swarms of tourists pass and repass close to the water's edge. I need not say that this alone is a sufficient reason for the bad sport this open fishing affords, as a rule. It is a lovely piece of water, one succession of streams. I fished this length many times, but had almost come to look upon it as fishless, until one raw, misty afternoon, when I was astonished to see the fish rising freely in every pool! I could hardly believe my eyes. The cold raw weather had kept the tourists at home, and the fish were out in the feeding places. Getting into the last stream but one above the bridge, I began fishing up with a long line; You must use a long line here, for there is not a bush, and the banks are almost level with the water. I got a fish at the first throw—a nice grayling, then another grayling, then a trout.

"What fly is that you are killing with?" shouts my companion, who is fishing on the opposite side.

"Honeydun bumble, friend; will you have one?"

He looks through his book, and in the meantime I get another fish (all these were taken within two feet of the bank, in shallow water).

"I think I will have one, if you don't mind," my friend cries.

I tell him to throw his line over—he can make a tremendous cast—and my cold fingers take off his tail fly, a little black midge, a great favourite of his, and tie on a honeydun. He soon finds the benefit of the change, for in the next pool he gets a fish, and then misses several rises from having too much line out, more than was necessary if he had waded instead of standing near the bank. Presently, after losing another fish, he announces his intention of "legging it" up to a favourite stream of his a couple of miles up the Dale. I wish him luck, and we part for the nonce. If I had had the whole of this bit of water between the foot bridge and the stepping-stones to myself that afternoon, I am certain I should have got seven or eight brace of good fish; but I can never fish with the fly properly with another angler within a hundred yards of me; in this case he was within twenty, and he seemed as anxious as I was to get ahead. It is perfectly wonderful what an irrepressible desire one fly-fisher has to get ahead of another! I have noticed it scores and scores of time, I remember once spending the best part of a day in trying to get ahead of a brother angler; I had flattered myself I was first in the water, but on turning a bend I noticed, on the sandy shelving beach, a recent footmark. Like Robinson Crusoe, I stood horrow struck; for a brief moment I thought it might have been some cowman's, but a closer inspection revealed the truth. There was no mistaking it, the big square brogue nails had left a perfect impression, and the disturbed sand had not yet had time to dry in the strong sun. It was useless to fish in water so recently waded through, so I decided to take a short cut across the hill; but the maker of the brogue mark must have seen me, for, when I descended the opposite slope, I saw a rod flash a field's length ahead, a figure in grey emerged from the bushes, looked in my direction, and then vanished into the depths of a wood. I was determined not to be beaten. I knew, for I had seen them drive up to our inn, that two anglers were following me; and I hoped in time I should tire my friend out; but though I often saw his brogue marks, and some hours later lunched in the pleasant spot he had evidently chosen—judging from an empty "Bass" bottle, and the broken egg shell he had left there—I never saw him again.

On another occasion, I was fishing on the Barle with a friend. We both wanted to fish up-stream, and arranged that I should commence at once, and he should religiously walk up for half a mile or so and put a paper sign on a stick to show me where he commenced. He declares he did nothing all day but walk and stick papers on the bushes. I confess it is quite probable, for he knew, from long experience, that, if once I got ahead, he would see no more of me till I got home at night to dine, at 11 p.m., or later. He has more than once sent half the village out with lanterns to hunt for my body. However, this belongs to my adventures on the Eden, and I shall never get through Dovedale at this rate. Writing about angling is like going for a day's fly-fishing. When you start, you announce your intention of "sticking to the main stream," but some tempting tributary lures you away before you have gone a mile, and in the end, you find yourself ten miles from where you had intended to go.

Below the Stepping Stones in Thorpe Dingles is a fine pool, which always contains very heavy grayling, one or two we saw there would weigh at least between three and four pounds. Everybody tried them, but it was useless; even Mr. John Bullock of "Derby Killer" fame, did not get hold of one, and he tells me he generally gets a few big grayling with his minnow when trout-fishing on the Dale. A. R. I. E. L., is of opinion that grayling might be frequently taken with the minnow if it is used under certain conditions. Grayling will strike at almost anything bright, and I think it is quite possible, if you fished for grayling with a gentle sink and draw motion of the minnow, you would often get them, but I cannot agree with A. R. I. E. L., that it is a method which ought to be adopted for the capture of the "lady of the stream."

I wished I had had the "red tag" fly with me to try over these big grayling. I used it ten years ago on the Teme, Onny, Clun, and Lugg, in the West of England, and found it a very killing fly. I almost forget the fly, but think it had a starling wing, orange body, and red or rather crimson tag—a bit of dyed wool. If some West of England angler will send me a sample to the GAZETTE Office, I shall be obliged.

Just above the Stepping Stones, there is a weir of no great height, but sufficient to bank back the water for a few hundred yards, and form what is known as Sedgy Pool, from the sedges which fringe its banks. If you are fortunate enough to get a good breeze on this pool you may be sure of fish, as it holds plenty of very fine ones. Get the wind on your back, and throw your fly on to the opposite bank, and then pull it gently on to the surface; the feeding fish are close to the edge, picking up the flies which get blown on to the water, and then are washed on by the wind and waves till stopped by the sedges or bank. Fish with a dry fly as much as you can, as you will then see the rise much more distinctly. It is impossible to strike too quickly in fishing for trout on still water. I generally got a fish or two out of Sedgy Pool when there was a breeze on it. It must be a splendid bit of water for evening fishing in the summer; in September the rise is over by six or seven o'clock, and there is no dusk fishing.

(*To be continued.*)

FLY-FISHING FOR DACE, CHUB, &c., NEAR LONDON.

WHILE the festivities of Christmas still linger around us, and the days are at their shortest, fly-fishing is a theme barely suitable for your columns. Bottom fishing, worms *versus* paste, and all the vexed questions as to the best baits for roach, dace, and other coarse fish, seem to afford greater interest. Yet, among the thousands of anglers in and around London, there are surely many who care for a graceful cast of the fly-rod, to whom hat subject is never out of season, and a gossip anent flies is ever welcome. Here, where I write, in "Sunny Devon," anglers are eagerly looking forward to the opening day in February, and are busily laying in the necessary stock of flies. The weather now is most promising, and so are the prospects of good sport. All winter the rivers have been high and the weather mild, affording every chance for the fish spawning well. The fields around are plentifully besprinkled with daisies, in sheltered spots the primrose is blooming luxuriantly, in the hedge-rows the song of hrush and blackbird may be heard in early morning; and last, but not least, in the nooks of the river where the water becomes low and quiet, trout may be seen occasionally rising to some tray specimen of the willow fly, or the February red, which the mild weather has prematurely enticed into winged activity.

I cannot now, however, descant on the pleasures offered in North Devon to anglers who reach its picturesque streams, which, unfortunately, distance has placed out of the reach of many a "good and true" brother angler. What I wish to speak about is the fly-fishing around London, a branch of the angling art that it is surprising to me is not more eagerly followed. Bottom fishing certainly offers many charms calculated to hold in bondage its devotee, particularly when he does not see any prospect of using the fly favourably, and scarcely any chance of access to streams stored with goodly trout; then, again, he will remember that in learning fly-fishing, even if he be the best of bottom-fishers, he has to commence a branch of the art where all his former knowledge and skill are of little avail. I remember well, many years ago, such was my own case. In one of the few well-preserved private trout streams near London I was granted a day's permission to fish; but, alas! when, after a night spent in dreaming of catching monsters, I reached the water with a complete equipment of bottom tackle, with cockspurs and wasp-grub to correspond, anticipating a red-letter day—one to be remembered in after years as the day of days—I was confronted by a sturdy man in velveteens, who stoutly told me that with artificial flies, and artificial flies only, would I be allowed to fish; one who was unmoved by my piteous tale of having forgotten my fly-book, and would like to try a worm; save that he lugged from the lining of his hat two feathered nondescripts—which I now suppose to have been March browns,"—and bade me try them. I did try them; and the man in velveteens grinned at the horrible attempts I made at casting, for sometimes the line, when it did not cling round me or him, would fall altogether in a heap immediately under the point of my rod, while the terrified trout sought safety among the reeds and snags. I do not think I remained long there, I rather imagine I took the first train home, with a firmly established resolution to return some day an Admirable Crichton of a fly-fisher and astonish the man in velveteens who had so unfeelingly jeered at my first attempts with the fly, and whom my allegation of having forgotten my fly-book had not imposed upon.

I will not tell a tedious tale of how I learned to throw a fly indifferently well, but merely remark that after a time I managed to get a line out fairly, getting some moderate sport—with dace and chub, of course—on the old Barge river, at Datchet, at Wraysbury, West Drayton and one or two other places. Still, with all my perseverance, I could never make up a heavy basket. Something seemed wrong with the flies, although I tried them from the hands of different makers.

One day, after obtaining from a shop in Crooked Lane a splendid book of flies dressed to Ronald's patterns, with each insect placed in a separate compartment, and having beneath it an entomological extract telling what the fly was, when it should be used, and what it might be expected to do, I started for Rye House, and there commenced to fish the New River towards Broxbourne.

But the result was the same—the fish cared no more for my new and choice articles than they had done for the old ones.

For nearly a mile of fishing I had risen only two fish, each too small to be retained, when I met a fisherman whipping the stream upwards. He was evidently of the class costermonger, for his greasy corduroys filled the air with an "ancient and fish-like smell," and his hoarseness of voice told a tale of persistently crying wares through street and suburb, where customers were few or reluctant. But his fishing gear! I have since fished on many a stream in the wildest parts of Scotland, and among the very poorest localities in Ireland, and never seen anything so wretched. Three pieces of roughly pared tapering ash sticks, whipped together with wax end, formed his rod; his line, ten yards of horse-hair in roughly twisted hanks, with a knot at intervals of a foot all through it; at the end of the line was a cast of the very commonest thick white gut, with two big flies dressed on a No. 9 hook; and, strange to say, he was hauling out fish nearly every cast.

One not unfrequently meets with a surly but successful angler, whose delight it is to conceal the nature of the flies fish are taking, and endeavours to lead astray the confiding individuals who listen to him. This humble piscator had no such despicable proclivities. He not only allowed me to examine his flies, but gave me a cast of them, refusing to accept as an equivalent any of the brilliant specimens, glittering in gold and silver tinsel, and bright floss silk, from my own book: they were all very well, he said, to look at and sell, but quite useless for chub and dace; and so I had found them.

The flies he gave me were:—

1. The Plover. Body, light yellow silk; legs and wings, a small feather from the back of the golden plover.

2. The Brown Snipe. Body, brown silk; legs and wings a small feather, dyed brown, from under portion of the snipe's wing.

The feathers with which these flies are dressed are extremely soft, and, when well wetted and in the water, their fibres wave about in a singular manner: the fabrications are evidently taken not for flies, but water spiders or something of that description.

I fished some years with fles of these patterns and had splendid sport. No. 1 I think the better of the two. I found it, however, more successful on the Colne and Iver than the Thames, where the dace run somewhat smaller. With it I one day killed a fine lot of perch at Twickenham, the only time I ever killed perch with the fly.

There is still another fly which will be found very useful for coarse fish, it is made with body peacock's herl, dressed rather full, gold tip, and hackled at top with inside feather from starling's wing. Hook No 14 or No. 2 Hutchinson's make.

This latter fly should be dressed on a strand of horse-hair, and with a drop fly of the same pattern (tip to be silver instead of gold), affixed to a single horse-hair cast, with a rod not too stiff, will, on a bright sunny day in summer, furnish capital sport, when used on the pools of the Colne. Fish are then lying in the sun well up towards the surface, waiting for what the stream may bring down. The horse-hair floats better than gut, and by simply letting your flies float down, you are generally rewarded by a lumbering rise. Gently raise the point of your rod, and the splash will tell you what you have hooked.

If a chub, he will make a fight of it under water at once, and, if there are weeds handy, probably smash you; but a dace splashes about on the surface for a few moments, as if he couldn't make out what the matter was, and then ends usually by coming quietly to bank. R. A.

Tiverton, Jan. 21st.

FISH-BREEDING IN CANADA.

GRAND results in fish-culture are being achieved in Canada, We have just received from S. Wilmot, Esq., Superintendent of Fish Culture for Canada, the "Report on Fish-Breeding in the Dominion for the year 1879." It bears the date 1880, and is printed "by order of Parliament," by Maclean, Roger and Company, Wellington Street, Ottawa. We trust that one of the results of the forthcoming Edinburgh and London Fisheries Exhibitions will be the establishment of similar fish-breeding establishments in Great Britain and Ireland under State support and direction. Such a department, if properly conducted. would increase the value of our sea and river fisheries by millions. It is a standing disgrace to this country that she alone, of all the great civilised nations, does next to nothing to increase that most important food for the people—fish.

It is a relief to turn from the contemplation of our own apathy to the energetic action of other countries. Let us glance at what is being done in Canada—a country so immense, so full of grand rivers, so sparsely populated, that one would have imagined fish-culture was unnecessary.

In the spring of 1879, the young fry planted in the waters of Canada, through the means of artificial propagation, numbered more than

Twenty-One and a Half Millions,

and the eggs laid down the same autumn, by the same process, amounted to

Twenty-eight Millions and Seventy-nine Thousand,

showing the successful manipulation of the several Government fish-breeding establishments in the Dominion, under Mr. S. Wilmot's superintendency, of a grand total of

Forty-nine Millions, Seven Hundred and Sixty-three Thousand

young fish and fish eggs of the salmon family during the year of 1879.

Mr. Wilmot may well be proud of such grand results as these. He was the pioneer of fish-culture in Canada. Its origin was a private enterprise of his own, commenced by him as an amateur for experiment and amusement, at his private residence at New castle, Ontario. From this little commencement there has sprung up, in Canada alone, since 1873, nine extensive Government fish-breeding establishments.

Mr. Edward Birkbeck, M.P., has done more than any other member of the legislature for the advancement and improvement of our fisheries. It is not too much to say that all who take any interest in the subject of our fisheries—inland or sea—look to him to forward their interests. If he will endeavour to move the Government to give State aid and direction to fish-breeding for the improvement of our fisheries of all kinds, he will have the hearty support of all classes. While we willingly acknowledge the able manner in which Her Majesty's Inspectors of Fisheries and their subordinates carry on the work appointed them, yet, when all is said, the result is ludicrously meagre, when compared with what is done in other countries. We have great hopes that the Great International Fisheries Exhibition of 1883 will show the nation and the Government the necessity of not only protecting fish and opening up rivers, but of breeding fish by millions for stocking our waters. It is more than probable that when the accounts of the 1883 Exhibition are made up, there will appear a splendid balance to the credit of the affair. The question will then arise, "What is to be done with it?" Let us hope it will be used as a nucleus for the establishment of national fish-breeding establishments on all our important streams. An acre of water properly cultivated will produce returns three times more valuable than an acre of cultivated land.

SPECIMEN FISH AT ANGLING CLUBS.

SUCCEEDING the splendid and unprecedented exhibition of ten specimen pike forming a portion of a united take by Messrs. Alfred Jardine and John Knechtli, which was made at the Gresham Angling Society about a fortnight ago, Mr. Pugh, a member of the Friendly Anglers brought up into the club-room of his Society, at the Albion Tavern, Albion Street, Hyde Park, last week, a beautiful show of specimen perch, as the result of his own fishing in the Kennett. Four of the best fish weighed together 6 lb. 12 oz., the largest 2 lb. 2 oz., sixteen others weighing over 1 lb. each, and altogether 26 lb. 9 oz. In addition to these he had some fine specimen dace up to 11½ oz. each. This old-established society, which is limited in its number of members, possesses many very fine preserved specimens of both perch and dace. Some few years ago, when fishing with Mr. Alfred Jardine in a portion of private water of the Colne, belonging to some friends of mine, that worthy and distinguished piscator succeeded in landing three remarkably good specimens of perch, one weighed 3 lb. 2 oz., another 2 lb. 13 oz., and another 2 lb. It was on the same day that the Union Jack, which is now under discussion, was taken; and on the following day Mr. Jardine took his perch to the studio of the late Mr. H. L. Rolfe, in Nicholas Lane, and there they were placed side by side with this Union Jack, and I remember the "scaley painter" remarking at the time "he would rather have been the captor of the three perch than the large pike." Mr. Jardine added three other specimens of perch he had taken out of the Thames, and had them all set up together in one case. When that case was shown to the late Mr. Frank Buckland, he declared "there was not another similar case in Europe." I may state here with an unbiassed opinion, in reference to one of the large pike belonging to Mr. Jardine, that he caught it in some private water, with an order of mine, to which he went overnight, and when I joined him the following morning about mid-day, he had, in some very rough water, taken that splendid pike. On our return to the hotel in the afternoon we called at the butcher's shop in the village to ascertain the weight of the fish, but the whole of the weights that could be collected were 30 lb., and it appeared to want 8 lb. more to bring the scale down. It was, however, weighed in the scales at the railway station, about twelve miles from the village, some six or eight hours after it had been caught, and if I remember rightly it then made over 36 lb. What I have been advocating for years in reference to specimen fish and the abolition of gross weights has now been practically realised by Messrs. Alfred Jardine and John Knechtli in the Gresham Angling Society, and there is necessarily more honour to be attached to the weighing-in of ten specimen fish scaling altogether 150 lb. than a gross take of over 300 lb. weight of all sizes, as it has, in my opinion, no comparison. In the case of Messrs. Jardine and Knechtli, if they had been desirous on this occasion of making a grand gross-weight exhibition, they would, without doubt, have surpassed that of any other club. They wanted rather to show specimen fish only, and the members of the Gresham Angling Society have every occasion to feel proud, and I am assured they are, at having amongst them such leviathans in pike-fishing, and who are such unmistakeable adepts in the science of angling. The presentation of three of the best fish to this important society, which are now at the taxidermist's for preservation in one case, will be a splendid addition to its museum, and perpetuate the captors' skill. Mr. Knechtli himself has a case of three pike, whose united weights I think will exceed those referred to, and, of course, fish of his own catching.

B.

INDIAN FISHING.

FOR the benefit of readers going to the East Indies, I send you a slight account of the fishing to be had in Calcutta. Having opened the subject, perhaps other correspondents may give further enlightenment on it. In my friend's garden was a tank, or, as we should call it, a pond, about thirty yards wide and fifty long. The native bearer told me there were fish in it that had not been fished for for years, as no one cared for sport. That evening he made some ground bait as follows: First he got some "haldee," being a cake made of crushed mustard seed, unclarified, which was used to feed cattle and fowls, and having worked it up with water, like paste, he next took two lemons and some leaves off their tree, growing beside the pond, and having put each lemon in the lumps of ground bait, put them in about 2 feet 6 inches from the bank, just opposite the lemon bush. He then told me to fish just off the ground or else one to two inches from it next morning or evening. Accordingly, about 7 p.m., with a mottled cane rod, running line and drawn gut stretch and bone-tipped swan quill float, I fished about a quarter of an inch off the ground. The lines were in not more than ten minutes before the float began to move like a perch takes it, and then went under with a rush. I struck, and, as there were no weeds, in two or three minutes landed a fish by playing round to the stone steps from which the servants bathe. The gardener brought a garden basket, and with this primitive landing-net, we secured a 3lb. fish. This fish was a laatah (pronounced lah-tah.) I went back quickly, and put in again, the bait being maida (Indian corn flour), worked up into paste and flavoured with broken lemon leaves, a piece on the hook about the size of a dried pea. The float hardly cocked, when it began to move; then shoot; next it went nearly half an inch out of water, and then down several times, much the same as half-pound carp bite. This time I had a "Rhuee" (pronounced "Roo-hee") about 4½ lb. I lost seven fish, for the gardener having taken away his basket, I had to ask another native to try and land the fish (and I hope the shades of Izaak Walton and Co. won't haunt me for it) with a two-edged dagger, by disabling them. One big fish managed to twist the gut line round the bare calf of the servant's leg (he having gone down to his knees in water), and cut it severely. In his attempts to stab the fish, however, he managed to cut my line, luckily near the hook, and that was how we lost the seven, Besides this we landed seven fish, weighing about 7½ lb., 6 lb., 5¼ lb., 4½ lb., 3 lb., 3¾ lb and 2½ lb., in a little over an hour. The average fish after that ran from 1 lb. to 5 lb. There were some very large—14 lb. to 20 lb.—in the tank, but the servants said they would only bite in the "rainy season." This was in the cold weather.

There are several large ponds on the Maudaan, or "plain," near Fort William, Calcutta, and very large fish, the names of which I do not know, running from 7 lb. to 25 lb. and 30 lb., I was told, but leave has to be obtained by orders.

In Simla, where the Government officers move in the hot season, there are plenty of mountain streams, but, as far as I know, not a fish in them. This is partly on account of the height of the mountains and partly on account of the ironstone and metallic rocks that form their beds. They are also made up of quartz. I have never noticed any Europeans fishing on the Hooghly (generally called the Ganges, in England) at Calcutta, but the native boatmen spear a fish dinner off the shallows. There are at Howrah, opposite Calcutta, some sacred tanks belonging to a rich Baboo proprietor, where the fish are fed by the Hindoo priests and devotees, and they are so tame that I am told they will take food out of one's hand, and even jump out of the water to reach it. Would not some of your readers like to have a quiet few minutes at those sacred tanks?

I hope to send other contributions from time to time.

In the Suez Canal, on the way out, the steamers anchor in the Bitter Lakes. Here, by moonlight, we caught one evening forty-eight salmon trout (?) with twine and some salmon-fly hooks, which we stripped of the feathers and baited with strips of bacon rind and fat pork. On the banks of the canal a ship's boat picked up mussels and cockles and other shellfish.

ONE WHO TRIED.

CONVICTION OF A NOTORIOUS RIVER POACHER.

AT the Norwich Guildhall this morning (before W. J. Utten-Browne, Esq., and other magistrates), William Barber and Henry Barber, father and son, described as wherrymen, of Runham, near Yarmouth, were summoned for using a dragnet, for the purpose of taking fish other than tench, smelts, bait and eels with a mesh of less dimensions, when wet, than three inches from knot to knot, or twelve inches all round, contrary to the Norfolk and Suffolk Fisheries Act. Mr. Chittock prosecuted on behalf of the Yare Preservation Society. Mr. I. Preston, of Yarmouth, defended. The evidence of Hewitt, the water bailiff, showed that on going on board the defendant's wherry in Rockland Dyke, near Coldham Hall, on the 11th inst., he discovered in the hold what appeared to be about two tons of fish, and also a wet net, which on measuring proved to have a mesh of the above unlawful size. Mr. Preston endeavoured to prove that the mesh was the, required size, but his witness failing to substantiate his contention, the magistrates convicted, and ordered the elder defendant to pay a fine of £10 and £2 9s. costs, and the net to be forfeited, and ordered the boy to pay a fine of £3; in the first case in default of payment two months' imprisonment, and in the second fourteen days. The magistrates declined to allow time for payment, on the ground that William Barber had been several times previously convicted of similar offences, and was known as a notorious poacher.—*Norwich Evening News.*

A NEW TOBACCO.

ANGLERS are such inveterate smokers, that it was with considerable pleasure we received from Messrs. Biggs and Son, some packets of their new "Barley White" tobacco, with a Polite request that we would make it known to the angling world. In order to be fortified in our opinion, we gave some of it to several angling friends—all great smokers—and asked for their opinions on it. These have been all so favourable, that we feel quite confident in saying that the "Barley White," is a genuinely pure tobacco, with a delicate and most pleasant flavour. We are informed by the proprietors—an old and well-established firm—that when this particular tobacco was brought to their notice, some time ago, they were so much pleased with it that they bought the market for it, and decided to place it before the public. It is a moderately mild tobacco, and therefore very suitable for continued smoking; it is entirely free from those injurious essential oils and flavourings which are so often present in "fancy" tobaccos, and which are so injurious to the liver. We have also found it very lasting in the pipe, and that it smokes right out, with a pearly-white ash. It will undoubtedly be popular with all smokers who prefer a tobacco not too strong, and which at the same time has a decided flavour. We may mention that, with the above, Messrs. Biggs sent samples of their "American Sun-dried Tobacco," also in packets: No. 1, "mild;" No. 2, "medium;" No. 3, "full." We prefer No. 2, which is more like the kind we are most accustomed to smoke, and habit goes a long way in prejudicing one for or against a new tobacco. We confess that had it not been for the unanimously favourable opinions given us by the anglers we asked to try it, we should not have felt justified in thus recommending the readers of the GAZETTE to clean their pipes out well, and give the "Barley White" a "fair, square smoke," as a trial. We like it; and any little diffidence we may have about recommending it, arises from what Mr. Blackmore has so truly described as the "fellow-feeling which a man has, a smoking man, for a fellow smoker's pipe—a feeling, whose depths is in nature's bowels, deep as the founts of calm volcanoes."

WITH THE GRAYLING.

ABOVE the hills the dawn of morning breaks,
  And sheds its flood of radiance o'er the lea;
  The clear-voiced brook makes laughing minstrelsy;
Deep in the bosky woods the pheasant wakes.

O'er moss and fell the frosty glory lies,
  The birch receives it on its silvern bark;
  The moorhen's eyes grow brighter still; and hark!
The heron's scream, as homeward now he flies.

To me the morn yet holds a greater charm—
  A pleasaunce sweeter, deeper, more serene
  Than e'en the jewelled glories of the scene;
A soul-salve rare as Gilead's gracious balm.

I "go a-fishing," for the Umber shy
  Whose iridescent sides shame Orient pearls;—
  See with what gentle, oily, dimpling swirls
The soft stream curls as Umber takes the fly!

Oh! panacea for all sub-lunar woes—
  The nerve-delighting fight a grayling makes!
  Be gentle and be calm, his lip oft breaks—
Good fisher, not so rough, or off he goes!

Triumphing do I stand, with gladsome brow.
  A quivering bar of silver gracefulness
  Upon the mossy bank, in death's distress,
As fragrant as the wild thyme, see him now.

Thence homeward through the brake, or o'er the lawn,
  With spirit cheered to greet the toil of day
  And heart as buoyant as the waving spray
That, all be-gemmed, sways in the breeze of morn.

CREON.

SEA FISHERIES.

A CONFERENCE of fishing-boat owners with Mr. Birkbeck, M.P., took place recently at Yarmouth. With regard to the depredations committed by Belgian trawlers, Mr. Birkbeck said he believed the result of the recent convention would be to entirely stop these proceedings. On the question of fishing vessels' lights, the meeting determined to appoint some practical men to represent Yarmouth and Lowestoft on the departmental committee, which will be nominated next session. Mr. Birkbeck said he had called the attention of the French Treaty Commissioners to the disadvantages under which English fishermen laboured in having to pay for taking herrings into French ports, while French vessels could enter our ports free, and hoped something might be done in the matter. Some discussion then took place with regard to Billingsgate Market, and the opinion was unanimous that Billingsgate must remain for seaborne fish, and that a central market might be made for railway-borne fish. It was resolved to send a deputation to the Board of Trade asking for the repeal of the Merchant Seamen's Wages Act, so far as related to the fishing trade.

WORMS IN DOGS.—Mr. James Doughty, Author of "Art of Breaking and Training Dogs," says: "I have used Maldire's Worm Powders for Dogs for many years, and they have always proved successful." Maldire's Worm Powders are sold by all chemists price 1s., 2s., 3s. 6d. and 5s. per packet, or sent post free (on receipt of Stamps) by Barclay and Sons 95, Farringdon Street, London.

RIVER REPORTS.

MID-THAMES.

By Telegraph.

River in grand trim for all-round winter work, jack feeding ravenously, chub and perch fairly on; weather frosty.

Thames (Kingston).

The water is in good order for perch, jack and chub fishing. I have not been out, but John has been getting some nice chub up to $3\frac{1}{2}$ lb., and a few fine dace. The bank fishers have been getting some fine dace, take them all together some of the best I have seen for some time. Another of my sons have been getting some nice roach from the bank. —John Johnson.

Thames (Twickenham).

The river is now in good condition, and tides suit well. We have had some splendid takes of roach and dacc. Mr. Beard took 100 fine fish in four hours, at Raking. Mr. Pitcher and friend took 12lb. of splendid dace one day with Pert Hammerton. Joe Dobbin and George Coxen have both been doing well. Those who want a good day's fishing now is the time to come; the river will never be in better condition.—Alfred Perrin.

Thames (Richmond).

Since my last report the river has been getting brighter every day, and this has caused the roach to go off the feed a little, but there is plenty of dace to be caught and they are very fine indeed. Takes of the past week are as follows:—G. Howard, one day 3 doz. dace; H. Mansell, 2 days, 9 dozen roach and dace; H. W. Reeler, one day, 2 dozen roach and dace; Job Brain, 2 days, 18 lb. roach and dace; C. Brown, 1 day, 9 lb. roach and dace; J. Bushnell, 4 days, $38\frac{1}{2}$ lb. roach and dace. Those who are fond of dace-fishing have got a splendid opportunity now.—J. Bushnell.

Thames (Walton).

The water has been falling rapidly since my last report, and is now but very little above summer level, and in capital order for fishing; in fact, nothing could be better. There is every prospect of some good takes for the next week or two, if the weather continues as it is, and there are no signs of a change. Beautiful and fine, with frost nights and mornings, and jack and perch well on the feed in the tail and along the banks. January 19, George Hone, with Messrs. Blamey and Wheeldon, had one jack, $4\frac{1}{2}$ lb., and another of 8 lb. (a picture), and lost a big one of 20 lb.; J. Hone, with Mr. Abbett, six perch; and Mr. Pace, from bank, two dozen roach. January 20 and 21, no fishing. January 22, George Hone, with Mr. Abbett, one jack, 3 lb. and six perch, average over $\frac{1}{2}$ lb. each; Mr. Higley, of the Highbury Anglers, one barbel, $3\frac{1}{2}$ lb., in good condition; Mr. Freeland, one jack, 3 lb.; from bank, one jack, $2\frac{1}{2}$ lb.; Mr. Rosewell, one jack, 4 lb. January 23, George Hone, with Mr. Mackriel, one bream, $4\frac{1}{2}$ lb. and one bream, $1\frac{1}{2}$ lb. January 24, George Hone, with Mr. Trim, one bream, 3 lb.; one jack, 2 lb.; and two dozen perch. January 25, George Hone, with Mr. Abbett, one and a half dozen perch, and lost a big jack; Mr. Rosewell, with Mr. Bevell, one jack, 3 lb., and six perch.—Henry G. Wood.

Thames (Windsor).

It is as well, perhaps, that the great army of London enthusiasts are unable to look out of their bedroom window and see the grand trim water is in just now as I write; otherwise a good many would strike for a day and be off to one of the Thames stations; as it is, I expect in my rambles next Sunday to see a marked contrast over this time last year, and those who go in for punt-fishing, if up to the use of pike, brains or cheese, will find the chub well on, if there is no change in water and the fine and far off principle is adhered to. Please the fishes, I must make a call next weeks at some of those likely finds in the Water Oakley reach and below, though one of the best harbours we had about here for chub has been taken away. Those who are in the habit of using these waters know well the long rows of old pollard stumps and rows of thick bush that overhung the mill stream at Surley; all this has been cleared, and I fancy any one trying to fish will find it very foul from fallen rubbish, and, if not so, the chub have doubtless left it. Mr. King, of the Royal Oak, Windsor, who is a member of the Gresham Club, took three chub yesterday, going $3\frac{1}{2}$ lb., $2\frac{1}{2}$ lb., and $1\frac{1}{2}$ lb., besides a few others, which were returned. Mr. Parsons, of Windsor, had 5 lb. 10 oz. of chub, largest $3\frac{1}{4}$ lb., and two gentlemen staying at the Royal Oak, out with "Honest Joe," took a miscellaneous bag of roach, perch, and one jack of 4 lb. Corporal-Major Drake, of the Royal Horse Guards Blue, amongst a bag of perch from private waters, had a nice specimen going 2 lb. 14 oz., which I have placed in the hands of Cooper, being one more to my collection. Another good look over the bridge before I close assures me that jack and perch can hardiy refuse anything in the way of fish at the end of gut tackle. Not that many are going to be had of $15\frac{1}{2}$ lb. on a single fine gut perch hook, as taken a few weeks back by a customer of mine, who, by the bye, has kindly handed me the formidable weapon, which, with his autograph and account of the capture, now graces about 15in. by 10 of black and gold.—B. R. Bambridge.

Ancholme.

The continued prevalence of fine weather has been very favourable to visitors of the waterside. It has been more like May than January, and even the nights have hardly had a touch of frost. Despite these agreeable concomitants, anglers in this neighbourhood seem to have no relish for winter fishing, and we must give up all hopes of writing readable reports until such a time as the days are longer and the daisies and buttercups spangle the meadows. Let me advise those who, like myself, are awaiting the advent of the trout-fishing season, to give their tackle a thorough overhauling before the eventful time arrives. Let the lines be examined, and all rotten ones consigned to the fire, and see that all rusty hooks follow suit, Gut should likewise be tested, particularly at the knots. By-the-way, when tying knots always wet them to prevent breaking. This also should be looked to, as the gut often slips when they are badly tied, or when they have been kept too long. To those who make their own flies, I would say, get ready the needle brown early brown, February red, and March brown.—Thomas Ford.

Barnstaple (N. Devon.)

Our opening day for trout-fishing is the 1st of February, and anglers here are looking up their flies and tackle. I hope to have some good reports to send you as the season advances.—James Rowe.

Dove.

The trout season begins next Thursday, and I am glad we are so near, as I never knew the fish more forward than they are this year. Depend upon it, should the weather continue as mild next week as it is this, there will be great sport amongst the speckled ones. Already the fish are rising nearly as freely as grayling, and eels have been caught this last few days while grayling fishing. They have, of course, had to be thrown back again. After next Thursday anglers will be able to lay justifiable claim to them. The high temperature of the atmosphere has again brought out an immense quantity of fly on the river, and even since I last wrote there has been more or less of a good rise of fish. Plenty of piscators have been out daily trying their skill, and most of them have been successful in catching something. One rodster caught six and a-half brace near Clonnholme, and two separate dishes of five and a-half and five brace are reported from Uttoxeter. Sport has also been remunerative at Rocester, Mayfield, Ashbourne, Ilam, and other places. A few more barbel have been caught by the bottom fishers, and, as everybody knows, the rare circumstance of these fish being taken in winter is only to be accounted for by the excessively mild weather. The barbel were caught with the cockspur worm.—The Splodger.

Ilfracombe (N. Devon).

Our sea-fishing this week has been a little brisker, some boats having had good sport on Sunday. Seven cod were brought in, two weighing 13 lb. each, three 15 lb. each, two 40 lb. each; two ling, one 15 lb., one 20 lb.; two skate, 28 lb. each. Monday, four cod, two 20 lb. each, one 16 lb., one 15 lb., and two small conger. Tuesday, six cod, two weighing 40 lb., one 21 lb., one 16 lb., and two 15 lb. each; three ling, two 42 lb., one 15 lb., and two skate, one 24 lb., one 40 lb.; one conger 30 lb. Wednesday, one cod 20 lb., and a few tamlin, cod, and whiting. Weather at present moderate.—E. Comer.

Medway (Tonbridge).

With the river in such splendid condition it is a great wonder that more votaries of the gentle craft have not been out. Those who have tried it, as a rule, have been rewarded with jack. Mr. G. Hewitt caught above the town a female pike weighing 6 lb. 6 oz., and several others are reported. It is to be hoped as far as fishing is concerned the present fine weather will last.—Ye Medway Water Rat.

Ouse and Ivel (Blunham).

We are pleased to state these rivers are now in good condition. The pike have been freely on the feed this week and some fine fish have been taken by members of the association.—E. B.

Ouse (Littleport).

Water in splenid condition as far as appearances go, and almost down to summer level. But though everything looks favourable, we are quite out of it down here, for the fish will not feed at all well yet. I have had three short turns myself, and had four anglers down on speculation, with the following results—Thursday, fishing myself, got $4\frac{1}{2}$ lb. roach; Friday, 7 lb. roach and bream; Saturday, $4\frac{1}{2}$ lb. roach, nine fish, largest $1\frac{1}{4}$ lb., a very handsome roach; Monday, Mr. Crick, Newmarket, 2 doz. roach, bream, and dace; Tuesday, Mr. George, Bassingbourne, 9 lb. nice roach; Mr. F. J. Hulford, Ely, 4 lb. roach in one hour; Wednesday, Mr. C. S. Smelt, Elm, near Wisbeach, 7 lb. nice roach, largest going 1 lb.—Charles South.

Suir.

We are all most anxious for Wednesday next, 1st February, being the opening day of the fishing season for rods and nets, and we anticipate first-rate fishing, owing to the past heavy floods and unusually mild season. Nearly all the salmon have spawned, and numbers of spring fish are going up the river. The heavy floods during the winter have prevented poachers from doing much in that way. Last night, sub-constable Holmes seized at Clonmel railway station two splendid springers, weighing respectively 25 lb. and 19 lb. They were directed to an egg merchant in Dublin. Up to the present there is only a slight clue to the senders. The streams are all in grand order for trout-fishing, and the flies used will be gold wrens, hare's ears, rat's fur, and red hackles. Notwithstanding the state our country is in, we expect better sport this coming season than for the few past ones.—Dora.

Trent (Nottingham).

Sport during the week has been rather quiet in the Nottingham district. The river has been running at an unusually low ebb, and pike anglers have not been slow to avail themselves of its clearness. Still, from some cause or another, the takes have not been large. Half-a-dozen nice fish—largest 17 lb. 14 oz.—were brought up from Colwick on the 20th, and a large take was reported from one of the upper waters on Monday. On Wednesday, at the Wellington Association, Mr. Hardy weighed-in one of 15 lb. within a few ounces, and on Thursday several good fish came to hand from Stoke. Chub-fishing has attracted a large number of votaries, but although pith and brains and greaves were brought into plentiful requisition, I cannot hear of many fish having been persuaded to feed. On Wednesday a noted local angler tried the upper length at Fiskerton with both the baits named, but failed to spring more than one solitary specimen. Just before closing my notes I hear that a pike of 11 lb. has been caught at Barton, and that a few nice chub have been landed in the Sawley fishery.—The Man at the Clubs.

Trent (Newark).

The water is low and clear and in capital condition for pike and chub fishing. Some fair quantities of both of those fish have been taken this week; the former by both spinning and live baiting, and the latter with pith and brains. Sport among the roach, dace, bream, &c., this week has not been very good, a few odd fish, as far as I can learn, only rewarding the patient roach fisher. Last Monday Mr. Butler had five nice jack, four of his fish going 30 lb. I heard of another angler having a nice brace from this locality that weighed 20 lb. Last Sunday I saw three fish that would average 6 lb. apiece in an angler's basket, and when I saw him he was spinning with a Colorado spoon-bait; taking all things into consideration pike-fishing has been pretty good this week. 'Pike-fishing closes in the waters of the Newark and Muskham fishery on the 1st February, an example that I should like to see followed in other waters. Chub, as I have just remarked, have been biting very fairly at pith, with brains as ground bait; several catches, and good ones too. I have both seen and heard about; I won't trouble you with particulars, but only add that my last week's recommendation will do for this, viz., anglers should go after chub, and take a farewell spin for pike this season in some of their favourite places. The wind to-day has been veering about very queerly, to night it has got in the east.—THE TRENT OTTER.

Wye and Derwent (Derbyshire).

Both the above rivers are now in first-class condition for grayling fly fishing, also for pike and coarse fish; and I am pleased to say that some handsome baskets of good sized grayling have been killed off of both rivers, both on Saturday, Monday and Tuesday, with the artificial flies. Baskets from four to seven brace per angler have been made. The killing flies have been the rough dressed claret, bumble, furnace and the flat winged brown flies. The long flat-winged browns have been out very abundantly on both rivers during the past week. Some fine grayling have also been killed off of the Derwent on F. C. Arkwright's water, with fly, below Cromford. The bottom fishers have done very well in the deeps during the past week with brandling worms, killing a quantity of good size chub, perch and dace, a few pike have also been taken out of the deeps between Cromford and Ambergate, none of the fish exceeding 6 lb. each; they have been killed both by trolling with the spoon bait and by using the natural small dace and roach for baits. I am exceedingly sorry to say that there has been several, both trout and grayling, picked up dead or dying of that fearful fish disease again, both on the Wye and on the Derwent, between Rowsley and Matlock Bridges.—GEORGE JAMES EATON.

SCOTCH REPORTS.

(From the *Scotsman.*)

LOCHLEVEN.—THE FIRST KILL OF THE SEASON.—Mr. Thompson, Cowdenbeath, and another gentleman were out with the rod for a few hours yesterday. The wind was light and from the south-west. Mr. Thompson succeeded in capturing two trout. This was not only the first kill of the season, but the earliest capture of the rod on record on Lochleven. The spawning season, it may be noted, was also early, and remarkably favourable, and has undoubtedly been the best experienced for many years. The trout beds were numerous, and never were disturbed by any of the heavy spates which subsequently overflowed the streams with such violence from south-west winds; and this season's fry have some weeks ago been seen in large numbers, which is rather unusual so early in the season. The streams have been under an energetic staff of watchers, and very little poaching has been heard of—only one conviction having been recorded.

SPAWNING IN THE TAY AND LYON.—Now that the spawning is nearly completed in the upper reaches of the Tay and the lower portions of the River Lyon, we are enabled to report as to the general results. The openness of the season and the absence of frost has been beneficial. This, combined with the full state of the river at the close of the fishing, enabled the salmon to have free access to the various spawning beds, which were all fully occupied. The fungoid disease, which was reported as prevalent in these waters before the close of the rod-fishing, has happily not proved so virulent as was anticipated. This favourable result is supposed to be mainly owing to the flooded state of the river which had advantageous effects in preventing its spread. Mr. Lumsden the superintendent of the fisheries, in his recent report to the Tay Fishery Board, states that only nine diseased dead fish (five male and four female) were reported by the bailiff, and four from the Lyon and Tay above the mouth of the Lyon. A considerable proportion of those seen were only slightly affected about the head. In the Grantully, Strathtay, and lower waters diseased fish are more numerous. In one pool eleven salmon were counted, all suffering from a malignant attack of this disease, and numerous instances of a similar nature are reported from the Strathtay waters. At Kenmore and Loch Tay several were also observed, but in most instances the disease was apparently of a milder type than in the lower waters. Notwithstanding the prevalence of disease, the spawning may be considered as having been, upon the whole, highly satisfactory. Experienced salmon fishers are of opinion that the prospects of anglers upon Loch Tay are quite as encouraging as of late years. The following table, compiled from an authentic source, shows the result of the fishing upon the loch for the last ten years—viz., 1870 to 1880 inclusive:—

Year.	Number of Fish.	Weight in lb.
1870	460	9,118
1871	114	2,270
1872	293	5,972
1873	779	17,770
1874	253	5,295
1875	913	20,106
1876	476	9,786
1877	869	17,703
1878	851	18,419
1879	356	8,117
1880	331	7,026
	5,695	121,382

GREGORY'S SPINNING BAITS. "The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[ADVT.]

THE LARGE DORSAL FIN OF THE GRAYLING.

MR. J. H. KEENE asks, in the FISHING GAZETTE of December 3rd, "For what purpose is the dorsal fin of the "grayling so large?" which was duly responded to in the issue of the FISHING GAZETTE for December 10, by H. M. P. Finding the subject has called forth no farther comment, I would now wish to add a few words upon the subject, which although not treating directly with our "English grayling" (*Thymallus umber*), it does with that magnificent example "Back's grayling" *Thymallus signifer*), whose dorsal fin is something grand, and the use of which is so clearly spoken of in the Naturalist's Library, "Ichthyology," Vol. II. The beautiful dorsal fin of this handsome species is so conspicuous, that it has been noticed by the natives dwelling upon the banks of its stream, and in their language signifies "wiry-like fin." It inhabits the rocky streams that flow through the primitive country lying between "Mackenzie's River" and the "Welcome." It is found only in the clear waters; and, Richardson says, delights in the strongest streams, taking eagerly at the artificial fly, and, when hooked, tugging strongly, and requiring as much dexterity to land safely as a trout six times the size. We do not see clearly the organs from which this great power arises, except in the large size of the dorsal fin. There is, however, no other organ to which to refer it; and if it is referable to it in those other fishes which have it so much, and often so curiously, developed, the power, when known, may probably be in ratio of its size.

The colours of this grayling are beautiful, but chaste; above of a lavender purple, beneath greyish with white spots; but the chief ornament or adornment is the large "dorsal" fin, of a graceful curving form. It is of a blackish-grey, but is relieved by tranverse rows of Berlin-blue spots.

The principal uses of the dorsal and anal fins of fishes, regarded merely as ministering to locomotion, appears to be that of poising those animals, and preventing them from continually reeling over to one side during either their station or progression in the water. The air-bladder, it is true, in most fishes, running as it does along the spine, tends to keep this part uppermost under ordinary circumstances; but this provision would have been insufficient to counteract the influence of the waves and conflicting currents, without the additional security afforded by the dorsal and anal fins, which, by the salient angle which they form with the body, throughout a great part of the length, and the broad area which they present laterally to the water, must obviously oppose a much greater resistance to any rotatory motion of the animal on its own axis, than any which it experiences in its motion either upwards or downwards, forwards or backwards. They thus operate in the same manner as the keel of a ship, and serve to keep the animal steady in its course; and for the same reason that a flat-bottomed boat rolls with every wave, and can keep its course at all only in very quiet waters, so a fish from which these fins have been removed reels continually to the right and left, and is able to preserve anything like an equilibrium only by keeping its other fins in constant motion, as a man does his arms when balancing himself upon a tight rope. But the dorsal and anal fins of fishes have an advantage which the best constructed keel can never possess; and that is, that their area and tension can be increased, within certain limits, in exact proportions to the necessity for greater security, the spines on which they are built being raised by muscles which are under the control of the animal; so that it has but to call these muscles into a greater or less degree of action, to expand or relax the fins to the precise point that is required. It is thus that we may imitate nature in our contrivances, but we can never approach her except at one or two removes.

I should esteem it a great favour if J. Harrington Keene, would kindly forward me the article upon "Brain Ivory," by our late friend F. Buckland, written some year or two since in *Land and Water*, and which J. H. K. so thoughtfully promised to look up and send in the FISHING GAZETTE, December 3rd, as I have either overlooked or lost my copy.

Exeter. FRANK GOSDEN.

SERIOUS ILLNESS OF MR. F. G. PEARCE.

WE very much regret to hear that Mr. F. G. Pearce the venerable and universally respected father of the Piscatorial Society has recently had a paralytic stroke. By desire of the committee of the club, Mr. T. R. Sachs has undertaken the office of treasurer, during the absence of Mr. F. G. Pearce who we sincerely hope will speedily recover.

GEORGE JAMES EATON, of Starkholmes Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[ADVT.]

CLUB AND OTHER JOTTINGS.

By L. B.

VERY little fishing news, club or otherwise, to report this week.

Among the North-Westerns, all things considered, some fair sport has been met with. Mr. J. H. Stead, of "Cure" celebrity, being credited with 12 lb. of jack and 8 lb. of roach and chub, the result of two days' angling in the river Ouse. Mr. Packman, 6 lb. of roach; Messrs. Harding and Halse, fishing with Davidson at Pangbourne, 6 lb. and 6½ lb. respectively, of roach and dace; Mr. Patching, 3½lb, of roach and chub; Messrs. Holmes, Billings, North, Underwood. Smith, Turner, Aldis, Marshall, also having some good roach and dace.

The West Central Association, No. 1 district, visit to the Bostonian Angling Society on Monday evening last was a perfect success, twelve societies being numerously represented.

From the Thames the report that comes to hand this week is a little more cheerful. Haslett, the well-known Chertsey pro., writes me this day (Wednesday). "I am glad to say old Father Thames is again right for fishing. I have been out part of two days with Mr. Allan, got two jack 5 lb. and 6 lb. respectively, and some perch, some fine roach and a trout about 1 lb., this last, being so wee, and, moreover, out of season, was of course let off; fishing with another gentleman on the 22nd, one jack and some perch; again on 24th, some perch (five). Hope to have better news next week." Say Haslett, what of those chub; ought not this bit of sharp weather to whet their appetites, and would not pith and brains fetch them? It would be quite a treat to hear of the capture of a few loggerheads.

A capital article that by "Chub Chavender" in last week's FISHING GAZETTE. I know the water referred to well, and have fished the Grand Junction Canal at West Drayton, Uxbridge, Rickmansworth, Watford, King's Langley, Boxmoor and beyond, more than any other water. Still, while agreeing with him on nearly everything, there are one or two of his statements which I would point out to him are somewhat at variance with the received notions of the most experienced canal fishemen. The system of ground baiting he recommends for instance, at all events for the main cut, is far too generous, and the barges he speaks of disparagingly are really a boon to the angler. With regard to ground bait the Cut fisherman is, if anything, more sparing than his brother rodster on the Lea. Eight or ten balls of bread and bran, about the size of an orange, will last him the whole day, though, if he is an old hand, he will rarely remain in one swim more than a quarter of an hour or twenty minutes. In the Thames or Lea a man will stick to a swim a whole day, well knowing it is a good swim, and that the fish may come on at any moment, and in an hour or two will reward him for his weary waiting. In the main canal, with a very few exceptions, there are no particular swims; granting a good bottom, and it is pretty generally so in winter, the depth is nearly everywhere uniform. The fish, too, are the most arrant rovers I know of. The keel of almost every loaded barge touches the bottom, and very frequently grates upon it in a most audible manner. Now, the instant the barge has passed, the fisherman should cast in, and he will find that if he is sharp he will secure two or three fish before the well defined cloudy track left in the centre of the clear water by the lumbering old craft has subsided; moreover, the opening and closing of locks necessitated by the passage of the barges, by giving a movement to the water where there are no mills, certainly makes the fish feed more freely.

The 3 lb. and some odd ounces fish (I have not a copy of the GAZETTE before me where I now am writing) taken at Staines, and referred to in my "Jottings" last week, was a "Perch" and the omission of the word was the printers mistake not mine.

[The mistake was not the printer's. Mr. B. left out the word, and of course it would have been dangerous to guess as to what the fish was.—THE PRINTER.]

Two new clubs, "The Kingfisher" and the "Brentford Piscatorials," were enrolled at the last meeting of the West Central Association of London and Provincial Angling Societies, on Friday evening last. Every true angler will rejoice at the starting of an angling society in Brentford, the very head-centre of Thames poachers.

A 19 lb. SALMON CAUGHT WHILE SPINNING FOR PIKE

AT the Piscatorial Society on Monday evening last, the following remarks were make by Mr. Thos. Huggett in reply to his name being associated with the successful anglers.

Mr. President and Gentlemen,—I thank you very heartily for the kind manner in which you have proposed my health as one of the successful anglers this evening, the more so as I have an anecdote to relate which I hope will amuse you. On Friday morning last, with the birds singing as in spring and a beautiful blue sky, I started off full of great hopes for a day's good pike-fishing; but in that I was somewhat disappointed, as I had rather an indifferent day's sport, but an event occurred early in the day which gave me entire and unqualified satisfaction. Having arrived nearly at the top of the water that I was to fish we came to a place where it was necessary to change boats, there being a weir but no lock. The attendant then commenced changing the rods and tackle and getting the other boat ready, so I thought while he was doing it, it would be a good opportunity for me to spin the weir pool over. I put on a medium-sized very bright roach, and, as the water curled or rather swirled heavily at the place where I commenced, I did not throw out the line but stood back some distance and gently dropped in my spinning bait. Ha! what was that; I thought I felt a touch, I struck instantly, and then raised the bait to have a look at it. I must have been mistaken; and yet the bait had been shifted on the hooks, no marks of teeth, No matter, don't bully him, as John Hammond, of Winchester, says, when you are trout-fishing. Wait a minute or so, for Mr. Esox Lucius, if he it be, will be reassured. I waited, re-arranged the bait, stood well back and again cast it lightly into the swirl; it was only for an instant, another strike and I was into something. Off went about thirty yards of my line at a terrific rate, and with a whirr of the winch which all true anglers so dearly love, and then out in the heaviest of the foaming weirpool sprang a lovely salmon bright as a bar of silver; and then out again and again. He then rushed over to another side of the weir near some piles and I had to run back and wind my reel at the same time so as to have some control over him, also a moderate strain upon my line; he then commenced to tug-tug, with as much breaking or tearing movement as possible but the steel was too well in and the tackle too sound for that to avail him. I then had an opportunity of beckoning over the attendant, who had now the other boat ready. He came over and I told him I was into a salmon, "Nonsense," said he, "on jack tackle; most likely it is a budge trout." "Budge trout be hanged" said I, "it's a salmon; he is as bright as a salmon and weighs twelve or fifteen pounds at least." There was no more time for conversation, for at that moment off he went, or rather tried to go, up on to some shallows all covered with long weeds called cow weed, but poor Tom thought he had better give him plenty of butt than allow such a dangerous proceeding to take place. After he had shaken the line somewhat as a dog shakes a rat, I turned him, and he came again into the pool and again rushed for the piles. The attendant then began to talk about the landing. As per usual, he had no landing net, and to gaff the salmon out of season would be most unsportsmanlike, or perhaps, what is worse, illegal, so he inquired of me what was to be done. I replied, "Never mind about the landing at present; he is not to be landed so quickly as you think. He is no chicken I can tell you; look at the rod." There he was round and round the weir pool and every now and then his tail showed out of the water as he turned and made his heavy plunges; but after a time he became more tractable and the question of landing him had to be decided. We thought of running him up a ditch which lay on the right of us and then blocking up the ditch with some of the weir paddles but this was found impracticable as the ditch was too wide and too deep. At last the attendant found a small drain, about 12 inches wide, running out of the ditch, so I determined to run him up the ditch and turn him into the drain. By this time about three-quarters of an hour had elapsed since he was first hooked, and when I put on a strain he came towards me without all that rushing and tugging he had exhibited in the early part of the struggle. I sailed him up the wide ditch; he raised several objections *en route*, but I kept the strain on, turned him into the little drain and ran him up some distance on to the shallow—the place was so narrow he could not turn. The attendant knelt down and put his arms under him and landed him gently on the grass; what a lovely fish, bright as silver and fat as a mole, worth perhaps 5s. per lb. At once I measured him. He was exactly the length of the butt of my rod, 3 feet, measuring over all, and the girth was 2 feet 10½ inches. The fisherman's store was close by. We weighed him, when down bumped the scales at nineteen pounds. The rest from the strain of the line during the minutes we were weighing him seemed to have revived him. We took him to the running water near the weir pool and dropped him gently in. The moment he was free he sailed off into the weir pool a sadder, though, I trust, a wiser fish for his visit to green fields and pastures new. The river keeper has been there nearly ten years and this is the first salmon he has ever seen taken with jack tackle, although very many anglers have fished there. Gentlemen, I again thank you for having associated my name with the successful anglers.

[Did not this pretty little adventure occur on the Avon?—ED.]

DESTROYING FISH BY DYNAMITE.

JAMES AND JOHN BENNETT and John Grocock, labourers, were brought up and charged with having, on the 17th inst., at Egginton, unlawfully used certain dynamite to catch or destroy fish in certain water belonging to Sir Hy. Flower Every, Bart. Mr. H. T. George (from the office of Mr. Eddowes, Clerk to the Trent Fishery Board), who appeared for the prosecution, stated that the charge was laid under 41 and 42 Vic., and it was fortunate for the prisoners that they were not charged under the Malicious Injuries to Property Act, as, if they had then been convicted, they might have been sent to penal servitude for seven years. He was afraid that this was an offence which had been considerably on the increase in this district lately, and if their Worships considered the case proved he should ask them to inflict a heavy penalty, and thus to assist the Trent Fishery Board to put down these occurrences. James Haynes said that on the day in question he saw the prisoners near the brook. One of them threw something into the water, and immediately afterwards he heard a report. He saw the water rise and also give off steam. He went to the prisoners, after having got assistance, and detained them until he gave them into the custody of the police. When he had the prisoners in custody he saw a dead fish in the water. Wm. Meakin and Wm. Hayes deposed to having helped the last witness, and P.C. Twigg to having received the prisoners into custody. He searched them, and found upon James Bennett four dead fish, and upon John Bennett two, but none upon Grocock. James Bennett also had in his possession a ferret and two nets, and Grocock one net. James Bennett denied that either he or the other prisoners threw dynamite into the water, though they certainly did take some fish out of the brook. He had never seen dynamite. The other prisoners made no defence. The

Chairman said that the Bench believed prisoners had been convicted of the offence—one of the most serious offences a man could be convicted of. If fish, the food of the people, was to be destroyed in this way a famine might occur in the land. They might just as well set to work to destroy every beast and sheep in the kingdom. It was absolutely necessary these proceedings should be stopped. Unfortunately the law gave the magistrates only a limited power of repression, but that power they were bound to exercise to the utmost of their ability, and prisoners now would have to pay £20 each and costs, or go to gaol with two months' hard labour.

THE FRIENDLY ANGLERS.

On Wednesday last, the 25th inst., this well-named angling society held its usual annual dinner at the Albion Tavern, and members and visitors turning up in strong force, the recently enlarged room, handsemely adorned with no fewer than seventy-six cases of stuffed fish, was quite filled. The members present were—Messrs. Newson (chairman), Victor Emanuel (vice-chairman), Paine (treasurer), Lee Good (hon. sec.), and F. and R. Hoblyn, Woodall, Cragga, Grant, T. and W. Barwell, Taylor, Brewer, Calcutt, Korner, Garrett, Bloxham, Batson, Howard, Blockley, Henderson, Brown, Bayfield, Palmer, Hughes, Mitchell, Hook, Pinnick, Marriott, Pugh, Hawkins, Nickerson, G. Gillatt, Meakin, Hodgkinson, Freeman, and Page, and Wheeldon, hon. member. The visitors comprised Messrs. J. Lander and T. R. Sachs (Piscatorial Society), Parkins (the Waltonians), H. Barwell, Slait, G. Hook, C. Hoblyn, Evans, Turner, Lister, and Mobbs. Besides the usual speeches, in the course of which the chairman complimented the visitors, and referred to the liberality of one of them in the matter of prize-giving, an important part of the evening's proceedings was the distribution of prizes, which, amongst the Friendly Anglers, are all private ones. The following is a list of the prize-winners, with the nature of the prizes attached:—Mr. F. Hoblyn, greatest weight with the fly and spinning bait, £14 14s.; Mr. Victor Emanuel, largest pike, perch and grayling, £14 14s.; Mr. Palmer, greatest weight of trout, a trout pin (£5 5s.), and £3 13s. 6d.; Mr. Woodall, largest chub (5 lb. 6 oz.), £6 6s.; Mr. Allard, greatest weight of chub, £6 6s.; Mr. Hunt, greatest weight of bream, £6 6s.; Mr. Brown, largest roach and greatest weight of same, £3 13s. 6d.; Mr. Hawkins, greatest weight of dace, £3 13s. 6d.; Mr. C. Calcutt, greatest weight of gudgeon, £3 3s.; Mr. Craggs, largest chub with the fly and greatest weight of tench, £3 3s.; Mr. Garratt, largest dace, £1 1s., and pair of ottomans, £3 3s.; Mr. Batson, second largest dace, £1 11s. 6d.; Mr. Henderson, second greatest weight of dace, £1 11s. 6d.; Mr. T. Barwell, largest trout from the Thames, £1 11s. 6d.; Mr. Grant, greatest weight on three specified days in the week, £1 11s. 6d.; Mr. Newson, greatest weight of pike, £1 1s.; Mr. Blockley, largest bream, £1 1s.; Mr. Mitchell, consolation prize for greatest number of shows without gaining a prize, £1 1s.; Mr. Berry, second largest perch, 10s. 6d. The total amount won amounted to over £80. But during the evening prizes were offered for 1882 amounting to nearly £100, including a pair of enamelled trout-pins, from Mr. T. R. Sachs, for fly-fishing and spinning, and £1 1s. from Mr. Lander. Mr. R. L. Pugh made a good show of fish, consisting of 31¼ lb. of Thames pike (the largest 12½ lb.), and 4¼ lb. of roach (largest 1 lb. 2 oz.), and 10¼ lb. of perch (largest 2 lb. ½ oz.), from the Kennett, in all, 45¾ lb. Some excellent songs were given by Messrs. Wheeldon, Berry, Brewer, T. Barwell, F. S. Hoblyn, and Victor Emanuel (in French), and Mr. Korner recited some Hans Breitmann ballads in the true vernacular.

HISTORY OF THE GRESHAM ANGLING SOCIETY.

The Gresham Angling Society has now attained a position when some slight sketch of its origin and progress may be useful as well as interesting to our readers, and in response to a suggestion made last week by a correspondent, we have much pleasure in placing before them a few particulars derived from authentic sources.

The society owes its origin to a suggestion made by its honorary secretary to an old friend, Mr. George Austin, and these gentlemen jointly are the founders of the society, as officially recorded in its minute book. Both are the sons of good anglers, long since gone to rest, one of whom was a member of an angling society more than fifty years ago. The objects of the society being carefully thought out and defined, a committee formed, and some thirty or forty members obtained, the project was formally announced in the press, after which a public meeting was called. The room in which it was held was crowded, and at the close a large number of names were handed in to Mr. Crumplen, who was in the chair. The objects of the society as stated at this meeting held on the 25th of March last, were to promote congenial social intercourse, to disseminate information, to travel cheaper, to rent water for the use of its members, to abolish the system of gross-weight competitions, to form a museum of specimen fish, and as far as possible to aid all movements having for their object the interests of the angling community—objects which have since been kept steadily in view. The society has been represented on every deputation of importance, and has invarialy thrown in its lot with the central bodies, feeling certain that it is only by united efforts that any useful reforms, or improvement in sport generally, can be successfully accomplished.

The original committee were: Messrs. George Austin, C. E. Aveling, F. W. Backhouse, C. G. Bennett, C. S. Bentley, E. Child, T. P. Cooper, T. Crumplen, S. C. Harding, J. W. Haye and J. G. Thompson. These gentlemen retain office until June next, when the committee will doubtless be re-constituted, and new members and officers introduced. They have, however, worked well together, and although differences of opinion have at times arisen, a question once discussed and settled becomes part of the policy of the society, which all endeavour to carry out. Mr. Bentley deserves a special word of praise. He has made several valuable suggestions, and the library, which is becoming an important feature with the society, is largely indebted to him. The books and the museum have so far grown that a librarian and curator have been lately appointed, and in Mr. R. Bryant and Captain Alfred the society has two valuable officials.

Mr. Alfred Jardine, who joined the society at its first open meeting, has brought in many good angling friends, besides aiding in every possible way, and the late take of pike by himself and Mr. Knechtli has enabled the society to boast of having had a finer display on its trays (when individual weights and numbers are considered) than have been shown before any other society. The honorary secretary it will be recollected suggested and compiled the first paper read before the society, and also presided at the inaugural dinner, which was so great a success in May last. The papers read and discussed before the society have been greatly attractive; they have since been published, and many other societies now read similar essays, so, that although the reading of papers at angling meetings is not new in itself, the Gresham has certainly done much to make them popular. Besides these literary evenings the society has those musical nights, which have always been more or less inseparable from angling, and to these it has imparted new interest by the revival of some of those sweet old angling ditties, now so rarely heard. On other occasions members bring their rods or tackle for inspection, and many novelties or inventions have from time to time been shown. Members of other societies are always welcome as visitors at these meetings, which take place every Thursday. The society has at present the right of fishing without payment in Godfrey's Water, Thorney Broad; also at Ford's, and they rent exclusively the small Lea at Waltham (this has always been private water), which they contemplate stocking, as time goes on. The society gives its prizes for specimen fish only. When we add that Lord George Hamilton, M.P., is president, taking a real interest in its welfare, presiding at the annual banquet in March next; and that Major the Hon. E. R. Burke, and Mr. Alderman Fowler, M.P., vice-presidents of the society, the first chapter in its history is complete. We have thought this little sketch of its origin and working might be of service to our readers. Enough has been said to show the importance of having such a powerful body numbering over two hundred members, ready to throw its weight unselfishly into any movement having for its object the advancement of the art of angling, the furtherance of union among anglers and angling societies, and the increase of our common sport.

THAMES *v.* ISIS.

The question which is the river Isis is one which is often cropping up amongst anglers; and by those who are unacquainted with the matter, it is frequently asserted that the Isis is a branch or tributary of the Thames, which river it joins at Dorchester; others assert that it is a "continuation of the Thames," and that at this place the Isis ends and the Thames begins. It is beyond doubt that considerable confusion prevails in the minds of many anglers on this point, and it is to endeavour to clear this up that I put to paper the following notes and extracts:—

Anyone who will examine a good map of the Thames from its source to the sea will at once note the fallacy of the idea of there being two rivers; they will see that the Thames commences near the village of Tarlton, near Cirencester, and proceeds in one continuous course to the sea. That a certain portion of this river was, and still is, occasionally called the Isis, there can be no doubt; the inhabitants of many villages on its banks call it so, and it was but lately I noticed in one of the daily papers these words:—"The curious phenomenon of the water of the Isis freezing at the bottom of the river." This portion was also called the Ouse, as will be seen from the following extracts from Stow:—"The Thames beginneth a little above a village called Winchcomb, in Oxfordshire, and still increasing, passeth first by the University of Oxford, &c., to London;" and in his next chapter that the Isis "goeth into Thame in Oxfordshire (which is more than fifteen miles below Oxford), where, joining with a river of the same denomination, it loseth the name of Isis or Ouse, and from thence is called Thamesis all along as it passeth." This description of Stow's appears somewhat contradictory, and is therefore of little value; but the authority of Camden is no doubt to be relied upon as stated in the following extract, in which he says "it plainly appears that the river was always called Thames or Tems before it came near the Thame," "and that in several ancient charters granted to the Abbey of Malmesbury, as well as to that of Eynsham,* and from old deeds relating to Cricklade it is never considered under any other name than that of Thames." In proof of this assertion he instances that in an ancient charter granted to Abbot Adhelm, there is mention made of certain lands upon the east part of the river "cujus vocabulum Temis, juxta vadum qui appellatur Summerford (whose name is Thames and near a ford which is named Summerford), and this ford is in Wiltshire." He likewise says it nowhere occurs under the name of Isis. It is likewise called the Thames by those ancient historians who chronicled the invasions of Ethelwold into

---

* Eynsham: this Abbey was founded about the year 1005, and was of considerable extent and magnificence, but at this time there is no sign of there having been an abbey here.

Wiltshire in A.D. 905, and of Canute in 1016, who all concur in this by declaring that "they passed over the Thames at Cricklade."

The source of the Thames is acknowledged as the Thames Head, and it is hardly probable that this source should give birth to a river called the Isis, which having run about half its course should then re-assume the name of Thames. It is much more likely that the name of Isis was of poetical origin, and that we should take the advice of Mr. Dickens, in his Dictionary, and agree that "the Isis legend should be abandoned and the river be called throughout its course the Thames."

As to the origin of the name of Thames, it was suggested by Mr. Ireland, in his work on this river, that it might be derived from the Saxon, Temere, or from the British word Tavuys which implies a gentle stream, and from which many rivers in the island derive their appellation.

R. W. Hobden.

ANSWERS TO CORRESPONDENTS.

C. Beale.—The fence months on the Ouse and Ivel are from March 15 to June 15.

E. Abdey, Redland.—Trout-fishing begins February 1 on most of the North Devon and West Somerset streams. We cannot say if this rule holds good on all the preserved waters, but should say not, as it is too early unless the season is exceptionally forward.

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

SILKWORM GUT.

Sir,—I did not think, when I replied to a letter which appeared in "Forest and Stream" on this subject, that my letter would be published in your paper and come under the notice of an amateur "gut manufacturer," or should have gone more fully into the question of manufacture of gut; yet, I suppose, not so fully as your correspondent "Creel" would have been satisfied with: it is not wise for a manufacturer to say too much in these days of keen competition.

During the many years my firm have been importers only of gut, I have been most careful to keep it in a room not too damp, or of too great a heat, and have always cautioned tackle makers and dealers not to expose it in their windows in the blazing sun.

I must confess that, although my firm has imported large quantities and I have had the purchasing of it, I was ignorant as to how the Spaniards made it—excepting the slight information I could gain from them, that the silkworm was put into vinegar, afterwards drawn out to as great a length as possible, then well rubbed with wash leather by women and girls, before being tied up in bundles of 100 each—until my first visit to Spain, in September last, therefore my experience has not been long.

No wonder "Creel" is so much astonished that our firm should be as many years in the trade, and purchasing to the extent of several thousands of pounds' worth every year, that we had not visited the seat of its manufacture. I have for many years had a great desire to visit Spain, to see the manufacturing of gut, which is one of the most important articles in our trade; but my time has always been so much occupied in the manufacturing of hooks, swivels, floats, rods, lines, &c., that I found it difficult to leave a large business for any length of time; also, the distance to Murcia being so great, and not knowing their language, I have put it off year after year.

The arrangement my firm had entered into, to mannfacture on their own account, made it a necessity that I should go there.

The person we have engaged as our manager, I have known for several years' and bought gut from him when manufacturing on his own account; it was certainly the best gut we purchased from any house.

With reference to the manufacture of silkworm gut—how the Spaniards made it years ago, I cannot tell, but certainly it used to be made stronger than of late years.

"Creel" is quite correct as to the boiling, &c., which process I have altered somewhat.

As to bleaching, I consider that also a mistake; yet, unless we can produce white gut, tackle makers and dealers will not purchase it. It must be a good white, or will not take the dye so well. Tackle makers must produce the right shade, or they cannot sell the lines, &c. More attention is paid to the colour than the strength; there is a prejudice, and how to get over it is the difficulty.

As to regulating the heat of the bleaching oven, as I am a countryman, and, as the Americans say, a greenhorn, it is not likely that I should know the use of a thermometer.

At our works we have to study the question of heat very much, and, having used them for years, it was a wonder it did not strike me, or that I had never seen a bleaching oven before.

A great deal has been said lately about dyeing gut and a great many make the same mistake as the Spaniards, viz.—putting the gut into boiling water. If the water is boiling when the dye is put in, or rather the boiling water poured on the dye, the gut should not be put into it until a few minutes after, then it will not reduce the strength, providing the right sort of dye is used.

I contend it injures gut to expose it to the glaring heat of the sun. "Creel" must consider that in Spain at the "gut season," the heat is intense and will dry up anything exposed to it. If "Creel" will put gut before a good fire for several hours, he knows what the effect will be.

The same in making hooks: once over heat them, let them remain one minute too long in the fire, the nature of the steel is taken out, and the hooks will become brittle, and no process you can apply will ever make them strong again.

I enclose for "Creel" a few strands of gut in the raw state, also a few strands in the manufactured or finished state; he will be able to form an opinion if our present system makes the gut brittle.

Apologising for trespassing upon your space.—I am, &c.

S. Allcock.

RED PASTE FOR ROACH AND BREAM.

Sir,—I think you will agree with me that those roach and bream fishermen who use paste for a bait, tinted red with vermilion, make a mistake by doing so.

Though the quantity of the pigment necessary may be very small, yet I have found it imparts a distinctly metallic taste to the bait, which must act rather as a repellant than a lure to such fastidious feeding fish as they seek to capture.

Of course everybody knows that vermilion is also very poisonous; though this could hardly affect a human being injuriously, supposing he ate his fish, for in most, if not all cases, the pellet is rejected immediately, the steel strikes home, leaving none to find its way into the stomach, and thence into the blood, supposing the process of digestion to be still going on during the short time the life of the fish is ebbing away.

If I may be allowed to give a hint to correct this oversight, I should advise that a grain or two of carmine, which is the colouring principle of cochineal, and is perfectly harmless—being used in a liquid form in the culinary art for tinting blanc manges, jellies, &c.—be used instead, when the required colour can be obtained without tending in any degree to militate against the end the angler had in view.—I am, &c.,

William King.

1, New Road, Commercial Road, E., January 23rd, 1882.

[This is a good suggestion. Red paste is much used by Norfolk anglers, and at times it is the most killing bait to use.—Ed.]

A FEW QUERIES.

Sir,—I should take it as a favour if you will permit me to put a few questions, which may be answered through the columns of the Fishing Gazette.

1st. Where can I obtain, or, better still, how can I breed large large bloodworms?

2nd. Can fishing be had at Tottenham in quantity sufficient to give encouragement, more especially with regard to roach and perch; and is it necessary or advantageous to use hair tackle for roach, and what are the best baits for the season.

Hoping you or some correspondent may be able to answer the above.—I am, &c.

John J. Harris.

52, Andover Road, Hornsey Road, N., January 23rd, 1882.

[The best bait for roach is paste. You may get a few fish at Tottenham, especially as their best season is from now until the middle or end of April. Drawn gut is better than hair, though hair will last much longer.—Ed.]

MALICIOUS DESTRUCTION OF A PUNT.

Sir,—James Gray, our principal water bailiff, had his punt sent adrift just above Boveney Weir on Sunday last by some malicious person, probably one of the numerous poachers who are thwarted and checked by his vigilance. The punt was utterly smashed, and I have authorised him to use my name in asking for help towards replacing it from those who value, as I do, his services in the cause of law and fair fishing. If any of your readers will send me any donation for this purpose I shall have great pleasure in handing them to him. We have offered a reward of £2 2s. for the conviction of the offenders.—I am, &c.,

Charles Caldecott James.

Chairman of the Windsor and Eton Angling Preservation Association.

Jan. 20, 1882.

SPAWNING OUT OF SEASON.

Sir,—In reference to the letter which appeared in your issue of January 7th, where your correspondent says dace spawn twice in one season, I wish to state I have caught both dace, roach, and perch full of spawn so late in the autumn that many anglers would be under the impression they were about spawning a second time, as asserted by your correspondent. But, as far as my observation has gone, in a great number of cases there is not the slightest doubt they were simply spawn-bound, and, in all probability, would sooner or later die from this cause. Hens, we know, constantly die in a similar manner from being egg-bound, when the application of a little oil would have saved them. From some cause or other, after many fruitless attempts, they find it impossible to shed their spawn, and I have no hesitation in saying, in many cases, by a very simple operation with the lancet, they would be enabled to relieve themselves and survive. About ten or twelve years ago an immense pike, weighing 22½ lb., was found dead on the shore of the reservoir at Stoke Newington. It was picked up by one of the workmen, and, on telling his companions, many singular opinions were advanced as to the cause of its death; but on showing it to Mr. Storr, an old pike-fisher, he soon proved to them they were all wrong, by taking out his penknife and widening the vent, when, to their astonishment, the spawn at once began to flow out, and there is no doubt that the helpless condition in which many fish are picked up from time to time is attributable to this cause.

I may mention that one day last September I caught over two dozen perch in the reservoir at Sunbury, and one contained a considerable quantity of spawn; but I am of opinion that in this case it would retain it until the following spring, because the vent was not in the least distended and the fish perfectly healthy and strong, but I may be mistaken. It was taken with a minnow.

In conclusion, Mr. Editor, I am of your opinion that dace do not spawn twice in the same season. Hoping these few remarks may be the means of elucidating something more definite on this interesting subject.—I am, &c., MARK ANTONY.

[Since our note appeared we have had some discussion with Messrs. Geen and Bonvoisin, and they affirm that they never asserted, or dreamed of asserting, that the *same* dace spawn twice; they merely contend that there are certain dace—the majority, which spawn in the spring; and other dace—the minority—which spawn months later. And they affirm this is the case every year, and they have for years past known it to be a fact. We should like to hear more on this interesting matter.—ED.]

MR. W. BAILEY, SENIOR, OF NOTTINGHAM.

SIR,—Seeing an advertisement in the FISHING GAZETTE that Mr. W. Bailey, of 170, Kirke White Street, Nottingham, would on receipt of 2s. 9d. forward one of his "Angler's Instructor," I wrote for one on the 8th December and I enclosed 2s. 9d. in stamps; and, although I have written twice since, I have not received the book or a reply to my order, and, as it was for the society, I thought a communication to you was not out of place.

I have commnnicated with the Post Office authorities and I received a lettter to the effect that they cannot trace any communication for me from Mr. Bailey.—I am, &c., JAMES B. UDALE.

23, Bayley Street, Staleybridge, Jan. 23, 1882.

[We regret to say we have received other complaints of a similar nature, and Mr. Bailey informs us in reply to our remonstrance that he has had so many orders for the book he has not had time to send them off. We trust he will return the money in all cases were he is too busy to send goods.—ED.]

THE PISCATORIAL SOCIETY.

SIR,—I have been favoured by an angling friend with a sketch rather artistically drawn of a number of pigs in various attitudes on the bank of a river, which appear to be jubilant at one of their number having been pushed into the stream by *a pig*, initialed T.R.S., and which, by-the-bye, is a capital caricature of the person whose initials it bears. In the background is another waving a banner inscribed "Piscatorial Society," this animal being marked J. L., the initials of the respected secretary of that angling club. Now, no one disputes that a pig is a useful animal, but is it, sir, a compliment to the Piscatorial Society for the artist to have represented their committee as a "parcel of pigs"? Surely he might have chosen animals less unsavoury, and more intelligent.—I am, &c.

THE PIG ON HIS BACK.

NAME OF GOOD SUBSCRIPTION WATER WANTED.

SIR,—Could you or any readers of the FISHING GAZETTE inform me of a good subscription water where I could become a member, anywhere within 70 or 80 miles from London, amount of subscription no object. If you could advise me of anything good you will greatly oblige—Yours, &c. H. J. P.

Jan. 24.

[You do not say what kind of fishing you want—whether trout or general. We should say the Cambridge and Ely Association or the Bedford Club would suit you for general fishing.—ED.]

THE RIGHT OF ANGLING IN THE THAMES.

(To the Editor of the *Daily News.*)

SIR,—In your able leader on Friday you write as if the above ques- had only been mooted of late years. No doubt the matter is more serious now than formerly, owing to the crowds who during the fishing season avail themselves of the metropolitan trains. The titles, however, of the following pamphlets (recorded in Daniel's "Book of Sports") would seem to indicate that the question is far from new, and that the rights and privileges of riparian owners exercised the Waltons of a past generation as well as our own:—"An Essay on the Right of Angling in the River Thames and in all other public navigable rivers. (Reading.)" "A letter to the proprietor of a fishery on the River Thames; in which an attempt is made to show in whom the right of fishing in public streams now resides. (Reading), 1787." The date of the former pamphlet does not appear, but probably it was earlier than 1787, as Daniel mentions it before the other.—Yours, &c., W. J. G.

Temple, Jan. 14.

ON Saturday a magnificent carp, measuring between two and three feet in length, and weighing 18 lb., was caught in a pool near Birmingham. It will be on view in about three weeks' time, at the fishing tackle establishment of Messrs. Nutting and Co., Edgbaston Street, where it has been sent for preservation.

CLUB REPORTS.

ACTON AND EALING ANGLING SOCIETY.

During the past fortnight, some of our members have taken some good fish from Twickenham downwards. Mr. Slatter, 12 lb. 7 oz. roach and dace; Mr. Cook, 13 lb. 10½ oz. roach and dace; Mr. Howell, 18 lb. 10 oz. roach and dace; Mr. Simpson, 4 lb. 10½ oz. jack; Dr. Dean, 3 lb. 1 oz. chub; and Messrs. Clayton, E. Eydman and A. Eydman also weighed-in fish.—BLACK BAG.

AMICABLE BROTHERS ANGLING SOCIETY.

Since the last report, Mr. Medcalf, jack, 10 lb. 13 oz.; Mr. S. Partrick, roach, 5 lb. 14 oz., dace, 1 lb. 3½ oz., perch, 7½ oz.; Mr. Pedley, roach, 8 oz., dace, 1 lb. 3½ oz. Mr. Ghurney, jack, 5 lb. 11½ oz.; Mr. Say, jack, 1½ lb.—T. WORLEDGE, sec.

January 22.

ANCHOR AND HOPE ANGLING SOCIETY.

On Wednesday, the 18th inst., Mr. W. Streeton weighed-in 3 lb. of very nice roach from the Lea, this being quite a change, as we very rarely get any fish weighed-in on a week night. Sunday, the 22nd inst., some of our members were out, and succeeded in filling our trays with some very good fish; Mr. A. Glass taking two very pretty jack, weighing 16 lb. 15½ oz., also a few roach; Mr. R. Smith three jack, weighing 10 lb. 14¾ oz.; Mr. A. Shakle roach, 2 lb. 11 oz., from the Lea.—D. DAVIS, sec.

ANGLERS' PRIDE.

We had a very fair show of fish on Sunday, the following members weighing in—W. Hayes, jack from the Grand Junction; H. Haines, 5½ lb. of roach from Pangbourne; D. Dodson, 2 lb. of roach from ditto (these fish were in splendid condition); T. Fiddes, 2½ lb. of roach from the Stort; T. Wall, 1½ lb. of roach from the Stort; J. Deeley, jun., roach from the Thames.—T. MARSHALL, secretary.

Jan. 24.

CHICHESTER ANGLING SOCIETY.

Although Chichester has long been noted as an angling resort, it was not until September last that a few brothers of the rod succeeded in establishing the above society. So rapid has been its growth, in December close upon one hundred members had been enrolled. His Grace the Duke of Richmond and Gordon, K.G., is patron; W. W. Baker, Esq., president; W. Kerwood, Esq., vice-president; Mr. A. Purchase, treasurer; and Mr. W. Cooke, jun., secretary. Head quarters are at the Globe Hotel. A splendid reach of water is within a few minutes' walk of the station, yielding pike, carp, perch, bream and roach, some excellent takes in past seasons being chronicled. One great feature is the water is seldom out of condition. Within easy distance is the Rother and the Arun, where some excellent fish have been taken by the members, while in the close season smelt and eel fishing prove remunerative. The first annual dinner is arranged to take place on the 21st of March, host Purchase being the caterer. During the past week Ned Weir has, as usual, been busy among the small bream in the canal, but the majority of rodsters selected Selham as the *venue*; Mr. Summers securing a handsome tray of dace, sixteen fish scaling 4 lb. 10 oz,, while Mr. Young landed a roach of 1 lb. 2 oz., some heavy fish breaking away; but, as a rule, fish were not on the feed. Weather dull and cold, wind northerly.

Jan. 26.

CLAPHAM JUNCTION ANGLING SOCIETY.

Since my last report several of our members have been out and met with some good sport. Mr. J. Innes headed the list on Sunday with a handsome take of perch from Shepperton, weighing 16 lb. 10½ oz. The weighing of them was successfully accomplished by Messrs. Hamilton and Wakeford. Mr. W. Maslin, E. Wakeford, E. Wilson, Hutchins, Valentine, Turner and Sutton, roach and perch. Messrs. E. Brewer, Wellman, and T. Wright, jack and perch, weight in all, 27 lb. 8½ oz. Notice to members: The club room being under new decorations at present, there will be no meeting on Thursday next, February 2nd.—E. WILSON.

Jan. 23.

FRIENDLY ANGLERS.

At the weekly meeting of this old society, at the Albion Tavern, Albion Street, Hyde Park, Mr. R. L. Pugh weighed-in, from the Thames, as the result of one day's fishing, 46 lb. of jack. This capture, in addition to the splendid show of perch in the previous week, has made him a successful contributor to his excellent society, the members of which have worthily congratulated him.—B.

GOOD INTENT.

Forty-six of the members of this club fished at Boxmoor, on the 15th inst., a pegged-down match for twelve prizes. All the prizes were taken. No member took more than one fish, and only fourteen took fish. The winners of the chief prizes were—Agambar, Bell, Hall, Baker, Philpott, Christie, &c. On the 22nd inst. Mr. Brookwell brought up a nice lot of perch, Mr. Maybury roach, Mr. Wyland dace, Mr. Philpot roach. Fish were very scarce. No good takes.—R. MURPHY.

GRESHAM ANGLING SOCIETY.

The meeting of this society on Thursday evening was largely attended, Dr. Lloyd in the chair. Reports as to the state of the Thames were read from Mr. King, of Windsor, Mr. Wood, of Walton, and Bartholomew, of Goring. The fish shown during the week include eight pike by Mr. Jardine, weighing 45 lb. 8 oz., and three perch, weighing 2 lb. 11 oz.; Mr. White, one chub, 2 lb. 11 oz.; Mr. King, of the Royal Oak, Windsor, three chub, 7 lb. 10 oz.; Mr. A. Paterson, 7 lb. 7 oz. of good roach from Cookham; and sundry other takes. Mr. A. W. Parker brought forward a motion in favour of the admission of junior members, and on which a lively discussion took place, the leading speakers being Mr. Parker, Mr. Bentley (who seconded), Mr. Clarke, Mr. Jardine, Mr. Miller, Mr. Austin, Captain Alfred, and Mr. Crumplen. In the end the question was adjourned for considerarion at the annual meeting in June next, but in principle the motion was affirmed, the main contention being as to the terms on which a kind of cadet corps should be admitted. It was generally agreed that the idea not having previously been adopted by other societies was no reason why the Gresham should not lead the way; and as the proposition was limited exclusively to sons or brothers of members, not all of whom would have a bent for angling, the suggestion would add an extremely limited number to their ranks. Mr. Jardine spoke rather against, Mr. Crumplen in support, the latter expressing a strong hope that the personal character which had been given to sundry topics in some other societies would never prevail at the Greshnm; but that, having spoken candidly, each and all would be friendly as ever, and still go on as they had done to promote the common interest of all—sentiments which were very heartily applauded. Mr. Parker subsequently introduced Mr. Sowerbutts, with one of his well-known roach rods, the manufacture of which he has given up, being unable at present to procure the Carolina cane. The rod was well handled and appreciated, as indeed is all useful work or any novelty shown to members. The meeting closed with a hearty vote of thanks to Dr. Lloyd, who had very ably presided.

HAMPSTEAD ANGLING SOCIETY.

Mr. C. Messenger brought home 3 lb. of nice perch and roach, and Mr. W. Messenger 5 lb. of very fine perch one weighing over 2 lb. and two others over 1 lb. each.—T. H. Hayward, sec.

Jan. 23.

IZAAK WALTON ANGLING SOCIETY.

Three prizes were fished for on Wednesday, 25th inst. Only one of them was taken, that was by Mr. G. Manning, who had a tray of very nice roach. Mr. A. C. Critchfield had another show of beautiful fish. The following are the particulars:—Three perch, 3 lb. 8½ oz.; the heaviest one weighed 2 lb.; two chub, one 2lb. 7 oz., one 2 lb. 5¼ oz.; three dace, 1 lb. 7½ oz.: one roach, 8¼ oz. Three special prizes will be fished for on Sunday next, 29th inst. The two special prizes not taken on the 25th inst., will be fished for on Wednesday, February 8th, 1882, same conditions.

LARKHALL ANGLING SOCIETY.

The president's prize of two guineas for the heaviest weight of jack taken on the last Wednesday in January, in the Thames, was competed for by about a dozen members, of whom only one was successful in getting jack, viz., Mr. G. Watkins, who weighed-in three fish from Egham; total, 11 lb. 7 oz. Mr. T. H. Deane, a few days ago, fishing at Hampton for roach, with a fine drawn gut line, and one of Gees' drawn hooks, and baiting with a gentle, hooked, and after some good play, successfully landed a jack which weighed 5 lb. 1 oz. The next musical evening is fixed for Wednesday, 15th February.

LITTLE INDEPENDENT ANGLING SOCIETY.

The majority of our members were out on Sunday and weighed-in fish, but our trays looked empty to what they have been for the past few weeks. Mr. Brown, Charlton Street, Euston Road, has given three prizes for the months of December and January. 1st, A suit of clothes not to exceed £3 10s.; 2nd, A pair of watertight boots; and 3rd., a bottle of brandy. This is the cause of our members going out in such strong force. The contest is now exciting, as each has only one more day to go out and there are several members who are only a few ounces of fish behind each other.—H. Moore, sec.

THE ORIGINAL ALEXANDRA ANGLING SOCIETY.

We had a fine show of fish on Sunday last. Mr. C. Hewett had a fine show of roach from the Lea, going 1lb. 5oz.; Mr. E. Brockett, sen., roach; Mr. W. High, roach; Mr. J. Blackledge, roach: Mr. C. Newton, jack. Several other members were out, but failed to score.—E. Dymond, sec.

ORIGINAL CLERKENWELL PISCATORIAL SOCIETY.

Several members were out on Sunday last and met with very good sport, Mr. T. Longman weighing in roach, several of them over 1 lb. each, and Mr. Obbard, perch, both from the Thames. Mr. Neagus had a fair take of roach from the Stort.—T. W. Lucy, sec.

THE PISCATORIAL SOCIETY.

Some signs of the improvement that is taking place in anglers' prospects were shown at this society's rooms on Monday last, when the following fish were weighed in:—Mr. Faulkner, one chub from the Thames, 4 lb. 4½ oz.; Mr. Huggett, seven pike from the Avon, weighing 44 lb. 12 oz., the largest 11 lb. 14 oz.; Mr. Robinson, 41 lb. of pike, largest 17 lb. 4 oz. and one perch (1 lb. 13 oz., from the Avon. On the following Monday there was also a good show of pike and perch.

THE PISCATORIAL SOCIETY.

There was a large attendance of members in the club-rooms at Ashley's Hotel, Covent Garden, on Monday evening last, Mr. J. Ross-Faulkner presiding on the occasion. The Good Intent Angling Society was represented by several of its members as visitors, including Mr. Brookwell, who brought up his splendid case of fine trout, which Mr. John Cooper has so beautifully preserved. They were much admired, and Mr. Brookwell complimented on possessing such good specimens of his own capture. The worthy chairman, Mr. Faulkner, weighed-in a brace of chub from the Thames weighing 5 lb. 7½ oz., the largest fish 4 lb. 4½ oz. Mr. G. Robinson showed six pike weighing 40 lb. 14 oz., the largest 17 lb. 4 oz., and one jack of 1 lb. 13 oz. from the Avon. On the previous Monday, Mr. Robinson weighed-in from the Avon 72 lb. 15 oz. of pike, the five largest scaling 45 lb. 13 oz., making a gross weight in the two nights of 113 lb. 13 oz. of pike. On Monday evening last, Mr. Thos. Huggett weighed in from the Avon seven pike weighing 44 lb. 12 oz., the largest fish being 11 lb. 14 oz. Mr. Huggett hooked and landed, after one hour's good play, a clean-run salmon, in which he displayed the "the science of angling" by landing it without the aid of either net or gaff. It may be fairly designated as "the work of an artist," as the fish led him into a little channel from whence the attendant got him out, and when the salmon was weighed it made 19 lb., and was afterwards carefully returned to the water little the worse for its exertions and visit to terra firma. Mr. Huggett's account of the exploit was listened to with great interest and attention. In consequence of the regretful indisposition of Mr. F. G. Pearce, who had arranged to take the vice-chair at the annual dinner at the Holborn Restaurant on February 15th. Dr. Brunton has kindly consented to occupy that position. The usual votes of thanks to "successful competitors," "the visitors," and "the chairman" having been given, a very pleasant and social evening terminated.

ROYAL PISCATORIALS.

The members of this society have been very successful among the roach this week. On the 18th about 60 lb. was weighed-in by Mr. G. Hockley, and Mr. T. Hughes, and on the 22nd nearly 140 lb. of roach, jack, and other fish, was exhibited by Messrs. Hughes, Hockley, Frith, and others; all the fish were in splendid condition, and the manner in which they were arranged delighted all beholders. Samples of the fish can be seen at Mr. Needham's, he having received orders to preserve several of them.—Pixie.

January 25th.

SECOND SURREY.

The members of this society visited St. Margaret's on the 22nd for a pegged-down competition, but like nearly all pegged-down affairs there was a lot of angling but very little fish, and at the close Mr. Gerald had one perch and Mr. France two roach; as these two gentlemen considered that the amount of fish taken was not sufficient in comparison to the value of the prizes that they were competing for, they decided that all prizes should be competed for on another occasion, at which all members shall have a roving commission. Members are requested to attend next meeting night to hear the result of the meeting at the Central Association.—Pixie.

SOUTH LONDON ANGLING SOCIETY.

Mr. Boorman on Sunday had 3½ lb. roach from the Colne, and Mr. Mitchell, a nice jack, of 4½ lb., from the Mole. To-day (Thursday), Mr. Price, two jack, from Guildford. I went to Cookham, and got 8 lb. roach with Godden.—G. H. Field.

Jan. 26.

STALYBRIDGE ANGLING SOCIETY.

The members of the Q Inn Angling Society met on the 21st January for a friendly contest in the society's reserve, when a very pleasant afternoon was spent. The members then returned to the meeting house, Mr. David Shaw's Q. Inn, back Grosvenor-street. The president, Mr. Henry Abrams, distributed the prizes as follows:—1st, Samuel Greenwood; 2nd, Joseph Warhurst; 3rd, Jas. B. Udale and John Tasker divide. The following also weighed-in:—David Shaw, Henry Abrams, J. T. Abrams, William Abrams, William Wardle, William Jackson.—J. B. Udale.

STANLEY ANGLERS' SOCIETY.

Several of our members have been out this week, and some nice fish shown at the club room. Our secretary had eleven roach weighing 5 lb. 1 oz. Mr. U. Pistrucci, amongst other fish, a fine conditioned perch of 1 lb., other members also weighing in fish on the 22nd inst. Mr. C. P. Wheatstone captured a few jack of 7 lb. on Monday last, at Rickmansworth. The same gentleman has presented the society with a very handsome chairman's hammer, consisting of the head of a 4 lb. perch, mounted with rosewood and solid silver fittings.

STOKE NEWINGTON ANGLING SOCIETY.

The above club has removed to the Middleton Arms, Mansfield Street, Kingland Road. The proprietor, Mr. E. Tomkins, is an angler, and will doubtless endeavour to promote the interests of the society. The meeting nights will be the first and third Wednesday in the month. Members are requested to attend next meeting night to decide time and place of competition for three prizes, given by Messrs. Harris, Brooks, and Webb.—Thos. Gretton, sec.

January 24.

WALTHAMSTOW ANGLING SOCIETY.

On Sunday last Mr. Latham had a very good show of jack from the Ouse, weighing 32 lb. 9 oz. Heaviest fish, scaling 10 lb., in first rate condition; no one out roach-fishing.—H. Howse, hon. sec.

WALTONIANS.

On the 22nd full trays were the order of the day. Mr. Malcolm, roach, 13 lb. 11 oz., a very handsome show. Mr. Phillips, roach, 6 lb. 15 oz.; chub, one fish, 2 lb. 2¼ oz. Mr. Roland, roach, 3 lb. 5¼ oz. Mr. Brady, dace, 2 lb. 5½ oz. Messrs. Togwell, Good, jun., Starr, and Packman also weighed in, and I weighed 3lb. of roach from Moulsford.—A. J. Marriott.

Jan. 24.

WALWORTH WALTONIANS.

On the 15th, Mr. Fox had a nice lot of roach and Dace from Teddington. On the 19th at the weekly meeting, Mr. Bayley, presided. The circular issued by the Thames Right Preservation Society was read. Mr. Weatherhead in a few remarks on the subject, said:—"We cannot expect to maintain these rights, against riparian owners, unless we employ gentlemen who will devote their interest and time to the cause, and in order to do that we must place in the hands of those gentlemen sufficient funds to enable them to examine into the rights of those riparian owners who would deny to us the right of fishing in the river. In order to raise that fund, let each angler forward the amount that it would cost him for one day's fishing, be it blank or red-letter day, whichever might suit him, to the society once a year it would soon form a sufficient fund to test a public right to the river." Several other members having spoken, it was decided that a box be had in the society, for the purpose of collecting funds to support the afore-mentioned society. On the 20th, Mr. Boalch and Mr. Russell were out with C. Brown, they managed to get about 14 lb. of roach and dace, Mr. Boalch winning thereby Mr. Bayley's guinea hat, and Mr. Russell won Mr. Beckett's half ton of coals; the other prizes were not taken.—Pixie.

WEST CENTRAL ASSOCIATION OF LONDON AND PROVINCIAL ANGLING CLUBS.

A long report of the meeting on the 20th reaches us just as we are going to press, so that we regret to have to hold it over for next week.

Capture of a Large Pike.—Mr. F. Johnson, of Wicken, when fishing last Monday in the lake at Chippenham Park, the seat of W. M. Tharp, Esq., caught a large pike (male), the length being 42 inches and girth 24 inches. It was not in first rate condition; had it been so it would have weighed considerably more than 30 lb. It has been preserved by Mr. W. Howlett, the eminent naturalist, Newmarket, in his best style. About five years ago a fine pike (female) weighing 23 lb. was taken from the same water by the Rev. Carwarden, of Cavenham, and was preserved by Mr. Howlett, and now forms a very interesting addition to the collection at Chippenham Hall.

A very fine pike, in splendid condition, was caught on Saturday in a pool in the neighbourhood of Birmingham. It turned the scale at twenty-five pounds.

NOTICE.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., must be addressed to the Editor of The Fishing Gazette, *No.* 12, *Fetter Lane, London, E.C* and should reach the office not later than Tuesday morning.

Contributions are solicited, but the Editor will not undertake to return rejected MSS., unless accompanied with a stamped addressed envelope.

Correspondents are requested to write on one side of the paper only and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith Unless this rule be adhered to no notice will be taken of such communications.

The Fishing Gazette is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls, and of the following, amongst other Fishing Tackle Dealers in London and the Provinces :—

Messrs. Alfred and Son, Moorgate-street.
Messrs. Price and Co., 8, Seymour-street, Euston-square, N.W
Messrs. Williams and Co., Great Queen-street.
Messrs. Gee and Co., St. Andrew's-street, St. Martin's-lane.
Messrs. Gee and Co., Gray's Inn-lane (near Holborn end).
Messrs. Little and Co., Fetter-lane, E.C.
Messrs. C. Kewell and Sons, 197, St. John-street-road, E.C.
Messrs. Kewell and Co., 1A, Conduit-street, Regent-street, W.
Mr. J. Richards, 97, Church-street, Paddington.
Mr. W. Leader, 30, Upper Marylebone-street, Portland-place, W
Mr. — Clark, 35, Wells-street, Camberwell.
Mr. Geo. Read, 91, Goldsmith's-row, Hackney-road, E.
Mr. A. Bulmer, 62, Wandsworth-road.
Mr. F. Oliver, 183, Great College-street, Camden Town.
Mr. J. E. Gold, 284, Waterloo-road.
Mr. D. W. Willoughby, 21, Lombard-market, Battersea, S.W.
Mrs. F. Y. Brocas, 4, Mill-street, Conduit-street, Hanover-square, W
Messrs. Gillett and Co., 40, Fetter-lane, London.
Mr. Alfred Young, "The Golden Perch," 174B, Oxford-street, W.
Mr. T. Barnett, 26, Church Street, Lisson Grove, N.W.
Mr. J. Smith, 7, Tottenham Court Road, London.
Mr. Edwin Stevens, Newsagent, 220, Kentish Town Road.

or

Mr. B. R. Bainbridge, 74 and 75, High Street, Eton, Bucks.
Mr. Cowan, 33, South Frederick-street, Edinburgh.
Mr. H. Whitty, 15, Basnett-steet, Liverpool.
Mr. C. J. Greene, 54, London-street, Norwich.
Mr. R. Ramsbottom, 81, Market-street, Manchester.
Mr. James Gregory, Vyse-street, Birmingham.
Mr. Wm. Bailey, Jun., 1, Sabina-street, Nottingham.
Messrs. Nutting and Co., 70, Edgbaston-street, Birmingham.
Messrs. W. C. and J. Penny, Booksellers, Froome.

Mr. John Cocks, Baker Street, Weybridge, Surrey.
Mr. Wm. Reid, Northgate, Darlington.
Mr. R. Pearsall, 11, Great Western Arcade, Birmingham.
Mr. G. T. Gibbons, 10, Bridge Street, Salisbury.
Mr. Thos. Heppleston, Manchester.
Mr. J. Perry, Minster Parade, Reading.
Mr. S. Dale, 7, St. John Street, Nottingham.
Mr. H. Booth, 88, Prospect Street, Hull.
A. W. Warner, 121, Broad Street, Birmingham.

Newsvendors can obtain the journal through their London Agents.

*** The "Fishing Gazette" Spinner (Registered) is sold by all the above firms.

ANNUAL SUBSCRIPTION.

The Annual Subscription, payable in advance, for the United Kingdom is 8s. ; or post free, 10s. 6d.

To any part of Europe, the United States, and Canada, the Annual Subscription, including postage, is twelve shillings and sixpence.

ADVERTISEMENTS.

All communications respecting advertisements must be addressed to the Manager of The Fishing Gazette, *No.* 12, *Fetter Lane, London, E.C.*

N.B.—All Remittances must be sent, and all Cheques and Money Orders must be made payable to Messrs. Sampson Low, Marston and Co., the Proprietors.

The Fishing Gazette.

SATURDAY, FEBRUARY 4, 1882.

ONE DAY IN MY LIFE.

"I SEE you'm thinner than you used to be, Mr. John." It is Susan, my uncle's old housekeeper, who is speaking, as she stands at the side of the breakfast table, and every now and then edges some dish towards me, as a gentle suggestion that its contents are worthy of my consideration.

At half-past four yesterday afternoon I had cast off, for one whole delicious month, all the bother and routine of Lincoln's Inn, jumped into a cab, caught the 5 p.m. train from Paddington, and here I am now at my uncle's house at Torborough sitting down to an early breakfast by myself—too early for my good uncle—for I have before me a glorious day's fishing in the dear old river, every post, every stickle of which I know so well, and have so often thought of during the past eleven months of toil in busy London.

William, the driver of the fly that brought me from the station last night, in reply to my eager enquiries as to the state of the river, had told me: "There was a lot of water come down day before yesterday, sure enough," and then his story of the capture of a mighty salmon by "Passon Greenheart" in the higher waters, and the doughty doings of a "gentleman from Lunnon, staying into the George," had set me all of a glow.

Is it to be wondered at, then, that I had been up betimes, and had hastened out to the end of the lawn, from whence I can see down at the bottom of the valley the dear old river.

But alas! the early autumn morning haze was rising thick, no vestige of a river could be seen; but I found myself standing on an island, with all around and below me a cold mysterious sea of heavy mist, whilst the little village on the crest of the hill on the other side of the valley, shining in rays of the morning sun, rose like a sweet islet from out of this deep mysterious sea.

No chance of a view of the river; so I leave this cold scene, hurry indoors, put on my waders and brogues, bustle the servants up to get breakfast ready, with the result that here I am just finishing that very necessary meal in a hurried manner that seems to irritate the worthy Susan, "who never could abide fishing"—but whose acquaintance with the sport, I fear, has been confined to drying wet clothes, turning waders inside out, and other such like interesting details; so that she has not seen much of the "sport," and is consequently not a very good judge of its merits.

Breakfast over, I throw over my shoulder my Freke fishing bag, from the strap of which hangs my trusty gaff, pick up my three-joint "greenheart;" and with a "Well, Susan, I'm off now; shall be back soon after six," I cross the hall, and, opening the door, turn and find Susan regarding me with a smile, in which affection amusement, and a spice of contempt are well mingled, but which gives way to a hearty laugh, as she hurries away, when she finds that she is observed; so, joining in the good old soul's merriment, I make my exit, and find myself—started.

Oh! what a delicious smell of mignonette and roses greets me as I get out into the open air, and I instantly reflect how different is the sensation which I experience as I daily sally forth from my house in Kensington, to catch the 9.20 train. But as I light my pipe I resolve to abolish all thoughts of business and smoky, dusty London; and so away to the garden wall to see the river.

Ah! it is plain enough now. There is the old rock showing his nose above the water, and the little green island too quite exposed! Ancient landmarks, or rather watermarks, these, which tell me that the river is fishable. And what a splendid colour that dark, slatey look, which our Devonshire rivers assume as they fine down after the flood! Hurrah! and in the buoyancy of my spirits I shout, Hurrah! in a way too that startles an old pensioner who is calmly smoking his pipe beneath the garden wall. So I step back, ashamed of my boyish glee, and, after waiting a moment or two, look out again, and find my old friend quietly smoking away again, so I gaze once more at the dear old scene spread out before me. Far away to the left stands out, blue and indistinct, old Cawsand Beacon, that brave Dartmoor Tor. What a wilderness of hill and valley lies between us, amid which I think I can even here and there follow the course of the old river. Now I have hit it, without a doubt, as it enters between the dark, wooded heights of Woodleigh. It is lost again now in those sombre woods, but then it glides out bright and sparkling again, as if glad to be in the sunshine once more. I can follow it clearly now, as it sweeps by the old town mill, under Woodleigh bridge; and then, as if to bid me welcome, comes towards me with a bold curve, right under the hill on which I stand, then winding away through the town meadows, under the old bridge of the lower town, dancing and sparkling over the shingle, where, in the summer draughts, they dig for sand and gravel, until at last, with one more graceful bend, it enters the gloomy woods of Copsewell, and is lost.

On the opposite side of the valley, beyond the meadows, rises Littleham Hill, crowned with its little village and quaint old church, and I watch for a moment a farmer collecting his sheep on the meadows, far down below me, and the barking of his restless sheep dog sounds mellow and sweet as it is borne upwards to me on the morning breeze.

Have I been dreaming? I think I must have been. Fishing is the order of the day, and I must not loiter. So, hurrying down the steps and out at the garden door, I find myself on the open hill, and really started now. All loitering is past now. Rapidly running down the zig-zag path that leads to the river, now cutting a corner acoss the steep turf, now jumping a furze bush that lies in my way, I am soon half way down the hill. "Hullo! what's that?" 'Tis a needless question. There is no mistaking what I see. 'Tis a salmon rod, swaying gently backwards and forwards, catching every now and then the glint of the sun, as its bearer hurries along on the lower path, and going in the same direction as myself. My feelings are not charitable toward the bearer of that rod at the moment. However, I determine to know the worst at once. It is not likely that he is going to fish above the mill, where I propose to begin. At any rate, I will make certain. So, increasing my pace, in a moment or two I am in full view of my enemy, who turns out to be no enemy at all, but old Jim Burrowes, a well known fisherman of the town. Jim has seen better days, but too great a love of the rod has rendered him almost a beggar, But Jim, in spite of his troubles, is a merry fellow, with an original mind. A most companionable man.

"Hulloh Jim, 'ow be ye then?" I shout. I wonder what it is that prompts me to speak in the very broadest Devonshire dialect for the first few days of my visits to the West? The temptation is irresistible, and I invariably yield to it. Jim turns round with a bewildered air, evidently not recognising me, as I rapidly scramble down the path to where he stands. Ah! he has recognised me now, and turns back to meet me with a pleased smile, for past experience has told him I will never spoil his sport. Poor fellow! well do I know that a good dish of fish is almost a necessity to him.

We shake hands, and then walk on together. Jim is going to begin at the mill and fish down, so our plans do not clash.

Then he tells me how last evening the water had fined down a bit, so he had ventured out, and at the tail of the pool by which we are now walking, he had twice raised a good salmon, and meant to have another shy at him to-day. "And where might you be going, sir?"

"Well I thought of trying up through Woodleigh to the head weir."

"I wouldn't sir. Tain't bad water, but the fish ain't there, they're gone up. I was up to the head weir when the flood came down, and saw a sight of fish go up sure enough. They're up under Monkworthy Chase; that's where I should go, if I had the liberty."

I know Jim's advice is good, but we are at the mill now, and it seems hard to give up all my plans at the last moment, particularly as Monkworthy Chase means a walk of three miles or more.

A moment of indecision, and the Monkworthy water is abandoned until to-morrow. I wish Jim good sport as he scrambles down to the water edge, and I hurry on through the miller's yard, where the person of each duck and hen seem familiar to me; and, as I cross the little bridge over the mill-tail, and look down for a moment into the cold churning water, it seems to me that I have gone back a year in my life; for did I not do the very same thing did I not have the same thoughts as I passed this way one whole year ago, on slaughter bent?

A quarter of a mile and I shall be at the first pool on my beat. I walk that last quarter of a mile in splendid style, and I am not ashamed to confess that during the last fifty yards or so I break into a run.

At last! I never had much faith in this pool, but yet how nice and tempting it looks. It is not a deep pool, but a good-looking one.

A broad pool with a rapid "run in," the course of which I can detect right away to the thin water at the tail, when it breaks away into a rapid shallow stickle.

In a moment or two my cast is taken off my float, and lies soaking in the shallow water. Eagerly and nervously my rod is put together, the cast tied on, the "butcher" smoothed out and admired, and I am wading knee-deep into the slack water by the side of the "run."

I must confess that I am decidedly excited as I make my first few casts. How carefully I fish how ridiculously long I stay at that first pool, throwing again and again over there in the slack water on the other side of the run, under the steep bank, where I felt sure there must be a peal! But no; I have at last fished it right down to the thin water at the tail of the pit, and the conviction is forced upon me that I have drawn a blank in pool No. 1.

However, "Excelsior" is my motto to-day, so, leaving the ungrateful pool on which I have lavished my youngest and best feelings and attentions, I wind up and get on to pool No. 2. How ovely is this Woodleigh covert! I can't help admiring it as I wend my way up to pool No. 2. And yet I anathematise it pretty freely, as I have to dodge my way under a big oak tree, or find my line caught in a confounded briar. On my side of the river the ground is level, and through the wood, close to the water's edge, there is an open glade, across and along which many a startled rabbit scuttles, and then, as if ashamed of its weakness, suddenly sits up on its haunches to reconnoitre me, until I approach too close, and then off again.

How gloriously rich the Osmunda fern looks as it hangs over the rapid river, which here is rushing over and between the huge boulders of rock, making music far sweeter than any I have ever heard in smokey London. On the other side, the trees grow close down to the water's edge, clothing the whole of the steep hillside, which here is so steep as almost to shut out from where I walk the blue sky, over which the white fleecy clouds are rapidly chasing one another. A wood pigeon, startled by my approach, scrambles out of the old oak tree just above me, with noise enough for an albatross, and making for the dark wood opposite, brings me back to piscatorial themes, and I find myself at pool No. 2.

But pool No. 2 requires some consideration. Though one of the safest "finds" on the river, for both salmon and peal, it is one of the most difficult places to fish that I know. The river which, both above and below, has been rushing and boiling over boulders of rock, here finds a large deep basin for a momentary rest, and its very depth is its chief difficulty—for, thickly wooded as it is on both sides, it must be waded; but I have fished this pool for trout in the dry summer weather, and well I know that about three yards out from my side there runs a considerable way down the pool a narrow ledge of rock, and, if I can only hit on this, the water will not probably be over my waders. The difficulty is that I must hit off the root of the ridge in the very heart of the "run," where the water is decidedly lively; and now, unfortunately, the flood has not run out enough to make the water clear enough to see distinctly. But it is a glorious hover for fish, On the other side, just at the head of the pool, there runs out towards me a sharp ridge of rock, throwing the brunt of the current on my side; but behind that ledge of rock the water is, I know, very deep, and it looks deeper than it is, being in the shadow of a vast overhanging ash. Ah! many a time in my boyish days have I almost shed tears of vexation as I have seen a great salmon come lumbering up over there, whilst I have been powerless to reach him, try as frantically as I might, with my small trout rod. A few moments of indecision, and I have resolved not to be beaten. So giving a precautionary haul-up to my waders, gingerly and carefully I wade out into the torrent. For the first few moments it is ticklish work, and I get almost giddy with the rapid rush of water by me. But I have hit the ridge now, and it is easier work; for, walking a few feet down the ridge, I am out of the worst of the current, and, if you please, ready for business.

It is difficult work thinning a fly here with, so much wood behind me, but at last I manage to deposit the "butcher" within a foot or so of the still water over on the other side. Very carefully I work my fly round into my own quarters, and, just as I am about to prepare for another cast, my fly being close in to the bank on my own side of the river, I see something silvery turn over in the water, an electric thrill runs down the rod, and the next moment a peal of about three pounds springs clear out of the water. I am immensely relieved when I find that I still hold him in spite of his leap. But I am in bad quarters for fighting; the stream is heavy here, and if I am to get him at all I must bring him up against it, for move down I cannot. The result is that my friend begins that manœuvre which of all others worries me most, I mean the splashing head-and-tail business on the top of the water. I ease the strain on him, and, thank goodness, this splashing performance soon stops. Now the fish is bearing down deep, sailing down the pool, and aided by the current, there is no stopping him yet, but I have to give him line. Down he goes, the line still running out, and he feels quite heavy. I begin to think I ought to have held him in a bit, for he is still taking line, and I feel the movement of the current on the line much more than the movement of the fish, so I put on the brake a little; when, "Hulloh! another fish!" I exclaim, as a fish, very like mine, springs out of water just opposite me in the middle of the pool; and yet I could have sworn that I saw a gut-cast hanging from him. There he goes again, and a little higher up. I am reeling up fast now in spite of the strain on the line; for in a moment it becomes clear to me that this is my fish, that masterfish has doubled, and is making up stream, whilst I have weakly allowed myself to undergo the process known to fishermen as "drowning." Again he is out of water and still higher up, but I am beginning to have him a little better in hand, for I am fast recovering my sunken line. I am getting on better terms with the fish now, and the strain is almost nil, for he is above me. Suddenly I almost lose my equilibrium as the fish skies diagonally along the surface of the water coursing above me, close in under the bank—the movement being like nothing so much as the children's "duck and drake" performance with a stone. I have him up short now, and begin to think of bagging him. Master peal is docile enough at last, I can keep his head above water and in this the elasticity of my "greenheart," elps me much. Gently floating him down to where I stand, olding my rod high with my right hand, and still keeping his ead and shoulders well up, as he slowly sails by me down the urrent, I grab him hard round the shoulders with my left hand. y grasp seems to give him new energy—what a splashing there is; ut I have a good hold of him, and nip on like grim death. A rap n the head with the handle of my pocket-knife, and my fish is cure.

I can examine him now. He must be close upon 4 lb.—a enuine peal—bright as a bar of silver, with that delicate blue nge over him, when looked at sideways, that tells he is fresh om the sea; evidently an arrival by the last flood.

Well, I have scored something, at any rate, and am more reckss now, and determined to reach across into that still water on e other side, so "hang the trees!"

I have done it now, and the butcher has called for orders at st, over there in the still water. "Nothing to-day, thank you!" ut the butcher is importunate, and calls again. Just as my fly is eing drawn off by the stream into the rapid water, my line raightens for a moment, there is the least perceptible pull, and e head and shoulders of a salmon show up. "Missed it, by ove!" My fly sails on for a yard or two, then I pull up and wait. fter a decent interval, I try again. I change my fly; in fact, I ake myself a perfect slave to that fish, but he won't stir a fin. have not half fished the pool. As I am at the end of my ridge I annot move down; so I pay out line, working my fly considerably keep it up.

I have not more than thirty yards of line when down goes the oint of my rod, and I feel that I have struck oil. Steadily and lowly the fish, whatever it is, bears right across the stream, the ne ploughing the water up, for the fish is working deep. Now e has turned, and is running down stream, not rapidly, but derminedly, and still keeping down, confound him! Ah! he has topped now, There is a continued jagging movement going on, s the fish, near the bottom, works his head from side to side. I islike this almost as much as the head-and-tail business, It ust be a salmon, I feel sure, and I have no chance of killing im here, against this stream. Rapidly my mind is made up, Vorking my way backwards up the ridge against the stream, I ake a dash for the bank, ship some water; but what matters that? or I still hold my fish. I feel that I have a better chance now spite of the bushes, and as the fish is lying well out in the iddle of the stream, sulking, I can, with my long rod, keep the ne clear of the bushes. Reeling up as hard as I can, lifting my od, and occasionally dodging under some overhanging boughs, rapidly work down below the fish, and begin to take the game to my own hands. I have stirred my friend up now, and he is orking up stream, and I am doing my best to keep up with him. t is queer work. Frequently, owing to the thick growth of the ushes, I cannot see where the fish is, still deep down. For a oment or two my heart sinks, for the fish has come in close under he bank, hidden out of sight by a large alder bush, and—oh, isery! the top of my rod is entangled in some of the twigs f that bush! But I am soon free again, and able to el my fish once more. So I take him down stream, nd coming upon a gap between two bushes, where the water oes not look deep, I drop in, and fortunately find that it is not bove my waders, I have a freer field now to fight in, and feeling hat I have been humbugged by this fish, I determine to see him. try and raise him; but no! I am too nervous yet to press him nduly, but still, the pressure I have put upon him turns him, and e comes in slowly, and now that the ball is once set rolling in ny direction, I mean to try and keep it in that course. So windng up rapidly, and finding that the fish is still coming towards e, I whip out my gaff, for I may get a chance of using it resently. Eagerly peering into the water just beyond where my ine enters it, I presently catch sight of a dull silvery side—and ot so big as I thought. This makes me more than ever deternined to make short work of it. I have the fish up short now, ny gaff is quietly dipped into the water, and I am ready; so raisng my rod high in my left hand, I bring the fish close up, and, s he turns, I lean forward, get the gaff well out beyond him and trike. There is a tremendous splashing, which I add to, for I lip and take in some more water, but I feel I am well pleased; o dragging my victim ashore, I scramble up to the bank, and hrow down on the bracken a fine pug-peal, or sea-trout, of from to 6 pounds. I despatch him quickly, throw the peal down by is side—for I like to admire my fish—look at my watch and find t half-past twelve, and then feel that the time has come when I ay fairly indulge myself in a pipe.

"I wonder how Burrowes is getting on, he was rather out of it s to the fish not being here." Time flies, so I pick up the fish, or I have a good half-a-mile to go through the wood before I lear water again

I have not proceeded far when I run across the miller, who, with an old sheep-dog at his heels, has been up superintending the harvesting in the fields above the woods. A cheery "How d'ye do, sir; what manner of sport?" and we are chatting away merrily in a moment. I make the old man's eyes sparkle as I ask after Juno, a famous old setter which he lent me for last season, and he goes away "chortling" over the peal, which he has, after many objections, accepted "for the missus."

I am quite glad when I emerge at last from the wood, and find myself in a large field, where the harvesters are busy, for my piscatorial blood is roused, and I am anxious to be at it again. It is a very large field, and I walk half way up it so as to get off the top of a long deep run, and so fish it down. I am very much attached to this run, with its deep and steady flow, studded with sunken rocks, over which the water swirls and boils, and behind which many a fine trout has his feeding grounds—trout which I hope are now displaced by peal, though I hardly expect to find a salmon here. It is too deep to wade, but with my powerful rod I can just command the water, and if there is a taking fish, well—I stand a fair chance of him. After fishing down about 50 yards, I come to a place where the stream narrows-in considerably, owing to a huge ridge of rock which runs out high and dry from my side of the river. The water is lively here, and if there is a fish anywhere it is here, I feel sure. "There he is, then," and the next moment I am into a lively peal, who at once bolts down stream. I am a little careless with him, and before I quite realise my danger, he has shot out round a deep sunken rock and I am in a fix.

But my suspense is not of long duration. Master peal's mouth is tender, something gives way, I fancy I am clear, when, the next moment, I feel myself hard and fast into some very dead subject indeed. 'Tis the sunken rock itself. Try as I may, I cannot free myself, upstream and downstream I go, and at last, in desperation, I break, and lost my faithful "butcher," and about a yard of my cast. The damage is soon repaired. A little lower down I raise and miss another peal, and when I have fished to the end, I find I have added to my score a brown trout of close upon a pound and a half.

How strange it is that, in the ordinary trout season, such a trout would refuse all my legitimate trout blandishments, but now yields himself a victim to a salmon-fly that must be to him a veritable montrosity. But trout are curious creatures, and this little weakness is, I have noticed, peculiar to them.

(*To be continued.*)

SILKWORM GUT.

IT is said that when Crochford, the ex-fishmonger, who stood high as a cook, heard that Ude had imparted the secret of an especial *rechérche* dish to Francatelli, he asked Ude whether such were true: "Yes," replied Ude, "I told him all but de eggs."

In a similar way, Mr. Allcock appears to have enlightened our American cousins respecting the manufacture of silkworm gut, through the pages of the *Forest and Stream*; as he frankly tells us, "it is not wise for a manufacturer to say too much in these days of keen competition." It may be doubtful, with some, whether it is "wise," but is it quite *English* to send out an incomplete receipt across the Atlantic endorsed with the authority of so well-known a British firm as Allcock and Co., of Redditch?

When the zealous angler gives the particulars of a preparation to poachers, stating that it will render their nets impervious to rot, and those diabolical (if illegally used) engines fall to pieces after a few contacts with the waters, he does so under the conviction that he is helping the cause of legitimate sport; but were he to recommend the same mixture to the net-maker, he would, we must allow, commit an unjustifiable act. It appears that the formula, given with such apparent fairness of detail to the readers of the *Forest and Stream*, was in answer to a correspondent, and gratuitous, but it does not seem that it was intended for English readers: the latter revelation being due to one of those retributive accidents which will occur in an universal newspaper age. However, as the FISHING GAZETTE, is now widely read in the States, the antidote may yet go out in time to check the too weening confidence in the British nostrum. Will Mr. Allcock, for the sake of science and the credit of mercantile morality, tell the world, what, in his "wisdom," he has suppressed? If he has omitted the eggs, *à la* Ude, let us have all the ingredients of how to cook the gut, if such be necessary, otherwise the rest of his suggestions are simply worthless.

At the first blush, Mr. Allcock's reply seems a marvel of candour. He "confesses," "admits," and "agrees" almost throughout; but if read by the light of the transatlantic paragraph, I must confess there is the same flavour of ambiguity which characterised that *canurd*. What can be made of the following complicated entanglement of words in your last issue ? —

" As to regulating the heat of the bleaching oven, as I am a countryman, and, as the Americans say, a greenhorn, it is not likely I should know the use of a thermometer."

I have nowhere said that Mr. Allcock did not know the use of a thermometer. That gentleman spoke of overheated ovens, and I merely suggested that overheating ought not to occur while a thermometer was within reach. But the following sentence is still more involved : " At our works we have to study the question of heat very much, and, having used them for years," [the bleaching ovens or the thermometers ?] "it was a wonder it did not strike me that I had never seen a bleaching oven before." " I contend," Mr. Allcock adds, " it injures gut to expose it to the glaring heat of the sun. In Spain, at the gut season, the heat is intense."

And I still contend, that as the sun in years past contributed to produce good gut, it can do so now. As for "the intense heat of the sun drying up anything exposed to it," surely are we so backward in this age of invention and discovery, as not to be able to provide against an admitted evil, the character of which is known ? Would not sheets of tissue paper, or certain coloured glass, placed between the ardent rays of the sun and the gut, remedy this objection ? May we presume that the process Mr. Allcock speaks of, in which he has thought fit to instruct his Spanish consignees, is that of the manager he has recently engaged, and (from whom he has bought gut of his own manufacture for several years, and which was certainly the best he purchased from any house), is the peculiar process of that individual, and not the result of Mr. Allcock's experience gained by his visit to Spain ? If so, anglers will assuredly have the more confidence in the future, which would scarcely have been the case had it been only the theoretical inspiration of recent days, untried by time, and therefore not entitled to that unchallenged reception which long usage alone can justify. I have to thank Mr. Allcock for his kindness in sending me the samples of raw—that is unboiled, unbleached, unbaked, but not unbarked—gut, and clear, transparent prepared gut.

Here is the result of my tests for strength of six strands of each, taken at random after two hours' soaking in filtered cold rainwater. The gut was looped to hank of cord, and in no case did the gut break at these junctions but fairly some distance from them.

	Yellow.		White.	
1	at 4¼ lb.	deadweight.	3¾ lb.	deadweight.
2	,, 6½ ,,	,,	4½ ,,	,,
3	,, 5½ ,,	,,	5 ,,	,,
4	,, 4 ,,	,,	5¾ ,,	,,
5	,, 5¼ ,,	,,	3½ ,,	,,
6	,, 4¾ ,,	,,	4¾ ,,	,,
	30¼ lb.		27¼ lb.	

Thus, so far, the yellow unprepared gut is stronger than the white, and both were very satisfactory as compared with gut I had procured from several quarters. I likewise tested a gut roach line, as fine at the shot end as hair, which lifted 4lb. before it parted. This was purchased more than thirty years ago at a shop now occupied, if not then, by Messrs. Little, at 14, Fetter Lane ; and, if I recollect right, a Mr. Reynolds was at that time the manager. The preservation of this line is extraordinary.

Creel, and " Amateur Gut Manufacturer."

P.S.—I send some of the cords to show how the strands were looped at both ends.

[We have elsewhere referred to these strands of gut.—Ed.]

THE COCKSPUR WORM.

A CORRESPONDENT asks for some particulars respecting this worm. Here is what Mr. Bailey says about it in that capital book of his, "The Angler's Instructor" (new edition). "The 'cockspur worm' is found in old rotten manure, or in decayed vegetable matter, such as the warm stuff at the bottom of cucumber frames, which, by the bye, is a capital place for keeping them during the cold winter months, as exposure to frost kills them at once. Even when gathered and kept for use they must be kept in a moderate temperature. This worm, when well scoured, is of a bright pink colour, with a small knot half an inch from the head, and a gilt tail. They are sometimes confounded with the brandling and other red worms, but the brandling is striped, and, when pierced by the hook, emits a very strong smell, which the cockspur is quite free from. In most fishing towns they are called 'red worms.' A No. 8 or 9 is the proper size hook for the cockspur worm." This worm is called the blood worm in Cheetham's "Angler's Vade-Mecum." He says : " We must not deceive ourselves into the opinion that the worm is so designated on account of any quality or abundance of blood, but merely from its flesh being thus richly coloured ; the blood of all worms is white." By " white " is meant water-colour. R. Brookes, in his "Art of Angling" (1740), says the best brandlings, gilt-tails, and red worms are found "in tanners' yards, under the heaps of bark which they throw out after they have done with it."

Mr. Greville Fennell, in his admirable little "Book of the Roach," says : "Roach will frequently take red worms, the tail more particularly, when they will not touch paste or gentles. A most successful roach-fisher of our acquaintance, Mr. Johnson, Egham, never fished for roach with any other bait."

Mr. Francis Francis, in his " Book of Angling," has the following note on the "cockspur." The " Red Worm : This is a very general favourite with fishermen. In the Nottingham district it it is called the cockspur. It will kill almost any freshwater fish, but is used chiefly for roach, gudgeon, dace, tench, and carp. It is found in heaps of dead or decaying leaves, or vegetable matter, in rotten dung or dead wood. The best way to procure and keep a stock of them is to put a little manure, some leaf-mould, a few cabbage stumps, or mowed grass, with a bit of rotten matting or old carpet over, and water it well now and then. This will breed and keep them. To scour them, put them in a pan with a bit of refuse, damp netting, or old cheese-cloth."

In "The Practical Fisherman," Mr. J. H. Keene says : " The red-worm, or cockspur, is a delightful little fellow, and is found in rotten manure heaps."

THE EEL-SETS ON THE NORFOLK RIVERS.

AT a meeting of the sub-committee appointed by the Joint Committee of the Yare, Bure, Waveney, and Ant Preservation Societies to enquire into the question of Eel-sets, held at the Bell Hotel, Norwich, on Tuesday, December 6th, 1881, R. E. Burroughes, Esq., in the chair, the report by Messrs. Chamberlain, Davies, and Greene was read :—

We have not space for the full report, but the following extracts embody the results of the investigation, and need no comment of ours :—

(*b.*) An eel net is constructed and set as follows :—A wall of close meshed and stout network is stretched across the river, the lower side weighted and resting on the bottom and the upper side floated by means of pieces of wood. In the bed of the river are three stakes, one in the middle, and one near each bank—to each of these stakes blocks are attached, through these blocks pass separate ropes, one end of each rope being attached to the top of the net above each stake, the other ends of the rope leading to the eel-boat moored by the bank. By hauling on these ropes the net can be pulled to the bottom of the river. In the wall of netting there are (say) four apertures at equal distance apart ; to each aperture a narrow network pipe or tube, about six yards long, and kept distended by wooden hoops, is attached. At equal distances in the interior of each tube, funnel-shaped circles of net are fastened (the shape of these can be undersood by reference to the bownet or to one of those ink bottles out of which the ink cannot flow when turned upside down). These "pokes" are stretched down the river and attached to stakes fixed in the bed of the river by ropes which lead from buoys on the surface of the water, through blocks on the stakes, and fastened on shore, two on either side. The eels passing down the river make their way into the long "pokes" through the narrow necks or apertures of the stops, and cannot find their way back again.

The nets are only set during ebb tide and at night. While they are set the men must be constantly on the watch. On the approach of a wherry one or two of the three ropes is hauled upon, so that the net is pulled down to admit of the wherry passing over. When the tide flows it is useless to keep the net set, as the eels do not run. It is, therefore, pulled down, and the men go to sleep. In the morning the three ropes are slackened, and the floats of the nets bring it to the top. The floats are then taken off the warp of the net in order that the latter may not be injured by a passing wherry whilst the men are attending to the "pokes." The guy ropes attached to the " pokes " are next cast off, when the buoys can be hauled in. The pokes are hauled into the boat and detached from the main net, and their contents emptied into a tub.

(*c*) The eels chiefly taken in these nets are the sharp-nosed or silver-bellied eels, which migrate to the sea in large numbers from July to November. These eels will not take a bait, and are rarely caught by babbing or picking. A good catch would be from twenty to thirty stone-weight. In the spring the grigs, another species of eel, move about and the sets are sometimes set for the purpose of catching them.

(*d*) We have obtained a great mass of interesting information respecting eels and eel-sets, but for present purposes it is sufficient for us to say that we are convinced that the eel-sets very rarely entangle other fish than eels, and then only in trifling numbers. And that the eel-sets are not in any way detrimental to the interests of the angler.

(*e*) We also find that on the occasion of the late October gale and the subsequent incursion of the salts, the ebb tide on the Friday night was so swift and strong and carried such masses of weeds and rubbish with it that all the eel-nets that were set were carried away even as far up as Hickling, and the promise of a rich haul of eels was destroyed. Only two of these nets were replaced when the salt tide came up, and these two were not "swum" or set during the flow of the tide. We therefore find that the destruction of fish on this occasion was not heightened by the nets, and that the passage of the fish up stream was not obstructed by the nets.

(*f*) Under the last-named circumstances we feel that there is no necessity to call the attention of the landlords to the matter, and we recommend that no further steps be taken.

(*g*) We may add that we find that the eel is especially a destroyer of fish-spawn. When the fish are spawning, the eels follow them in vast numbers and greedily devour the spawn. Without entering into details of this destruction of spawn, we may say that we are convinced that it is a serious matter, and we think that the capture of eels should be encouraged by anglers in their own interests.

A. J. N. CHAMBERLIN,
G. CHRIS. DAVIES,
C. J. GREENE.

YOUTHFUL ANGLERS.

By "B."

It must have been for some time apparent to all who are interested in angling pursuits that in the present day there exists, in addition to what may be termed the general army of anglers, a considerable body of youthful piscators preparing for the common rank; and, as in many other important matters, I am glad to find the great City club, the Gresham Angling Society, has taken up the question, and has left for consideration at the annual meeting what steps can be taken to compact them together in union with the society as a kind of cadet corps. The move is certainly one, in my humble opinion, in the right direction. We all know the value of early education in matters of everyday life, and it is not a whit too soon to begin to teach the junior anglers the principles and practice of true and legitimate sport. I can hardly yet imagine, for the question requires much thought, that they can rank in the society of adults. The Gresham is peculiarly and exceptionally adapted for the addition of junior members, inasmuch as the hour of meeting is not only early, but is particularly prompt in commencement, which I take is one grand principle in the success of the club. Many of the members of that society, to my knowledge, have sons that already belong to the rank of "youthful anglers." The worthy scions of such well-known famous names as Jardine, Knechtli, and Alfred are known to me for their love of sport, and there are doubtless many more parents enrolled on the emblazoned scroll of the Gresham Angling Society who possess similar desires to those to whom I have referred. It is true they will be properly brought up and taught by their parents what is right in angling—there is not much fear about that—but it still leans to the idea of an organised troop of "youthful anglers." I do not mean of actual children, that have scarcely entered their teens, but of periods between fifteen and seventeen; and there are many bright-headed juniors who, at that age, have all the ideas of manliness and manly society about them, and are capable of attending meetings of early commencement and receiving instruction and information from their seniors in life. All honour to the Gresham Angling Society for leading out this new idea—an idea which, it is true, has never been broached to my knowledge by any other club. It is a grand subject for discussion at the annual meeting, and, if I am permitted to attend, I shall certainly give my hearty support to it. I get wrong sometimes in some of my actions, but with no desire to offend; a feeling prompts me to do certain things, whilst the motive for doing it is occasionally wrongly construed. It is, however, more to the subject of "youthful anglers" that I am now occupying my thoughts, and I would rob no one of the glory of initiating it. The presence of "youthful anglers" is not limited to the Thames, or any other particular river. Wherever there are fish to be caught, and the right to practise angling, there are shoals of junior disciples of the rod always to be seen busily engaged in the sport. They must be cared for and encouraged in the pastime their choice has led them to pursue; and I maintain if a cadet corps can be established we should give it a good trial, and that I am convinced the Gresham will do, if it decides—and I am certain it will—to adopt it. The junior anglers of the present day are not content with the common tackle I used to angle with forty years ago. A cheap hazel rod is a venerable relic of the past—an inexpensive line, fastened to the top of the rod, has become almost obsolete. The aspirants to the angling art now invest in hickory or cane rods, fitted up with rings, winch and running line, and all the new appliances. Our great anglers of the present time are improving on rods and spinning tackle, and bringing their inventions within the reach of all, for the benefit of those who are to follow them in piscatorial fame. The "youthful anglers" now have great advantages over those of days gone by in the science of fishing. They have examples in the art of what can be done; and if the idea is carried out of raising cadet corps in connection with angling societies, we shall raise up an army of anglers which, for skill and fame, will never have been equalled. It is as well to ventilate the subject raised by the Gresham Angling Club on the latter question, only bearing in mind that the idea has originated with that Society.

[We cannot quite agree with B. on this occasion. We ask him whether he really thinks that young anglers are going to learn much practical fishing by attending angling club meetings? They will learn to smoke, drink whiskey, and play cards, for it is not likely their elders will leave these good things to turn to dry nursing their youngsters again. Let the youngsters keep clear of the club until they are no longer youngsters.—Ed.]

GILLETT'S GUDGEON.

Mr. Gillett, of Fetter Lane, whose business of fishing-tackle making has been established more than a century, has sent us his artificial gudgeon for notice. Having given it a good trial when pike-fishing, we are able to speak very highly of its killing qualities; in our opinion it is one of the best and cheapest baits in the market. The spin is imparted by a curved metal tail; if this tail is properly curved the bait spins superbly, and as it spins on the gimp—which is passed through a tube in the bait—there is no fear of kinking, even though no lead is used; this is no slight advantage when spinning in a shallow, weedy water. It spins so easily that the gentlest pull is sufficient; now this is another good feature, because all spinners agree that you cannot spin too slowly. We cannot too strongly impress upon anglers the fact that it is not a bit of good to merely bend the tail round equally, the bend must be done in one particular way, or else there can be no good spin. It is a difficult matter to describe this way, but we endeavoured to do so in an article on artificial spinning baits which appeared recently. The top part of the tail must be bent round more decidedly than than the lower part. It can be done with the fingers, or with a pair of pliers, in an instant. Mr. Gillett mounts the gudgeon very neatly on gimp, with two triangles at the tail, and a loose flying-triangle at the head. We prefer to dispense with the latter, as it hinders the spin occasionally. The gudgeon-shape of this bait is by far the best shape to give an artificial bait—it offers much less resistance to the water than a roach or dace-shaped bait.

GUT.

The other day Messrs. Allcock and Company sent us, for "Creel," some strands of gut, just in the state it comes over from Spain, and others after it has undergone the bleaching process.

The gut, as imported, seems to be perfect, and gets spoilt in the process of bleaching, simply because the trade will have a white gut. As imported, the gut appears a strong yellow colour, but this arises simply from the presence of a thin, brittle yellow skin which is most easily removed. We removed some, and found that the strand of gut was then simply perfect—transparent as spring water, and colourless. Such gut as this does not want dyeing at all! It is only after it has undergone the weakening bleaching process which makes it an opaque, dull white, that it wants dyeing. Take a strand of gut as imported, remove the brittle skin, and then place it alongside a strand of bleached gut. One will be as clear as glass, the other as opaque as milky water.

It seems to us, then, that if the trade feel prejudices in favour of white opaque gut is one which ought to be removed. We will answer for it that any angler who has his choice will prefer transparent to opaque gut.

RIVER REPORTS.

MID-THAMES.

> " Oft expectation fails, and most oft there,
> Where most it promises; and oft it hits
> Where hope is coldest, and despair most fits."
> —SHAKESPEARE.

EXPECTATION has certainly failed during the early part of the present week, for when I wired the GAZETTE (better do that than a jack), I thought I had never seen old Father Thames in such grand fishing fettle for twenty years at this season of the year. On Sunday, however, the presence of snow was indicated in the water by my personal knowledge of its icy coldness and the greenness of its tint. On Monday morning, an excellent amateur angler and myself ventured out into some first-rate Thames water, rigged up with all the best of tackle, three quarts of well-scoured lobworms about our clothes, buoyant with hope, and buoyant with spirits in the shape of half a pint of the "state of Ireland." In the evening, we returned, sadder and wiser men, *sans* fish, *sans* lobworms, and *sans* spirits. We put it down to snow, but the village Bell "put it down to me." At Bray and Monkey Island, some fair catches of roach and perch have been had, and from that snug hostelry at Ray Mead, presided over by W. Deacon, I have the following:—"Dear Buzz,—W. B. Clarke, fishing this day (Wednesday) with Mr. Ramsey Couper and Mr. Morgan, killed two pike, in excellent condition, the largest going 13¼ lb., and being, by Mr. Alderman Mackie's measurement, 36 inches long and 17 inches girth. The fish was weighed by Host Councillor Deacon, in the presence of admiring visitors and envious piscators." From Cookham I glean that the Little Independent Angling Society visited lately these waters, but in consequence of the unfavourable state of the angling element, took little away independently but themselves and some good grub from host Cocking of the White Hart. E. Godden, out with Mr. Field, has had some 16 lb. of excellent roach, some of them going over 1½ lb. each. Mr. Grazebrook, of Cookham, writes:—"The water is at last in fine order. On Sunday last, in two hours and a half, I killed three pike. going respectively 6½ lb., 4½ lb. and 2¾ lb., and on Monday one jack of 5 lb. and had bad luck with a beauty of about 10 lb., for in striking it I broke my rod and had naturally some trouble in playing such a fish with barely 4 feet of rod and a gut trace on. However, I brought the beastie up at last to the net, but in lifting him up triumphantly the bottom of the net gave way and the fish escaped, leaving me alone in my punt lamenting." I know Mr. G. will, and would under the circumstances detailed, have given a quart of precious lobs to have had a photo of him "left alone in his punt lamenting." Mr. A. Louch, in the Cookham waters lately, had four jack in less than three hours, gross weight 18 lb., best fish 6 lb., and in the Strand (a pretty bit of water near Cookham), pike of 2½ lb., 3½ lb., 6 lb., 8½ lb. and 9 lb. have recently been taken. At Hurley, Messrs. Harrison, sen. and jun., have been on to the chub and roach, one brace of chub giving 7 lb. Mr. Hawkins, in the Hurley waters, has been busy after the chub, piloted by young Coster, of Temple, and has done fairly. Mr. Brooksbank has taken from those good all-round waters one tench 2 lb., besides roach and chub, and Townsend a tench of 4 lb., besides miscellaneous bags of roach, chub, and perch. The Black Boy, at Medmenham, seems more intersected lately with highways and bad-ways than tide-ways, so the news from that quarter is no-ways interesting. At Hambledon a bankman, in legering, has taken, amongst other fish, two trout, the largest going 4 lb., and being so badly hooked as to be past redemption—the other fish was, however, returned to the mother element, with a wish whispered into its gill to bite again in season. At Henley, Messrs. Alcumb, Budd, Bradley, and others, have been doing well with jack, the chicken having just turned into its teens, and another close on to "sweet seventeen." At Wargrave and Sonning good work has been done amongst perch and chub, and, at Maple Durham, a Mr. Wilton, in three days' fishing with pith and brain as attraction, has nobbled some 42 lb. of chub. Weather foggy and cold. The river is still suffering from a plethoric affection of snow and coldness of interior regions, but favourable symptoms are hourly developing, and a happy issue may be anticipated by Saturday or Sunday next.—MARLOW BUZZ.

Thames (Goring).

Water in good order for jack, perch and chub. Two days last week, four jack, largest 8 lb., and 16 lb. of good roach; Monday, two jack, largest 12 lb. —JOHN RUSH.

Thames (Halliford).

The river is now in excellent order for seasonable fishing. Mr. Innes, of the Clapham Junction Angling Society, fishing with me on Sunday, January 22, caught over fifty perch, several of which we returned to the river, and took away 17 lb. of the best. Mr. Withers, fishing with me the next day, took 25 lb. of perch, besides returning the smaller ones. Messrs. Palmer and Nickenson, fishing with me on Tuesday afternoon, the 31st ult., took two nice barbel, one weighing 4lb. 12 oz., and the other 5 lb. 14 oz., and lost a fine one, from what we saw of him about 9 lb. Mr. T. Abbott, of the Richmond Piscatorials, fishing with me on the 1st inst., caught one barbel about 2 lb., and a jack of 5¾ lb. Messrs. Palmer and Nickenson, fishing with me on Wednesday, caught one jack, between 3 lb. and 4 lb., and lost a large one, he having bitten the gimp clean in two, after having him on some time.—GEORGE ROSEWELL.

Thames (Kingston).

As I expected, some nice chub-fishing has been had. John has had four nice takes of chub, three and four each time for a few hours' fishing, the fish going from 2 lb. to 4½ lb., a brace of jack 3 lb. each, and about two dozen in about one hour-and-a-half's fishing. Not much done from the banks. The water fine. A private boat got one of the nicest jack for shape I have seen for some time, weight 8½ lb. I have not been able to step into a boat for some time.—JOHN JOHNSON.

Thames (Richmond).

The river is now in splendid order for fishing, and the dace are feeding well but the roach are not feeding so well and are running small in size. There was every punt out here on Sunday last, and there has been a fair lot of people down since. The water, getting bright and low, has quite put a stop to the bank angler as they cannot find water enough close to the shore now, so they find their way above the locks. The sport of the past week: G. Howard, one day, three dozen dace; H. Mansell, two days, eight and a half dozen dace; Job Brain, three days, 29 lb. roach and dace; H. Howard, two days, eleven dozen dace; C. Brown, one day, 7 lb. roach and dace; H. Wheeler, two days, 20 lb. roach and chub; J. Bushnell, four days, thirty-nine roach and dace.—JOHN BUSHNELL.

Thames (Walton).

Water in first-rate condition for anything, but nobody down fishing. It seems strange that after the reports given lately as to the state of the water, &c., that there are so few anglers about; I suppose they are waiting for another flood. Prospects good in every respect. A slight frost this morning, but warm enough in the middle of the day. Jack and perch well on the feed and plenty of bream in the bream hole, in fact we only want the anglers. Sport during the past week:—Jan. 25, George Hone, with Mr. Abbett, one and a half dozen per, and lost a big jack; John Rosewell, with Mr. Bevell, one jack, 3 lb., and six perch. Jan. 26, J. Rosewell, with two gentlemen, one jack, 17 lb.; Mr. Pace, from the bank, one dozen roach. Jan. 27, George Hone, with Mr. Abbett, four bream (largest 4 lb.) in two hours. Jan 28, John Hone (trying for bream), one bream, 4½ lb., and one bream, 3½ lb. Jan. 29, from bank, one jack, 2 lb. Jan. 30, Messrs. Wood and Tuker, one bream, 1¼ lb and one bream, 14 lb., and one bream, 4 lb. Jan. 31, George Hone, with Mr. Mackriel, one carp, 6½ lb., taken in Bream Hole, with fine drawn gut and lob worm, fishing for bream.—HENRY G. WOOD.

Ancholme.

During the early part of the present week we were visited with very heavy rains, which have made the water of the colour of that celebrated man Simpson, which Londoners know so well. However, it is toning down very nicely again, and the fine weather has returned, but with a slightly lower temperature. By the end of the week the water will be in nice order again, and fishing operations will be resumed with considerable zest. Some fine catches have recently been made, one roach of nearly 2 lb. fell to the rod of a local angler, whilst eels and bream have fed more or less all through the winter.—THOMAS FORD.

Chichester.

Matters piscatorial have greatly improved during the past week, fish being well on the feed. On January 29, with a falling barometer, Selham was shunted by the majority of rodsters, but those who braved the heavy pluvial visitation were well rewarded, Mr. Young weighing-in 2 lb. of dace and 3 lb. 5 oz. of roach, some good fish among them. Mr. T. Wood scaling roach 5 lb. 6 oz., six fish weighing 4 lb. 2 oz. At the canal, in a miniature sea, Mr. Summers took four dozen and ten roach. Ned Weir, on the 30th, landed nineteen bream from the basin, losing a heavy fish. With tight tackle, Mr. Young, at Selham, in three hours taking 6 lb. 12 oz. of fine roach. Pike seem off the feed; but at the basin early on Thursday morning, Mr. G. F. Salter killed a fish of 4 lb. 10½ oz. with live bait. Three fine perch of over 1 lb. each were also shown by Mr. W. L. Coombes, taken with brandling. For bream and roach paste has decidedly proved most killing. Taken altogether the past few days have afforded better sport than has been shown for months past. Weather fine, wind northerly.

Dove.

This river has been in flood and is now full of snow broth. It was all right up to Sunday, when we had such a fall of snow and rain in the district as must have astonished the very oldest of our rodsters. Talking of coming down in flakes, why it fell in heaps, and the weight of the heavy masses broke boughs from the trees in every direction. Of course, it came too suddenly to last long, and it is now nearly all gone, but the thaw caused the stream to rise to an immense height, and fishing has been practically stopped all the week. Trout operations should have been commenced on several of our lengths to-day, (Thursday) but though no information is yet to hand, I fancy those who ventured out would have very small prospect of success. There were a good number of anglers on the water last Friday, and several more buckets of grayling came to to hand averaging five brace each. The reds and browns proved the best lures on the top, and the cockspur on the bottom. When the snow broth goes out of the river, I fancy chub will bite freely at either worm or maggot. Trout are in grand condition, even thus early, and I believe a favourable season is in store.—THE SPLODGER.

Exe (Exeter).

The weather still continues beautifully spring-like, and in the window of our excellent local paper the *Exeter and Plymouth Gazette*, may be seen one of several spikes of the Windsor bean in full blossom, such as might be expected to be seen in a couple or three months' time. Wild flowers, such as primroses snowdrops and violets, are really common, and wild strawberries are brought in daily, and ere my next will reach you no doubt many "daisies" with the dorsal fin will have been plucked from their silvery stream, and the disciples of old Isaac Walton will once more repeat his words—viz., "Oh, the brave fisher's life is the best of any. 'Tis full of pleasure, void of strife, and 'tis belov'd of many. Other joys are but toyes, only this lawful is, for our skill breeds no ill, but content and pleasure, &c." Trout are very fine and plentiful, and salmon (which we shall have but little to do with for a short time longer, excepting in one or two isolated places), are running up splendidly; in fact in places they are as plentiful almost as roach, at any rate, to use the river watcher's words, they are like flocks of sheep, and, as our dear lamented friend, F. Buckland, observed upon many occasions, that the time was not far distant when the conservators would be relieved of their onerous duties, and certain rivers would be once more thrown open, but that we can hardly expect yet of the river Exe; in fact, the system is in such working order and in such hands that it will, no doubt, be many years ere they consent to do this, but at the same time it is decidedly too much to ask one guinea for the season for a single rod, who by dint of exertion might manage to secure, say, twelve or fifteen fish during the season, and those only taken by those that can well afford the time and money. The net licenses are but £3 12s., the returns for which cannot be named; but suffice to say in most instances it is over four figures. Therefore, I consider that the net licence should be raised; at any rate, the rod licence should be brought to the original 7s. 6d., or at the most 10s., which would enable many to enjoy the sport. And surely rod fishing fairly will never deteriorate any river, leave alone such a stream as the Exe, which during the past twelve years has been gradually improving. But more on this subject in my next. Roach are very fine, and many over 1 lb. weight have been taken. Pike are numerous, but not very large. Fishing in the estuary very indifferent; the herring are leaving fast.—Frank Gosden.

Exe. (Tiverton).

To-day (Thursday) has been opening day on the association water. A good many rods were out and a fair number of fish were killed in the upper portion of the water, but down stream very little was done. Thirty is the largest number taken by any one rod, and two gentlemen were fortunate enough to reach those figures. Taking into consideration the low state of the river, and its transparent clearness, it was considered very fair sport. Fish are not in such good condition as they were expected to be with the very mild winter we have had. There will not be any real good sport until we have had rain. Flies killing best to-day were the old favourite, viz., blue upright, half stone, silver twist, and February red; wind E, and barometer rising. I may mention there are no alterations to the rules this season. The fishing is restricted to the artificial fly only, and season tickets only are issued; non-residents, 2 guineas.—Wm. Mudford.

Lee (Cork).

Angling and netting on the river Lee opened yesterday. The water was in fine condition for angling and the weather was also conducive to a good day's sport. The result of the first day's operations gives hope that the season will be above the average. The winter floods saved the river to enable spring fish to reach the upper streams. On the lower section of the river Captain Young, son of Mr. H. L. Young, was the first to land a springer. Captain Ducutt had a fine fish in play but lost it. The fishing in the upper sections of the river was somewhat better. Mr. Augustus Warren and party landed four springers. Mr. R. Bowen also killed a fine fish and Lord Bandon took one. Captain Abbott and party killed one springer, and landed some old fish which were returned. The Blackwell nets were out from 12 o'clock last night. About sixty springers were sent into market during the day and they were retailed for 2s. per lb. at first and subsequently at 1s. 6d. Demand was rather slack.—Angler.

Medway (Tonbridge).

As I anticipated last week, anglers have been busy, and have made some good catches. On Saturday there were several parties out. Mr. W. Mills, below the town, caught a brace of pike; on weighing, one 5 lb. and other 2 lb. Mr. R. A. Dallas has made some good baskets of perch, paternostering. Mr. T. Elliott, of Tonbridge Wells, fishing with a friend near Leigh, caught three pike, weighing 11 lb. On Tuesday Mr. E. Greenwood and Mr. C. Payne caught two brace of good pike. The water is a little cloudy, but is fining down nicely, and just the thing for all kinds of fishing.—Ye Medway Water Rat.

Ouse and Ivel (Blunham).

Pike have been freely on the feed, some fine takes have been had, during the past week by members of the association.—E. B.

Suir.

The season opened here on Tuesday, and it promises to be the best on record. Although the river was too flooded for rod fishing, the nets did splendidly. Clonmel got eight salmon, Carey's five, Derrinlaur seven, Gurteen four, Kilshulan six, and Coolnamuck twenty-seven. The trout fishing was extra good on both river and stream; young chaps about the town got from two to three dozen each (some more) on the Suir. Master Fennel got two dozen and one very fair-sized trout on the Tar; Mr. Frank Wayland got five on the Clashawby, averaging ¾ lb., in half an hour; the killing fly was the hare's ear.—Dora.

Taw, &c., (N. Devon.)

The waters are in good condition, trout are plentiful, salmon and grayling are gone back to sea. I have some alive with my trout in a large pond in the town, caught a month ago. Wind still east, too cold to attempt any fishing. Gents should now put aside their guns and look after their rods, reels, lines, and flies. I have found that the North Devon streams require their own style of rod, and Rowe, at Barnstaple, can supply you with your wants, and the flies sure to kill in north Devon (fox and hare's flax mixed, silver twist, and hackle to match), blue upright, with tag, hackle to be rusty. Pinkelts fancy (brown hackle, claret body, with straw tag) will do for some time. Otters are plentiful, and, although hated by anglers, I feel sure they need not fear, for having opened thirty I never found any kind of fish, excepting on one occasion, and that was full of eels. I got one Monday trapped, and his stomach was empty. —Rusty Game.

Trent (Newark).

During the latter part of last week the water was in capital condition, and some very nice catches of fish were had, chiefly jack and chub, the only drawback to good sport being the lot of nasty slime or refuse, from, I believe, the Burton Brewery, that was in the water, both bait and tackle being covered with it in a very few minutes. But, notwithstanding this, some very nice chub were taken with pith and brains from various reaches in this locality. I and a friend were out chubbing an hour or two last Saturday, best fish nearly 3 lb., pith being the bait. On Sunday it rained very heavily all day, and in the higher reaches of the Trent I suppose a lot of snow fell. This combination of rain and snow quickly got into the river, and by Monday morning the river was running bank full, and nearly the colour of mustard. By Tuesday it was a very heavy flood, the low lying meadows being covered; but it soon began to subside, and it is now running down nearly as fast as it came up, although it is still very much discoloured. The water has got well within the banks, and in the course of a few more days, if no more rain falls, it will be again in fishing trim. In the meantime anglers wanting sport had better bring their worms with them, for there are no prospects of anything else for a few days.—The Trent Otter.

Trent (Nottingham).

On Sunday rain fell heavily throughout the day, and as the upper reaches had been subjected to a "deluge," the river here on Monday was bank full. The river rose with amazing rapidity, and was on the following day standing a few inches deep on the banks. Angling pursuits were therefore out of the question. On Wednesday and Thursday a subsidence took place, but very few anglers were out, and reports generally go to prove that no fish were killed. The clubs also are quiet, although in a few days it is proposed to submit to the association a circular letter received from Mr. Eddowes, clerk to the Trent Fishery Board, in reference to the more strict preservation of fish in the river. Pecuniary support is asked for, and seeing that we have nearly 3000 enrolled members, a very small grant per member would certainly not be missed. Just before closing this report information reaches me that Mr. John Tomlinson, a well-known member of the Wellington Association, has weighed-in a pike, caught in a private lake, of 15 lb. 9 oz.—The Man at the Clubs.

Trent (Alrewas.)

Heavy rains visited the midland district on Saturday and Sunday, which quickly brought on a rise and discoloured the water to such an extent that angling has been at a standstill and no news worth reporting is to hand. The river to-night is rapidly going down, and will be fishable about Saturday with no more rain. Last Saturday, with Messrs. John Allday and Sam Basnett, I had an excellent day's pike fishing. As the pool is strictly private, the spot must be unmentionable. The day turned out a regular soaker. On the conclusion of the day's sport we counted to our joint rods 24 fish, from 3 lb. to 5 lb. each, and which were principally taken spinning a roach on Gregory's Archimedean pike tackle. The day, barring the wet, was a thorough enjoyable one in every sense of the word. The kind hospitality of our host and hostess, with all the surroundings tending to make it one of the reddest of red. letter days in our angling career. May their shadows never grow less.—James Gregory,

Tweed and Teviot.

Since my last notes a great many diseased salmon have been taken from both rivers, and it would seem as if nearly all the fish in the rivers was affected with the fungoid disease, and there can be no mistake that both rivers will suffer severely next season from the depopulation they are receiving from this epidemic. Salmon angling on both Tweed and Teviot opened on Wednesday, and a good many anglers were out, but not a single clean fish was got, although any amount of kelts and unclean ones were run, and, of course, returned to the river again. The Sprouston water, which has always yielded the first fish of the season on the opening day, was fished clean, and the same remark applies to the Hendersyde and Ednam House "casts." On the Duke of Roxburghe's water at Floors Castle, there is no report of anything having been done, and the "casts" at Makerstown were not fished on Saturday last, we had a flood of 1½ feet, but one of 6 feet is sadly wanted to clear away the dead and diseased fish, and also clean the bed of the rivers which are now getting very bad indeed. To-day (Thursday) many anglers have been out, but not a clean fish was got up to the time of sending off this report.—Maxwheel, Kelso.

Yore (Yorkshire).

Up to last Sunday we had somo delightful weather in this district, and some nice dishes of grayling were taken with the worm, but on that day snow fell; as it thawed the next day, the fishing is spoiled for some time to come, that is, untill all the snow-water is cleared out of the river. It has been colder to-day (Wednesday) than for some time past.—Francis M. Walbran.

TO OUR READERS.

Some time ago many of our readers were kind enough to send us the names and addresses of such of their angling friends as did not know the Gazette.

We shall be extremely obliged if other readers will do the same, as it helps very greatly in increasing the circulation of the paper

We take this opportunity of thanking hundreds of our readers who have been to the trouble of writing merely to say how much they liked the Gazette, and how useful they find it; this is encouraging. Any suggestions for the improvement of the paper in ny way will be carefully considered.

THE "FISHING GAZETTE" VOLUME FOR 1881.

The above is now ready, handsomely bound in cloth, price 12s. 6d. A few copies still remain of the previous volumes, and the cloth cover for binding can also be had separately, price 2s. 6d.

DINNER OF THE RICHMOND PISCATORIAL SOCIETY.

On Thursday evening about fifty members of the above flourishing Society, dined together in the Society's room, at the Station Hotel, Richmond. The Chairman of the evening was Major Bull, Vice-President of the Society. Among the visitors were Mr. W. H. Brougham, Mr. R. B. Marston, of the Fishing Gazette, and Mr. J. Groves. The dinner was a most decided success in every way, and we shall give a report next week.

THE "RED TAG" FLY.

In response to our request that some West of England reader would send us a sample of this killing grayling fly, Mr. Earp, of Kidderminster, has very kindly sent one. It is not dressed in the same way as the "Red Tag" we used some years ago; but it is a killing fly, made thus hackle: red hackle from cock's neck, body of peacock herl, pretty full, and bit of crimson wool for tail or tag. It is identical with the bracken clock, as made by Mr. Cummings, of Bishop Auckland, only the bracken clock is minus the red tag. The bracken clock is the Devonshire "fern web."

Have any of our readers got any real dotteril feathers to sell? We do not want dyed imitations.

THE "FISHING GAZETTE" WINCH AND HARDY'S WINCH FITTING.

It is with pleasure we learn from Messrs. Allcock and Company, that the trade orders for the above are coming in fast. They will be able to make deliveries in the course of next week probably.

More than one tackle maker has written to complain of our statement that the winch-fitting can be put on a cane rod. They suggest we ought to know there is nothing inside a can rod for the screws to hold to. Just so. But why, in the name of all that is cane, do you not put something inside? Plug up the butt with a bit of light deal, a few inches long, and then put your screws into it. We give you this hin gratis.

CLUB AND OTHER JOTTINGS.

By L. B.

Messrs. Geen, Hobden, and Pitts have been among the chub, the first-named gentleman securing some heavy fish. An otter has taken up his quarters not a hundred miles from Penton Hook, and is being vigilantly sought for by several good shots in the neighbourhood. It is pleasant to learn that Mr. George Oram, one of the most energetic of our Lea bailiffs, is rapidly recovering from a long and serious illness. We can ill spare good men from the river, particularly during the now fast-approaching fence months. It is curious to note how among our brother rodsters in the East of London (who are mostly Lea men) pegged-down matches continue to be patronised, while among brother bobs at the West, who are principally Thames men, they are almost a thing of the past.

Things are looking-up a bit in the neighbourhood of Pangbourne; and on Sunday last Mr. Malcolm, of the Waltonians, succeeded in getting a good take of roach, over 20 lb., I am informed. Mr. Philips, of the same society, has also been having some very good chub.

Things continue very quiet at the Welsh Harp. Pray tell us, friend Sawyer, how is it those big jack won't feed?

Not many, but a few really heavy and handsome jack are generally picked up at this time of the year by those who, undeterred by the horrors of mud-lane, patronise Dagenham Lake.

Re the 3 lb. 2 oz. perch—I humbly beg the printer's pardon, the omission of the word perch was mine; but a contemporary is a bit too hard when it assumes the omitted word was "roach," going on to state that "one at Staines is said to have weighed 3 lb. 2 oz., but while we know there are 12 oz. to 1 lb. troy, and 16 oz. to 1 lb. avoirdupois, 'Fisherman's weight' is somewhat of a delusion and a snare." I don't wish to be hypercritical, but if the writer of the above charitable paragraph will glance down his own lines in the same issue, January 29th, he will wonder how he came to announce that "a complimentary visit will be paid the Bermondsey Brothers on Tuesday, January 21st."

Among the golden barbel some very good shows continue to be had. Mr. Goodge's take of 25 lb. of roach from the Chelmer, on the 29th, being among the best. I also saw a nice little dish of roach and dace from old Father Thames, at Taplow, yesterday, and Mr. Joseph Green, by whom they were taken, says the water is in the pink of condition.

At the recent meeting of the committee from the three London associations of angling clubs, certain important recommendations were adopted. They are to be made the subject of a circular issued to all societies enrolled, so that the said recommendation may be discussed by the delegates at the next monthly meeting of each association, after which a joint meeting of the committee of the Amalgamated Associations will take place, which no doubt will be duly empowered to take early active measures to promote the important questions of coarse-fish culture and renting waters.

The monthly meeting of the United London Anglers' Central Committee will be held on Monday evening next, at the Bald Faced Stag, Worship Square, Finsbury—Mr. Samuel Morgan in the chair. It is hoped there will be a good attendance of members to carefully consider the important subjects above referred to.

I have been favoured with a circular containing full particulars of the forthcoming International Fisheries Exhibition, to be held in Edinburgh in April next, The prizes are both numerous and valuable, and varying from £50 to £5. and the coarse-fish anglers have a little corner, though, of course, and rightly, sea fish, sea-fish culture, and the salmonidæ—the first of which may be deemed a source of national wealth, and the second of permanent interest to our Scotch friends—occupy the place of honour. I sincerely hope some of our London friends who have goodly specimens of defunct freshwater fish, will exhibit them just to keep up the credit of the metropolis.

The annual supper of the Good Intent Angling Club takes place on Wednesday evening, 13th inst., St. Valentine's Eve.

Haslett writes me from Chertsey to-day (Wednesday), that the river is a capital colour, and that, fishing with Mr. Allan and another gentleman, he has been getting a few good perch. Mr. Stanley Isaac and myself had a day with him on Sunday, and though we tried very hard could not induce the roach to bite. We managed, however, to get four jack out of our roach swim; heaviest a little over 4 lb., which may perhaps account for the red-eyed innocents being right off the feed. Strange to say, the swims we fished had been carefully fished with a gut paternoster the previous day with no result; yet though we were using gimp snaps, and, for want of others, very large baits, the fish bit quite boldly.

FISHING SEASONS IN ENGLAND AND WALES.

Several changes having been made in the "open time" for salmon, trout, and coarse-fish fishing in England and Wales, we have compiled the following list, showing all the variations from the statutory fishing seasons which exist in different rivers. The statutory open season for Salmon is as follows:—

For rods, from February 2nd to November 1st, both days inclusive.

For putts and putchers, from May 2nd to August 31st, both days inclusive.

For all other instruments, from February 2nd to August 31st, both days inclusive.

The open season for Trout and Char is, for all kinds of instruments, from February 2nd to October 1st, both days inclusive.

The open season for Freshwater Fish is from June 16 to March 14.

The following is a list of the English and Welsh fishery districts in which the above close seasons have been *varied*. Where a blank is left the close time given above remains in force:—

District.	Angling Season for Salmon.	Season for Other Instruments for Salmon.*	Angling Season for Trout and Char.	Season for Other Instruments for Trout and Char.
Avon and Erme (Devon) ..	Feb 1 to Sep 30	Ap 1 to Sept 20	—	—
Avon and Stour (Hants) ..	Feb 2 to Oct 1	Feb 2 to Aug 14	—	—
Axe	May 1 to Nov 19	May 1 to Sep 19	—	—
Camel ..	May 1 to Nov 14	May 1 to Sep 30	—	—
Cleddy ..	Feb 2 to Oct 31	Mar 16 to Sep 14	Trout, Mar 2 to Sep 28	Trout, Mar 2 to Sep 28
Clwyd and Elwy ..	May 16 to Nov 14	May 16 to Sep 14	—	—
Conway ..	May 1 to Nov 14	May 1 to Sep 14	—	—
Coquet ..	Mar 26 to Nov 14	Mar 26 to Sep 14	—	—
Dart	Mar 2 to Nov 1	Mar 2 to Aug 31	Trout, Mar 1 to Oct 1	Trout, Mar 1 to Oct 1
Dee	—	—	Trout, Feb 15 to Oct 13	
Derwent (Cumberland) ..	Mar 11 to Nov 1	Mar 11 to Aug 31	Mar 10 to Sep 30	Mar 10 to Sep 30
Dovey, Mawddach, and Glaslyn ..	May 1 to Nov 29	May 1 to Sep 13	—	—
Dwyfach and Dwyfawr ..	Mar 2 to Nov 14	Mar 2 to Sep 14	—	—
Ehen, Esk, Mite, Irt, and Calder ..	Mar 11 to Oct 31	Ap 1 to Sep 14	Trout, Mar 11 to Sep 30	Trout, Ap 1 to Sep 30
Exe	Mar 2 to Nov 1	Mar 2 to Aug 31	—	—
Fowey	—	Below Lostwithiel, Ap 1 to Aug 31	—	—
Kent, Leven, Winster, Bela and Duddon ..	Mar 2 to Oct 31	Mar 2 to Sep 14	Trout, Mar 2 to Oct 1	Trout, Mar 2 to Oct 1
Ogmore and Ewenny ..	May 1 to Nov 14	May 1 to Sep 14	Trout, Feb 15 to Sep 1	Trout, Feb 15 to Sep 1
Ouse (Sussex) .	Ap 2 to Oct 31	Ap 2 to Aug 31	—	—
Rhymney ..	Ap 2 to Nov 1	Ap 2 to Aug 31	—	—
Seiont, Llyfni, and Ogmore	Mar 2 to Nov 14	Mar 2 to Sep 14	Trout, Mar 2 to Oct 1; Char, Mar 15 to Oct 14	Trout, Mar 2 to Oct 1; Char, Mar 15 to Oct 14
Stour (Kent) ..	May 2 to Nov 1	May 2 to Aug 31		
Taff and Ely ..	May 1 to Nov 14	May 1 to Aug 30	Trout, Feb 2 to Sep 19	Trout, Feb 2 to Sep 19
Taw and Torridge ..	Ap 1 to Nov 15	May 1 to Sep 20	—	—
Teify and Aeron	Feb 15 to Nov 14			
Teign	Mar 3 to Nov 20	Mar 3 to Aug 31	Trout, Mar 3 to Sep 30	Trout, Mar 3 to Sep 30
Towy, Longhor, and Taf ..	Mar 16 to Nov 1	Mar 16 to Aug 31	—	—
Usk and Ebbw	Ap 2 to Nov 1	Ap 2 to Aug 31	Trout, Feb 15 to Oct 1	Trout, Feb 15 to Oct 1
Wye	Mar 15 to Nov 1	—	—	—
Yorkshire ..	Mar 1 to Nov 15	—	—	—

* Except putts and putchers.

In the following districts the close season for freshwater fish ha been abolished:—Avon and Erme, Avon and Stour, Eden, Towy Wye.

In the Kent and Severn fishery districts the close season for pike only has been abolished, and in the Severn district (except the Severn itself below the mouth of the Verniew and so much of the Avon as flows through Worcestershire and Gloucestershire) the close season for all kinds of freshwater fish, except grayling, has been also abolished.

WORMS IN DOGS.—Mr. James Doughty, Author of "Art of Breaking and Training Dogs," says: "I have used Maldire's Worm Powders for Dogs for many years, and they have always proved successful." Maldire's Worm Powders are sotd by all chemists price 1s., 2s., 3s. 6d. and 5s. per packet, or sent post free (on receipt of Stamps) by Barclay and Sons 95, Farringdon Street, London.

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

SPECIMEN FISH AT ANGLING CLUBS.

Sir,—The perusal of your correspondent B.'s paper, "Specimen Fish at Angling Clubs," has induced me to jot down some of my own ideas on the subject, and I trust, as those of a working-man angler, you will be able to find space for them.

Our friend B., after giving particulars of a splendid catch of perch from the Kennett by a member of the Friendly Anglers, and of ten pike, weighing together 150 lb., by those well-known sportsmen, Messrs. Jardine and Knetchli, says: "What I have been advocating for years, with regard to specimen fish and the abolition of gross weights, has now been practically realised by Messrs. Jardine and Knetchli," &c., &c. Let me at once tell you that I agree entirely with the theory of weighing-in the "big 'uns" only, but at the same time I despair of its being put into practice, under present circumstances, by any appreciable number of our London angling clubs, for reasons which I will endeavour to make plain. In the first place, the members of those clubs—being for the most part men whose means are in inverse proportion to their angling capacities, and whose visits to the Kennett, or similarly good waters, are necessarily very few in number—are obliged to rely for the greater number of their outings upon those near-at-home waters the denizens of which, although fairly numerous, are very shy and difficult to capture, in consequence, as I believe, of the continual pestering and worrying with groundbait, sight of rods, &c., they are subjected to. Now, from my point of view, if B.'s scheme is to be of any practical value, anglers should abstain not only from weighing-in, but from retaining, when caught, any but specimen fish—that is, fish of much greater size and weight than the minimum sizes allowed to be taken from our rivers, the Lea and the Thames. And here arises the difficulty. Let us see how this alteration would work if applied to the open portions of the Lea, for instance, which are so largely frequented by the class in whose name I take the liberty of writing. A man may sit roach-fishing there for a whole day, and although master of all that "delicate finesse" so pleasantly referred to by Mr. Wheeldon, will be fortunate beyond the average if, when darkness compels him to desist from his pleasant toil, he has 5 lb. of roach in his basket, after having returned to the water, as he took them, all under seven inches in length, the limit in use at my own club. Can it be expected that such a man will hail with delight a raising of the standard which would reduce such a day's take probably to 3 lb.? Another phase of the question is, that his day's take may—and I am sorry to say often does—consist of only two or three sizeable fish. Imagine the chagrin of such a "sticker" to find, on arrival at his club-house, his take beaten by one fish (a specimen weighing rather more than either of his two or three), the result of a ledger thrown in and left to shift for itself by a careless angler or novice, who probably preferred the liquid and solid attractions of the nearest inn to a cold seat by the waterside.

I could give further examples of the present inapplicability of the specimen system to most of our clubs, but will content myself by assuring B. that London anglers generally will be only too glad to adopt it, when they can obtain, as the result of a fair day's work within reasonable distance of their homes, even a much smaller take of good fish than either of those referred to by him as triumphant vindications of his principle.

When anglers of all grades make common cause in the propagation of coarse fish and the restoration to the general body of those portions of the Thames and other rivers which have been unlawfully filched from them; when the water companies, deriving their supply from public waters, annually return to those waters all the fish which accumulate in their reservoirs; when we hear no more of the exclusive use, by individual societies, of waters which have been from time immemorial open to all for at least a small daily charge; when steam-launches have been banished from our fisheries, and trailers and illegal netters are classed and punished with burglars; when, in fact, the fish in our waters have been largely increased, commensurate with the enormous increase of those who wish to capture them—then will arrive, as a matter of course, what I will call "the specimen fish era," which none will welcome more heartily than B.'s at present unconvinced admirer, J. M. D.

MR. W. BAILEY, SENIOR.

Sir,—I have to inform you that I received "The Angler's Instructor" from Mr. W. Bailey, senior, on January 27. I am sure it would be better, when Mr. Bailey was so busy with orders, if he could send a reply—if only a postcard—stating that he had received the order. It would give more satisfaction. With reference to "The Angler's Instructor," I can recommend it to all anglers as a first-class work on the art of angling.—I am, &c.,

23, Bayley Street, Staleybridge. James B. Udale.

"THE ANGLER'S INSTRUCTOR" BY BAILEY.

Sir,—This book is published by Longmans and Co., of London, and T. Foreman and Sons, of Nottingham; and your correspondent, Mr. J. B. Udale, can get a copy through any bookseller. I obtained my copy in this manner.—I am, &c., W. T. Boydell, Jun.

REWARDS TO COUNTY POLICE FOR THE DETECTION OF POACHERS.

Sir,—It will be in the memory of your readers that some time ago Mr. Thomas Hoole sent Captain Etheridge fifty copies of their reward bill offering one guinea to any one who should give information as to lead to the conviction for illegal fishing. The captain then distributed them—especially among the Oxford City Police—if possible to counteract the machinations of the noted Beasley gang. This was effected to a certain extent, which, Mr. Hoole hearing of, after a meeting of the West Central Committee of the London Anglers held on the 20th ult., sent the captain three guineas to distribute between Sergeant Keen and Police-constables Castle and Barrett, one guinea each—that gentleman's letter conveying a wish it should be presented with some little ceremony. Therefore last Friday week the captain attended upon the bench of magistrates and made the sum over to the mayor, being introduced by Alderman Carr, chairman of the Oxford City Police Committee. It was then determined by the Board to apply to the Conservancy for twelve deputations for the police to enable them to enter punts and search, what they could not do before, and they could only catch them on their landing. This will be a great and important movement as the police may then go afloat and act with vigour at the time of the commission of the offence. The Oxford anglers and the Press of that city are not unmindful of the seasonable aid offered by the London anglers who have gone so far from home to do good to the general cause.—I am, &c., Creel.

FLY-FISHING FOR DACE, CHUB, &c., NEAR LONDON.

Sir,—I read R. A's. interesting article on this subject with great pleasure. I am one of the many who are fond of fly-fishing, and who fish streams where dace and chub are more numerous than trout. I have often cast over shoals of dace, &c., on bright days but have seldom been rewarded with a rise, although my casting line has been of the finest gut, and I have tried fly after fly, and sometimes tipped it with a gentle,

I have read most of the modern angling books, but beyond the fact that dace will rise at a fly little is said in them. I shall certainly have some flies made up as described by your correspondent and hope to get good sport with them.

Perhaps R. A. will, with your permission, favour your readers with further notes of his experience on this subject, and give the name and address of the tackle maker who dressed his flies.

I should much like to see Mr. Balderston's table of flies for dace and other white fish. He referred to them when he gave his table of flies for trout. I studied the latter with great interest and have looked for those for dace, but either I have missed them or they have not been inserted.—I am, &c., W. T. Boydell, Jun.

Jan. 31, 1882.

[They are coming.—Ed.]

SALMON OVA FOR NEW ZEALAND.

Sir,—I have the honour to inform you that, in accordance with instructions from the Acclimatization Society of Otago, I have shipped two boxes, containing 130,000 salmon, for Dunedin.

They go, through the courtesy of the Orient Line Managers, Messrs. Anderson, Anderson, and Co., and Messrs. F. Green and Co., direct to Melbourne, freight free; also by the kindness of the Union Steamship Company of New Zealand, no charge is made for the conveyance from Melbourne to Dunedin.

I had instructions to secure Tay ova if possible, but was told, unofficially, as early as July last, that it would be a hopeless task to proffer any request to the Tay Board of Conservators. However, I wanted the ova from Tay salmon, so had made up my mind, by hook or by crook to get them. I talked the matter over with my friend, Mr. Francis Francis, of the *Field*. He said it was perfectly hopeless. That just made me feel madder to get them. I happened to recollect a valued friend on Tay side, who had written to me on this subject before. So I wrote him again, and fortunately he did what was needed, so I had all ready to start. Many thanks to him! But the elements were adverse. The floods descended, and the salmon disease was so prevalent that I was advised to give up the expedition.

Backed by the Inspectors of Fisheries, I had also applied to Tyne Fishery Board. The Chairman, Mr. J. M. Ridley, wrote me a most courteous reply, to the effect that, had I only applied earlier, the Board would have been very happy to meet my wants, but that the season would probably close before the needful permission of landowners could be obtained in time. So I gave it up with a very heavy heart, wrote to New Zealand to say it was impossible for me to fill their orders this season, put things away, and resigned myself to ill-fortune.

"A telegram for you, sir!" was the next phase of the matter. "Ridley to Capel, Foot's Cray,—Very heavy run of fish. Come at once. Wire Harbottle," &c. Very thankful to hear such good news I held a council with my manager, and settled that he should start next night for Tyneside. Well, he got there safely, was most kindly received, ably assisted by Mr. Harbottle, the Inspector of Tyne Fisheries, and his staff. Mr. Ridley and Mr. Taylor Smith were there to see that all went well. Two days' fishing settled the busisiness; so he tackled up and returned to meet me at Cannon Street Station, leaving the eggs in good care at King's Cross.

I was sending off hatching apparatus for South Africa, and after its despatch we fetched the boxes of eggs from the Great Northern Railway to the office of the Wenham Lake Ice Company, who had very kindly consented to take charge of these, as they had of so many more for Mr. Buckland, until wanted, to stow them in the ice-house. So to 125, Strand, we drove, and met with every courtesy.

I desire here publicly to thank sll those who have had any part in this business for their kindly assistance; more especially all those, who, meeting a perfect stranger in Mr. Cross, my manager, did all that mortal man could do to make him both successful and comfortable.

The Steamship Companies and the Wenham Lake Ice Company also deserve warm thanks for their kind courtesy and generous aid, and I thank them with all my heart.

Mr. Cross informs me that these eggs were taken and packed exactly as I should have wished. Knowing his skill and experience, I had every faith and hope that this shipment will turn out as good as good as my first—a little box of trout eggs that was sent out in 1878 with Mr. Frank Buckland's last consignment. They were received by Mr. Howard, of Wallacetown, and pronounced the best sample of fish ever received from Europe. I cannot see any reason why the present shipment should not prove equally good. I know that they were properly impregnated and packed, and have been carefully handled; so wish them and their recipients all success.

The reason why I did not accompany Mr. Cross was that I had my hands full of business. Apparatus had to be sent to South Africa, and shipping arrangements had to be concluded for goods going to India. Besides this, I had to arrange for a new rearing-house capable of holding a large number of feeding trout-fly, as well as to see to the welfare of a house full of ova, and other matters, so that I was fully occupied.

I may add that the Gillaroo trout of Ireland is now firmly established here, and that there will be a copious supply of the eggs of this, the finest of all British trout, during the coming winter.

Apologising for taking up so much of your valuable space.—I am &c. CHAS. C. CAPEL.

Cray Fishery, Foot's Cray, Kent.

BLOOD-WORMS.

SIR,—Your correspondent, J. Harris, Esq., will find the largest blood-worms in their native element, *i.e.*, in the mud of old ponds, those from 18 inches to 3 feet deep are the best. Naturally they are insignificant, and so tender and fragile, they require the most careful handling when baiting the hook; under these circumstances the greatest attention he might bestow upon them in the hope of increasing their bulk would only be thrown away, as the fatter and larger he makes them the more soft, juicy, and tender they will become, and if required for angling purposes this procedure will entirely spoil them for such an object.

To compensate them for this insignificance and weakness, Mr. Harris may not be aware that the blood-worm, like the star-fish, possesses the wonderful faculty of forming perfect worms from pieces cut off from the original; and when we consider what a number of animals must necessarily live on these creatures, not forgetting those two savage and voracious specimens, the stickle-back and water devil, we cannot help being struck with the wisdom displayed in an arrangement so admirable.

If your correspondent has an idea he can enlarge them beyond their natural size by some extraordinary process, later on, he can get any number from the places alluded to; but he must take them and let them remain in the mud, wherever he puts them, or they will soon die. I do not think they are strong enough to undergo the trying process of scouring, or the cockney anglers would not keep them in the mud from which they are taken, as they do. If he confounds the red-headed garden worm, he wants to breed in length about 1½ inches, with that midget bait for bream, perch, flounders, dace, and roach, and by many people called the blood worm, let him procure (the sooner the better) a solid piece of hen-dung about the size of his hat. This may be obtained from any hen roost in a neglected state. Let him take this splendid piece of guano and bury it about 2 feet deep in a rich leafy loamy soil, and take it up about the end of July or beginning of August, and he will see such a mass of worms, thousands upon thousands of apparently little short threads of dirty cotton that will astonish him. I expect they acquire sufficient nourishment from the dung until they are strong enough to take to mother earth in earnest. I can compare them to nothing but a bullock's liver when perforated by ten thousand half-grown gentles. Hoping these few remarks will not be lost, on Mr. Harris in particular, nor your readers in general,—I am, &c, MARK ANTONY.

FISH-CULTURE IN AMERICA.—The great and rapid advance which fish-culture has made in the United States, the stimulus it has given to one of our greatest industries, that wise policy which, through the medium of a Fish Commission, directs attention to the best and most economical method of producing, capturing, or preserving fish—these have all contributed to our national progress. If the work done in the last 15 years in the United States has been accepted with hardly more than a passing word of laudation, abroad our labours have received the fullest recognition, for our methods are sanctioned and adopted, and on subjects having to do with the rearing or capture of fish the demand for information is constant. To sum up as succintly as possible the whole subject, we have invented the most perfect engines for the capture of fish, and, to make up for the loss of life in fresh and salt water, we have set about in a scientific way to replenish the water as fast as we deplete it."—*New York Times.*

WEST CENTRAL ASSOCIATION OF LONDON AND PROVINCIAL ANGLING SOCIETIES.

THE first meeting of the year of this Association, was held on the 20th inst. Mr. Bonvoisin in the chair, faced by Mr. Beckett.

Notwithstanding the unfavourable weather of the past week, there were a goodly number of delegates in attendance, thirty-eight societies being represented. The business of the evening was commenced by the hon. sec. reading the minutes of the meeting, held on 16th December last, which, on the proposition of Mr. Dodge, seconded by Mr. Ghurney, were confirmed as read. Letters from the secretaries of the Brentford Piscatorials, and the Kingfisher Angling Society, requesting to be enrolled with the Association were next read. Representatives from both societies being present, and answering satisfactorily to the usual inquiries of the hon. sec., as to their respective codes of rules, &c., Mr. Murphy proposed, and Mr. Field seconded "That the Brentford Piscatorials be enrolled with the association." Mr. Adean proposed, Mr. Starr seconding, a similar resolution on behalf of the Kingfisher Angling Society, both of which, on being put to the meeting were carried unanimously.

After a few words from the Chairman to the gentlemen representing the above societies, as to the objects of the association, and urging their guarding the great privileges conceded to its members, the business of the evening was proceeded with.

Amongst the correspondence received by the hon. sec., was a letter from Captain Etheridge of the Thames Conservancy, Reading, calling the attention of the association to the conviction of one Beazley, at Oxford, obtained through the vigilance and energy of Sergeant Keen of the local police, also the capture of nets by Police-constables Carr and Barrett. The committee recommending the payment of the sum of £1 1s. to these three men, some discussion took place as to the payment of the full reward of £1 1s. each to Police-constables Carr and Barrett. A conviction was not really obtained by them, owing to the delinquents leaving the neighbourhood; their nets, gear, &c., were however, seized and destroyed, and a conviction would have undoubtedly have followed had the rascals not decamped. A proposition by Mr. Murphy, seconded by Mr. Reynolds, "That the sum of £1 1s. each to paid to Sergeant Keen and Police-constables Carr and Barrett," on being put to the meeting, being carried by a large majority. An amendment by Mr. Adean, "that the sum of £1 1s. only, be paid to, and divided between, Police-constable's Carr and Barrett," being lost on the vote.

The sum of £1 1s. was also voted to the annual dinner of the Thames Fishermen on the committee's recommendation. The usual seasonable gratuities to the waiter and postman were also voted.

On the question of the annual vote to E.C. committee, the Chairman, in opening the discussion, stated that the sum voted to that committee, last year was £10 10s. and in previous years £5 5s. only.

Mr. Murphy, who continued the discussion, urged that a like sum of £10 10s. be again voted to the E.C. committee. In his opinion, he thought it was not, however, a question of amount, as one of good feeling, one association to the other, and, in support of his views, stated shortly the great good done by the E.C. committee in the preservation of the Lea. The vice-chairman, Mr. Ghurney, secretary of the E.C. C., Messrs. Townsend, Gardner and Humby continued the discussion at some length when the following proposition and amendment were put to the meeting. Proposition by Mr. Welch, seconded by Mr. Murphy "that a like sum of £10 10s. be again voted to the E.C. C." Amendment by Mr. Gardner, seconded by Mr. Humby "that the sum of £5 5s. only be voted to the E.C. C." On the vote being taken the amendment was carried by a majority of 5.

Monetary matters being disposed of, the result of the interview by Messrs. Marston (of the FISHING GAZETTE), Geen, and Bonvoisin with the third association was laid before the meeting by the chairman. These gentlemen waited on the third association on the 18th instant, and were most cordially received, and requested to state the views of the W.C.A., on the question of fish cultivation, and on matters generally of importance to anglers, to which Messrs. Marston and Geen suitably replied, the latter gentleman requesting the third association to send delegates to the W.C.A. meetings. The hon. sec. then read the minutes passed by the third association on the 18th instant.

A misunderstanding having arisen between the Gresham Angling Society, and the association, the chairman, and Mr. Murphy, tendered full explanations to the hon. sec. of the Gresham. Mr. Crumplen, in a few words, gracefully accepted such explanations, stating he hoped nothing would again arise to mar the good fellowship existing between them.

Business being at last disposed of, the hon. sec called the roll, the following societies being represented: Amicable Brothers, Amicable Waltonians, Acton aud Ealing, Bostonian, City of London, Cambridge Friendly, Cobden, Duke of Norfolk, Golden Barbel, Good Intent, Gresham, Hammersmith United Junior Piscatorials, King's Cross United, Larkhall, Marylebone, Norfolk, North Western, Prince of Wales, Princess of Wales, Portsmouth Waltonians, Peckham, Perseverance, Queen's, Royal George. St. John's, Savoy Brothers, Silver Trout, South London, Stanley Anglers, South Belgravia, Trafalgar, United Brothers, United Marlboro' Brothers, Waltonians, Westbourne Park Piscatorials, Brunswick Piscatorials, Brentford Piscatorials, and the Kingfisher. Mr. Ghurney representing the Ea- Central Committee. GABRIEL TREADWELL.

GEORGE JAMES EATON, of Starkholmes Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[ADVT.]

NORFOLK.

THE extreme mildness of the weather, coupled with the splendid condition of the water, has resulted in many fine fish being brought to grass in various parts of the country, but I think I may venture to say, not more so than in Norfolk. Pike are in abundance, roach are plentiful, and bream have been showing up well. Although not wishing to "blow my own trumpet," I have myself experienced two as good days' pike-fishing as ever I should wish to enjoy, landing in the two days no fewer than twenty-four fish, weighing 159 lb. I have also seen some exceptionally fine roach, taken at Tasburgh, near Norwich, averaging 1lb. per roach, and taken with white paste. Some splendid bream have also been taken at Thorpe, one gentleman succeeding in landing a couple weighing 7¼ lb.; and many others were taken the same week, although not quite up to this weight. A great many more would undoubtedly have been landed, but, unfortunately for the anglers of Norwich, they are blessed with a not over scrupulous Corporation, who, by way of amusement, will at times let all the sewage matter of the city into the river, thereby destroying all angling prospects and endangering the lives of her Majesty's subjects who may happen to live in the vicinity of the river,

This is certainly a crying shame, and I think it is time for the anglers of Norwich to begin to move in the matter. Otherwise, when the season comes round they will find they will be rewarded after their day's exertion with an empty creel. The river from Norwich to Cantley is just now in a most disgraceful state, and for miles it is completely covered with a foul, dirty white substance resembling snow mixed with soot. At Thorpe the westerly winds have carried it out of the Hythe into the old river, and, having no particular chance of getting away, it has completely blocked the stream, and is now at least half a foot in thickness. When it gets completely saturated with water it will sink to the bottom, fermentation will then set in, and so soon as the hot weather comes it will rise again to the surface—spread itself much in the same way as tar does when dropped into the water—and then give off its deadly poison to be inhaled by those who live near, and also to occupiers of yachts and other craft which ply on the river, the result of which may only be too easily guessed at. I therefore trust that the secretaries of the various angling societies will do something among their members, and so form a deputation, or else memorialise the Corporation, in order that the affair may be thoroughly investigated, for they (the Corporation) are the body who alone are responsible, and not the Yare Preservation Society as many persons suppose.

Down the river towards Yarmouth the inhabitants on either side of the river have to drink the water from the river; but at the present time rather them than me, for it cannot be a pleasing occupation to have to skim a heap of dirty sewage matter off a pail of water before using it.

As reported in our last week's issue of the FISHING GAZETTE, the conviction of that notorious poacher, Barber, shows that the Yare Preservation Society made a happy selection when they appointed the present Water-bailiff, William Hewitt. I believe this is about the fourth conviction which he has been the means of bringing about since his appointment, and certainly great credit is due to him for his last "clever capture." I think this case may lead to show that at present the bye-laws of the Yare Preservation Society are not yet perfect, for it brought to light that which many people were in total ignorance of, and that is, "that with a net, having the legal 3-inch mesh (when wet) they may between the hours of sunrise and sunset, use it with impunity, and thus destroy all our best sport. I should hops that when the time comes to amend the laws this clause in the Act, should be carefully done away with, and the only nets which should be used are those for the purpose of taking bait and smelts. As to the "Barbers" it is a pity the laws with respect to their crime were not more stringent, for although to some persons their fine and costs, amounting to about £16, seemed a heavy sum, it was next to nothing compared with the proceeds of the fish they have destroyed. A gentleman friend of mine informed me, the other day, that he was prepared to prove that since Christmas he could show where they had consigned no less than 50 tons of fish to one firm.

Therefore, my brother anglers, be not surprised this next season if you have to content yourselves with the small fry of the river, instead of your two and three pounders as hitherto. I should imagine the greater part of these fish were taken from the North River, as there, I believe, he has not been so closely watched as he has on the Yare.

I hope our metropolitan friends will interest themselves in this matter, and when they see the trouble and expense which the society has taken, in order to protect sport, they certainly will not forget the subscription boxes when next they pay our old river a visit.—ANGLER.

SEA-FISH CULTURE.

FEW sea fishes have been hatched. Professor Baird, however, the grand head of fish-culture in America, has successfully treated the eggs of the codfish, and the fish planted in the harbour of Gloucester, Mass., have been taken about the wharves, where they were never seen so far in shore before. His assistants, Messrs. Earll and McDonald, had Spanish macketel hatched in the Chesapeake Bay last year and discovered their breeding grounds. The sea bass was hatched in 1874, at Noank, Conn., under the superintendence of Mr. Mather, and the fish commissioners of New Jersey have been successful with the smelt. The eggs of the striped bass have been hatched in many instances, but the place where they spawn in numbers sufficient to make it profitable to seek them on their breeding grounds, has never yet been discovered. There are many problems in fish-culture yet unsolved and which need the close attention of men who are both practical fish-culturists and men of science. If the new hatchery at Coldspring be placed in charge of such a man there is hardly a limit to the benefit which might be derived from it, both directly and indirectly. It might be made a place of instruction in fish-culture, which has grown to be an important branch of our political economy, and a model institution within easy reach of New York city, where visiting scientists would find a laboratory with microscopes and other instruments for pursuing investigations into the life and history of our fluviatile and marine fauna at their hand.

The site of the new hatchery is eminently adapted for a fresh and salt water landing place. A large spring bursts from a broad hillside, at an elevation of twenty feet from the bay, which is only 200 yards distant at low tide. In addition to this the outlets of three good sized ponds traverse the property, all emptying into the bay.

The New York Fishery Commission, while it has done some excellent work in the stocking of our streams and lakes, has not taken a position in the line of advanced fish-culture, being rather conservative and wedded to methods of the past. It has done and is still doing grand work, but it should not confine its methods to the inland waters, as it has done, and should follow the lead of Professor Baird in his broad work of bringing the sea within the domain of fish-culture and replenishing our exhausted marine fisheries, as well as the trout brooks.

The importance of the establishment of the new hatchery cannot be over-estimated, and the work at hand is interesting to all. The first fish on the list to claim attention will be the smelt. It is taken in nets when seeking the spawning grounds, and the spawn and milt are taken in the usual manner. The spawn of the smelt is glutinous, adhering to the first object it touches after extrusion from the female. Its eggs are caught on twigs by the fish-culturist, and the twigs are then placed in a floating box which has perforations at each end to admit a circulation of water. Fine screens covering the perforations retain the young fish until ready for release in the stream or for transportation to other waters. Following smelt, another delicious fish, the Spanish mackerel is next in order. The eggs of this fish require a different treatment. They are non-adhesive and require to be suspended in currents of water the same as the eggs of the shad. The striped bass and the sheepshead will no doubt also receive attention this spring.—*N. Y. Herald.*

CLUB REPORTS.

ANCHOR AND HOPE ANGLING SOCIETY.

Several of our members were out on Sunday the 29th inst., and met with poor sport, Mr. A Shakel saving the club from a blank with 1 lb. 10 oz. of roach and dace from the Lea. One of the jack taken by Mr. A. Glass on the 22nd inst., weighing 10 lb. has been sent to Mr. Miller, 257, East Street, Walworth to be preserved. A peg-down match will take place on Sunday, February 5th, at St. Margaret's for three valuable prizes.—D. DAVIS, sec.

BERMONDSEY BROTHERS.

The members received a complimentary visit on Tuesday, the 31st ult. Eighteen clubs were represented. Mr. Ghurney was present, and advised the foundation of a south-eastern district visiting list for clubs on the south side of the Thames.—W. ALLEN.

BRIGHTON ANGLERS' ASSOCIATION.

After the long and continued floods the members have again wet their lines, but with little success, only one prize taken at the competition of the 21st, Mr. G. Saunders being the winner with jack. On last Sunday, Messrs. Ash, Batehelor, Hassell, Anscombe, and A. Cardy went to the Ouse, the latter gentleman taking five jack from there; Mr. Anscombe, three; and Mr. Cardy, two; Mr. Batchelor, one small chub; the other scoring a blank. The water is in fine condition. Wind S.E., shows for hard frost. Second competition on this day.—GROUNDBAIT.

Feb. 2.

BRUNSWICK PISCATORIAL SOCIETY.

Last Sunday, Mr. Keeble weighed-in roach; Mr. W. Booth, roach and perch; Mr. E. Booth, perch. Next Sunday a pegged-down match for several valuable prizes will take place, and on the following Sunday other series of prizes will be competed for.—ESOX LUCIUS.

BURDETT ANGLING SOCIETY.

The members of the above went to St. Margaret's to fish for a series of six prizes on Sunday last, five of which were taken by the following gentlemen:—Mr. Hastings, dace; Mr. Taylor, chub; Mr. Eaton, roach; Mr. Creffield, roach; Mr. B. Smith, roach. Two other members weighed-in, but the take altogether was small.—T. G. WALKER.

Feb. 2nd.

CAMBRIDGE FRIENDLY ANGLING SOCIETY.

The next return visit, West Central Association (No. 1 district), will take take place to the above society on Thursday next, the 9th inst., when we shall be very pleased to see all anglers and friends who can make it convenient to attend. Last night one of our most successful members had a really splendid show of roach, filling the two largest trays we have, the gross weight being over 30 lb.—WM. SUTTON. sec.

Feb. 2.

CITY OF LONDON ANGLING CLUB.

On the 22nd ult., Mr. Castell weighed-in 3 lb. 2 oz. roach and perch from Wraysbury; on the 29th, Mr. Plumstead, sen., 2 lb. roach from St. Margaret's, winning Mr. Hale's prize; and Mr. Castell, roach, dace and chub from Broxbourne.—CAS.

DUKE OF NORFOLK ANGLING SOCIETY.

The members of the above thriving club sat down to their annual dinner on Monday evening, the chair being taken by Mr. Adeane, faced by Mr. Selman. The worthy host, Mr. Brady, placed a capital dinner on the table, which was thoroughly enjoyed, and a most delightful evening spent. After the usual toasts, success to the Fishing Gazttte was proposed, and after some excellent remarks from Mr. Barnet, fishing tackle maker, of Chapel Street, it was decided that it be regularly supplied to the club. Mr. Lallam showed a nice barbel 2 lb. 14 oz. from Maidenhead on the 22nd inst.—H. Adeane.

Feb. 3

EUSTONIANS.

The next return visit will be held on Monday, February 13.—R. Neall, sec.

Feb. 2.

GOOD INTENT.

There was a fair show of fish on Sunday last, brought in by Messrs. Maybury, Donovan and Philpott, who had some good class roach. Mr. Thos. Bates brought in jack. Mr. H. Brookwell had some good perch. On Tuesday Mr. Edward Sanders brought in two handsome tench weighing 7 lb., and five perch, one weighing 3 lb., one ditto 2 lb. 3 oz., the next 1 lb. 12 oz., one ditto 1 lb., half the other 1¼ lb., they are all to be preserved and to be in one case. The annual supper of this club takes place on the 14th inst., at our club house; chairman, Mr. H. J. Tibbatts; vice, Mr. H. Brookwell.—R. Murphy.

GREAT NORTHERN BROTHERS' ANGLING SOCIETY.

We had a very fine show of fish on Sunday last. Mr. Stammer, three pretty jack from the Welsh Harp, 9 lb. 8 oz.; Mr. Hutchings, 2 lb. 2 oz. roach, from the Colne Mr. J. Watling, 10 lb. 14 oz., from the Thames, including a barbel, 4 lb. 5½ oz., taken on a tight line; Mr. J. A. Fitch, jack, 2 lb. 6 oz.; Mr. Armstrong, 2lb. roach. Thames; Messrs. Warner, Kirk, and Parrett, roach, from Grand Junction Canal; Mr. Ivher, one chub, 1 lb. 9 oz.; Mr. Theobald, chub and roach from the Wey; one chub, 3 lb. 5 oz., taken on a single hair line.—J. A. Fitch, jun., sec.

Jan. 31.

GRESHAM ANGLING SOCIETY.

The meeting of this society on Thursday evening was largely attended—Mr. Edwin Frost in the chair. The hon. secretary announced that the committee had made arrangements to hold the annual banquet on Wednesday, March 22, at the Holborn Restaurant (Prince's Salon). Next Thursday the society will have an exceptionally interesting evening, the Rev. H. Cummings, of Dartford, having promised to describe his system of trout breeding, after which there will be a selection of music by members and friends. The Fishing Gazette float, and sundry novelties from Mr. Gee, were shown to the society, and the usual reports as to condition of rivers were read.

HAMMERSMITH UNITED.

On the 19th, roach and dace by Messrs. Mackness and Alebridge; 20th, jack and chub by Mr. Hobden; 22nd, chub, dace and roach by Mr. Pitts, Mr. Penny, one jack, 4¼ lb.; from Black Day Water, perch and roach by Mr. Arnold. Last Thursday we had a grand show of chub from the Thames, taken by Messrs. Geen and Hobden, gross weight 54 lb. On Sunday, Mr. Penny had two jack weighing together 6 lb. 10½ oz., and Mr. Lewis, fishing between Putney and Kew Bridge, roach and dace.—Hammersmith Argus.

On the 26th we had our trays pretty well filled, Mr. Bachus having a good show of roach and dace from Richmond, Messrs. Geen and Hobden some nice chub from Eynsham weighing 54 lb., Messrs. Robert Dean and Hitchcock also had some roach and perch from Wraysbury. On Sunday Messrs. Penny and Rackstraw succeeded in landing some jack from private water. On the 26th ult., Mr. Forbes of the Coleherul Hotel, West Brompton, fishing with Shepherd at Pangbourne caught upwards of 50 lb. of chub.—Vortex.

THE JUNIOR PISCATORIAL SOCIETY.

The first annual supper of the above club takes place on Tuesday next at the club house. Since my last report the fish have not been on very much. Messrs. Woodman and Palmer caught jack, 16 lb. 8 oz.; Mr. A. Hubbard, at Shepperton, four jack, 15 lb.; Mr. Palmer, at Newbury, two perch, 1 lb. 12 oz.; Mr. Woodman, at Newbury, four jack, 8 lb. 11 oz.—A. H. Bisley.

LARKHALL ANGLING SOCIETY.

The competition for jack took place on Wednesday, Jan. 25, there being altogether seven competitors. Most of them went to Weybridge, where they found the waters in fine condition, and thought to have a good day's sport, but the weather was so foggy that they found difficulty in seeing the floats. Mr. G. Watkins managed to win the prize after a hard tussle with a jack, 5½ lb., none of the other members succeeded in getting a run.—Veritas.

LITTLE INDEPENDENT ANGLING SOCIETY.

Our members that were out on Sunday had excellent sport, producing, on their arrival home, a most splendid show of fish of all kinds, which well filled our trays, a wonderful difference to the previous Sunday, and although they are but little anglers they managed to catch big fish. The contest for Mr. Brown's prizes, of which we gave a report last week, is now at an end. Mr. Humphreys managing to win the first prize, the suit of clothes, rather easily in the last day's outing, killing a splendid brace of chub, about 6 lb., 1 jack and some perch. Mr. Letch the second, the pair of water-tight boots, and Mr. Blenham the third, the bottle of brandy; some other members were very close up. Mr. Letch, by winning Mr. Brown's second prize, also takes a handsome workbox, given by Mr. Humphreys, and Mr. Blenham a set of vases, given by the same gentleman. - This contest has been very exciting to our members, and the prizes won are all worth having.—H. Moore, sec.

Feb. 2.

NORTH-WESTERN ANGLING CLUB.

The shows of the above are gradually improving since the rivers have been in anything like condition. During the past week Mr. Bonvoisin had three nice jack from the Thames, taken paternostering. Mr. Isaac had one which turned the scale of 4 lb., taken in the same manner. Mr. Harding, from Pangbourne, 5 lb. nice roach, Mr. Marshall 4 lb. ditto. Messrs. Weaver, Billings, Turner, Mott, Gunsley, Holmes, Stead, and Hillier also had fish consisting of roach, dace, and chub.—F. Hill, sec.

THE ORIGINAL ALEXANDRA SOCIETY OF ANGLERS.

We had a very good show of fish on Sunday last. Mr. H. Hussey headed the list with roach from the Roden; Mr. Morton, jack from the Colne; Mr. C. Hewitt, roach from the Lea; Mr. W. High, roach from the Lea; Mr. Blackbridge, roach from the Lea. There was a mistake in last week's Gazette in reference to Mr. C. Hewitt's roach; it should have read, "the largest fish, 1 lb. 5 oz.," which was sent to Mr. Brock, of the Stepney Angling Society, to be put up.—E. Dymond, sec.

ORIGINAL CLERKENWELL PISCATORIAL SOCIETY.

The major portion of the members fished a peg-down match on Sunday last at Burnt Mill, for three prizes, and, after a well-contested affair, Mr. H. Marles took first honours, Mr. W. Gorsuch, sen., second, and Mr. Neagus third, the takes being very small. Several of the other members were out, and met with fair success, including Mr. Obbard with roach and bream, one of the latter weighing 3½ lb. Mr. T. W. Lucy had also a small jack scaling 4¼ lb. On Monday next, February 6th, a special meeting will be held to take into consideration the resolutions passed at the association meetings on January 18th and 25th.—T. W. Lucy.

PECKHAM BROTHERS ANGLING SOCIETY.

The shows of fish have been very small lately, J. Stidolph, weighed-in 3 lb. of roach from the Colne, and W. Mathews, two jack from the Lea, the other members doing nothing. The benefit for T. Woods was a success, and a very pleasant evening was spent. Among those gentlemen who contributed to the harmony we noticed Messrs. Duke, Gendle, Fell, Hall, Fryer, Stidolph, Reed, Comerford, Page and Carter. The handiwork of Mr. Williams on the trays of the above club still form a a centre of attraction to visitors at the Prince Albert. --W. H. Page, hon. sec.

PISCATORIAL SOCIETY.

There was a goodly attendance of members at the club room, Ashley's Hotel, Covent Garden, on Monday last presided over by Mr. W. B. Adlington. The following fish were weighed-in and with one exception from the Thames. Mr. Robinson, one jack 4 lb. 12 oz. and 6 lb. 9 oz. of perch; Mr. J. Ross Faulkner, five chub weighing 9 lb. 5½ oz., the largest 4 lb. 11 oz.; Mr. MaLachlan, two chub weighing 4 lb. 1 oz. and a perch of 14 oz.; Mr. H. B. Brown, 4 lb. 6½ oz. of chub and two tench 3 lb. 11½ oz.; and Mr. Foreman, two chub 3 lb. 9½ oz. and four perch 2 lb. 11 oz. There is a good demand for tickets for the annual dinner on the 15th of February and some of the stewards have already filled up their tables.

PRINCESS OF WALES ANGLING SOCIETY.

On the 29th ult., our members had their pleasure in competing for several prizes, and altough the weather was so unpropitious, they were rewarded for the brave manner in which "stuck it." Mr. Glaister, with a fine show of roach, won the first prize, a handsome cup (presented by Mr. Bubb of the Waltonians), and two money prizes, one for the largest roach. Mr. Porter won the second prize with a nice show of dace and roach, one dace weighing 8½ oz. Mr. Allport won the third prize with a fine show of perch. Messrs. C. Severn, H. Robson and E. Percy also weighed-in fine shows of roach and perch. There are yet two prizes to be fished for, and those gentlemen who were not fortunate enough to win one on the 29th must think of the old motto: *ne cede malis*; and try and win one on the next occasion.—F. Robson, sec.

QUEEN'S ANGLING SOCIETY.

Not much done on Sunday last, and very few members were out. Mr. Walford, 4 lb. 2½ oz.; Mr. Cotsford, 2 lb. 4½ oz.; Mr. Morgan, 1 lb. 2 oz.; Mr. Pratt, 15 oz., all from Harefield. Had a better show on the Sunday previous, but neglected to post the report till too late for insertion.—H. Musgrove.

Feb. 1.

RICHMOND PISCATORIAL SOCIETY.

The winter dinner of the above society took place at the Station Hotel, Richmond, on Thursday evening, Major Bull occupied the chair, and Mr. A. J. Little and Mr. H. Dickenson. A report of the dinner will appear in the Fishing Gazette next week.

WALTONIANS.

On the 29th ult., Fortune was rather uneven in her favours, Mr. Phillips had chub 18 lb. 10 oz. roach, 6 lb. 1½ lb.: Mr. Malcom, a grand show of roach from Pangbourne, 24 lb.; Mr. Roland, roach and one dace, 6 lb. 5¾ oz.; Messrs. Togwell, Good, jun., Greenfield, Morris, and your humble servant, weighed-in fish.—A. J. Marriott.

Jan. 31.

WEST LONDON ANGLING CLUB.

The members of this club have been successful in taking the following jack from the river Ouse, viz:—January 2, Mr. Barnard, one specimen pike, 10 lb. 3½ oz.; Mr. M. J. Butler, 3 jack 7 lb. 1 oz.; January 29, Mr. W. H. Tremaine, one specimen pike, 21 lb.; Mr. M. J. Butler, 5 jack, 10 lb. 4 oz.—R.C. Stock, hon. sec.

(THE DEVONSHIRE RIVERS.)

FISHING TACKLE, &c.

DEVONSHIRE FLIES (GOOD in ANY STREAM), 1s. 6d. per dozen. Flies made to pattern. A large stock of Rods and Tackle of all kinds. Some choice SPLIT CANE RODS by "Copham;" bargains. The Devon and other artificial Baits, Reels, Lines, Gut Casting Lines, Fly Books, Wading Stockings and Trousers, Baskets, and every other requisite. THE THAMES RIGHTS DEFENCE ASSOCIATION.

S the Thames to become a preserve in the hands of a few wealthy landowners, or is it to be what it ostensibly has been om time immemorial, a free river? This question is one of the ost important now before the anglers of the metropolis and the wns and villages on the banks of our national river. The orts now being made to assert the rights of anglers must end in failure unless they are more warmly and generally supported. Power, money and influence are at the command of our opponents, and unless we can employ similar weapons there can be but one end to the struggle—disastrous defeat for us.

We hold it to be the duty of every angler who fishes in the Thames to come forward and help to the utmost of his power, to subscribe to the funds of the Defence Association, and to use his influence in inducing others to help. To show we are not preaching what we do not practise, we mention that we have already given five pounds towards the fund, and shall hope to give more. If the ten thousand anglers of the London clubs would each give as much as he can afford, the hands of the Committee of Defence would be so strengthened that immediate action could be taken. Unfounded claims to stretches of water now closed to anglers would be challenged, and, if necessary, contested. At present, in consequence of lack of funds, the chief result of the establishment of the T.R.D.A. has been to put riparian owners on the alert, and it is whispered that they talk of concerted action in defence of their presumed rights. The motto of the society is "Defence, not Defiance"; we do not wish to attack those who can prove unquestionable right to preserve certain waters; and we believe there are such on the Thames. On the other hand, it is perfectly certain that anglers are now warned off certain stretches of the river where they have an undoubted right to fish. Not only is this the case, but the evil is growing; every successful assertion of riparian rights is followed by another, and it is indeed high time for anglers to throw off their apathy and make a strong and bold stand.

It is of insufficient encouragement that the T.R.D.A. has to complain. When Mr. Francis Francis started the movement, great promises were made, but we regret to say the makers of them do not, in many cases, fulfil them. The London angling clubs have not yet taken the matter in hand to any extent. We ask them if this is not a case in which they should lend their great aid willingly, liberally, and at once? If they are not concerned in the defence of angling rights, who, we ask, are?

There is not a club in London which does not contain Thames anglers; but we cannot think that any London angler, whether he fishes the Thames or not, will refuse his help to this association.

Every year the free water within reach of Londoners is being curtailed. We could mention many fine fisheries on the Lea which once were open to all at a small charge, but which now are in the hands of a few; the rest will go in the same way—there is no help for it; they are all at the mercy of the first club which can afford to pay a little more than the owner is now getting. It is absurd to talk about selfishness; we blame no men for renting a fishery, we only blame the apathy of the London clubs, which permits fisheries being closed to them when they might have secured them for their own members. What is the advantage of association amongst London clubs if it lets outsiders do what *it* should do?

Happily the Thames is not open to legal encroachments of this kind; but the fact that they are legal elsewhere makes it all the more necessary to keep what we have of the Thames, and, if possible, get back what is ours by right.

THE WINDSOR AND ETON ANGLING PRESERVATION ASSOCIATION.

WILLIAM DOWNES was summoned on Monday, Feb. 6th, at the Beaconsfield Petty Sessions, for having attempted to take, on Sunday, Jan. 23, and taken on Sunday, Jan. 30, fish in an illegal manner. J. Gray, the bailiff of this association, caught him on both occasions; on the first, he was using a large landing net in Boveney ditch; on the second he had recently wired four small jack, which were found upon him. The charges were fully proved, and he was fined for each offence 18s., including costs, or fourteen days' imprisonment.

WAVERLEY ANGLING CLUB EDINBURGH.

THE annual dinner of the club took place a few evenings ago in the London Hotel, the president Mr. John Gillespie, in the chair. After the presentation of prizes value £15, to the successful winners of last year, the Rev. Dr. Taylor proposed the toast of the evening, "Success to the Club," the president replying. The secretary Mr. McDougal mentioned that the club was the largest in the city. It was agreed to give a prize of £10 to the International Fishing Exhibition, for any essay on the Natural History and Habits of the Freshwater Trout, with special reference to the institution of an annual close time in Scotland, and the expediency of adopting a rod license.

TO BE SOLD.—A reel and line (formerly in the possession of a Nobleman and celebrated Salmon fisher), upon which is a line of pure stallion twisted hair 62 yards in length; price two guineas.—Apply W.D., 17, Albion Gardens, Dalling Road, Hammersmith, W.

TABLE OF THE COMPARATIVE DEADLINESS OF ARTIFICIAL TROUT FLIES.

GROUP I.

	Seductivity.	Times used.	Numbers caught.	Months in which most were caught on one occasion, &c.
1 Light grey mallard wing; body, bright green peacock's harl; legs, orange or blood-red hackle	100	109	532	General
2 March brown ..	99	21	109	April; also later
3 Grey mallard wing; body, peacock's harl; legs, furnace hackle ..	97	12	54	October; gen.
4 Quill blue dun ..	96	8	47	July
5 Water-cricket ..	96	20	36	September and March, &c.
6 Double red and furnace palmers.	90	11	20	September
7 Ronald's whirling dun	88	72	307	June and after, to September
8 Broughton point ..	88	18	43	June
9 Orange-red hackle. Pennell's form .	87	50	239	From middle March to Aug.
10 Black palmer ..	87	149	426	General
11 Grouse hackle ..	87	19	73	September and April
12 Wings, double, partridge and grey; legs, black transparent hackle ..	86	18	29	September
13 Light grey mallard wing; body, ostrich harl; legs, black hackle	84	7	56	August, March, &c.
14 Francis	84	15	35	October and September
15 Orange blue dun ..	83	14	70	From April
16 Blue dun	82	55	262	April; gen.
17 Dark mackerel ..	82	14	31	September from July
18 Hawthorn fly ..	81	41	133	July
19 Cowdung	80	15	90	May, &c,
20 Little pale blue dun	78	21	41	October
21 Cochybonddu ..	77	154	474	May; gen.
22 Landrail hackle ..	76	21	41	March, &c.

Average of seductivity (the test number) 78
Times used 1534
Numbers caught on the flies .. .. .. 4962 = 5·53 total.

In answer to your request, Mr. Editor, I enclose a second set of tables of flies, supplementary to the first. The results in the former list were averages taken from gross totals, irrespective of conditions. The numbers now given are the results of the reduction to one uniform standard of the proceeds of each "fly-cast's" fishing. Every cast, when in use, has been supposed to catch as many fish as there were flies on the collar, so that a bad day's sport is, as far as practical results are concerned, in every respect equivalent to a day yielding an abundance of fish. This is only fair, for whilst on a day of great deeds trout will take almost any fly presented, we find that the bad occasions are most probably the better periods for testing the qualities of flies. The columns, however, which are given in these second tables, are only the results of the system of averaging just named, which system represented each fly as doing its duty if catching one fish. The representative number of any fly when found to be above one, denoted good work; whilst figures less than unity pointed to inferiority. The labour in this part of the work was indeed simply immense, for as there were 4962 fish caught by a similar number of flies, so there was at first a number of vulgar fractions corresponding to the total of the figures in the second column. These in the case of each fly had to be reduced to decimals, then added up, and finally divided by the number of occasions on which the lure, the subject of attention, had been used; the result being one (unity) if the fly had just done the work required. After the 99 flies had thus been treated, the quantity to two places of decimals, representing the best fly of the number, and the one which had caught by far the most fish, was taken as the standard of percentage merit. This fly, my own favourite pattern of the grey mallard, had been found to have a personal value of 1·24, which quantity was then considered to be equivalent to 100; after which all ther lures were reduced to the same comparative standard. hus, Mr. Editor, at your own particular request, I have eliminated ll fractions from my results, giving only one decimal, so that the ork may be understood as having a certain substantial basis.

And now, on returning to the subject of the tables themselves, must state my reasons for the division into four groups which ere appear. Group I. consists of flies which have, at least, een used more than ten times; or, if not, have caught one-twelfth f the number of fish taken by the standard fly.

Group II. consists of good flies, all above the standard, which, owever, except in the case of the red ant, do not conform to the equirements for entry in the preceding division. The red ant is case of exceedingly high merit, but one which it is believed ould have been much lower had the record in an old part of the iary been not defective on two occasions, giving in these isolated nstances only the successful fly of the cast, whilst omitting the ed ant and other flies that had not caught fish. All the flies in his division are wholly exceptional cases, as being used on only a imited number of very propitious occasions, and each, with the mission of the single instance named, though not used on ten lays, had been brought into requisition five times or more, at east.

The third group consists of flies employed more than once, but ot on ten occasions, which do not attain the standard; or of those hich, if exceeding that amount, have not been employed five times o as to qualify them for the second group.

The last division is formed of flies used only once, and the uncommonly high figures of some of these is owing to the fish having ll been caught by one fly. The column of months simply indicates he periods in which my diary shows that I have personally been most successful with flies opposite which the name of any month is placed. If more than one month is named, that which is first is the period in which the greatest number of fish were taken, by the fly indicated, on one occasion. The abbreviation "gen." implies deadly at all seasons. I express no opinion on the results of practical ly-fishing. The tables are for the readers of the FISHING GAZETTE to compare with the tables of their own memories, so as to ascertain if, having tried conclusions with trout, these conclusions are he same as my own.

ROBERT BALDERSTON.

NORTH DEVON NOTES.

ONE of the most provoking things that can happen to a tradesman is to have people continually coming into his shop and taking him away from his work to ask questions, and, for a stranger, it is almost (when merely to gain information and not to benefit the tradesmen) an impudent thing to do. I remember being told by a fishing-tackle maker in Devon, it is the more provoking, because, he says, they ask all the information they can with the hope of getting their fishing for nothing; and the fact was crowned when he told me, after getting all information that was possible, the Cockneys have the impudence to produce their tackle, &c., and ask to be shown which fly, &c., would do, as they had had a new outfit before leaving town and did not know which to use, and then coolly add, if I want anything I shall know where to call; he added, ninety-nine times out of one hundred they never come back. I was told also that one gentleman had done all this, and the informer told the gentleman he had fishing to let, and he had the impudence to go and fish the water without thinking of thanking him, much less paying for the ticket. After this, I do not wonder when gentlemen go into a strange town that all information is withheld, but when I go into a town I make it my business when entering a tackle shop first to buy and then ask for correct information and I can get it. So some of my readers will now know how it is they are treated coolly when seeking a day's fishing, especially in Devon. I have fished the rapid streams of Devon many a season, and am therefore able to give my experience of the northern part, where for many years I have settled. The capital of North Devon is Barnstaple, the putting-up place for the district; trains run conveniently through the district and close to the rivers, where at any time a decent day's fishing can be had. The salmon rivers are the Taw and a branch stream called the Mole, with the Torridge at Torrington ten miles away by rail. There are many trout streams come-at-able, viz., the Bray, nine miles; the Ockman, running into the Torridge; the Higher Mole, the Higher Taw, the Yeo, and many streams which are free by asking for. All are fished by the fly, and, although the minnow, for trout only, is forbidden, yet many a basket is filled by means of it. Salmon and peal fishing is only practised by means of the minnow; and with a greenheart rod of 10 feet, an assortment of minnows all bright, a salmon fisherman is rigged, but in his pocket must be a 10s. 6d. licence, or the water bailiffs may require his name and address, with the penalty of £1, or seven days in service of her Majesty, with low diet. I have long detested the minnow-fishing, because it is dreadfully provoking being out for many hours without sport, and after toiling on up stream fishing (which is the most successful in rapid streams) to find a brother-Zebedee in the water scraping his minnow one side to the other, and, although a fly-fisher, I have generally, taking the average, had more and larger fish to show. Often, when meeting with such a one, on comparing fish, I have had the most fish, although I use but three or four flies from February to September; silver blue, varying in size for high or low water; cow-hair varied in colour, light and darker, with the never-failing blue upright, which Devonshire is noted for, especially as the ginger-blue hackle from the old-fashioned game bird is still to be had here and there. My rod is an 8 feet greenheart, a medium size waterproof line with 1½ yards of gut casting line—in all my experience I never wanted a longer rod, except for peal or salmon, which I do not care much for. The rivers of North Devon are generally very low after May until September, when a noted pack of otter hounds meet in easy distances and rare good sport is always had, and a thorough knowledge of the streams is obtainable. Many a gentleman comes down to Devon and, running with the hounds, has made the acquaintance of Mr. Connop, who has generally, with his liberal heart, given a day or two's peal fishing on the Mole—he being owner of the best portion of that river. A day is well spent upon any of the streams which North Devon is noted for, away in the river Bray running between miles of wood with hills on both sides which shelters the wild stags of Exmoor, many an hour have I gazed at the deer in their unfettered state feeding by the heath or lying between the ferns with only the water's trickling noise to be heard. Here on these waters fished Cutcliffe who wrote his book on "Rapid Stream Fishing," the best book of the kind ever written, and containing the most reliable information; and, although some years have passed since then, the fishing in the streams has not improved. Twenty years ago ten or twelve dozen fish was the average number for a day's sport, fish running from 3 oz. to 6 oz. (the fish in Devon do not run large, but on another stream, which I leave for another day, fish from 4 oz. to 10 oz. may be had). The neighbourhood in which the Bray is situated has been noted for the breed of "fishing colour" fowls, although now very scarce. I now must leave off and promise my readers a continuation at an early date, when I have wet my line, and will give my experience day by day, stream by stream. I will not terminate my remarks without adding that should any one require any of the feathers—"reds" and black reds—which Devon is noted for, through the editor, I could get any quantities of hackles, but I fear the blues are all bought by the tackle shops.

RUSTY GAME.

[We can quite endorse "Rusty Game's" remarks on the impertinence of some town anglers, who seem to think the country tacklemaker only exists to furnish information to them gratis. Our own practice invariably is to give a fair order for flies, which generally prove the best to use, and then ask for what information we may want.—ED.]

CLUB AND OTHER JOTTINGS.

By L. B.

THE monthly meeting of the United London Anglers' Central Committee took place at the Bald-faced Stag, Worship Square, Finsbury, on Monday evening last, Mr. S. Morgan presiding. There was a very good muster of delegates and Lea bailiffs, including Messrs. Philips, High, Bagley and our friend Mr. George Oram, who, though not quite his old self yet, is nevertheless making rapid strides towards complete recovery. From the West Central Association were Messrs. Beckett, Field and Bonvoisin.

After the reading and confirming of the minutes of the previous evening, the secretary, Mr. R. Ghurney, explained that in accordance with the circular he held in his hand, the most important item of business down for discussion that evening were the recommendations of the joint committee of the three associations in the matters of coarse-fish breeding and the renting waters. The speaker said these were matters of such importance, and upon which it was desirable there should be, if possible, unanimity of opinion, that having in view the fact that there had not been sufficient time given the members of angling societies to discuss these questions, he would strongly recommend that the discussion should stand over till the next monthly meeting night in March, every society on the East Central Committee's books meanwhile to receive a circular containing particulars of joint committee's recommendations. This very excellent and practical resolution was unanimously adopted. A somewhat desultory but, so far as I could follow it, very interesting conversation then took place, in which Messrs. Becket, Field, Murphy, Manning, Philips Ghurney, Bonvoisin and others, as members of the joint committees, gave several important explanations of the aims and anticipated results of the printed recommendations, all of which gave great satisfaction and cleared away a number of misapprehensions. The sum of £6 (£2 each) was then voted as a reward to the three police constables who recently captured a huge net in the neighbourhood of Clapton, well known by the significant name of the "Clapton Monster," convictions being obtained against the persons using it, and the magistrate making an order for the destruction of the "sweet little thing," *vide* recent number of the FISHING GAZETTE. Afterwards attention was called by bailiff Phillips to the destruction of small fish in one of the Lea ditches by a barge discharging what I understood to be "blue billy." Mr. P. explained that the dead fish, as witness the sample he had brought up, consisted entirely of roach, dace, bleak and a minnow or two, but not a single "tidler." Ah me! the same old tale, 'tis the good that die, the good-for-nothing that live and thrive. Never mind, Phil, let's hope for better things when the amended Rivers Pollution Bill is passed, and, if anglers as a body, can be of any use in getting it pushed on they should certainly not hang fire.

As far as sewage is concerned, recent experiments seem to clearly prove that its purification can be made fairly remunerative, and the following cutting from the pages of a contemporary on Saturday last, may prove interesting :—

" THE PURIFICATION OF THE THAMES.

(Telegram to the *Echo.*)

"This morning a deputation from Plumstead, consisting of the Rev. John M'Callister, Mr. Edmund Kimber, and an engineer, inspected the sewage works at Aylesbury, and took samples of the sewage, both purified and unpurified, the purified being perfectly clear water. Fishes were swimming in one of the conduits of purified sewage, which, as it entered the brook, was seen to be much clearer than the water of the brook itself. The manure obtained from the works sells for £3 10s. per ton, and the subsidy given by the town to the works is £200 a year. The secretary of the works expressed himself perfectly confident that in future they could work more economically and profitably from the experience of the past, and that the purification of the Thames was now well within their grasp."

Some routine business was then transacted, and the roll called, a vote of thanks to the chairman terminating the proceedings.

I was glad to notice the other evening that among the prizes at a certain club for competition, during the present half-year was a pretty little framed oil painting by our old friend, Mr. J. Greville Fennell. Strangely constituted indeed must the man be who does not feel greater and purer pleasure in winning a pretty lasting trophy of this kind—one that will brighten the home for many a long year, and please the missus, to boot—than in securing a couple of bottles of "cream of the valley" gin, or a box of British "smokes."

This (Friday) evening, the monthly meeting of the Central Association takes place at the Star and Garter, St. Martin's Lane, W.C.

Anglers desirous of having some good jack-fishing, might go farther and fare worse than by paying the Ouse, about Huntingdon and Hartford, a visit.

The next monthly meeting of the West Central Association of London and Provincial Angling Societies, takes place on Friday evening, 17th inst. Special notices have been issued to all members (of which I forward copy), and Mr. Hoole writes me he anticipates a big muster.

The Good Intent Angling Society's annual supper takes place on Tuesday evening, 14th February, not on the 13th, as announced in my jotting last week. Mr. H. J. Tibbatts in the chair; vice, Mr. Harry Brookwell. Among the invited guests who have promised to be present are Messrs. J. P. Wheeldon, *Bell's Life*; Crumplen, hon. sec., Gresham Angling Society; and L. Bonvoisin, chairman, West Central Association.

Mr. Hoole, the secretary of the West Central Association, has been confined to his bed for over a week. He has been ordered a week or ten days' rest in the country, and purposes spending it with Mr. and Mrs. Geen, at Chertsey.

When I saw Mr. Geen last week he was contemplating—nay, making—active preparation for a day at a certain good jack-water, rods being looked up, orders for a nice little lot of big lively dace given, and Mrs. Geen taking directions for the manufacture of a huge haversack Say, P. G., did it come off; or is the capture of that brace of 20-pounders you spoke about as "very probable" still in store, with those other good things, all of which are said to come to those who can afford to wait?

From Chertsey, Haslett, the fisherman, writes me to-day (Wednesday): —"I was out on Saturday with a gentleman. Got two jack and lost four. At the old place they are wide-awake. We floated a nice dace several times by the place, but it was no go. Then we tried a fine gut paternoster, and I told the gentleman that by the time he had lit his pipe he would have a bite, but he had not time, for in a second away went Master Jack with the hook. We tried again, with the same result. Then we got two and left the swim till dusk, when we lost two more hooks with fish. I cannot help thinking the gentleman made a great mistake leaving off too soon. One hour just at dusk is, in my opinion, equal to several during the earlier part of the day. Another time with Mr. Allen, four jack and one perch."

THE WEST CENTRAL ASSOCIATION OF LONDON AND PROVINCIAL ANGLING SOCIETIES.

BY A DELEGATE WHO HAS NEVER MISSED A MEETING.

IN 1877, a few gentlemen, members of the Hammersmith United Angling Society, met a few of the Silver Trout Angling Society to discuss the best means of forming an association to protect the interests of the London anglers; the result of this meeting was the birth of the above powerful association. To one who has watched its rapid progress, as I have done, it must appear wonderful how such grand results have been obtained, even with such hardworking, indefatigable, never-to-be-denied men at the helm as Messrs. Geen, Hoole, Bonvoisin, Becket, Murphy, Welch, Hatfield, &c.

Let us just take a retrospective glance. First they gained concessions upon the Great Western Railway, then followed in rapid succession concessions upon the London and South-Western, Midland, Great Eastern, London and North-Western, and Great Northern Railways Secondly, they took the lead, in conjunction with the United London Central Committee and anglers of Sheffield, in getting the "Mundella" Freshwater Fish Protection Act passed. Thirdly, they gained reductions to members holding the Association's card of membership in price of fishing tackle from certain manufacturers, also in mackintoshes, Messrs. Woolgar and Co. allowing them a discount of 25 per cent.; and many more are the privileges enjoyed by the London anglers for which they have to thank this association. Look at the work they have in hand now, going to follow out our worthy editor's idea in respect to the propagation of coarse fish, but, not content to attempt this alone, they are going to rent water for the exclusive use of the London anglers, and also provincials, if enrolled with them. I say, "going to" do so, because I am convinced they will succeed. They have the right men in the right place; and now, having the assistance of the other two associations, success is doubly sure. I can only say, put as much faith as possible in your association, and be sure they will do all they can to deserve your trust in the future as they have done in the past. In April next this association will be five years old. When it was inaugurated, in April 1877, there were fifty-two angling societies in London and suburbs, now there are nearly 150, out of which number eighty-six have enrolled themselves upon its books.

It has often struck me, while listening to a discussion, that we must have a lot of clubs who do not care one jot how the concessions are obtained for them, provided they reap the benefit when gained. Two delegates are allowed to attend from each society enrolled, and take part in all the business, but, strange to say, there are seldom more than forty out of eighty-six societies represented; and when the secretary sends out a special appeal for attendance it is seldom responded to by more than forty-five or forty-six. I have noticed that certain well-to-do clubs are never represented more than once or twice in a year, and I have thought how very selfish to let these delegates, the majority of whom are hard-working, respectable tradesmen and mechanics, come night after night and work for the general good, without receiving a helping hand from those who can so much better afford the time and the attendant expenses. I am pleased and proud to say, we have lately enrolled a society which is a credit to the whole fraternity; they have only been formed a few months and have now 200 members, all well-to-do in this world's goods, but true good-hearted anglers who are always to the front in assisting in the work for the general good. I am always delighted to see a gentleman (I am beginning to look upon him as an old friend) representing that society at our meetings, enter the room; it tells me that all our aristocratic clubs do not desert us to fight our own and their battles too; I am cheered when I can shake hands with Mr. T. Crumplen and say, Thanks for your attendance. Come, come, ye clubs of the first water, wake up, and let your poorer brethren see that you are willing to take a share in the work as well as a good slice of the pleasure.

It appears to me impossible, let the club be ever so small, that a gentleman cannot be found to represent his society once a month, surely one out of the number will volunteer if requested. It is no good acting the high and mighty; we have a lot of work to do before we can school some anglers to do the proper thing, and the sooner we have the assistance of every society the better the chance of our success. We can soon weed out the black sheep, supposing there are any, and I expect, amongst our thousands, we are not without a few.

Let me beg of those societies, who are so lukewarm with regard to the welfare of their poorer brothers, to come to the front and help their associations in the good work of providing cheap and innocent sport, which keeps them from public-houses and betting dens.

ROACH.

READING AND DISTRICT ANGLING ASSOCIATION.

ANNUAL MEETING AND DINNER.

THE annual meeting of this useful and prosperous association was held on Monday afternoon, at the headquarters of the society, the Great Western Hotel, Reading, Mr. James Simonds (president) occupying the chair.

The Hon. Sec. (Mr. Arthur C. Butler), having read the notice convening the meeting, and the minutes of the last annual meeting,

Mr. Walford Ridley proposed that the president, hon. treasurer, committee, and hon. secretary be re-elected, with thanks for their past services; and the motion, having been seconded by Mr. James Bedding (Pangbourne), was carried unanimously.

On the motion of Mr. Goodhind, seconded by Mr. Creed, Mr. Walford Ridley was added to the committee.

The report and cash account for the past year were then read by the hon. sec.

THE DINNER.

The annual dinner followed, at the Great Western Hotel, and was a great success. Over forty gentlemen sat down to a capital dinner, which was admirably served under the direction of the proprietor, Mr. W. G. Flanagan.

The President (Mr. J. Simonds) took the chair, and Mr. Henry Creed (one of the vice-presidents) the vice-chair.

Among the company were the Mayor of Reading (Mr. J. Messer), Major Simpson Carson (Marlow Association), Messrs. C. P. Wheatstone (president of the Stanley Anglers), R. L. Pugh (of the Friendly Anglers), J. P. Wheeldon (*Bell's Life*), J. Spreckley, and A. C. Butler (hon. sec.).

The President gave the toast of "The present and future Sovereign and other members of the Royal Family," after which the Vice-Chairman proposed "The Army, Navy and Auxiliary Forces," which Major Carson suitably acknowledged.

Mr. Goodhind next submitted "The Mayor and Corporation of Reading," and expressed a hope that the important works which they had before them in the present year would not result in the levying of another threepenny rate. (Hear, hear.)

The Mayor responded in a pleasant speech.

The President, in proposing the toast of the evening, "Success to he Reading and District Angling Association," observed that they ere told by archæologists that in the days when Reading Abbey was the zenith of its importance, the Kennet was well stocked with fish, nd so many used to be caught, that fish ponds or reservoirs were ade, with which to stock them in readiness to meet the large demands pon the hospitality of the Abbey, occasioned by the frequent visits f Royalty and its trains. He feared they could not hope to get the out to tumble over one another in the Kennet and Thames in that ay again. (Laughter.) As the population of the town increased, in e same ratio had the fish decreased. Where they saw one rod ten r twelve years ago, they could see perhaps twenty now, and it was me that societies like their own were formed when they were. Hear, hear.) That association had two main objects—first, to com-el all anglers to fish in a sportsmanlike way; secondly, to preserve nd provide fish as a means for that sport. (Hear, hear.) They were oing their utmost to prevent undersized fish being taken. He had ot fished since he was young, but looking back through the mists, s it were, as it were, of many ages—(a laugh), he remembered that was then much easier to take small fish with a little hook than big sh with a large hook; hence they got a lot of little boys taking large umbers of small fish. They must also put a stop to setting of night nes, and by the experienced aid of their honorary solicitor they oped to find in time that river poaching would be given up. Having eferred to the transference of fish from the ditches, and the turning f older trout into the Thames—as alluded to in the report—Mr. imonds said he was averse to the practice of the association in illing otters, which he thought did not do much harm, but which he eared would soon be an extinct creature in our district. With refer-nce to a movement which he understood had been aiming to secure e right to take coarse fish all the year round, he believed their ssociation with others had done their best to resist it, and up to the resent had been successful. It was coarse fish which the poor ostly fished for, and it was well that there should be as many as ossible of this class of fish in the river. He concluded by remarking at the balance to the credit of the association was gradually declin-g, not because the number of members decreased, but because any did not pay their subscriptions.

Mr. A. C. Butler, whose name was associated with the toast, after xpressing his continued earnest interest as hon. secretary in behalf f the association, referred to the combined action of the four up-iver associations in regard to the artificial culture of Thames trout, emarking that they could almost see their way through the under-aking, in which case they hoped to be able to put into the Thames 000 lb. or 3000 lb. weight of Thames trout every year. (Applause). Having referred to the unanimity of the Thames Association in regard o suggested amendments of the Thames bye-laws, and expressed is opinion that they were not in a position at present to take any ction in the matter of coarse-fish culture, Mr. Butler said he re-retted as much as the president the necessity to destroy otters, bserving that as it was not possible to pursue the sport of hunting hem, there was no alternative but to get rid of them. They had illed eight this year, and forwarded three baby otters to the Zoo-gical Society for their collection.

Mr. Ferguson gave the toast of "The Visitors," and spoke of the reat interest which Major Carson (who with Mr. Wilson was coupled ith the toast) was taking in the important matter of trout culture.

Major Carson, in responding, urged the desirability of the angling ssociations of the Thames combining together for various purposes, specially for the breeding of trout. He also strongly desired to see similar society formed at Henley to join hands with Marlow at edmenham and with Reading at Shiplake, in which case the river ould be covered up to Goring. (Hear, hear.) Their societies had one much to stop illegal fishing, but he did not think they met with e encouragement they ought, not only from many gentlemen in their espective neighbourhoods, but also from anglers from London and lsewhere, for whom the association provided sport. (Hear, hear.) ith regard to their trout-breeding scheme, they had selected a esirable site, and he was willing to see that some difficulty which ad arisen as regards rent was rectified, though he hoped the members f the association would provide a sufficient fund to carry out the ecessary measures for the propagation of a very large number of out, which, when they reached a proper size, could be turned into eir waters. (Applause.) He hoped that on the Thames a spirit of utual forbearance would prevail, that on the one hand the riparian wners would not be too positive in asserting what they considered eir rights, whether legal or otherwise; and that on the other side, entlemen who went fishing and who were anxious for fair sport ould not take liberties, as by so doing they excited the hostilite of parian owners towards the associations, and thereby deprived them f support. (Applause.)

Mr. Wilson also responded.

Mr. F. Hurley proposed "The Press."

Mr. Wheeldon, one of the editors of *Bell's Life*, in acknowledging he compliment, said that, while hoping that riparian owners would eprive all anglers who abused a privilege of their rights, he would trongly urge the English public not to allow any riparian owner to ssert a right unless he could prove it to be just, for he believed that he claims of many riparian owners would not stand the test of legal nvestigation. (Hear, hear).

Mr. Walford Ridley gave the toast of "The Chairman," to which r. Simonds responded, and said that any member wishing to fish in piece of water over which he had a private right, he would be elcome to do so, provided he adhered to the rules of that asso-iation. (Applause.)

The health of "The Vice-Chairman," proposed by Mr. Jesse, con-luded the toast list.

During the evening some capital songs were sung.

Several gentlemen who had been invited were regretfully unable to attend, including Mr. Francis of the *Field*, and Mr. Marston of the Fishing Gazette.

PRIZES AT THE INTERNATIONAL FISHERIES EXHIBITION.

The committee of the International Fisheries Exhibition, to be held in Edinburgh, April, 1882, announce that special prizes will be awarded for essays as follows: On harbour accommodation for fishing boats on the east and north coasts of Scotland, pointing out the localities where harbours are most required, and distinguishing between natural coves or bays which may be converted into good harbours by artificial assistance, and places where the harbours must be entirely artificial, £25. On the various modes of fish-culture practised in the different countries of the world, £15. On the various methods of oyster culture, £15. On oyster culture in Scotland, including Orkney and Shetland, specifying the localities and the species or varieties of oysters most suitable, and discussing the effects of the laws at present in force, £20. On the legislation at present applicable to the salmon fisheries in Scotland, and the best means of improving it, £10. On the best means of increasing the supply of mussels for bait, indicating the most suitable localities for mussel-beds, £20. On the natural history of the herring, with special reference to its migrations, £10. On the various means of curing and preserving fish at home and abroad, £15. For the best description of the means used for curing and preserving the various kinds of fish caught on the coasts of Scotland, the Hebrides, and the Orkney and Shetland Islands, £15. On the pollution of rivers, indicating specially the kinds of pollution injurious to fish life, £20. On the salmon disease £10. On the migration of the salmonidæ, as affected by meteorological and other influences, £10. Should there be a mesh fixed by law for herring nets, and, if so, of what size; or should fishermen be at liberty to use any size of mesh they please? £5. On the best method of preserving fish alive for markets, £15. wn the artificial propagation of sea fishes suitable for food, £10. On the breeding and rearing of freshwater fish, £10. On the species of foreign fish most suitable for introduction into British rivers and waters, £15. On the utilisation of fish offal, £10. On the fish supply of great cities, with special reference to the best methods of packing and distribution and other means calculated to facilitate the delivery of the fish in good condition for market £20. On the herring-brand, £10. On the food of fishes, both in fresh and salt water, accompanied by illustrations and preparations, £15. On the natural history and habits of the fresh water trout, with special reference to the institution of an annual close time in Scotland, and the expediency of adopting a rod license, £10. On the migrations and spawning of sea-fish suitable for food, £10. On angling associations, with code of rules for their management, £10. On the relations existing between the annual migrations of sea birds and the migrations of fishes, £10. n the best m odes of preserving ice, £10.

Persons desiring to compete will obtain particulars on application to the acting secretary Mr. Henry Cook, W.S., Edinburgh. Special prizes will also be awarded for the following exhibits: Specimens of tinned fish of all kinds, £25. Specimens of dried, salted, and smoked fish of all kinds, £50. Models or plans of fishermen's dwellings, £10. Models and drawings of fish passes and ladders, £20. Model of the safest and handiest sailing fishing-boat—hull, spars, sails, and rigging, £20. Models and plans of piscicultural establishments, £10. Models and plans of fish-curing yards, £5. Models and plans of apparatus for transporting live fish long distances in safety. £10. Models and drawings of a handier and safer rig, for the boats now in use on the east coast of Scotland, than the lug sail, which requires to be dipped at every tack in beating to windward, £20. Specimens of models and plans of trawl nets, £10. Specimens or models and plans of bag, stake, and fly nets, £10. Collections of inland fishing tackle, £20. Fish hatching apparatus, full size, with appliances and implements, £25. Models or drawings illustrating the best system of rendering streams polluted by sewage and manufacturing refuse innocuous to fish life, £25. Model of a fishing trawler—sail or steam, £20. Eel trap for river not to interfere with other fisheries, £5. Apparatus for catching crabs and lobsters, £5. Systems or signalling at night for fishing fleets and vessels, £25. Model of machine, worked by hand or steam power, for taking in trawl, coble or herring nets, £15. Improved salmon net, cotton or hemp, for use with coble, £5. Improved herring net, £5. Models of whale boats, and of all kinds of apparatus and tackle used in the seal and whale fisheries, £20.

[At the Norwich Fisheries Exhibition prizes were, at our suggestion, given for essays on the Salmon Disease and on Angling Associations, we are glad to see our Scotch friends will also give prizes for essays on these subjects.—Ed.]

Pike and Carp in the Serpentine.—In 1796 a pike was taken in the Serpentine in a most curious manner. As a footman was walking by the side of the water early one morning, he saw something struggling in the weeds near the shore; thinking it was some one drowning, he rushed into the water and found it was an immense fish, nearly powerless. The man got beyond the fish and gradually lifted him nearer the shore, and at last threw him out. It proved to be a pike of more than 30 lb. in weight, which had been suffocated by attempting to swallow a carp of nearly 7 lb. in weight, which was stuck in his throat.

RIVER REPORTS.

MID-THAMES.

> " They say most men are moulded out of faults ;
> And, for the most, became much more the better
> For living a little bad."
>
> —Shekespeare.

The condition of the river at the present moment has been moulded out of recent faults, and is probably all the better for having been a great deal bad. The snow broth has disappeared, and as I write the water is simply perfection for roach, chub, perch and jack angling, so I need not pen any further encomiums so as to induce my brother piscators to at once take a breather on the " banks and braes " of bonny Thames, and strike while the iron, or, rather the water's hot. At Henley, during the past week, Mr. A. W. Johnson has had three jack going 11 lb., 8 lb. and 4 lb. respectively, and a fine chub taken spinning ; Mr. Towsey, one jack of 8 lb. and one of 4½ lb. ; Messrs. Foulger and Pitchey some good baskets of chub, with pith and brains as bait ; Mr. Day, jack from Marsh Pool, best scaling 7lb. ; Mr. A Smith, from near Bolney, three jack, largest 7½ lb. At Hambledon, Mr. Askew, in one day, five good jack, and another day, three jack. In the Hurley waters, Messrs. Frost and Christy, fishing with R. Plummer, jun., from the East Arms, on the 8th inst., had 30 lb. of chub, and on the 9th a few good chub and six small jack. At Marlow and Cookham nothing much has transpired, but at Maidenhead and Bray on Tuesday, Messrs. Thomas and Littlewood, with Plummer, jun., got a jack of 8 lb., and some decent roach and perch. Weather mild and pleasant, with breeze steadily N.W.—Marlow Buzz.

Thames (Goring).

Water in first-rate order for all-round fishing. Fishing two days in private water, 100 lb. of jack, largest 20 lb., also 20 lb. of good perch, largest perch, 3 lb.—John Rush.

Thames (Richmond).

The river is now in splendid order for fishing, and the dace are feeding well but the roach are not feeding at all kindly. The punts that have been out here have been getting from five to eight dozen fine dace each day; all the punts were out here on Sunday, and I think all their occupants went home with a good basket of fish; the bank anglers have not been doing much during the past week as the water is too low in the tide-way for them; on Sunday last I, with a gent, had a day's perch fishing but came home minus the perch but managed to get a well-fed jack of 3¾ lb. The sport of the past week is as follows: G. Howard, two days, 8½ dozen dace; C. Brown, two days, 19 lb. roach and dace; Job Brain, three days, 31 lb. roach and dace; H. Howard, two days, 11 dozen dace; H. Mansell, two days, 13 dozen dace; J. Bushnell, three days, 23 lb. dace, one jack, 3¾ lb.—John Bushnell.

Thames (Shepperton).

The water is in very good order for jack and perch fishing. Not very good prospects for fishing. W. House, fishing five days with a gentleman, caught one small perch; Mr. King, fishing four days, never touched a fish; Dr. Smith, fishing six weeks, caught one jack of 9 lb. ; A. Trodd, fishing with a gentleman on Saturday, caught three jack, largest 4 lb., next day one of 3 lb. The bank fishers have been doing better with the roach.—W. Rogerson.

Thames (Teddington).

The water is in good order for all-round fishing. Weather fine, wind south-west. Opposite the lock a little boy baited his hook with a worm and caught a jack of 5 lb. Mr. Keen caught a nice little jack about 3 lb. Mr. Bull, out fishing with Frank Femp, one 5 lb. and the other 4 lb. ; and Mr. Bull, out on Sunday, caught fifteen nice perch. Charles Baldwin, out on Sunday, caught three dozen of roach and dace. In the middle of January Mr. Edwards and his friend Rubin caught twenty nice jack in a week in the bream hole.—J. Baldwin.

Thames (Twickenham).

River in splendid condition; dace are now well on the feed. I had several punts out during the week. Mr. Johnson, of the R. P. S., has been out four days with Pert Hammerton, and have weighed-in at Richmond 80 lb. 4 oz. of fine dace.—A. Perrin.

Thames (Walton).

Water clear and in every respect in first-rate state for fishing, falling fast, and within 3 inches of summer level (last summer level). The weather has slightly changed to-day, but throughout the week has been cold and foggy and dull. The wind now has freshened from the east, and either rain or a continuation of dull weather is probable. With such variations it is really problematical as to prospects of fishing. Sport during the past week: February 1: No fishing. February 2: J. Stone, one bream, 4½ lb. ; J. Rosewell, seven jack, total weight 32 lb., largest 6 lb. (reported). February 3: J. Hone with Mr. Prim, one bream, 4 lb. ; one ditto, 3 lb. ; and three ditto, 2 lb. each. February 4: George Hone, with a gentleman, one jack, 1½ lb., put back again; Messrs. Pace and Luker, from bank, one and half dozen roach. February 5: Plenty of bank anglers, but no reports of takes; Messrs. Pace and Luker one and a half dozen roach from bank. February 6: No fishing. February 7: George Hone, with Mr. Mackriell, nine bream, total weight 25 lb. (four 4 pounders). February 8: No report.—Henry Edward Wood.

Thames (Windsor).

Water to-day is looking A 1, and considering the recent mildness of the eason one would think a great many anglers would avail themselves of it, but in this neighbourhood such is not the case. I have been prevented, for one, but hope before this water changes to manage a day. Perch, chub and jack ought to come well; a few of the latter have been had, a member of the Richmond Piscatorials had one from the old river going 11 lb. ; Mr. Brian, of the Jolly Miller, Eton, one of 5 lb. ; Mr. Way, of Windsor, three small ones, taken whilst paternostering for perch. Chub have been had, but as a rule small. Mr. Carey, of Windsor, had a nice bag on the 2nd inst., but nothing over 3½ lb. Messrs. Parsons and Way, of Windsor, on the 4th inst., out with James Gray, took about 16 lb. of roach, perch and jack. A barbel was taken on Wednesday by a customer of mine, which shows the mildness of the season—it was a small one, being only a little over 1 lb., but in good order. A pretty trout of 1½ lb. was taken last week with worm by a friend of mine whilst roach-fishing. The thanks of anglers are due this week to the Windsor and Eton Preservation Society, who have prosecuted one of our riverside celebrities, with the very satisfactory result that he is now enjoying a month's hard labour. The offences were committed on January 21 and 29; in the first case a net was used on the system well known about here as " poking " ; in the second case, the instrument used was the wire, with which he was caught red-handed, fish being in his possession bearing marks of its use. As the property on which this took place belongs to Mr. White, farmer, of Dorney, we have to thank him for his kindness in allowing the officers of the society to watch it and prosecute, as he will do all cases coming under his notice. Would that every other gentleman along the Thames would do the same. I was nearly omitting to mention by whom these captures were made: I need hardly say James Gray, the well-known fisherman here, was one, and his brother, Richard Gray, the other.—B. R. Bambridge.

Ancholme.

The water did not clear down quite so fast as we expected, consequently little has been done since my last report; but I hope to send a better account next week. On Saturday last, after reading your weekly reports, and finding that they had begun trout-fishing in the west, I could not resist the temptation to wet a line against the trout in the east, so I made up my mind to limit myself to half-a-dozen for the opening afternoon. The first I took was a *fontinalis* of two years old, and weighing quite ½ lb. I returned this to the water. I had no difficulty in securing the six, the largest of which weighed a little over 1 lb., and that in a beck where there were none six years ago. The March brown has not yet appeared, but the following flies are on the water: needle brown, early brown, little early brown, and gravel spinner. For ways of manufacture I refer the reader to my shilling manual on trout-fishing.—Thomas Ford.

Chichester.

Water is now in splendid condition both at the Canal and Selham. The result of a day on the Rother was but meagre. Mr. G. F. Salter, a brace of small jack and a brace of handsome perch; Mr. Young, a few good roach, and Mr. E. Wood, a small jack and a few roach,—fish evidently coming on towards the evening. A couple of enthusiasts, on their return, strolled down the canal, and, selecting a likely spot, were soon busy. Mr. Young, from midnight until 3 o'clock in the morning, taking 10¼ lb. of fish, one handsome carp of 4 lb. and a bream of 2¼ lb., with paste. Mr. G. F. Salter, on Saturday night, landed a couple of good bream, weighing together 4 lb. 5 oz. With a continuance of cold weather, pike will soon be on. Some good fish were heard in the early morning of Monday. Weather fine, wind westerly.

Eden, Carlisle.

The water is rather low and clear. The weather is very fine and mild for the time of the year. The season opened more successfully than it has done for the past thirty years. On the 2nd inst. the nets at Armathwaite got fifteen salmon. At Warwick twenty-four salmon were taken. At Rickerby they took ten salmon, and at Cargo, in Mr. Bone's water eleven salmon were taken. The rod-fishing also has been something extraordinary, a lad at Appleby having got three trout, and a gentleman at the same place got nine trout, weighing 3 lb. Mr. Silby Wetheral got four trout and one float whiting. At Carlisle, on the 4th inst., a youth got three trout. On the 2nd inst., Mr. J. B. Slater got a salmon about 8 lb. weight. On the 4th inst., Mr. Waters killed a salmon weighing 21 lb. ; Mr. Barlow killed a salmon weighing 19 lb. On the 6th inst., Mr. Jackson Potter killed a salmon weighing 11 lb. The same day Dr. Lamb, of the Castle, Carlisle, killed a salmon weighing about 12 lb. I am sorry to report that the disease is very bad amongst the salmon, hundreds having died.

Exe (Exeter).

Very little news up to the present in the way of trout-fishing, a few brace of small ones have come to grass, the river being rather low and as clear as glass. The up-Exe folk have been doing remarkably well, considering the earliness of the season. Salmon have fallen back during the past week, which, no doubt, is owing to the lowness of the river; a few hours' rain would be very acceptable. Fishing in the estuary very poor, excepting for herrings, which were reported as leaving; a few heavy takes have been secured, but, strange to say, the success has been merely for the few, and to the disappointment of many, numerous boats have done nothing, whilst three boats brought in 150,000 between them for one night's catch, the boats' crews sharing from £15 to £18 a man, and on Thursday there were but a few boats at sea that met with any success; but one boat, a Mr. Pym's brought in about 19,000, which sold at 47s. per thousand. These fish were very mixed, the greater portion being spent or shotten, the others being full-roed and apparently not in spawning season, the ova and milt being hard to exude.—Frank Gosden, Exeter.

Ilfracombe (N. Devon).

There has not been much doing in sea-fishing this last fortnight, fishermen not being able to get bait for their spillers nor for hooking. When they have been able to secure a little bait they have caught some fine cod, averaging about 25 lb. each; also a few ling weighing about 17 lb. each. On Wednesday one of the little trawling skiffs went down in Barnstaple Bay, being the first voyage for the season, and returned this morning with about two dozen thornbacks, and a few pairs of soles and some plaice. Three large skate have been caught this week with ground lines, and some good sport has been had off the jetty with hand lines for small whiting, pout, pollack, and dabs. Weather at present very mild.—E. Comer.

Lea (Rye House).

The water is in good order now, the wind south-west, and very mild. Mr. Moss took some very nice perch on Sunday, and I hear there were some very fine roach taken by other gentlemen.—Wm. Cowell.

Medway (Tonbridge).

The water is as clear as gin, and fit for any kind of angling. There has been a good deal of execution done amongst the pike during the week. The following fish have been reported:—Saturday, above the town, Mr. G. Hewitt a pike, 6 lb. 7 oz.; Monday, an angler, while trying for roach with a worm at Barden Park, a pike, $4\frac{1}{4}$ lb., and a perch, $\frac{1}{2}$ lb. Tuesday, James Stanley a pike, 4 lb. 15 oz.; Wednesday an angler above the town three pike, 12 lb. The same day Stanley, fishing at the Powder Mill point, was broken away by a large pike, which was afterwards caught by Mr. G. West with Stanley's hook in it, and part of his line attached. It weighed 15 lb. 14 oz., was 37 inches long, and 18 inches in girth. It is now in the hands of Cooper, of Radnor Street, for preservation. Wind rather cold, but prospects of sport good.—YE MEDWAY WATER-RAT.

Norfolk.

The long-continued fine weather has been a source of joy to many an angler's heart. Rods and lines that would otherwise have been snugly stowed away for the winter haue been in full play, and many good catches of roach have been exhibited at the various clubs. Mr. Wilson of the N.P.S., has again been successful in securing some good bream at Thorpe, and a good take of perch has been shown at the club-house of the E.A.P.S, taken near Wortwell Mills on the Waveney. Through the kindness of a gentleman residing near Norwich, and through whose estate flows a small rivulet, I had a splendid day's pike-fishing on Monday last, and was fortunate enough to land out of one small hole six splendid fellows. The day was gloriously fine and had the appearance of a June more than a February day. The Norwich Angling Club have had their annual pike-fishing contest on Barton Broad, and I have just seen a magnificent female fish weighing 18 lb., and caught by Mr. Gunn, the celebrated animal and bird preserver of St. Giles Street, Norwich, and which fish I believe it is the intention of the society to preserve. The E.A.P.S. will also hold their pike-fishing match shortly, a magnificent piece of private water having been secured for that purpose, when it is expected that some good sport will be the result. I am pleased to have to report that the river is again free from filth, and that some good fishing may again be indulged in without fear of having one's nasal organs polluted. I trust this is the last we shall see of that kind of thing and that the authorities will endeavour to purify, instead of pollute, our old river.—ANGLER.

Ouse (Littleport.)

With the water down to summer level and plenty of fish, it seems strange that we cannot get them on well enough to make it worth while for anglers to pay the river a visit yet. As soon as a piece of ground bait is thrown into a swim they will come on well for five or ten minutes, but if the swim is fished for an hour afterwards we can hardly get a bite; the only chances for making anything like a bag is to shift from swim to swim. Pike are moving a bit now. On Saturday an Ely gentleman got five nice ones, and on Tuesday another Ely gentleman got two of 4 and 5 lb. I got one myself to-day of 3 lb. I have also taken for the last fortnight small bags of good roach, from 5 to 8 or 9 lb. each bag.—CHAS. SOUTH.

Ouse and Ivel (Blunham).

Fine pike have been taken this week, varying from 4 lb. to 10 lb. Mr. Thompson, one of our members, had a fine take of roach on Wednesday, varying from $\frac{3}{4}$ lb. to $1\frac{1}{2}$ lb.—E. B.

South of Ireland.

Good average sport continues on the Lee, and with the change which has occurred in the weather better results may be soon expected. Rain commenced on Wednesday, and the weather continues wet and murky. The barometer is falling steadily, and if the American forecast bears out correct, we may have some wild and stormy weather before the week closes. A good freshet is required before any real good sport can be experienced during the week. Mr. Augustus Warren and party added to the death roll of the previous week something like six springers. The other catches during the week may be summed up thus: Sir Oriel Forster three $\frac{1}{2}$ lb. each, Col. Hawkes, three; John Manning, four; Mr. Dale, two; Mr. Haynes, one: Mr. M. Manning, one; T. Osborne, one; Mr. James Lawlkin, one; Lord Bandon, one; Capt. Abbott, one; Mr. Bowen, two. During the week there has been some hot work in pursuing poachers. The bailiffs were attacked one night, and the police fired upon the assailants. Several nets have been seized, but this does not deter poaching operations, which are carried on in the most audacious manner. The injury done to legitimate fishing by these depredators can scarcely be imagined. During the entire winter drift-net fishing has been carried on in the lower harbour. On the 28th January, a parcel containing seven large salmon were seized at Passage on their way to market. The offender was only fined 10s., on the ground that he was only a messenger. With such leniency, it is no wonder poaching should be carried out.—ANGLER.

Suir (Clomnel).

The Clonmel cot men are doing very well; from Wednesday to Friday last they got twenty-seven fine fish, and are doing even better this week. The fish are running small, which is a good sign they are numerous. They got a few very large fish this week, weighing about 30 lb. each, the rest running about 12 lb. each. The river is now in nice order for the fly. Mr. R. F. Hutchings got a beauty of 12 lb. at Banard. Dr. Campbell at Hilcommon demesne got a splendid fish of 28 lb. and another one smaller; John Curry one at Cahir Abbey. Peter Carey got a fine fish of $25\frac{1}{2}$ lb. on Mr. Higgins' preserves at Lackan, which took him a few hours to land. The trout-fishing is very good, but fish in very bad condition. The favourite flies are hares' ears, red hackles, gold wrens, &c.—DORA.

Torridge (Woodford Bridge), North Devon.

This communication arrived too late to forward on last week, but thinking it of interest, I enclose the same with my usual notes. Salmon have not been known, at any rate for many years, to be so plentiful as at the present, in this portion of the river. "Otters" are also very numerous, and numerous salmon have been found on the banks bitten and partaken of by these vermin; independent of this, a great number of salmon have been found upon the banks dead, showing no signs of otter bites or ill-usage whatever. I am afraid these must be ketts or slats returning seawards, and have been either scared by these otters in their selection of a fresh run fish; or can it be the fungus (saprolegia ferax) that has attacked them? I expect further information shortly. One of these fish so found was over twenty-five pounds weight. Trout are as plentiful as ever, and those gentlemen who visited and have since spoken so highly of the surrounding scenery, combined with the fishing will find the Woodford Bridge hostelry, still in the same old hands (C. Blake), where they will find their welcome as of yore.—FRANK GOSDEN, Exeter.

Trent (Newark).

The water has been in fairish condition most of the week, it having very rapidly gone down from the last flood, but sport, somehow or other, has not been very grand, although some few very nice fish have been taken, but good bags have been the exception not the rule, the snow broth in the river probably having something to do with this but in spite of this the water has not been a bad colour, and, as I have just said, some few very nice individual fish have been had by various anglers, notably, a chub of 4 lb. 2 oz.; roach of 1 lb. $5\frac{1}{2}$ oz, 1 lb. 5 oz. and 1 lb. $2\frac{3}{4}$ oz. respectively, being weighed in at the clubs. I have been out one day and took a few very nice roach, biggest fish 1 lb. 5 oz., a fish in only middling condition, it was 14 inches in length and 10 inches in girth; had it been in good condition it should have gone 1 lb. 12 oz. at least, the little cockspur worm being the fatal lure, which bait, I might say, has been the most successful this week. It has been raining rather smartly to-day, so probably we shall have a slight rise in the river, but to-night it is still clear and in fairish condition; should it continue so a friend and I are going chubbing with pith and brains, if it rises and a little colour comes down we shall have to content ourselves with a little roach fishing with cockspur worms as bait. In the meantime anglers should be prepared for anything, for the water may come down high and thick, and it may not, for under the present circumstances a little rain soon causes a rise.—THE TRENT OTTER.

Trent (Nottingham).

The river in this district, is low and comparatively clear, but anglers are still pestered with the refuse which is poured into the stream, by the Burton-on-Trent breweries, whenever this nuisance will be abated it is impossible to say. Sport during the week has been rather meagre, chub and pike have claimed attention but very few fish appear to have been killed. The proprietor of the Beeston fishery was busy spinning for pike on Wednesday, but from what I learn, he failed to get a run although there must be plenty of fish in the water. Failing pike, a few perch and a couple of tench were landed. There are no reports to hand from Weston, but at Shardlow odd chub have been caught with Greaves. —THE MAN AT THE CLUBS.

Wye and Derwent.

Since my last report the weather has been very foggy and misty, which has been all against fly-fishing; but still there have been some nice dishes of both trout and grayling killed with the artificial flies. Trout-fishing commences on the Darley Dale Club's waters on March 25. On the Derwent, Chatsworth fishery, the opening day for trout-fishing is April 1; so is the Wye on that date, according to the Freshwater Fisheries Act. Trout can now be taken both in the free water, and also where club rules are not in force. Spinning or trolling with the "well-known Derby trout-killer," has killed a few nice sized trout in the Derwent, between Darley and Matlock Bath station bridge. The groundbait fishers have done fairly well both amongst trout, roach, dace, and a few small-sized perch, all taken with brandling worms for baits. The coarse fish have fed the best in the deepest water, and trout have fed the best close to the rough streams, in the eddies, and curls, and have taken a swimming bait the best. Several anglers have been out pike-fishing between Matlock and Ambergate during the week, but I cannot hear of a single capture, as they seem dead off the feed. A good number of natural flies have been out on both rivers during the week, viz.:—cockwing duns or hare's-ear, bed-fly, and long, flat-winged browns. The best killing flies have been the claret-body, bumble, red-fly, and furnace flies. Both rivers are now in capital order for fly-fishing. Only few anglers out.—G. J. EATON.

SCOTCH NOTES.

(From the *Scotsman*.)

THE TWEED.—The prospects of the salmon angler, the close-time for whom on Tweed terminated on Wednesday last, are certainly not of the brightest character. The mysterious fungoid disease still prevails to a pitiful extent. In every pool and shallow where the fish may rest without exertion large numbers of salmon, many of them of large size, are to be seen in all stages of the disease. Some of them show only show a few spots of the fungoid growth, and others are completely covered. In the end of last week, consequent on rains and snow in the upper districts, there was a rise in the waters of about a foot and a half, and a considerable movement was observable among the fish, many spawned and diseased ones making their way seawards. It is remarked that the disease almost invariably attacks the fish on the snout, tail, or fins, and as those parts are the most liable to suffer from abrasion during the spawning operation, it is taken as a proof that the disease—at least in the majority of cases—is communicated by floating germs, especially as the fish, when the disease is still in its earliest stages, are usually found to be quite healthy. Indeed, on Wednesday last, a large salmon, well spotted with the fungus, rose to the fly and made a very good run before it was landed and returned to the river. The anglers' prospects would be greatly improved by a good heavy flood, which would carry off to sea the spawned and diseased fish, admit of the ascent of clean ones, and cleanse the beds of the rivers, which are becoming very foul. A few rod-fishers, taking the first chance after the termination of the close-time, were out on Wednesday, but their only success was the running and returning a number of unclean fish. On Thursday they had much the same success; but at Sprouston Mr. Kerss scored the first capture of a clean fish for the season—namely, a fresh-run salmon of about 15 lb.

LOCHLEVEN.—The weather has been much colder during the past two days, with a wild, boisterous, west wind. Mr. Townsend, of Glasgow, was out with the rod for a few hours on Friday and Saturday, and captured six trout weighing about 8 lb. With the exception of one, which was rather lanky, the trout were in capital condition. As this is the second, it is also the best basket of the season.

TWEED AND TEVIOT.—Sport on these rivers since the opening of the salmon fishing has been as good as expectation warranted; in fact, much better, according to the ideas of some anglers. That very indifferent sport was anticipated at the beginning of the season just opened was the opinion of one and all of us anglers, and that for various causes, viz., disease, lowness of water, want of floods, &c. That these fears were groundless, so far as things have as yet gone, is now a well-known fact, and happy are we disciples of old Izaak that things are so. Within the last ten days the number of salmonidæ affected with the fungoid epidemic have apparently decreased very rapidly, and whether this is in a measure due to the small flood we had a fortnight ago—which must, I should consider, have taken away a great quantity of the dead and diseased fish to the mouth of the river or whether it is due to the much colder weather—we are now experiencing, is a circumstance beyond my powers of knowing. That there are a very considerable less number of affected salmon seen now than there were fourteen days ago is a verified fact, and one much to be thankful for. What we really want now is a good heavy flood, of nothing less than from six to eight feet, and that before the net-fishing season commences, on the 14th of the present month, so as to do any good to the spring rod angling fishing; for, once the nets are on, few and far between are the salmon that escape the meshes of the crafty netsman. To hark back, however, to the doings on the opening week of the salmon fishing, I may mention that all the waters here on the first day were fished blank, but on the following day (Thursday) the Hendersyde water (which has for years yielded the first salmon of the season) again had the coveted honour, as Mr. James Kerrs, fisherman, killed a beautiful clean-run salmon of 15 lb., and Mr. Murray, of the Weigh House, Kelso, killed one of 7 lb., and also run several other unclean fish on the same water. On Friday nothing was done, however, bus on Saturday Mr. Kerrs again killed six fish, two of them being beautiful clean salmon, and weighed about 12 lb. each. Thus ended the first week of the season on the Hendersyde water. On the Ednam House water Mr. Drummond landed one baggot on Thursday, one on Friday, and three baggots and two kelts on Saturday. On the Duke of Roxburghe's water at Floors Castle there has been no fishing, and the same can be said on the Sprouston and Makerstown waters. On Monday (February 6) Mr. Drummond, at the junction of the Tweed and Teviot, landed one baggot and one kelt, and Mr. Johnston, wine and spirit merchant, Kelso, angling on the Hendersyde water, Kelso, landed four kelts and lost a nice clean salmon after running him for about a quarter of an hour. On Tuesday very good sport was got, as on the Ednam House water Mr. Archibald Steel killed one very nice clean salmon, which turned the scale at 8 lb., and the same gentleman ran and landed a very good kelt, which, however, had to be returned again to the river; this, in my opinion being one of the absurdities of our present salmon Acts. Why return to the river a fish that will rise to the fly? and more especially after it has been run, for it is just about twenty chances to one that after the fish has been returned to the river again, after having had the exertion of the run, and the fly cut from its mouth, that it sickens and dies, consequent on the strength it had to exercise during its running (while in a very weak state), and the loss of blood that was sure to ensue on the hook being cut from its mouth, even if said fly got no further than the jaw. On the Hendersyde waters also, very fair form was shown, as Mr. James Kerss killed a brace of very nice clean salmon, each weighing nearly 8 lb., while several kets were also landed on the same "casts." On Wednesday little or nothing was done on the Ednam House water, not a single fish being landed, but on the Hendersyde lower water Mr. Johnston, wine and spirit merchent, Kelso, killed a pair of clean salmon, which would weigh about 8 lb. respectively, and he also ran several unclean fish; nothing being done on the Sprouston water. On the Nisbet water, one clean fish of 6 lb. was killed by Mr. W. Michie; and on the Pavilion water, on Saturday, Mr. Bain, Galashiels Burgh School, killed a couple of sea-trout, and ran a kipper grilse for some time, but lost it; he also ran an unclean baggot. On the same water Mr. Hall, Galashiels, got a brace of sea-trout. Good sport was also got in the Peebles district. In the Lanton district of the Blackadder, several sea-trout were got. Angling on the Teviot has not yet begun, fishing on this river usually starting about the 20th of this month.—MAXWEEL, Kelso.

THE SPORTSMAN'S EXHIBITION AT THE AGRICULTURAL HALL.

WE beg to draw the attention of our readers to the advertisements of this fine exhibititon which appear in our columns this week. Every sportsman should pay a visit to this exhibition, it is unique of its kind.

SCOTCH FISHERIES IMPROVEMENT ASSOCIATION.

THE following gentlemen appeared before Lord Rosebery and the Lord Advocate, as a deputation from the Scotch Fisheries Improvement Association:—Mr. D. Milne Home of Milne-Graden, Sir James R. Gibson Maitland, Bart. of Sauchie; Admiral Maitland Dougall of Scotscraig, Mr. J. Maxtone-Grahame of Cultoquhey, Sir Molyneux Hyde Nepean, Bart.; Professor Douglas Maclagan, Mr. Archibald Butter of Faskally, Mr. T. G. Murray, W.S.; Mr. Charles Morton, W.S.; Mr. J. Barker Duncan, W.S. (secretary); Mr. John Anderson, Denham Green; and Mr. Alexander Fraser, of Canonmills Lodge.

The object of the deputation was to obtain, if possible, government assistance in removing many drawbacks under which the Scotch Salmon Fisheries are labouring, amongst them being the want of fishery-boards and the want of official inspectors. However, we regret to say our Scotch friends got nothing but somewhat sarcastic politeness from Lord Rosebery and the Lord Advocate. The latter suggested they could perhaps have inspectors but would certainly have to pay for them; Lord Rosebery said that though they might not think it, their interests were well looked after in London; as evidence of this, he mentioned that the Admiralty had refused to lend a gunboat for the protection of the Scotch Fisheries.

The deputation then thanked their lordships—for nothing—and withdrew.

RICHMOND PISCATORIAL SOCIETY.

THE winter dinner of the Richmond Piscatorial Society took place at the Station Hotel, Richmond, on Thursday evening, when there was a large attendance of the members and their friends. Major Bull presided, and the vice-chairs were occupied by Messrs. Alfred Little and Henry Dickinson. Amongst others who were present were Messrs. T. Abbott, W. Abbott, Bond, Brougham (secretary of the Thames Angling Preservation Society), F. C. Clench (chairman of the society), Crew, Eydemann, Field, Ford, Fricker, Gaynor (curator), Giles, Goodale, Griffiths, Groves, Heasler, Houghton (treasurer), Johnson, Keyes, R. B. Marston (editor of the FISHING GAZETTE), Plant, E. V. Powell, Taman, Tyrrell, &c. Mr. Munro placed an excellent dinner on the table, and the whole of his arrangements were of the most satisfactory character. Musical matters were under the direction of Mr. Crew, Mr. Johnson presiding at the piano. Songs were given by Messrs. Everill, Griffiths, Turner, Plant, Crew, W. Abbott, and Tyrrell, and a recitation by Mr. Powell.—The loyal toasts were duly honoured, the health of "The President of the Richmond Piscatorial Society, H.S.H. the Duke of Teck," being proposed as a separate toast, after which the health of the vice-presidents was proposed by Mr. Dickinson and responded to by Mr. T. Abbott.—In proposing "Success to the Richmond Piscatorial Society," the Chairman said that the society was started by a few earnest and energetic men in 1879. It had had its vicissitudes, and it had fallen rather low in numbers when they were fortunate enough to secure their excellent friend, Mr. Clench (applause). They now had 130 members, and the number was likely to increase. After referring to the presence amongst the visitors on that occasion of Mr. Marston and Mr. Brougham, the Chairman went on to speak of the work of the year, alluding to the fishing of the members, the pleasant evenings spent in the club room, the encouragement given by the society to the river keepers, the nefarious practices of the poachers, and the damage done by steam launches. He remarked that as the owners of the steam launches had formed an association for the protection of their interests, it would be necessary for them to do all they could to put a stop to the injury the launches inflicted. He was asked the other night whether he could not do something as a member of the Joint Sewerage Board to take the sewage out of the Thames. This was a subject of amazing difficulty, for whether they took the sewage to Barking Creek or the mouth of the Darent, the people had the bad taste not to like it (laughter). However, the Joint Board were doing all they could, although they had great difficulties to contend with.—Mr. Clench, whose name was associated with the toast, said they now compared well financially, socially, and numerically, with any similar society in London. The steam launches to which the chairman had referred inflicted great injury upon the immature fish. In the spawning season they washed up the immature fish on the banks of the river, and there they were left to perish by thousands. Another important matter was the claims which the riparian owners were making to every inch of water up the river. The Thames Rights Defence Association were doing all they could in this matter, and they hoped to be able to hand down to their children unimpaired the rights which had existed on the Thames for generations (applause). He was very pleased that they had with them on that occasion Mr. Marston, the author of the scheme for the culture of coarse fish, which he hoped would be the means of restoring a great deal of fish to the river. He had to congratulate them that two of their members, Messrs. Little and Powell, had carried away prizes from the fishing tournament inaugurated by Mr. Marston at the Welch Harp. They were doing all they could to prevent poaching, and hoped to be able to stop netting down to Kew Bridge. They were now going to devote the whole of their funds to the cultivation of coarse fish and the acquiring of private waters, in which their members and their friends might fish.—Mr. Houghton proposed "The Thames Angling Preservation Society," and Mr. W. H. Brougham responded, referring to the early history of that society, and some recent efforts to trap the poachers.—Mr. A. Little proposed "The Treasurer, Secretary, and Officers of the Society," and this was responded to by Mr. Houghton, who expressed the regret they all felt at the unavoidable absence of Mr. J. H. Gaunt, their able secretary.—Mr. Clench proposed the health of the chairman, a toast which was most heartily received.—Major Bull, in returning thanks, said that the Vestry (his presidency over which had been referred to by Mr. Clench) used to be very much abused, but it was now doing a great deal of work in a quiet way. First of all there was the waterworks, and then the Free Library, a noble institution, which had attained a success beyond their most sanguine expectations. It was a source of pleasure to hundreds of their fellow parishioners, and now other parishes were enthusiastically following their example. All honour to those who originated it. About the end of April or the beginning of May they hoped to open two fine swimming baths, than which he thought there would be no better in London. Then there were people who were anxious to bring a tramway here, and another water company, and in fact they were almost oppressing them with the number of benefits they intended to confer upon them.—The remaining toasts were "The Vice-chairman," proposed by Mr. Brougham and acknowledged by Mr. Dickinson and Mr. Little (who referred to the necessity for a lock and weir below Richmond); "The Visitors," proposed by Mr. Clench and responded to by Mr. Marston, who explained his scheme for the cultivation of coarse fish, and urged the club to lend cases of stuffed fish to the Edinburgh Exhibition, a suggestion which was well received; and "The Press," proposed by Mr. Taman and coupled with the name of Mr. Dimbleby.—*Richmond and Twickenham Times.*

WOODLANDS ESTATE.

WE have pleasure in bringing before the notice of our readers an estate situated within the jurisdiction of the Metropolitan Board of Works, called the Woodlands Estate, at Streatham, one of the outlying villages on the south side of London. This estate is charmingly situated, and is picturesquely studded with villas erected in the Queen Anne style of architecture. All true lovers of nature and intending housekeepers would do well to give Streatham Hill a visit, and afterwards call at the rooms of the Streatham Hill and General Estates Development Company, Limited, 5, Queen Victoria Street, E.C., where every attention will be paid to inquirers. We are informed that the rental of these unique villas average from £66 to £130 per annnm.

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents*]

DOTTEREL FEATHERS.

Sir,—I notice your note in Fishing Gazette this week respecting some dotterel feathers. You will find a few in the paper enclosed, your acceptation of which will gratify me.

I scarcely know which feathers you prefer, here we like the "necks" best, and, so far as I am concerned, I consider there is no feather equal to some dozen or so found at the setting-on of the tail. Dotterels have been very scarce of late years with us, but last season I heard of four being shot and managed to purchase the lot, chiefly for Atkinson the tackle-maker here. He tells me he has a skin to sell, quite perfect and good one, some half-dozen feathers or so in one wing spoiled with the shot. He asks 15s. for it, much too dear; but he says he can make more out of it by converting each feather into a fly. You can seldom purchase a skin here, even from the men who shoot the birds, for less than 7s., and even then you have to consider yourself favoured.—I am, &c., Sprint.

Kendal, Feb. 4, 1882.

[We are much obliged to "Sprint," the feathers are first-rate. We also are indebted to Mr. W. H. Aldam, of Winchester, for some very fine samples, and also some honey-duns.—Ed.]

NOTES FROM YARMOUTH.

Sir,—I can't get over that lie about the big perch, $10\frac{1}{4}$ lb.! If a younger man, I would go and see this, which is no doubt a "sea perch." Many years since I offered a reward for a big perch, of a sovereign, *i.e.*, for a five-pounder; at least thirty-five years have passed by, and $3\frac{1}{2}$ lb. is the largest brought me.

Some years ago the late Colonel Duff ordered his keepers to drag Hickling Broad for our Yarmouth Aquarium. They got thirteen perch weighing just over 40 lb., the largest about $3\frac{1}{4}$lb.; we got them into the Aquarium tanks, but they soon died; the fact being they will not live long in the filtered water. I am well known amongst the Norfolk and Suffolk fishermen, and almost all the large fish are brought to me. The largest specimen of a perch I ever heard of was caught on a night line, and, according to the statement, weighed 7 lb.; but I don't believe this—perhaps it was troy weight, *i.e.*, 12 oz. to the pound. My sovereign was afterwards heard of, and the man came over here about it. Dear old Frank Buckland was for many years my most intimate friend, and he never saw a larger perch than one I have in a case in my dining room, this weighed $4\frac{1}{2}$ lb. I have another grand case of three, caught with the worm within an hour by my eldest boy, they weighed $8\frac{1}{2}$ lb. several hours after capture. Buckland said they were worth a thousand-mile journey, and beat anything in England, the largest fish of these three being $3\frac{1}{4}$ lb., and I sent Buckland up two others, which weighed when caught over 6 lb. There were no big fish in the Serpentine, and in Whittlesea the largest perch was under 3 lb. I know this well, as a friend of mine held the appointment of engineer when it was drained, but they found a monstrous eel, which was exhibited at Wisbech, and the largest pike weighed 34 lb. This piece of water covered nearly 2000 acres, and the villagers called it the Great White Sea. I bought an old painting on oak of a pike, as large as life, painted by a village artist 150 years ago. A gentleman at Brighton gave me forty times what it was knocked down for and I let it go to him. This fish was about 52 lb. in weight, and over five feet long, it had an old inscription upon it of the weight, &c. There are very large pike and perch in the Fritton lake, which is very deep and nearly three miles long, I have a large pike in a case which took a 1 lb. bait, and gave me forty-five minutes' hard work—this was in the upper water. Mem.: there are three lakes there, besides a small pool which my friend Colonel Leathes most kindly keeps for my recreation; I have driven over, just eight miles, and taken a pike within an hour; this is a lovely little piece of water but would soon be spoiled, and I only fish it when an old London friend comes to stay with me once or twice a year.—I am, &c., R. R. B. Norman.

P.S.—I saw a perch at Mr. Holroyd's, fishing-tackle maker, Gracechurch Street, many years since. This fish was the largest I have ever seen, and weighed $5\frac{1}{2}$ lb. Mr. Holroyd is a very worthy man, and his statement was, I have no doubt, correct. I called to see it again, but could not.

Feb. 3, 1882.

EARTH-WORMS.

Sir,—With regard to several letters that have appeared in your paper as to the subdivision of worms, perhaps the following may be of some interest.

Taking the description of the earth-worm from Darwin. "On Vegetable Mould and Earth-worms," and dividing the worm roughly into fourths, the upper fourth contains the mouth, a strong pharynx and the æsophagus, with three pair of large glands which secrete a surprising amount of carbonate of lime. Darwin says that nothing like them is known in any other animal, and they are useful in dealing with the humus acid of decaying vegetable matter.

In the second fourth the æsophagus is enlarged into a crop in front of a gizzard, which has powerful muscles for the trituration of food, and contains grains of sand and small stones.

And the third and fourth fourths contain an intestine with an extensive absorbent surface.

If the worm were cut in two, one half would have all the means of preparing food by digestion without the means of absorbing it, and the other half would have all the means of assimilating food without the means of digesting it, and it is difficult to believe that such important organs as the missing ones could be reproduced.

The following facts are worth noticing: that a dry atmosphere will kill a worm very quickly, while it will live under water many weeks; and that, although it struggles so violently, it is very insensible of pain.

It may be observed that the same author in his "Naturalist's Voyage Round the World," speaks of a South American worm of simple structure, a division of the genus planaria, and found beneath rotten wood; it resembles a little slug, but narrower, and having near the middle of the under or crawling surface two small transverse slits, from the anterior one of which a funnel-shaped mouth could be protruded.

One of these was cut transversely into two equal parts. In the course of a fortnight both had the shape of perfect animals. The body was so divided that one of the halves contained both the inferior orifices, and the other, in consequence, none. Twenty-five days from the operation the more perfect half could not be distinguished from any other specimen. The other had increased much in size, and a rudimentary cup-shaped mouth could be distinguished. Then an accident killed all the specimens.

"Mark Antony," in your paper, speaks of pieces of the blood-worm producing perfect blood-worms. Is the blood-worm thus spoken of the brilliant crimson larva of the golden dun? H. M. P.

FRESH AND SALT WATER FISH—HOW TO FISH A BREAM HOLE.

Sir,—Can any of your numerous readers answer the following queries?

How is it that mackerel, cod, plaice, and more particularly the herring, are considered best for the table when full of spawn—many people, in fact, only caring for them when in this condition—whilst freshwater fish, such as roach, dace, pike, chub and barbel, are in such an emaciated state they are only fit for the pigs?

The magnificent hard-roed bloater I had at breakfast this morning suggested this idea.

A very learned friend of mine says this is "bosh," and would try and make me believe that freshwater fish are just as good for eating purposes when about to spawn as saltwater fish. All I know is I once partook of some roasted spawn from a barbel, and not long afterwards it cost me a considerable sum for sundry goes of brandy. But, as Puny Moore said of the hen, perhaps that barbel "was not healthy."

Can any practical angler inform me the best and most efficient way to fish a bream hole 35 feet deep, in a gentle current, *with a float*, my rod being only 14 feet long. I find the float business an intolerable nuisance, and ledgering for bream at such a depth is dead against my usual practice, as I prefer a moving bait?—I am, &c.,

Mark Antony.

N.B.—May not the taking of such vast numbers of sea-fish full of spawn account for their scarcity? This reminds me, not long ago a noble restaurateur in Fleet Street wanted to charge me 1s. for a sole about the size of my hand. I take size No. 7. On objecting to the swindle, he replied, his face livid with rage, "There was none larger in de market." Grand fried sole of my boyhood! shall I ever gaze upon thee again? I am afraid not.

[Some freshwater fish are as good to eat when full of spawn as they are at any other time. It is after spawning that they are emaciated and poor. The roe of some freshwater fish is unwholesome food according to old writers—see Walton. We do not see how you are going to fish that 35-foot deep bream hole with a 14-foot rod *if you use a float*, unless you get up a tree; of course you can do it, but, as you observe, it must be a difficult matter to get your line in and out each swim. Your can rove with the ledger—work it very gently over the hole in any direction you please—letting it rest, of course, a long time between each move.—Ed.]

SILKWORM GUT.

Sir,—There is one peculiarity about silkworm gut which has not been referred to in the recent correspondence on the subject, and which may not be generally known, although it is of considerable interest to anglers. This is, that on once being strained to its utmost or breaking tension, it loses the greater part of its original strength. The experiment may be easily tried. Take a length of new gut—an ordinary hook length will answer the purpose admirably, and placing the loop over the hook of an ordinary spring balance, pull steadily from the other end until it breaks. If the gut be good this will take place (according to stoutness) at between 4 and 5 lb. of strain; but if the broken pieces be subjected to the same test it will be found that they will give way with a very much lighter pull, frequently, indeed, hardly bearing the strain of knotting a fresh loop.

The moral of this is, never trust to a gut cast which has once been fairly broken either by a heavy fish, or by entanglement among weeds; a cast which on commencing has been found a good one, may, by catching a branch or other obstacle, and having to be broken away, be rendered altogether untrustworthy, although but a short piece be broken off, and a good fish may regain his liberty in consequence.—I am, &c., W. B.

[Was the gut dry or wet when W. B. tried this useful test?—Ed.]

TROUT LICENSES.

Sir,—Can any of the numerous correspondents of the Fishing Gazette impart to me the following information:—

First, where can I procure in book-form the Salmon·Fisheries Acts up to the present time.

Secondly, the trout-fishers in the river Wannsbeck are rather embarrassed at the following action of the Tyne Board of Conservancy, who have made a bye-law, and got it endorsed by the Home Secretary, to this effect—that every trout-fisher pay two and sixpence for a season ticket, a shilling for a month or a day. Now the Wannsbeck being within their jurisdiction, they are this season putting this law in force. But they have no water-bailiffs or watchers of any kind on the river, and the trout-fishing being strictly preserved by the owners of the land through which the river flows, and who are not connected with the Tyne Board at all, but give permission to fish to whom they think proper. And from the above circumstances we think that they have no jurisdiction or right to tax trout-fishers who may have the good fortune to obtain leave to fish for trout in these private waters.

Any information on the above subjects will be gladly received by yours, &c., John Tweddle.

Choppington Fishing Club.

[Write to Messrs. Spottiswoode and Co., The Acts Office, West Harding Street, London, E.C., for Parliamentary papers. You must pay for the trout license, even the owner of the water must pay; but, as you observe, it is most unjust (unless watchers *are* employed) to impose this tax, and it has caused great complaint in the Severn and other fishery districts.—Ed.]

THE TRIANGULAR BONE IN THE CARP.

Sir,—Upon reading Mr. J. H. Keene's excellent work, "The Practical Fisherman," respecting the triangular *stone* found in the jaws of the carp, brings to my mind a few lines which were written by Robert Dick, of Thursoe, in the song of a "Geologist," and, if I remember rightly, they were thus quoted:—

> "It is gude to be breaking a stone,
> The work now is lucky and braw;
> It is grand to be finding a bone,
> A fish-bone the grandest o' a'."

Mr. J. H. K. states, in the above work, the following:—"A small triangular *stone*, said to be found in the jaws of carp (I have never seen it), on being ground to powder and applied to a bleeding nose was said to act as a styptic." Having had occasion to preserve one of this species of fish lately, I beg to forward to you, for him, the triangular stone (bone) he is anxious no doubt to see. These bones are not taken from the jaws, as spoken of, but from the gullet behind the gills, where the teeth are very large even in the small sized fish; and, from the example forwarded, you will perceive that it is not a *stone*, but simply a *bone*, which acts as a preventitive against foreign substances passing too quickly into the stomach.—I am, &c.,

Frank Gosden, Exeter.

[We have sent the peculiar shield-shaped bone to Mr. Keene.—Ed.]

YOUTHFUL ANGLERS.

Sir,—After reading the article on "Youthful Anglers" in your last week's issue, I must confess that I quite agreed with your editorial remarks, and beg to differ from my worthy old friend, B. So far from joining in his views on the subject, I know that both Messrs. Jardine and Alfred did *not* agree to the proposition when it was mooted at the Gresham Angling Society, but expressed their opinion very much *au contraire*. If it is considered necessary to establish a club for young anglers, by all means let them start one themselves, like other youthful clubs for cricket, football, &c.; or, at any rate, do not start one at a public house, whether it bears the title of hotel, tavern, or restaurant, and whether cards are admitted, as at the Piscatorials, &c., or prohibited, as in the case of the Gresham. If these worthy sires determine on founding a junior angling club, let it be an independent club, established in the ancestral hall of one of its founders, where the juvenile members may, when they get tired of smoking, drinking, and playing at men, go up to the nursery until bed-time arrives. This only will effectually prevent their becoming too early, as you wisely suggest, lovers of the "black bottle," with pipes and whist. The charm with boys and girls lies chiefly in their retaining their youthful *naiveté*, which, once deprived of, they become old-fashioned or precocious; and this is mostly caused by their would-be friends giving them ideas, and letting them be the hearers, of things far too deep for their understanding—one cannot always keep a guard upon one's tongue.—I am, &c., Piscator.

GREENHEART WOOD.

Sir,—What is the correct name of the wood from which "Greenheart" salmon-rods are made, and where can it be obtained in London?—I am, &c., Amateur.

[Greenheart is its correct name, it is imported from the West Indies in logs. Any tackle-maker will supply it.—Ed.]

RECLAIMING STRAYED FISH.

Sir,—I take the liberty of sending you an account of a day's netting in the ditches in the district of the Maidenhead, Cookham and Bray Angling Association on Tuesday, January 7:—Jack, 5; perch, 106; roach, 262; chub, 6. All returned to the river in good order, some were very good fish.—I am, &c., Harry Wilder.

Maidenhead, Wednesday.

A GOOD TESTIMONIAL.

Sir,—To show you how I like your Gazette I may tell you I have frequently bought up all I could get at the Nottingham station, merely to give away.

For many years I have read the *Field*, often when coming home by rail from Nottingham, and never missed my station; but in the short time I have taken in the Gazette I have missed my station, and had a few miles' walk from being so interested in it. I should, all the same, like it better if it were more "fishy."—I am, &c.,

Caythorpe, Notts. John Foster.

A FEW QUERIES.

Sir,—I have to thank you for inserting my letter, which you headed "A Few Queries," and for your footnote to same, also to "Mark Antony" for his directions respecting blood-worms. These I required as a bait for Prussian carp, the habits and haunts of which I enquired for some time since. I have hitherto successfully taken the Prussian carp with gentles, using a fine gut line, hair hooks, and light quill float, and soaked bread as groundbait. I am speaking of the early part of the season, since when I have had several turns at them, but on each occasion failed to score, so I thought it well to try a change of bait.

I must apologise for having troubled you so much, but I am unfortunately without any angling friends to whom I could go for advice.

I hope you and other gentlemen who are taking such an active part in the coarse-fish culture scheme, will use your best endeavours to prevent the question falling through. I only regret my want of means prevents my doing much, but if a fund should be formed with this object in view I and a friend would like to do our little best towards it.

Maybe I weary you; but, in conclusion, allow me to express the hope that some more articles by Mr. Keene, after the same style as "Perch and Perch-fishing," may make their appearance from time to time in the Fishing Gazette.—I am, &c.,

John J. Harris.

Feb. 8th.

FLY-FISHING FOR DACE, &c., NEAR LONDON.

Sir,—If Mr. Boydell will kindly send me his address I shall have much pleasure in forwarding him a copy of my shilling "Manual on Trout-Fishing," and marking therein a list of the flies which I have found very useful when fishing for dace, &c., both in northern and southern rivers.

When the waters are very fine and low the flies should be smaller than ordinary, and I have found those of the blue tinge invariably to kill the best. One of the finest is made very small indeed. Hook, No. 0. or 00.; body, yellow silk; and wings and legs hackled with small dotterel's feathers; but it is too early for this fly as yet. It takes best in hot, sunny weather.—I am, &c.,

Thomas Ford.

CLUB REPORTS.

ACT-ON-THE-SQUARE ANGLING SOCIETY.

The members of this society held their inaugural dinner on Thursday evening Feb. 2, at the club-house, the Ferry-Boat, Tottenham, Messrs. Day providing in their usual capital manner. Mr. W. Mead occupied the chair, and was ably assisted by Mr. Thompson as vice-chairman. The first toast given was, of course, that of the "Act-on-the-Square Angling Society," which was received with hearty cheers, and to which Mr. Mead, in a very able manner, replied, stating that, although the society was still in its infancy, it was prospering to a remarkable extent, particularly as this society do not have any meeting on Sunday, or weigh-in fish on that day, as other clubs, particularly in this end of London do; but confine themselves to club matters, and weighing-in on Thursdays, and prize fishing on Saturday. The health of the secretary, Mr. A. George, the late chairman, Mr. Chapman, the "Messrs. Day," and the "Visitors," were duly drank and responded to, after which the company settled down to harmony for the remainder of the evening. The distribution of prizes will take place at the end of the season. On Saturday the members sat down to fish for another of their prizes, a teapot given by Mr. J. Stone, and although the wind blew with great force, the prize, which was roach only and pegged-down, was eventually won by Mr. W. Mead, Mr. Money being only three quarters of an ounce behind.—A. George, hon. sec.

AMICABLE BROTHERS ANGLING SOCIETY.

The fog on Saturday deterred many members from going out; several ventured, but the result was nil, with the exception of Mr. Partrick, who weighed-in roach from the river Lea to the extent of 7 lb. 10 oz. Next Sunday's pegged-down match is from Burnt Mill to Roydon; ten prizes.—T. Worledge.

ANCHOR AND HOPE ANGLING SOCIETY.

Seventeen of our members fished a peg-down match at St. Margaret's on on Sunday, the 5th inst., for three prizes. The first, a handsome timepiece, given by Mr. H. Scott, was taken by Mr. W. Streeton. The second, a very nice fishing box, given by Mr. T. Bowling, was taken by Mr. R. Smith. The third, a plated teapot, given by Mr. R. Smith, was taken by Mr. B. C. Booth. —D. Davis, sec.

Feb. 7.

ANGLERS' PRIDE ANGLING SOCIETY.

The members of the above club contested for a series of prizes at Burnt Mill on the 5th inst., with the following result;—G. Watkins, first; H. Scutt, second; and W. Nash, third. Messrs. Mallett and Fiddes also weighed-in. Mr. Taylor, of the Friendly Citizens, weighed-in 3 lb. 13 oz. of roach from the Lea. Also Mr. Frost, of the Bermondsey Brothers', weighed-in a splendid chub of 2 lb. 9 oz.—T. Marshall, sec.

Feb. 7.

BERMONDSEY BROTHERS' ANGLING SOCIETY.

On Sunday last, Mr. Frost caught one chub, 2 lb. 9 oz.—Wm. Allen, sec.

Feb. 7.

BRENTFORD PISCATORIAL SOCIETY.

We had a very good show on Thursday the 2nd. Mr. Mount-Stephen and friend 70 lb. of jack; and yesterday, the 3rd, Mr. T. Waight weighed-in 15 lb. of jack. Mr. W. Turner, on Thursday, a 15.-oz. roach; also, Mr. T. Taylor, 1 lb. 8 oz. of dace.—J. H. White, sec.

Feb. 4.

THE BRUNSWICK PISCATORIAL SOCIETY.

This society met at the Brunswick Arms, Brunswick Street Stamford Street. Host Keeble, on Wednesday, caught some jack and bream. Several valuable prizes will be competed for on Sunday, pegged-down.—Esox Lucius.

CLAPHAM JUNCTION ANGLING SOCIETY.

The only members that weighed-in last week were Mr. E. Wilson, with some very nice roach and dace from Reading, Mr. E. Wakeford, from same place, Mr. E. Brewer, roach and dace, and Mr. R. Wellman, perch. Members are requested to attend on Thursday next.—E. Wilson, sec.

GOLDEN BARBEL.

On 29th ult., Mr. T. Lee had 4 lb. 10 oz. of roach from the Thames; E. Harrison, roach and dace; G. Hall, from the Colne, roach. J. Green had some fine roach from Windsor; C. Lumby, roach, and Mr. Goudge roach and dace from the Chelmer. On the 5th inst., Mr. T. Lee had 4½ lb. of roach; Mr. J. Green, 5½ lb. roach; G. Hall, 2 lb. roach; J. Day, 5¾ lb. roach; Mr. Goudge visited the Chelmer. He says it is one of the most uncertain rivers he ever fished. One time you might get 20 lb., and the next time you go you will have a hard matter to get a few ounces. On the 7th inst., Mr. J. Green paid Father Thames a visit, and got nearly 7 lb. of fine roach.—Pixie.

Feb. 6.

GOOD INTENT.

There was a good show of fish shown in the club on Sunday last. Mr. G. Bates brought in four pretty jack, Mr. Philpott roach from the Lea, Mr. Maybury roach from Wraysbury, Mr. Murphy roach, Mr. Donovan roach from the Lea. There are prizes given for the best specimens of roach, dace, jack, perch, and chub from any waters on next Sunday. Our annual supper takes place next Tuesday, the 14th inst., and not as L. B. reported in your last issue, on the 13th, Valentine's Eve. Mr. H. Brookwell has gone on the war path, and no doubt will render a good account of himself on return.—R. Murphy.

Feb. 9th.

GRESHAM ANGLING SOCIETY.

The meeting of this society on Thursday evening was of exceptional interest and their large room was crowded to excess by an appreciative audience, anxious to hear the Rev. Hayman Cummings on "Trout Culture," and the evening proved a notable success. Mr. Crumplen was unanimously voted to the chair, Mr. Bryant, librarian, kindly undertaking the office of secretary, *pro tem.* In introducing the subject, the rev. gentleman stated that he should not have recourse to notes, feeling sure that the society would prefer a plain statement of facts and experience, which he at once gave in very clear and eloquent terms. Among other circumstances, it was incidentally mentioned that on the occasion of the Norwich Exhibition he himself carried 25,000 trout about the size of minnows from Norwich to London, and then to Dartford, not changing the water and not losing a single fish, adding that he would almost safely, on the same system, undertake to land 20,000 in Australia, without losing probably more than ten. The whole ground of pisciculture, as regards trout and salmon, was ably gone over, the enemies of the ova and fry in the shape of pike, trout, floods, swans, aquatic insects, rats, mice, &c., being thoroughly dealt with, and the opinion finally expressed that the propagation of fish, coarse or delicate, might be best secured by following nature, without many of the fanciful artificial aids often thought so necessary. At the conclusion of Mr. Cumming's address several questions were asked and ably replied to, and an extremely hearty vote of thanks was passed, coupled with the suggestion that the reverend gentleman should put his thoughts in writing, that they might be printed in the society's transactions for the year. Dr. Brunton, Captain Alfred, Mr. Bentley, Mr. Parker (who had introduced Mr. Cummings), the chairman, and others took part in the discussion. At the conclusion of the discussion, the musical entertainment was proceeded with, and a very enjoyable evening passed. Mr. T. P. Cooper, who had occupied the vice chair, superintended this part of the programme, and many members gave some of their favourite songs. Mr. Parker, jun., gave a pretty pianoforte solo with bell accompaniment, Dr. Brunton, Mr. Aveling, Mr. Callaghan, Mr. Cartwright, Mr. Jaques, Mr. Oscar Benndorf, Mr. Marshall, Mr. Miller, Mr. Bentley, and others assisted, and Mr. Crumplen gave a humorous angling reading of his own composition. At the close of the proceedings a very hearty and special vote of thanks was accorded to Mr. Woods, who had presided with great efficiency at the piano, and also sang, coupled with the names of Mr. Crumplen, and Mr. Cooper, who had occupied the chair and vice-chair on the occasion. Several distinguished visitors were present, including Mr. T. R. Sachs (Piscatorial Society), and Dr. McLarin, who were warmly received A pike of about 8 lb. was weighed-in by Mr. White, and some 15 lb. of chub by Mr. Frost, the latter in fine condition (taken with Plummer), at Hurley. The evening closed with "Auld lang syne" and the National Anthem, in true Gresham style.

HAMMERSMITH UNITED.

Our members seem waking up at the fag-end of the season, as on February 2, Messrs. Pitts and Hobden had a first-class take of roach from Henley; on the 4th Mr. Geen was again to the fore with 36 lb. of chub from Shepperton. Our host, Mr. Green, has tried some fishing in the Ouse, but his capture was very small, and was taken in a peculiar manner. He left his rod unattended, and found, upon his return, that something besides a worm was on the hook. It turned out to be that a small perch had swallowed the worm, and one of the same species had swallowed it, and was unable to disgorge it, and this led to the event of landing the lot; the "gorger" weighed 1 lb. 2 oz. Several of our members are anxious to learn of some more swims from the "Thames Fisherman"—shall I say at Shepperton?—Vortex.

ISAAK WALTON ANGLING SOCIETY.

The members competed for two special prizes on the 8th inst., Mr. G. P. Rolt securing first honours with 12 lb. 1 oz. of jack, the heaviest one weighed 6 lb. 7¼ oz, thus winning Mr. T. Dennison's prize (one gallon of old tom); Mr. T. Ward was second, with 1 lb. 14¼ oz. of roach. Messrs. Barnes and Bliss also weighed-in for these prizes. Several other members were out, but were not successful.

Feb. 9.

JUNIOR PISCATORIAL SOCIETY.

The first dinner of this society was held at the Duke of Cornwall, South Island Place, Clapham Road, on the 7th inst., Mr. F. Palmer (president), presiding. There were about thirty members present, besides friends, and an exceedingly pleasant evening was spent. The usual toasts were followed by some excellent singing. The society, though but a comparatively young one, is in a flourishing condition.—W. Osborne.

LIVERPOOL ANGLING ASSOCIATION.

The annual meeting was held on the 29th Dec. last, at which there was a strong muster of members. The hon. sec. read the statement of receipts and payments, showing a balance of £25 16s. 7d. to the credit of the association. On the motion of Mr. Sergeneson, seconded by Mr. T. Hood, the balance-sheet as read was unanimously adopted. The election of officers was then proceeded with, resulting as follows:—President, T. W. Haigh, Esq.; vice-president, Mr. R. Woolfall; chairman, Mr. G. Pratchett; vice-chairman, Mr. W. Pearson; treasurer, Mr. W. Jones; hon. sec. Mr. R. Woolfall; hon. cash steward, Mr. J. Evans; committee, Messrs. J. Travis, H. Wood, J. Fearnett, T. Bloomfield, J. Lofthouse, E. W. Boulding, and W. G. Langley. The following prizes were then presented:—R. Woolfall, fly rod and fishing brogues, £1 11s. 6d.; R. Eelinger, fishing boots, £1 1s.; E. W. Boulding, fishing boots, £1 1s.; H. Wood, fishing boots and rods, £3 5s.; W. Davies, creel, &c., £1 1s.; W. Pearson, landing net, &c., 10s. 6d.; W. Francis, salmon, grilse and trout flies, 10s. 6d.; E. Chandler, creel, &c., 10s. 6d.; J. Evans, rod, 10s. 6d.; R. Smith, 10s. 6d.; and J. Mercer, fly rod, £1 1s. After which the meeting, which throughout had been a thoroughly cordial one, was closed amid a chorus of kindly feeling and brotherly good friendship. A fully attended committee meeting was held on the 31st January, at which the following business was disposed of:—That the opening match of the season be fished in the river Vyrnwy, at Llanymynech, on Tuesday, Feb. 28th, the prizes to be 12s. 6d. and 7s. 6d. for the heaviest and second heaviest creel of trout and graying, and 12s. 6d. and 7s. 6d. for the heaviest and next heaviest creel of coarse fish; and an additional prize, by Mr. J. Evans, of 5s. for the heaviest fish. All prizes given by the association to be in cash. That the scale of weights for weighing-in be as follows:—Pike, 3 lb.; perch, roach, rudd, trout and grayling, 4 oz.; bream, chub, carp and tench, 6 oz.; dace and graining, 3 oz; and barbel, 1 lb. That the lowest weights for preserving be, pike, 8 lb.; perch, roach, rudd and grayling, 1 lb.; dace and graining, ¼ lb.; trout, chub and tench, 2 lb.; barbel, 3 lb.; bream and carp, 4 lb.; salmon, any weight. That the premium for specimen fish be, salmon, 10s. 6d.; trout, 21s.; sea trout, 10s. 6d.; pike, carp, tench, perch, bream, grayling, roach, rudd, dace, graining and chub, 10s. 6d. each; and for gross weights, 1st, £1 1s.; 2nd, 10s. 6d.; 3rd, 5s. Pike, eels and salmon barred. The following special prizes were announced:—By Mr. Pratchett, fly-rod and reel and line, one for the heaviest trout or grayling, and the other for the heaviest coarse fish taken by members who do not win a prize this season. By Messrs. Eelinger and Boulding, a silver challenge cup for the three best trout and grayling taken in the club contests; to be won twice before it becomes the absolute property of any member; to remain the property of the association until finally won, and to have each winner's name engraved thereon. By Mr. Pearson, a prize of £1 1s., the disposal of which to be left to the absolute discretion of the association. No member to take more than three prizes in the club contests this season. Several other valuable prizes remain in abeyance, particulars of which will be duly announced when settled upon.—Rd. Woolfall, hon. sec.

Liverpool, February 5th.

ORIGINAL ALEXANDRA SOCIETY OF ANGLERS.

We had a very good show of fish on Sunday last. Mr. C. Hewett, roach, the largest going 1 lb. 1½ oz.; Mr. W. High, roach, from Ponder's End; Mr. M. Dymond, jack; Mr. Morton, perch; Mr. Stanton, roach, from Richmond. On Sunday next, we go down to St. Margaret's, to fish for thirteen prizes, peg-down, roach and dace only to weigh; and the swims will be pegged out by Mr. Blackledge and Mr. Atchinson. The draw will take place at Mr. Lindred's, the Pied Bull, Stansted.—E. Dymond, sec.

PISCATORIAL SOCIETY.

There was a satisfactory attendance of members and visitors in the club-room at Ashley's Hotel, Covent Garden, on Monday evening last. It was reported, to the great satisfaction of all present, that Mr. F. G. Pearce is better, but he has not yet recovered the use of his left side; but Dr. Coates, a member of the Piscatorial Society, who is his medical attendant, has strong hopes that he will do so. Mr. J. Ross Faulkner weighed, from the Thames, four chub, 11 lb. 8 oz., the largest 4 lb. 1½ oz.; Mr. Andrew, one jack of 6 lb. 4 oz. and 3 lb. 6 oz. of roach; and Mr. H. B. Brown, one chub, 2 lb. 2 oz. Mr. G. Robinson, from the Avon, 12 lb. 9½ oz. of jack, tbe largest 6 lb. 5 oz, and Mr. M. H. Blamey, seven jack, scaling 30 lb. 14 oz., from private water.

QUEEN'S ANGLING SOCIETY.

Very few members out on Sunday, but the fish weighed-in were in splendid condition. C. Wallford had 4 lb. of roach; Cotsford, 2 lb. 4¾ oz.; Smith, 1 lb. 8 oz.; Chick, 10¼ oz. from Uxbridge; Morgan, 1 lb. 3½ oz. from Richmond. These weights will not compare favourably with other societies, but as we do not allow the use of punts or boats, it is hardly to be expected that we can have such splendid takes as are chronicled in the Fishing Gazette, but which, by-the-bye, we are very glad to hear of, as it knocks the fished-out theory all aside.—H. Musgrave.

Feb. 6.

ROYAL PISCATORIALS.

The members of this society visited St, Margaret's on the 2nd, to compete for some valuable prizes one among them, being a dressing case valued at £10 10s. Like all limited place competitions, the amount of fish taken was small; Mr. F. Dale had the best lot, but, unfortunately for him, in his eagerness to get some fish, he wandered over the limit, before he was aware of it, and fished "the Black Pool" for which he got disqualified. The shades of evening brought the affair to a close, and the gentlemen adjourned to the Pied Bull where they had made arrangements to stop, and restore the "inner man." This having been done to the satisfaction of all present, a gentleman, well known by his amusing and interesting fishing adventures, addressed the members in a few words on behalf of the Thames Rights Association. He pointed out what riparian owners would do if they could, and also what they are doing at the present time in various parts of the Thames. He asked all anglers to support the Thames Rights Association, and on this occasion, I am happy to say, that this appeal was not made in vain, the funds of the Association increased between seven and eight pounds. In consequence of the small amount of fish taken on this occasion at St. Margaret's, it was purposed that the prizes be competed for another day.—Pixie.

Feb. 7.

SURREY PISCATORIALS.

At the fortnightly meeting held at the headquarters of the above society en the 8th, Mr. Meadway presided. Among the members present were Messrs. Bansback, Beckett, Boalch, Linstead, Hamlyn, &c. The minutes of the last meeting having been read and confirmed, the report received from the West Central was read, discussed and met with approval. A question as to the financial condition of the society was responded to in a very able manner by Mr. Hamlyn, the hon. secretary. A vote of thanks to the president and the secretary brought the business of the society to a close. The following gentlemen weighed-in fish this day from Richmond:—Mr. Beckett, 12 lb. 8½ oz. of roach; Mr. Bansback, 8 lb. 1 oz. of roach and dace; Mr. Boalch, 4 lb. 3½ oz. of roach and dace and Mr. Meadway, 3 lb. 8 oz. roach and dace. Several other gentlemen did not arrive in time to weigh.—Pixie.

Feb. 9.

STANLEY ANGLERS' SOCIETY.

Since our last report we have been favoured with several shows of fish by various members. On January 28, Mr. Rose, from Elstree, a brace of jack weighing 8 lb.; Mr. Wheatstone, a good tray of jack and perch, largest jack 6½ lb; on the 31st, Mr. Paramor, 10 lb. of jack, largest fish 5½ lb.; on the 4th inst., our treasurer, Mr. W. Jarvis, 17½ lb. jack and 5½ lb. of roach; on the same date, Mr. Wheatstone, 7½ lb. of jack, and about 5 lb. roach. We regret that through a combination of unlooked for circumstances we have been compelled to forego our annual ball this year.

STOKE NEWINGTON ANGLING SOCIETY.

A competition for three prizes, given by Messrs. Webb, Harris, and Brooks, will take place in the river Lea on the 12th inst., the boundary being between Ryehouse Bridge and St. Margaret's Lock House. All fish to weigh at the new club house, the Middleton Arms, Mansfield Street, Kingsland Road, between 9 and 11 o'clock p.m.—Thos. Gretton, sec.

Feb. 6.

WALTONIANS.

On the 5th inst., Mr. Togwell had chub, 12 lb. 6¾ oz. (one fish going 3 lb. 5¾ oz.); Mr. Phillips had chub, 9 lb. 1 oz. (one fish 3 lb. 8½ oz.), and roach, 1 lb. 9 oz.; Mr. Brady had dace, 3 lb. 15 oz., and roach, 4½ oz.; Mr. Malcom, roach, 2 lb. 10¼ oz. Mr. Roland also weighed-in.—A. J. Marriott.

Feb. 7.

WALWORTH WALTONIANS.

On Sunday last the members of the above competed for four prizes, given by Messrs. Caine, Butt and others. The first was taken by Mr. Bayley, second by Mr. Fox, with roach and dace; and the third by Mr. Boalch, with jack and perch from Windsor. Seven members have given in their names to accept the challenge from the South London, the time and condition to be decided on February 9th. The next competition will take place on the 25th, for one guinea, given by Mr. White, and two rods, given by Mr. Howard, senr.—Pixie.

Feb. 7.

WEST LONDON ANGLING CLUB.

During the present year the members of the above club have been taking some remarkable specimen fish. Mr. J. Butler has had pike of 13 lb. 4 oz., 17 lb. 15 oz., 13 lb. 15 oz., &c.; Mr. F. S. Barnard, pike, 10 lb. 3½ oz.; Mr. Tremaine, pike of 21 lb. and 13 lb. 5½ oz.; Mr. E. Matthews, Colne, a roach from Uxbridge of 3 lb. 15½ oz. and 2 lb. 5¼ oz.; and Mr. G. Buxton, a dace, 1 lb. 5¼ oz. The total weight of fish during the month of January was 107 lb. 4¾ oz., and since then 24 lb. 12 oz., making a grand total of 132 lb. ¾ oz. Creel.

WEST LONDON ANGLING CLUB—A CORRECTION.

Allow me to correct an error made in forwarding you doings of the West London Angling Club, viz.. Mr. M. J. Butler's weighs should be 13 lb. 3 oz., instead of 10 lb. 4 oz. I would also inform you that the total weight for the month of January amounts to 107 lb. 4¾ oz. by the members.—C. R. Stocks, hon. sec.

Page 56, line 13, for "hin" read "hint."

Gregory's Spinning Baits. "The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[Advt.]

George James Eaton, of Starkholmes Matlock-Bath, Derbyshire, respectfully invites Noblémen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[Advt.]

BY SPECIAL APPOINTMENT.

POLLACK, BASS, MACKEREL.

HEARDER AND SON,

Deep Sea, River and Lake Fishing Tackle Makers to H.M. Government, H.R.H. Prince of Wales, H.R.H. the Duke of Edinburgh, and exploring expeditions,
195, UNION STREET, PLYMOUTH.
Established 1770.

Mounted lines for cod, conger, hake, whiting, bass, pollack, mackerel, and all kinds of fish at home and abroad.

Specialities for foreign fishing. Inventors of the celebrated silver spinners, spinning sand eel and sole-skin bait for pollack, mackerel, and bass.

Eleven prize medals, including Berlin Fishery Exhibition 1880. *Illustrated Catalogue gratis.*

No skilled labour is required in the application of the Stain.

SATURDAY, FEBRUARY 18, 1882.

ANNUAL DINNER OF THE PISCATORIAL SOCIETY.

UNDER the very pleasant presidency of Mr. Edward Birkbeck, the Conservative member for North Norfolk, the forty-second annual dinner of the Piscatorial Society, took place last Wednesday evening, in the Prince's Salon of the Holborn Restaurant. The affair was a complete success in every respect; in fact, the 1882 annual dinner of this Society will long be remembered with pleasure by all, and there must have been nearly 200 members and visitors present; amongst the latter were:—Mr. Spencer Walpole, the Senior Inspector of Fisheries; Mr. Carrington, of the Westminster Aquarium; Mr. Hatfield, Mr. Towse, Mr. R. Clemow, &c. We imagine it to be utterly impossible for any body of anglers to meet together in this convivial spirit without smoking being almost general, and Mr. Birkbeck—who we are glad to say is becoming quite an old friend amongst us London anglers—is well aware of this; he gave the signal at as early a moment as possible, and in a very few seconds the consumption of tobacco in all forms commenced. Then came the toasts. That of the Queen and Royal Family headed the list, and was proposed by Mr. Birkbeck, who drew attention particularly to the great interest the Royal Family is taking in Fisheries Exhibitions. The toast, we need hardly say, was received with the utmost enthusiasm. Mr. Lander, the hon. secretary of the society, to whose efforts the success of the dinner was so largely due, then read extracts from the Report, showing that the Piscatorial Society, although nearly fifty years of age, is even more flourishing than ever. (Applause.) Mr. Lander referred the members to the report itself for full particulars. A song then followed, and next was *the* toast of the evening—that of the Piscatorial Society—given by Mr. Birkbeck, and given in such a pleasant, kindly, and sincere manner, as made every member of the club feel prouder of belonging to it. Mr. Birkbeck said it gave him the greatest pleasure to fill the honourable office they had conferred upon him—that of chairman at the great dinner of the year of the best piscatorial club in London. He was extremely glad to see his friend Mr. pencer Walpole present. (Hear, hear.) Mr. Walpole, as they all knew, took the deepest interest in our fisheries, and he trusted the time was coming when the Government would place funds to a large annual amount at the service of the fisheries department for the purpose of stocking our rivers with suitable fish. (Great applause). If the Governments of England and the United States could change places for a short time he could answer for it we should see our rivers attended to at once, money would be spent in stocking every river as far as possible. He hoped that this country would not be content with the present state of affairs as regards fish-culture, and he should impress upon all his friends in the House the great importance of the subject. (Hear, hear). Mr. Birkbeck next turned to the question of the Thames, and spoke strongly against the claims of the riparian owners. He thought anglers should make a strong stand for a free Thames. (Hear, hear). In this connection he would mention that, in his own case, where this very matter of angling rights, on the river Bure, in Norfolk, had come before him, and when he had purchased title deeds, giving him unquestionably the exclusive right to fish, he had said to himself that it would not be fair to preserve it merely for himself and his friends, and he had unreservedly thrown it open to all fair anglers. (Great applause). He sincerely hoped the riparian owners would reconsider their views. Mr. Birkbeck then briefly touched on the forthcoming Scotch and English Fisheries Exhibitions. He was glad to say the committees of the two exhibitions were on a very friendly footing together, and it was only that morning that H.R.H. the Duke of Edinburgh, who was president of the Scotch exhibition, had told him (Mr. Birkbeck) that he should help the 1883 exhibition in every way in his power, and expressed the wish that his name should be added to the general committee of the 1883 exhibition. (Applause). He need not remind them that Her Majesty was patron, that the Prince of Wales was president; in fact, that all the royal family had promised to support the affair. They already knew it, and most highly valued such distinction shown the fisheries interests. (Applause). But he wished to remind them that the approaching public meeting at Willis's Rooms was also to be presided over by H.R.H. the Prince of Wales, that it would be one of the most influential meetings ever held—ministers, ambassadors, noblemen, and most influential persons having promised to attend. The object of the meeting was to pass certain resolutions connected with the 1883 Fisheries Exhibition. The meeting is to commence at twelve o'clock on Monday, February 27. He hoped all the members of the Piscatorial Society would make a point of attending. (Hear, hear). Mr. Birkbeck then referred very feelingly to the loss the society sustained through the absence—through illness—of its respected "Father," Mr. Pearse. It was pleasing to hear he was improving. Just at this moment one of the members got up and announced that not only was Mr. Pearse better, but at that very instant (9.30) he was uncorking a bottle of champagne to drink to the health of the society. (Applause). The whole assembly then most enthusiastically drank to the speedy recovery to health of Mr. Pearse.

The next incident of the evening was the singing, in rare good style, by Mr. Alfred Jardine, of that favourite song, "The Fine Old English Angler," which Mr. T. R. Sachs informs us was composed by Mr. G. W. Chapman, a former secretary of the Piscatorial Society. With the permission of the society, we should much like to publish it in the Gazette.

The next toast was that of the secretary and other officers, proposed by Mr. Thomas Huggett, who is one of the most successful members, he having weighed-in more than a quarter of the total weight for the club. Mr. Huggett said he was proud of the Piscatorial Society; he always regarded it as an oak among clubs, not a poplar or a willow, but a good sturdy oak—(applause)—with its roots going back half a century; but even a century was nothing to an oak, nor would it prove more in the history of this society. He then referred first to the hon. secretary, who had all—or nearly all—the work to do. Angling societies were like ships, they require good officers to steer them. He was sure they would all agree with him that in their hon. secretary they had the right man—(hear, hear)—and one who had done much to keep the society together. He lamented the absence of their treasurer, Mr. Pearce. All wished to see him back. The duties of the auditors, Messrs. Gillet and Patteson, were most efficiently performed. There was yet one gentleman to whom he had not referred, and that was their librarian. Mr. Gray was respected by all. (Hear, hear.) Mr. Gray was always ready to take anything he could lay his hands on—(laughter)—either for their library or museum.

Mr. Lander briefly replied for the officers, stating their endeavours would be to maintain the efficiency of the club, and they had to thank the committee for their cordial support. A capital song, which was encored, then followed.

The next toast was that of "The Thames Angling Preservation Society and Kindred Societies," proposed by Mr. T.R. Sachs, who said that as one of the committee of the Thames Angling Preservation Society, he felt a little out of place in proposing this toast, but he perhaps for that reason had better facilities for knowing how really efficient and hard-working the society was. (Hear, hear). He regretted the absence of Mr. Thomas Spreckley, the president of the society.

Mr. W. H. Brougham, secretary of the Thames Angling Preservation Society, then responded. He regretted that it had fallen upon him in consequence of the absence of Mr. Spreckley, which was occasioned by the marriage of his daughter. Mr. Brougham said it was eighteen years since he first became a guest of the Piscatorial Society, and on the first occasion he had had to respond to the same toast. At that time the Thames Angling Preservation Society was a private society, but it was a very jolly one, for sometimes the most important business transacted was to find out who had to pay for the bottles of sherry, (Laughter.) The Thames Angling Preservation Society was now a public institution, and it had representative and hard-working men on the committee such as Messrs. Geen, Ghurney, Hatfield. (Hear hear). Mr. Birkbeck had referred them to the riparians on the Thames. He (Mr. Brougham) was happy to say that the Thames below Staines was free. (Hear, hear.) The T.A.P.S. had, during the last year, received the very honourable addition of a patron in the shape of H.R.H. the Prince of Wales (applause); they had important duties on hand, they were endeavouring to extend their protecting powers to Kew Bridge. (Hear, hear.) They were also endeavouring to get back from the water companies the fish which had been pumped from the Thames into the reservoirs, amounting, he thought, to many tons weight. He was glad to say the angling on the river had been very good. He might mention the 80 lb. weight of dace taken the other day at Twickenham, and that a bank angler took a pike of nearly 19 lb. at Shepperton. (Applause.) In the rearing ponds at Sunbury they had 3,000 fry of trout and char, the gift of Mr. Littlewood, of Huddersfield; and that gentleman had liberally promised them 10,000 more for the Thames. (Applause.) Mr. Marston's scheme for coarse fish culture would receive the hearty support of the T.A.P.S. (Hear, hear.)

Mr. Elliott, who was from the provinces, responded on behalf of the kindred societies. He said he felt that all the societies should work together for sport, and not for prizes. (Hear, hear.) The great London angling clubs should set a high example, and it would surely be followed. The slaughter of small fish, in order to make up gross weight, was a most pernicious practice, and one which, he was glad to see, all the better societies were setting their faces against. He could tell them that there were a great many London anglers whose presence was not at all acceptable to their country brethren, for when they invaded their districts they seemed bent on mischief. They left gates open, so that the farmer's cattle strayed; they broke fences, stole fruit, took every fish they could catch, big or little, and, in fact, made themselves as different from what the true angler should be as it was possible to imagine. He, of course, did not for a moment accuse any of the gentlemen present of such practices, but he thought it would do good if it were known in London that country clubs and anglers often had very good grounds for closing their waters to London men who called themselves anglers.

Then followed a song by Mr. Harrison, and Mr. Alfred Jardine next proposed "The Press." Mr. Jardine said that he undertook this toast with considerable diffidence, for it was one which had always been in previous years proposed by a very dear old friend of his whom they all had known and loved. He referred to the late H. L. Rolfe, whose loss they all mourned. Such losses as these showed them plainly how time rolled on. They had also to regret the absence of their treasurer, who was on a bed of sickness, but he trusted he would recover, for it seemed to him (Mr. Jardine) that anglers were particularly looked after and cared for by the Almighty. He thought Izaak Walton's book was, next to the Bible, one of the best books in the world; and he was sure that any true disciple of Izaak Walton could not be a very bad man. But to return th the toast. We had there gentlemen of the Press, and he had much pleasure in referring to the immense benefits conferred by the Press on the public generally. And sportsmen were especially indebted to the *Field*—to that oldest of sporting papers, *Bell's Life*—and to the Fishing Gazette, which was the only paper entirely devoted to angling. He proposed, then, "The Press," coupled with the names of Mr. W. H. Brougham, Mr. J. P. Wheeldon, and Mr. R. B. Marston.

The company here sung "For they are jolly good fellows," a spontaneous compliment much appreciated.

Mr. Brougham briefly replied, and then Mr. Wheeldon said that he, too, deeply felt the loss of the gracious presence, the tall and stately figure and scarlet phiz of dear old Rolfe. He (Mr. W. had been connected with *Bell's Life* for eight or nine years, and felt that he had done his duty fairly well (hear, hear), and in describing his ill luck or good luck, he had always kept to the truth (laughter), which was more than all anglers could say The chairman had referred to the action of the riparian owners and their claims on the river. Now he felt very strongly on this question, and thought anglers should do their utmost to support the Thames Rights Defence Association. (Hear, hear.) He had hoped that the chairman of that society, Mr. Francis Francis, would have been present with them to urge the matter on their notice. It was only the other evening he was at a dinner where he heard riparians say they would repel London anglers in consequence of their unpleasant behaviour—trespassing, foul pipes, foul language, &c., being some of the charges made against the London club men. Now, he was no apologist for unseemly conduct, but, on the other hand, this gave the riparians no right whatever to set up claims to the river, to the exclusion of respectable anglers—claims which were founded on moonshine. He was sorry that the Thames Rights Defence Association had had to go to the Lord Mayor for help. He felt this was a case where anglers should help themselves. He said that he had the previous evening dined with the Good Intent Anglers at Shoreditch, and he was delighted to find that the best feeling was manifested towards the more wealthy clubs, such as the Gresham and the Piscatorial, which had done something towards breaking down the barriers which exist between rich and poor anglers. (Hear, hear.) When rich and poor were all banded together as one body we should have the finest body of anglers in the world; for he knew none would venture to dispute that some of the most skilful of our anglers are to be found amongst the mechanic and working class. (Hear, hear.)

Mr. Marston, in responding on behalf of the Fishing Gazette said that one of the pleasantest things connected with the Fishing Gazette since it had been under his care, was the great number of friends it had made for him amongst the anglers of London, and not in London only, but in all parts of the world. Also not the least pleasant thing was the invitation for salmon, trout, and jack and other fishing, which he often got from perfect strangers—readers of the Gazette—in various parts of the country. He said he most heartily endorsed all that Mr. Birkbeck and Mr. Wheeldon had so ably said as to the necessity for defending our rights on the Thames. He was very glad to be able to announce to them that their chairman, Mr, Birkbeck, had most kindly promised to take the chair at the Society of Arts at the meeting of London anglers which will be held there shortly to discuss the question of the propagation of our coarse fish. (Hear, hear.) They, as anglers, were deeply indebted to Mr. Birkbeck for the great interest he shows in all fishery matters. He considered the establishment of fisheries exhibitions as of the utmost importance. In 1880 we had the splendid International Fisheries Exhibition at Berlin, which gave great impetus to fishing interests; then followed the important National Exhibition at Norwich. The Edinburgh International Exhibition, and the great 1883 International Exhibitions, were coming, All this was of immense importance in furthering our knowledge on the subject. He then referred to the Fishing Gazette Tournament, which was held at the Welsh Harp last year, and which was very successful. He thought that, as the fence months were coming on, this question of angling tournaments should be revived and he would venture to suggest that it might be possible to get up a competition between members of the Piscatorial and Gresham Societies, and if such a competition were arranged he would be happy to give a prize. With regard to the Edinburgh Fisheries Exhibition, Mr. Marston said that he had been requested by the committee of that exhibition, to endeavour, if possible, to get some of the London angling clubs to exhibit cases of stuffed fish as was done at Norwich. He was glad to say that some clubs hadpromised already; others, he regretted to say, were apparently indifferent, but he hoped the Piscatorial Society which has the finest collection in London, would exhibit. (Hear, hear.) As a member of the club, he felt they oughtto exhibit. Their Scotch friends would take it as a great compliment, and when we ask them to exhibit at our 1883 exhibition, they would be all the more willing to do so if we helped them with theirs. (Hear, hear.)

The next toast was that of "The Chairman," given by Dr Brunton, the vice-chairman. Dr. Brunton said the toast would have the sympathy of all. It was a great honour, and an important matter to the society, to have for their chairman not only a member of Parliament, but also the president of the Norfolk Acclimatisation Society. He thought that for this evening, they might fairly claim the initials M.P. after Mr. Birkbeck's name, as standing for Member of the Piscatorial Society. (Laughter.) Dr. Brunton then expatiated on the true nature of the angler's vocation. "We are not simple fishermen; we study nature, we are not pot-hunters." He took exception to the expression "Coarse Fish," which, he said, did not apply to such fine fish as perch, though truly of a bream, perhaps, it might be said it tasted like a boiled flannel pin-cushion. (Laughter.) He would very much like to see the continental system of stews introduced into the proposed new fish market, then we could buy our fish alive and fresh; the fish cleanse themselves in these stews, and got rid of the muddy flavour which they must acquire in muddy water. Mr. Birkbeck briefly replied. Mr. Addlington then proposed the vice-chairman, Dr. Brunton, one of their most expert fly-fishers, and also one of their most pleasant and genial members. (Hear, hear.) Dr. Brunton replied, thanking the society for the honour they had done him in giving him the duties of the vice-chair. Mr. Forman then proposed the visitors, and hoped they would all become anglers.

Mr. Spencer Walpole in replying, thanked them in the name of the visitors for the way they had been entertained. He would not make a long speech because the hour was late, and evidently, from what he had seen, whatever might be the feelings in another House, the Piscatorials were decidedly in favour of cloture. (Laughter.) We heard of rights of men, and rights of women, &c., but he thought what anglers wanted was rights of fish and fishing. (Hear, hear). Although, happily, political matters did not interfere with the harmony of angling meetings, he certainly considered that Mr. Birkbeck, the Conservative member for North Norfolk, had made a most liberal and even radical speech. (Great laughter.)

The general meeting then broke up, but some dozens remained for an hour, and, after voting Mr. Wheeldon in the chair, indulged in some singing and general chat. At 12·30, this subsidiary meeting dispersed, and so ended one of the pleasantest meetings of anglers ever held.

THE SPORTSMAN'S EXHIBITION AT THE AGRICULTURAL HALL.

It has been a matter of surprise and regret to all anglers who have visited this exhibition that so few of our fishing-tackle makers are found amongst the list of exhibitors; we think this may in some measure be accounted for by the fact that the Norwich Fisheries Exhibition was held so recently, and that Fisheries Exhibitions on a grand scale will be held this spring in Edinburgh and next year in London. However, the firms who do exhibit deserve all the more credit for their enterprise, and will doubtless reap a larger reward than if they had more competitors.

Messrs. F. T. Williams and Co., of Great Queen Street, have a very effective show, and we noticed many gentlemen handling their fine glued-up cane rods, their hard wood trout rods, &c. We were glad to see they made special features of rods fitted with Hardy's winch fitting, and the new Fishing Gazette winch. Amongst their novelties we noticed specially a new and cheap light tin box, divided into compartments, for artificial baits; the compartments being made of cork. This bait-box is very handy indeed, and is sure of a favourable reception from spinners. They have also the new "Captain Boyton" pike bait—a metal fish with archimedean head and tail spinning arrangements. In our opinion the blades at the head of the bait are quite unnecessary, and can only prove detrimental to the spin, as well as acting as a gag, and perhaps preventing the hooks striking home. As we have so repeatedly said, a properly bent tail is all that is required for obtaining the most rapid and regular spin.

Messrs. Holbrow and Co. have a good miscellaneous exhibit of polo clubs and balls, tent-pegging spears, fishing rods, &c. all appear to be of very good quality and remarkably moderate in price.

Messrs. W. Watson and Sons are taking orders for guns and fishing-rods, and they certainly have an extremely fine selection of both. Their sporting knives attracted much attention, particularly their new "angler's knife." We can strongly recommend any of our readers who are in the neighbourhood of 308 and 313, High Holborn, to look in and see Messrs. Watson's really fine stock. They have for many years past added a fishing-rod and tackle department to their business, and every novelty is at once added to their stock; they mean to command success by deserving it.

Messrs. Cayless and Sons, of Loughborough, have quite a large exhibit of their specialities—nets of all kinds, including the Fishing Gazette bait-net, which, we are glad to hear, is much appreciated. By the way, the *Field* gave it a very good notice.

Messrs. Thornhill and Co., of New Bond Street, have an extensive and most attractive exhibit of their sporting knives, flasks, baskets, canteens, clocks, &c., also one or two specimens of stuffed fish, the only ones we noticed in the building; in fact, the absence of trophies of the chase is general—in an exhibition of this kind they ought to have been a prominent feature.

Mr. John Loynes, of Elm Hill, Norwich, exhibits a model of his safety pleasure boat, which obtained the prize medal at the Norwich Fisheries Exhibition. It is built specially for fishing and cruising trips on the endless rivers and broads of Norfolk and Suffolk, and fulfils the necessary requirements of such a boat in an admirably perfect manner. Any of our readers who may think of visiting East Anglia, should note Mr. Loynes' address, as he will furnish all information about the waters. He publishes a useful guide for 3d.; every angler should possess it.

Mr. Henry Heath, of Oxford Street, exhibits his sporting hats, caps, helmets, &c., of every description—his soft helmet-shaped cap is the very thing for anglers. Keeps the sun and rain off both face and neck, and can easily be fitted with his registered removable band for holding the fly-cast—a most useful invention.

Messrs. J. Kay and Son, of Sheffield, have a selection of their porpoise-hide fishing and shooting boots, their patent "Eclipse" boot being an admirable sample of sound work and material.

Messrs. Salver and Co's. show-case attracted as much attention as anything in the building, their guns, camping out requisites, and other sporting accessories, being most varied and good.

Mr. Henry Churchman, of Horsham, exhibits a novelty in the shape of a "Sportsman's" tonic, or Seville orange brandy—a very useful friend when one is wet through on a fishing expedition.

Messrs. J. C. Cording and Co., of Piccadilly, have a splendid collection of fishing canoes, boots, stockings, brogues, coats, bags, hats, &c., &c.; the first-class quality of their goods is known too well to need comment from us.

Messrs. Macdougall and Co., of Inverness, show an exhibit of fishing and shooting hosiery which deserves special notice. These goods are hand-knit, and we can most strongly recommend them to the notice of all anglers who wade or who suffer from cold feet; they will outlast three pairs of the ordinary hose sold with fishing stockings, especially for wearing over the latter to keep out sand and grit.

Messrs. Anderson, Abbot and Anderson's exhibit is also of special interest to our readers, comprising, as it does, all kinds of fishing waterproofs, including many specialities. And the same be said of that of Mr. George Cording of 125, Regent Street, his fishing gloves being a noticeable features and a most useful one.

Mr. Thomas Grant, of Maidstone, caters for anglers with his world-renowned Morella cherry brandy, a most excellent liqueur for the sportsman.

Messrs. W. Sparkes Hall and Co., of Regent Street, exhibit their "Carmichael" Portable Boot Tree. This invaluable little invention we have before noticed most favourably. Most anglers have experienced the annoyance of not being able to get on their boots after they have been dried by the hotel "boots." Messrs S. H. and Co's. invention completely obviates this difficulty.

Messrs. S, Matthews and Son of Charing Cross, have a very fine exhibit of waterproof goods for anglers, and their new automatic invisible apparatus for preventing drowning is a capital idea, well worth the attention of all salmon and trout fishers.

Messrs. Taylor and Son, 82, Great Portland Street, have a good exhibit of their fishing, shooting and walking boots, which are of the best material, workmanship and style.

Messrs. Samuel Gulliver and Co. show their now celebrated whisky "Curaçoa," prepared from the finest old matured Irish whisky, oranges, lemons, and aromatic spices. This carries recommendation on the face of it, and fully deserves the immense success it has already attained.

Mr. J. Wilson, of 52, King Street, Woolwich, has a fine show of his specialities in lawn-tennis nets, racquets, shoes, &c. Mr. Wilson is a Freemason and an angler. His new fastening for lawn tennis racquets is very ingenious.

In concluding our notice of that part of the exhibition more particularly of interest to anglers, we must heartily congratulate Mr. Rafferty, the manager, and Mr. Etherington, the secretary of the exhibition, on the very great measure of success attained. Such exhibitions as this ought to be more general among such a sport-loving people as we are, and we trust they will be encouraged to repeat their enterprising experiment at no very distant date. Just a word for their catalogue—a most important feature of an exhibition of this kind. It is in every respect admirable—clear, well arranged, easy of reference, and has one special feature which we would strongly recommend to the notice of all who may have to get up catalogues of this kind, that is, the description of each exhibit has opposite it a blank space for "visitors' notes."

Our friends of the Piscatorial Society, should not forget to examine Mr. T. Huggett's really admirable fishing-punt made by himself.

GRESHAM ANGLING SOCIETY.

Splendid Take of Pike.

A SPLENDID take of pike by Messrs. Alfred Jardine and A. Nuthall, was weighed-in at the Gresham Angling Society on Friday last. These well-known anglers took no less than 30 pike in 5 hours, 18 of which were brought to the Gresham as specimen fish; 12 under 4lb. weight being returned to the water. Mr. Jardine, with his usual good fortune and skill, took the largest, his total, composed of 11 fish, weighing 87 lb., the two heaviest weighing 21½ lb. and 17½ lb. each; the remaining 9 going altogether 48 lb.

Mr. Nuthall had 7 fine fish, weighing together 57½ lb., the total gross weight being 144 lb. 8oz. These were all taken "spinning" and "paternoster;" forming a brilliant sequel to the grand take of Messrs. Jardine and Knechtli's we lately recorded.

CLUB REPORTS.

ACTON AND EALING ANGLING SOCIETY.

Since my last report the following fish have been weighed:—Mr. Slater, 26 lb. 7¼ lb. roach and dace; Mr. Howell, 4 lb. 12½ oz. roach and dace; Mr. Head, 7 lb. 11 oz. roach and dace; Mr. Dean, 1 jack, 2 lb. 6 oz. Messrs. Simpson and Clayton have also shown roach and perch. The first visit of clubs in No. 1 district of the W.C.A. will be paid to this club on Tuesday, Feb. 21, when we hope to see a good muster of angling friends amongst us on that occasion.—Black Bag.

AMICABLE BROTHERS ANGLING SOCIETY.

On the 12th twenty members fished for eleven prizes at Burnt Mill, with little success, only four being taken—Messrs. S. Patrick, Shary, Farebrother, and J. Pedley, first, second, third, and fourth, winning. Mr. C. A. Medcalf, Mr. J. Hunt, Mr. J. Robinson, and Mr. A. Plumstead prizes. The remaining prizes will be fished for at Ware on Sunday, February 19. A return visit will take place in the club-room on Wednesday, February 22. The visit is on No. 2 list of the W.C.A. Any other clubs being able to attend on that occasion, we shall take a great deal of pleasure in receiving the call, and return it in full afterwards.—T. Worledge.

ANCHOR AND HOPE ANGLING SOCIETY.

Only three of our members weighed-in on Sunday, the 12th inst. Mr. A. Shakel, roach and jack; Mr. A. Glass, roach; Mr. T. Bowling, roach and dace. A roving match will take place on Sunday, the 26th inst., for three prizes (Staines Bridge to Penton Hook.)—D. Davis, sec.

Feb. 14.

BOSTONIAN ANGLING SOCIETY.

We had a fair show of fish on Sunday last, the following members weighing-in:—Mr. Brothers, roach and perch, and Mr. Goodge, roach, from Shiplake; Mr. Hart, one jack; Mr. Collier, roach; Mr. Jennings, three jack; and Mr. Vincent, a pretty jack from the Colne weighing 14 lb.—H. Taylor.

BRENTFORD PISCATORIAL SOCIETY.

Our takes have been smaller this week, jack about 8 lb. Mr. T. Taylor, 8 lb. of dace on Friday at Isleworth with Howard. Mr. J. Allen, two perch, one 1 lb. 8 oz., the other 1 lb. 4 oz.—J. H. White, hon. sec.

Feb. 13.

BRIGHTON ANGLERS' ASSOCIATION

Last week in the Ouse Mr. Tomkins took two jack, one 7 lb. and one 3 lb. Mr. Anscombe, in the same river, took two jack, both small. Mr. Cardy lost one, after being friends a quarter of an hour. He was a large one, but did not gorge the bait. On Sunday he tried Chichester and did not get a knock all day. He could see the bottom across the canal anywhere, and strongly recommends anglers not to go till the water is cloudy or the weeds grow in front of the angler.—Groundbait.

CITY OF BRISTOL ANGLING ASSOCIATION.

The monthly meeting of this association was held at the club house on Monday February 13th, when, after the ordinary business of the evening had been transacted, the vice-president, Mr. J. H. Champion, rose, and spoke as follows: "Mr. President and brother members, it falls to my lot to now perform one of the most pleasing duties that can fall to the lot of a vice-president of such an association as this. I do this with more than ordinary pleasure, as I have at all times, since I have had the honour to be connected with your association, found your president (Mr. Jones) to be a man of sterling worth and a thorough angler, and ready at any time to give advice to any member or members who might be considered to be not quite up to the mark. And now, Mr. Jones, I have the extreme pleasure, in the names of the members and friends of this association to present to you a fishing-rod, reel and tackle, and to express a hope that you may long be spared to enjoy its use." (Loud applause, during which the vice-president resumed his seat.) The president, on rising to return thanks, said he should ever remember this evening. He found it difficult to find words at his disposal wherewith to express to them (the members and friends of their association) his deep thanks for their kindness in presenting him with such a beautiful rod, &c. He could assure them that it would always be much prized by him, not for its intrinsic value, but rather as showing the good feeling that existed between them as members of the City of Bristol Angling Association. After sketching out a brief history of the association, the president said they all knew he was not a man of wealth, but anything he had done in the past to promote the welfare of the association, he would for the future endeavour to surpass. Several other members bore testimony to the worth of the president. A vote of thanks to the vice-president for presiding, which, after being duly acknowledged, concluded one of the most pleasant meetings ever held by this association.—J. H. Stantial, hon. sec.

Feb. 13.

CITY OF LONDON ANGLING SOCIETY.

A few of our members were out on the 12th to compete for two prizes given by Messrs. Hobbs and Stebbings, Messrs. Chambers and Castell winning the former with roach and perch from Amberley, the latter with perch from Penton Hook. Mr. Payne had roach from Amberley, and Messrs. Plumstead, sen., and Pratt roach from the Lea. Mr. Payne's prize will be fished for on the 19th.

CLAPHAM JUNCTION.

The only members weighing-in this week were Mr. J. Innes and Mr. Hutchins with some splendid roach and dace from Shepperton, several going over 1 lb. each.—E. Wilson.

Feb. 14.

DUKE OF NORFOLK ANGLING SOCIETY.

The above society had good trays on Sunday last. Mr. Pates chub and perch, the largest 2 lb. 5 oz., from Ripley; Mr. Allen, jack, from Cowley. Messrs. Baxter, Haimbers, Stone, Wilkens, Colley, and Avon, also having fish. —James Avon, sec.

FRIENDLY ANGLERS.

At the weekly meeting at the Albion Tavern, Albion Street, Hyde Park, on Wednesday evening last, Mr. Pugh made a magnificent show of perch from the Kennett. They weighed altogether exactly 57 lb. The nine largest weighed respectively 2 lb. 4½ oz, 2 lb. 3 oz., 1 lb. 12½ oz., 1 lb. 10 oz., 1 lb. 8½ oz., 1 lb. 8 oz., 1 lb. 6 oz., 1 lb. 4½ oz. and 1 lb. 4 oz. There were twelve others weighed over 1 lb. each and eighteen over 12 oz. In addition to the perch he had 8 lb. 6½ oz. of roach and 1 lb. 7 oz. of dace, making a gross total of 66 lb. 13½ oz. On the previous Wednesday Mr. Pugh weighed-in 16 lb. 8 oz. of perch, the largest 1 lb. 7 oz., and 10 lb. 4 oz. of jack.—B.

GOOD INTENT SOCIETY.

We had a handsome show of fish at our club on Sunday last. Messrs. Chritchfield and Brookwell showed 60 lb. of chub and perch, good fish, but not large size; Mr. Beard brought up one handsome perch, 3 lb.; Mr. Maybury, 10 lb. of roach; Mr. Edward Saunders, 7 lb. of perch; Messrs. Bell, roach; Philpott, roach; Gadbury, roach; R. Murphy, roach, chub, and dace; W. Wheeler, Sluggett, Donovan, Moss, Levey, Beard, Cox, roach. Our annual supper took place at our club house on the 14th inst., and was an immense success, 120 sitting down; Mr. Tibbatts making an excellent chairman; Mr. Brookwell, vice-chair. We were honoured with the company of J. P. Wheeldon, *Bell's Life*' Mr. Crumplen, hon. sec. of the Gresham; Mr. Bates, from ditto and Piscatorial; Mr. L. Bonvoisin, West Central; Mr. S. Mongan, East Central. The supper was everything that could be desired, and great praise was given to our worthy hostess, Mrs. Roberts. A telegram was received at the last moment from Mr. Geen, that he could not possibly be with us; Mr. T. Hoole sending an apology, as he is so unwell. After the supper, presentations were made to the secretary, Mr. R. Murphy; and Mr. W. H. Beckett, for their past services, consisting of illuminated addresses on vellum, in massive gold frames, beautifully executed. Harmony prevailed till two o'clock, when every one was delighted with the evening spent.—R. Murphy.

Feb. 15.

GREAT NORTHERN BROTHERS ANGLING SOCIETY.

On February 5th, Messrs. J. S. Fitch and W. Barker, jack from Grand Junction Canal, weighing, respectively, 6 lb. 1 oz. and 6 lb. 12 oz., heaviest fish, 5 lb. 9 oz.; Mr. Stammer, a brace of handsome jack from Welsh Harp, 9 lb. 14 oz. From the Thames the following weighed roach:—J. Kirk, 1 lb. 3 oz.; Theobald, 1 lb. 7 oz.; W. Parkin, 1 lb. 10 oz.; F. Watling, 3 lb. 15 oz.; Young, 2 lb. 5 oz.; J. K. Fitch, 1 lb. On February 12th, from Grand Junction Canal, Mr. J. A. Fitch, jack, 10 lb. 12 oz.; Mr. Barker, 6 lb. 9 oz.; Mr. Stammer, jack, from Welsh Harp, 5 lb. 15 oz. From the Thames:—Mr. F. Watling, roach, 4 lb. 8 oz.; Cowper, 3 lb. 1 oz.; Baker, 1 lb. 2 oz.; Armstrong, 1 lb. 6 oz.; C. Warren, 1 lb. 6 oz.; J. K. Fitch, 1 lb. 13 oz.; C. Watling, 2 lb. 1 oz. Messrs. Young and Walker, dace, from New River. Messrs. Kirk and Hutchings, roach, from the Colne.—J. A. Fitch, jun., sec.

Feb. 14th.

GRESHAM ANGLING SOCIETY.

The weekly meeting of this society was held at 1 Bishopsgate Street Within, on Thursday evening, R. A. Holroyd, Esq., in the chair. The correspondence included letters from Mr. King, of the Royal Oak, Windsor, and Bartholomew, at Goring, both reporting water in fine condition, but much rain having fallen at the latter place probabilities for the next day or two were adverse. The circular from the West Central Association was read and discussed, Mr. Crumplen and Mr. Bates being deputed to attend the general meeting on behalf of the society. The famous take of pike by Messrs. Jardine and Nuthall, recorded in another column, was the subject of much interest to the members, and Mr. Jardine very suitably replied to the congratulations tendered. Several other members have also weighed-in some good fish during the week. The hon. secretary then described the visit of himself and Mr. Bates to the Good Intent Angling Society on the occasion of their annual supper, expressing his admiration of their fine museum, and, more than all, of the fraternal welcome extended to them by such a large body of their brother anglers, with which they were greatly gratified. Mr. Bates, having spoken in similar terms, it was unanimously resolved that a letter of thanks should be written to the Good Intents reciprocating all their good wishes. The proceedings closed with a hearty vote of thanks to Mr. Holroyd for occupying the chair.

HEARTS OF OAK ANGLING SOCIETY.

I am pleased to say that we had some nice trays of fish on Sunday, Mr. A. Fish, Mr. J. Whitmore, and Mr. Walford being to the front. The supper of the above society took place last evening (Tuesday night), when an excellent supper was provided by the host (Mr. J. Wilson), and a very pleasant evening was spent. Mr. J. Woodard had a good show of chub.—C. J. Millie, sec.

IZAAK WALTON ANGLING SOCIETY.

Several of the members were out on Sunday last, but only one of them met with any success, and that was Mr. W. H. Hawkes, who had a nice jack. There will be a special meeting of the members on Wednesday, the 22nd inst., for the purpose of considering the important resolutions advanced by the amalgamated associations. Mr. A. C. Critchfield showed 23 lb. of roach and chub on Monday last, the 13th inst.; the fish were in prime condition.

JOVIAL ANGLERS.

I have much pleasure in reporting that the members of the above club had a good day on Sunday last, the 12th inst. Mr. Clark, fishing at Hampton from the bank, took a good roach weighing 1 lb. 13½ oz., gross weight, 3 lb. 7½ oz.; Mr. Green, from the bank at Shepperton, had 6 lb. 7 oz. roach, two of these fish weighed 2 lb.; Mr. Kollman, from punt at Richmond, 6 lb. 12 oz. of roach and dace; other members also had a fair show. I am proud to say that the club progresses, and the members increase, both of working and honorary members.—H. W. Platt, sec.

LITTLE INDEPENDENT ANGLING SOCETY.

Most of our members were out on Sunday jack-fishing only, a series of prizes being given for the same. Messrs. Wightman, Pipe, Goodes, Welch, Raime and Moore proved successful in bringing home a most excellent show. Mr. Petrie also had a capital lot of roach, rudd and tench; Mr. G. Watson, perch; Mr. Thompson, roach; and Mr. Humphreys, roach and perch, which made a handsome display of fish on the trays.—H. Moore, sec.

NORTH-WESTERN ANGLING CLUB.

Many members of this club were out on Sunday, but met with very inferior success. Mr. Marshall (one of those that generally manages to show us some fish) had 6 lb. nice chub; Mr. Aldis, brace of jack from Elstree, and Mr. Grindley one from the harp. Mr. Turner had a few roach and dace from the Thames. At the time of sending this to you some four or five of our members are off for a day's jack-fishing; lets hope they will come home loaded, as it is the last day this season at this particular water.—F. Hill, sec.

Feb. 13.

ORIGINAL ALEXANDRA SOCIETY OF ANGLERS.

Our members went down to St. Margaret's to fish a pegged-down match for thirteen prizes, but we found the fish would not feed, and only five prizes were won. Mr. Lyndsell, of the Pied Bull, Stanstead, gave our members 10s. to fish for. Mr. Brockett took first prize, Mr. Blackledge the second, Mr. C. Hewitt, the third, Mr. W. High fourth, Mr. Stanton the fifth. The other prizes stand over to some future date. Mr. Coleman, one of our new members, kindly acted as referee.—E. Dymond, sec.

ORIGINAL CLERKENWELL PISCATORIAL SOCIETY.

The trays of the above society were not overburdened with fish on Sunday last, the following members weighing-in:—Mr. L. Gorsuch, perch; Mr. Neagus, roach, both from the Stort; Mr. Obbard, dace and roach, from the Lea; and Mr. T. Burke, chub, one scaling 2½ lb., from the Thames.—Thos. M. Lucy, sec.

Feb. 15.

PECKHAM BROTHERS.

The members of the above club were out on Sunday last. A match at Staines for four prizes was on the *tapis*, and each member was on his mettle. "Lardy," while walking about to find a good swim, fell into the water, and had to swim really. He then settled down, and succeeded in taking first prize. A. Duke was second, J. Stidolph third, and H. Garrad fourth; Messrs. Menard and Gendle also had fish. March the 21st is set apart for the annual dinner, when A. Brodie, Esq., will occupy the chair.—W. H. Page, hon. sec.

Feb. 15.

SECOND SURREY.

At the weekly meeting held at the headquarters of the above, it was decided that all the members visit Staines on the 19th, to compete for those prizes that were not won at St. Margaret's, including the cup given by Mr. Hockley. Members competing will be restricted to that portion of the river Thames situated between Staines Bridge and Staines Lock. All fish, according to club rules, to weigh.—Pixie.

Feb. 16.

SIR HUGH MYDDLETON ANGLING SOCIETY.

The members of the above society fished a match for a series of prizes at Taplow on the 29th ultimo. The rain came down in torrents; still, the members persevered till darkness brought an end to the sport. The following is a list of the winners:—G. Rogers first, gross weight and specimen fish, winning two prizes; E. Smith, second; Duncan, third; Caborn, fourth, Taconville, fifth. Few of the members have been out since the match. The takes of fish worthy of mention are: Mr. E. Smith had on the 5th inst. four chub, scaling 10 lb. 6 oz., the largest—a perfect beauty—4 lb. 14 oz. The fish has been sent to Mr. Gibson, of Richmond Road, Barnsbury Road, for preservation; on the 12th inst., Mr. E. Smith was again to the fore with 10 lb. 11 oz. of handsome chub; Mr. G. Caborn had a nice little show of fish, chub and dace, the largest chub—a very handsome fish of 3 lb. 14 oz—taken with single hair. Who says chub don't fight? It took me twenty minutes to exhaust this little chub.—G. Caborn, sec.

February 13, 1882.

SOCIETY OF CAXTONIAN ANGLERS.

The usual weekly meeting was held on Friday, the 10th inst., and a very fine show of fish was presented. The palm was carried off by Mr. T. Matthews with a fine jack of 18 lb. 8 oz., and another of 16 lb. 12 oz. from Slough, and several others of smaller size. Mr. W. Cate showed a beautiful bream of 4 lb. 5 oz. from the Lea. This society does not boast of large takes, but notably of specimen fish. This night's show keeps up the principle of the club. —I. J. Field, hon. sec.

February 10.

SOUTH LONDON ANGLING SOCIETY.

On Sunday, Mr. Price had a jack, 6 lb., frem Guildford; Mr. Mitchell, from Chertsey, 3 lb. roach; Mr. Norman, from private water, four jack; Messrs. Delehaye and Graving, from Twickenham, a nice show of roach and dace; Mr. Price followed up his success with a 5 lb. pike from Guildford. Six of our members will fish six of the Walworth Waltonians for a supper on Sunday next at Bourne End.—G. Field.

STANLEY ANGLERS.

Since our last report, some of our members have been very busy amongst the jack, as the subjoined figures will show. On the 11th inst., Mr. C. P. Wheatstone 10 fish, weight, 40 lb. 13½ oz.; largest jack weighed 10 lb., and a nice perch of ¾ lb.; Mr. H. Rose, on the 12th, three jack, 27 lb. 3 oz., largest weighing 17 lb. 6½ oz.; Mr. W. R. Humby, a nice jack of 5 lb. 1½ oz. Mr. Scull showed a tray of roach and dace. Several other members were out, but were not very successful. Mr. Rose's large pike has gone to Cooper for preservation, and was a beautiful fish, in splendid condition.—G. E. Walker.

Feb. 15.

STOKE NEWINGTON ANGLING SOCIETY.

On the 12th inst., the members of the above fished the Rye House water for three prizes; Mr. J. M. Brookman taking the first with a brace of jack, weighing 5 lb. 4 oz.; Mr. A. Parrott, the second, with 4 lb. 4¼ oz. roach and dace; the third by T. Gretton, with 2 lb. 4 oz. roach, the heaviest a fine fish, weighing 1 lb. 2¾ oz. Mr. S. Wilkinson also had perch; Mr. W. Webb, jack; and Mr. T. Harris, roach; making a very fair show of fish when exhibited together in the evening at the new club house.—T. Gretton, sec.

Feb. 14.

UNITED BROTHERS.

Several members were out on the 12th but only two managed to return with fish:—W. Tyler, two nice little jack, and a perch from Pulboro, and A. Smith, some very handsome roach, one turning the scale at 1 lb. 6¾ oz., from the Lea.—W. Belton.

Feb. 15th.

WALTONIANS.

On February 8th, Mr. Giles weighed in a very nice jack, taken at Pangbourne from the bank, weight 5 lb. 6 oz., and a small show of roach. Mr. Waltham had a handsome show of roach, also from Pangbourne, 14 lb. 12 oz. Mr. Horsford also weighed-in 1 lb. 13 oz. roach. On the 12th the trays were well filled, nearly all who went out having fish. The best show by Mr. Phillips; roach, perch, chub, &c., a little over 10 lb.; Mr. Togwell, 7 lb. 8½ oz. chub: one fish 3 lb. 11¾ oz.; Mr. Packman, 4 lb. 6¼ oz. roach; Mr. Brady, 3 lb. 12¼ oz. dace; Mr. Malcom, 2 lb. 15¼ oz. roach; Mr. Roland, 2 lb. 9¼ oz. roach. Messrs. Greenfield, Good, jun., and yours truly also weighed-in fish.—A. J. Marriott.

Feb. 15.

WALWORTH WALTONIANS.

On the 9th, Mr. Weatherhead visited Blunham, and succeeded in getting three jack. On the 19th, a contest for a supper will take place at Bourne End between six members of the South London and six of this society, viz., Messrs. Brown, Bailey, Delehaye, Fox, Piolaine and another—Captain, Mr. C. Bansback. The representatives of the South London are Messrs. Brown, Boreman, Breewood, Buckham, Mitchell and Head—Mr. Field, captain. Conditions—Pegged-down, no livebait, no ledgering, one rod and line only, fish to go by this society's rules. Messrs. Field and W. Brown are appointed to pick out swims. An omnibus will start from the St. Paul's, Westmorland Road, in time to catch the first train from Paddington on Sunday morning. All fish to be weighed at the St. Paul's in the evening. The winners to have the choice of naming the house in which the supper shall take place—Pixie.

Feb. 15.

WAVERLEY ANGLING CLUB.

In addition to the £10 prize offered for an essay on trout, &c. (mentioned last week) to the International Fishing Exhibition, we learn the club has agreed to give another prize of £10 (ten pounds), for an "exhibit" for collections of inland fishing tackle and best complete anglers' outfit, specially adapted for the rivers and lochs of Scotland.

WEST LONDON ANGLING CLUB.

I am sorry to add to the length of your errata, but under the above head you give from me the takes of a roach of 3 lb. odd ounces, and a dace of over one pound. This was my error, as I sent on the tabulated statement of the secretary, but leaving out a column of the number of fish that made up these totals. The misstatement will be obvious to most of your readers, as a roach and dace of these weights are almost unprecedented, yet I hasten to ask you and your readers to accept my apology for the error, although not wholly my own. The account of the gross weight taken by this club and the weights of the specimen pike are accurate.—Creel.

THE GREAT INTERNATIONAL FISHERIES EXHIBITION, LONDON, 1883.

We have much pleasure in announcing that R.H.H. the Prince of Wales, has consented to preside at a public meeting, to be held at Willis' Rooms, on Monday, the 27th. of February, at 12 o'clock. We trust our readers will make a point of attending at this meeting, which will be a most important one.

George James Eaton, of Starkholmes Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[Advt.]

RIVER REPORTS.

MID-THAMES.

"Ah, that deceit should steal such gentle shapes."
—Shekespeare.

The river is in prime order for all round winter work, more especially for roach, and the deceitful steel hidden with gentle shapes has been gathering and fleecing the river sheep to a nice tune, even until the weary angler has cried, "Bah, *toujours mouton!*" Jack and chub have not been too bountiful, but perch have been on the look-out for worm or seductive minnow. At Pangbourne and Maple Durham three takes of roach and perch came up to 32 lbs., and at Wargrave one take of perch scaled 14 lb. with twenty-one fish. From Horley I glean that on Tuesday Mr. Brooksbank caught with lob worm three tench scaling respectively 3 lb. 12 oz., 2 lb. 14 oz., and 2 lb. 10 oz. This pretty haul of physicians was shown in the evening at the village inns to admiring onlookers, one of whom, evidently the wag, seeing one of the fish at his last gasp, cruelly remarked, "Physician, heal thyself." The same day in the Horley waters Mr. Buckland took fourteen roach, best four going respectively 1 lb. 8 oz., 1lb. 6 oz., 1 lb. 4 oz., and 1 lb. 1 oz., with eight perch, two best scaling 1 lb. 10 oz. and 1 lb. 3 oz. Thursday evening.—I have just been interviewing Father Thames, and pronounce him to be in fine fishing fettle, pulse not too high, temperature not too low, and general condition will be still further improved by the copious dose of *aqua pura rainana* which was administered on Wednesday morning.—Marlow Buzz.

Ancholme.

At length the scale has been turned very severely against the pike. Large numbers have been caught in the upper reaches of the water, and some of them were of a very respectable size. Nothing worth reporting has, however, been done in the neighbourhood of Brigg, and the warfare seems to have been conducted mainly against the *ferox*. At the time of sending off this report the water is in fine condition, but we are now threatened with rain.—Thomas Ford.

Ballynahinch (Ireland).

The season opened on the above fishery with anything but a bright prospect, waters being so low, with continual east winds; but I am glad to say this week has been quite the reverse. Last Thursday the wind veered to the south, and we had a rattling spate, with a little sunshine. So, on Saturday, with the aid of a good "grey monkey," lured Mr. Springer to change his watery lair; and, again on Monday, with the same fly, both fish weighing 11 and 11½ lb. respectively. Since the spate, seals have been showing a good deal on the tidal pools, which is a good sign that fresh fish are running. Weather mild, with occasional shower since the spate.—W. B.

Dove.

Our scaly ones are not thoroughly in the humour yet. The fish have certainly not this week been biting well on the bottom, while they have not yet gone up to the top with any extraordinary degree of freedom. I fancy the weather has had a good deal to do with it. The elements have been unsettled, something after the style of March, rainy, gusty, and sunny by turns, and nothing long. The water, too, in the early part of the week was running low and fine. Trout and grayling have been rising best in the middle of the day, when the sun has been shining. They have then been taking the red fly, the bumble (light blue), and the dark one of the same class. I only hear of two good dishes having been filled, namely, one of five brace and the other of 6½ brace, taken above Tutbury, with the flies named. All these were mixed fish, and not very grand samples at that.—The Splodger.

Exe (Tiverton).

The rain of yesterday has moved the river only a little, it was slightly coloured to day and will be fishable to-morrow (Friday), if no more rain. The present prospects are not good. Should we get enough rain to have a flood water then some good sport may be looked for. The best killing flies at present are blue upright, halfstone, blue silver twist, and hare's ear gold twist.—Wm. Mudford.

Lea (Rye House).

The water is in good order now for fishing. The wind south-west and mild. There have been some nice takes of fish this week, roach, jack, and perch, and all in good order.—Wm. Cowell.

Medway (Tonbridge).

Water thick and unfishable. Sport since last week, Stanley, three pike, 14 lb., one 9 lb. 3 oz. On Monday, Mr. Cox took the first prize of the weighing-in club with a pike which weighed 5 lb. 7 oz. As soon as the water clears a little roach will be on the feed.—Ye Medway Water-Rat.

Ouse and Ivel (Blunham).

We regret to state that these rivers are a little flooded to-day (Thursday), but have had good sport during the week. We hope to see them in good condition by Saturday.—E. B.

Rother (Selham).

Water in capital order. At Chichester Canal water in good condition. Weather changeable, Pike and perch should be on feed. White frost this morning, with a few hours' rain. Wind westerly. At Selham roach off feed, except in early morning. Mr. Young showing some good fish; Mr. Summers, lower down, taking a fine dace measuring 13 inches. Some fair pike have been taken during the week; Mr. Terry, of Chichester, in four runs, securing but one fish of 4 lb. I hear of a 20 lb. pike taken near Burton Mill. At the canal, Chichester, Mr. Hammond took a small jack on Wednesday, but large bream and roach seem altogether off. Fish are in a very poor state here, and will evidently soon commence spawning.—Geo. F. Salter.

Severn and Teme (Worcestershire.)

These streams are good form for angling, and there is every prospect of a good season, as there could not have been a more favourable season for the salmon and trout to ascend the rivers to spawn, and there was a flush just in time to take the pelts down to sea again; the nets are taking some fine fish, the price in Worcester is 4s. per lb. I have seen a few good takes of whitefish. I reckon it will be a forward season for trouting; one of our fish dealers had about 20 brace last week. I am sorry to see a fine lot of fish fall to the netter, these fish were brook trout, some near 2½ lb. each. I have seen the early brown on the wing some days past, it is a fly you can kill trout with in this district. I have a few exact to size and shade of natural fly at 2s. per dozen.—J. A. Griffin.

Suir (Clomnel).

The rod-fishing has been excellent up the river. Surg.-Maj. Campbell getting seven in a few days, weighing respectively 28 lb., 24 lb., 20 lb., 19 lb., 18 lb., 18 lb., and 10 lb.; Mr. Jellies, five, 24 lb., 20 lb., 14 lb., 10 lb., &c.; Mr. R. F. Hutchings, three, weighing 25 lb., 12 lb., and 8 lb., at Banard; Major Blake, one, 10 lb.; Pat Moloney, one, 25 lb. There were two taken at Bally-Carron, 30 lb. and 25 lb.; two on Lord Donoughmore's preserves. The Clonmel cotmen got eighty-two salmon since the season opened; and, notwithstanding a great deal of poaching going on, the river is fully strewed with spring fish. The water-bailiff was severely hurt by poachers at Clonmel, on Monday night. The trout-fishing is getting very good and fish in better condition.—Dora.

Swale.

Trout-fishing has hardly yet commenced upon this river, as there is a good sprinkling of snow stilll remaining upon the high hills. The local fishermen, too, nearly all begin with the worm and natural minnow. Suitable flies for commencement are the needle brown, early brown, gravel spinner, and inside and outside woodcock's wing.—Thomas Ford.

Taw, &c. (N. Devon).

Taw has risen and thick. The smaller streams have scarcely risen from the rains of Saturday and Tuesday. The water was very low and clear last week; two or three days warm, mild weather, and only few fish taken. The wind having changed from east to west, with cold and hailstorms, not much prospect (until we can get rain to raise all the streams) of good fishing. The flies as before, which I enclose for your inspection. I am told they have done well already for this time of the year. I saw a gentleman who told me he had seen twenty salmon, which would have scaled 30 to 40 lb., laying dead within a short distance on the Taw, and no marks upon them to show the cause of death. They are in the rivers three and four deep, being so plentiful.—Rusty Game.

Thames (Goring).

Water came down to-day very thick in very good order for roach. Prospects at present looks bad for this week. If we get fine weather it will do for jack about Sunday. There has been taken a few jack and perch. Best day three jack, largest jack 5 lb., and 10 lb. of perch.—J. Rush.

Thames (Richmond).

The heavy rain that has fallen this week has made the water thick again, and the sudden change has put the fish off feed, for on Tuesday the water was getting too bright, and now it is a bit too thick; but if they had no more rain in the country than we had here there is a chance it will run off in a few days, and be all the better for the change, as there were not many roach to be had with the water so bright, but in all probability we shall be able to get the right side of them now the water is thick. Dace are heading towards the weir now, and they want the keeper's sharp eye on them or we shall lose the lot. Let us hope the Thames Angling Preservation Society will take the precaution, as in former times, to keep a man constantly on the spot for the next month, for this means either a good or bad fishing season next year and the year after; and all fish that are taken now that are rough should be returned to the water, as they are about to spawn or have spawned. Sport of the past week is as follows:—The 12th inst. being another day for Richmond, every punt was engaged. G. Howard, two days, 8 dozen dace; C. Brown, three days, 28 lb. roach and dace; Job Brain, two days, 21 lb. roach; H. Mansell, two days, 13 dozen dace; Wheeler, two days, 11 dozen dace; H. Howard, three days, 16 dozen dace and one bream; J. Bushnell, four days, 47 lb. roach and dace.—John Bushnell, fisherman.

Thames (Shepperton).

Since the rain the water is rising and getting rather too thick for jack and perch fishing. Prospects are very good for roach fishing. F. Purdue, two days, two dozen very good roach and half-dozen perch; Dr. Smith, in two days fishing in his own punt, first day, two jack, one 2½ lb. and one of 2 lb., second day, one of 5½ lb. A bank angler, on the 12th, caught a jack weighing 18 lb., and they have been doing well with the roach, taking some 1 lb. and some 1½ lb. each. I have not been out myself.—W. Rogerson.

Thames (Windsor).

Water, owing to the heavy rains of this morning and Monday last, is coming very much discoloured; will be good for worm fishing, but has stopped jack and chub fishing, though the latter will not despise the tail end of a nice bright lob, which will for some days be the bait. By the bye, writing of worm fishing, I omitted last week to mention a pretty lot of roach taken by a bank angler opposite Colonel Harford's, near Surly Hall, four of which went just over 1 lb. each, and one lusty fellow 1 lb. 15 oz. A very good specimen of Thames perch, as regards shape and condition, was taken last week by a customer of mine in the Surly Hall water, going 2 lb. 2 oz., by Mr. Allen, of Windsor. Our local enthusiast, Mr. Parsons, had a nice bag of roach on the 13th inst., twenty fish going 10½ lb. Very few jack have been had, and I only know of one decent fish; this was taken by Mr. Eason, of Stoke Poges, weight 5 lb. But few anglers have been trying them, otherwise, believe me, there are some good fish in the Surly Hall waters, notably the pool, and, lower down river, the "Flam" at Athens and Clewer Point; but water is now no good. Our thanks are again due to James Gray, the bailiff of the Windsor and Eton Preservation Society, who is evidently making it very warm for those members of the wire and net fraternity in the neighbourhood of Bovency, as it was only last week I had to credit him and his brother with the capture of another member, who is now doing a month's hard labour. This time, with the assistance of the lock-keeper, Croft, of Boveney, two brothers were caught almost on the same spot, with a large net, evidently made to suit Boveney ditch. Of course, they were catching rats, as to which the magisirates sitting at Beaconsfield will decide next Monday. Societies will do well to instruct their bailiffs to look after these ditches, as everything seems to be in a forward state this winter. The jack are evidently going up with the intention of spawning. The society here has promptly acted on the information of James Gray, that in a certain neighbourhood thousands of fish have been left behind from last flood, and two nets of simple construction are being made in order to restore them to the parent stream.—B. R. Bambridge.

Trent.

Rivers rising, water thick and unfishable, wind blowing almost a gale. Such is the disheartening news to hand to day. This is most disappointing, as the waters was reported in splendid order for pike fishing, and your humble servant had arranged to have the first day's pike fishing in the rivers this season. I cannot glean of much sport from the rivers. Mr. John Roberts got a good 10½ lb. fish from Alrewas last Saturday, and a few minor sized ones were taken by two of the members of the Birmingham and Midland Piscatorials. On the same day at Earlswood, Mr. John Allday, fishing with Mr. Joseph Naas the celebrated tenor singer—who, by the way, is one of the most enthusiastic anglers I know—secured a few fish spinning, but none of any size. A friend of mine, however, fell in with some good luck the latter end of last week fishing in some private waters a few miles from Birmingham by one o'clock. He and a friend had secured eighteen fish, after luncheon this was supplemented by another five; the lot, on being weighed, averaged 4 lb. each and were a splendid lot of fish, which any angler might feel proud of capturing. Roach fishing has been very bad. Mr. W. Reynolds took with the cockspur worm six fish, which weighed 5 lb., and this is about the sum total of news piscatorial worth speaking of.—James Gregory.

Trent (Newark).

Owing to the recent visitation of Jupiter Pluvius, our river is in a state of flood, nearly bank-full, and very thick; will take a week to get it in trim, if all things go on favourable. I have nothing of importance to communicate in the way of sport. I have not heard of a decent bag all the week. Our chub-fishing excursion that I mentioned last week duly came off, but was not a brilliant success. The fish caught were few and small. To-night (Thursday) the water is still rising, and about the colour of mustard, so the prospects are not as yet very brilliant. I can only advise anglers, who comtemplate a visit to the river, to take the advice of *Punch* to parties about to get married—"Don't." I said just now that I had nothing of importance to communicate this week, but I must not forget a very important item, and that is, Thomas Bentley and Valentine Watkin, two well-known members of the netting fraternity, yesterday had an interview with a local bench of magistrates, with the result that the former had to pay £3 and costs, and the latter £2 and costs, and forfeit the trammel nets they were using. John Swanwick, water bailiff to the Trent Board, clearly proved the case. A nephew of one of the convicted poachers said to me to-day, "There will not be so many fish weighed in David Slater's club now," a remark which I should like to hear further about. Will send a full report of the case in time for next week's Gazette.—Trent Otter.

Trent (Nottingham).

The river on Wednesday rose very rapidly, and quickly upset all calculations of pike and chub fishing. During the week a very large number of anglers have patronised the stream, and in one or two instances good sport was met with. For instance, a take of seven pike on Monday was followed by one of eight on Tuesday, whilst on Wednesday eight were brought up from Stoke. Several very nice chub have been caught in the Beeston length, besides three average-sized pike. The Weston subscribers appear to have been tolerably busy, but reports show that sport has been indifferent for the time of the year. Matters are quiet at Shardlow, but from Sawley I learn that a capital basket of pike (largest 8¾ lb.) has been forthcoming. On Thursday the water was still very much discoloured, and those who intend going out will do well to confine themselves to the back waters.—The Man at the Clubs.

Wye and Derwent (Derbyshire).

A very great quantity of heavy rain fell in the night last Tuesday, which caused both rivers to rise a little, and quite put a stop to fly-fishing for a short time. This rain will benefit the bottom fishers very much on the Derwent. Sport, both on Saturday, Monday, and Tuesday, was very good on both the Wye and also on different parts of the Derwent, with the artificial fly. One Sheffield angler killing seven and half brace of grayling on the Wye last Saturday between Bakewell and Rowsley, with bumble and furnace flies; also on the same day there were some nice dishes of grayling killed off of both the Chatsworth fishery and the Darley Dale club water, chiefly with bumble, February red, and furnace flies. On Tuesday six brace of good sized fish, both trout and grayling, were killed on the Derwent free water, between Darley and Matlock, both with the fly; the fish rising the best from one to three, and rose the best in the falls of the streams and in the deep slow runs. A great quantity of duns and browns were out on both rivers last Saturday, and the grayling were taking them eagerly. The bottom fishers have done fairly well on the Derwent during the week, chiefly with cockspur and brandling worms, killing chub, roach, dace, and a few trout; there has also been a few pike killed in the Derwent close to Whatstandwell, with gudgeons and small dace for baits. All that the angler requires now is fine weather to bring down the water, then good sport would be had. I have found out, and remarked for many years, that a high full water is very unfavourable for graying fishing with the fly. Bumble, claret body, Febuary red and furnace flies are killers, trout taking them as greedily as grayling. Both rivers ought to be in good ply for fly-fishing by Monday if no more rain falls. Very few anglers out Friday or Thursday; it is very cold with slight rain in the wind.—George James Eaton.

Yore (Yorkshire).

During the past few days the weather has reminded one more of April than February. A good many of the early duns have been out on the streams, but the fish have not, as a rule, been in a fly-taking humour. The mild open weather also appears to have caused grayling to spawn earlier than usual, as several that I have seen ought certainly to have been returned to their native element. A Wharfdale angler told me that he caught a trout last week, and that it looked in such capital condition, that it seemed quite a pity to be obliged to turn him into the river again. Let us hope that a real good trout season is in store for us during the present year.—Francis M. Walbean.

SCOTCH NOTES.

Tweed and Teviot.—Since last week rod salmon anglers, as well as trout-fishers have been highly gratified by the appearance of a much-needed flood. The stormy weather of the last few days of the previous week culminated on Sunday by a flood, which has raised the hopes of the angling community in this district, and which has also done an incalculable amount of good to the rivers. On Monday the flood was fully seven feet, having risen from the Friday previous from two feet to fully the height stated above. This has had the effect of allowing the kelted fish to go to the sea, and has also carried off all the dead fish which were polluting the rivers, and also rushed up all those salmon which were affected with the fungoid disease. No salmon angling has, therefore, been possible, but trout-fishers have had their fill during the past five days, and many good baskets of from 2½ lb. to 7 lb. have been got with bait. The rivers are now in good fishable condition, and as the bay at Berwick was literally swarming with clean salmon ready to enter the river whenever a flood gave them the chance, both Tweed and Teviot are sure to hold many of these clean fish now, and next week should see a goodly quantity of salmon killed. I am glad to record that no diseased fish are now to be seen. The net fishing opened on Wednesday, and better takes of salmon and trout have been got than has been the case for a number of years back, thus giving genuine hopes that the forthcoming season will be a better one than has been the case since 1876. I am to-day informed on authority that a good many clean salmon have been seen running the caulds, in the vicinity of Kelso, and high hopes are entertained of a successful spring fishing.—Maxwell, Kelso.

(From the *Scotsman*.)

Opening of the Salmon Fishing in the Forth District.—The net and rod fishing season in the Forth district opened on the morning of Saturday, under most unfavourable circumstances. Among the fish taken, however, was a beauty of 29 lb. weight. A number of kelts were landed with the nets, and returned to the river, and it is satisfactory to learn that not a single diseased fish was seen at any of the stations fished. A few undoubted cases of fungoid disease have been noticed in the Forth district during the close time, but there has been no real cause for alarm as to the spread of the disease, and it is to be hoped it will be arrested by the flood, which will carry most of the weak and sickly fish down to the sea. It is expected that the upper waters will be found well stocked with clean salmon, as during the last ten days a great many have been seen leaping in the Forth near Stirling, and the majority of these must have got forward with the present spate. The Stirling and Craigforth waters have again been leased from Mr. Speedie for rod fishing by the Stirling Forth and Teith Angling Club at the same rent as last year; and on Saturday several anglers were out, but owing to the dirty state of the wates almost no sport was obtained.

Tweed.—There has been very little angling on the Tweed during the past few days. Unseasonable fish have been frequently landed, but few clean salmon. On the Sprouston Water on Friday, two clean salmon of good weights were got. The heavy rains in the western districts brought the Tweed and Teviot down in flood on Saturday, and at Kelso Bridge the tweedometer indicated a rise of 2½ feet. Yesterday the water had fallen to a considerable extent, and good angling for both salmon and trout is anticipated this week should the weather prove favourable.

Annan.—The angling season on the Annan and tributaries opened on Saturday. An unusually large number of anglers turned out, but the river was too heavy for successful fishing. A good number of "kelts" were caught and returned to the river. Notwithstanding the ravages of the fungus, there seems to be a large number of sound fish in the river. The tributaries, the Milk and Dyfe, which are both excellent trouting streams, were also largely patronised by trout-fishers, and some good sport was obtained.

Callander.—Salmon fishing opened on Saturday, and every boat on the two lochs were engaged. The morning broke still, with a heavy downpour of rain, which prevented the fishing being as good as was expected. The following are some of the takes:—On Loch Lubnaig, Mr. Menzies landed a fine fish of 14 lb. Messrs. Stewart and Bryce, of Stirling, had nine yellow trout, in excellent condition, with the fly. On Loch Venacher, Mr. G. A. Cox, of Invertrossach, landed two salmon, one a beauty of 26 lb. On the River Leny, Colonel Robertson had one salmon, 13 lb.: John Henderson, one, 10 lb.; R. Lister, two, 20 and 13 lb.; A. Buchanan, one, 13 lb.; and Peter Robinson, one 18 lb.

The Tay.—Mr. Kincaid fished the Stobball water on Thursday, and caught two fine salmon, 26 and 15 lb. respectively. On the Grantully streams on Saturday, Mr. Alex Robertson, merchant, Aberfeldy, caught a newly-run fish weighing 10 lb. On the Athole Arms Hotel water, Mr. John Halliday, of London, landed a clean run salmon weighing 21 lb.

Opening of the Deveron Salmon Fishings.—The salmon fishing on he Deveron was opened for the season on Saturday with every prospect of a successful yield. The fine open winter has been favourable for the spawning of the fish, and more clean salmon were caught than for many years past on the first day of the season. The river was literally swarming with fish, the greater proportion, of course, being kelts. There were no symptoms of disease, and very few dead salmon. Over sixty fine clean fish were got by midday, ranging from 6 lb. to 12 lb. in weight. On the opening day last year about the same number were gos. Anglers are likely to have a good season, as the trout are not only plentiful, but rising capitally to the fly, A beginning will be made with the net sea fishings this week should the weather continue favourable for putting in the stakes. A good shower of rain is needed to put the river in proper condition for the free running of the salmon.

Loch Tay Salmon Fishing.—The weather is still unfavourable for fishing. On Saturday rain fell and the river Lyon was swollen, but the Tay was not much affected. On the Killin Hotel water, on Saturday, Mr. A. M. Cowan caught one salmon weighing 13. On Saturday the Killin reserved was finished by Colonel Murray of Polmaise, and Mr. N. J. Menzies of Menzies, when the former caught a nice salmon of 22 lb. The net was tried on the Kenmore reserved water, four shots being taken between the beacon light and the Kenmore Bridge, but only two salmon of 10 and 25 lb. were taken. The fish were newly run. On Friday a party of the Earl of Breadalbane's guests went up to fish the Auchmore reserved waters, and only caught two salmon, weighing 17 and 18 lb. respectively. On the Ardeonaig Hotel water, Mr. Christie, Edinburgh, had one fish, 23 lb, : Mr. Fyfe, Edinburgh, one, 23lb. The following takes were got by the Lochay Hotel boats on Friday:— Mr. Dixon, Glasgow; one fish, 17 lb.; Mr. Nicholson, Sheffield, one fish, 17 lb.

Opening of the Dee Salmon Fishing.—Our Banchory correspondant writes:—The salmon fishing opened on Saturday in this district. The weather was extremely favourable, but owing to the smallness of the river, anglers did not get very good sport. There is a good appearance of fish, and no signs of disease General Walker, in Knappach water killed a fine fish of 10 lb. On Lower Crathes water, Dr. M'Donald secured one of 9 lb. Mr Walter Leslie, on Biroston water, landed a fine fish of 10 lb. William Brands on very water secured two good fish about the same weight.

IRISH NOTES FROM CORK.

Atmospheric influences have been unfavourable to angling, during the last week. Floods in the commencement of the week, and cold weather with hail, showers, and snow has marked the last days of it. Very little good was done in consequence, but judging by the appearance of the morning with the glass set at fair, and the general pleasant temperature. I would not be surprised if some havoc was made. The late floods brought a lot of fish, and with the settlement in the weather excellent sport may be expected. During the last week. Sir Augustus Warren and party killed two fish. A professional angler named Manning had good sport on Saturday, having landed three springers and one unspawned fish. Among the other captures, were, Mr. Colthurst and party three ; Mr. Bowers three ; Mr. L. C. Parkes one ; Major Hawkes one ; Mr. Augher one .—Angler.

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

PAUCITY OF FISH IN THE THAMES, &c.

Sir,—I have received a very strong reason for the re-supply, either by natural or artificial means, of the coarse-fish stock of the Thames and other waters of "our rivers." Mr. W. H. Davis, C.E., writes: "I read in the *Licensed Victuallers' Gazette* a day or two ago, that 'the dace were well on the feed at Teddington,' so I thought I would go and try. I went, and I can simply say that I believe the dace have departed from Teddington, and so thinks my fisherman, Ben Stevens. What few I took—about 18—were good fish. I remember the time when I could get seven or eight dozen easy .and I have taken thirteen dozen. But you cannot do it now ; the fishing has been wretchedly bad at Teddington all the season, and I do not think, from all I have heard, that it has been much better in the upper reaches. A few years ago I could always insure a good take of jack, perch and roach at Moulsford, now they are indeed few and far between. The glories of the Thames, as far as fishing is concerned, are departing. I believe there is still a great lot of poaching about Moulsford and up to Shillingford; and again, scarcely a boat sculls past your punt, but there is a bait of some sort out for jack, mostly a spoon, and young greedy fish are caught and taken out too, and many larger ones are pricked and fight shy. The best swims for perch and roach about Moulsford are constantly "fished" by a professional fisherman, and that does no good. I suppose one must try Norfolk, but then it is a long way to go. By the way, it is very bad of so many papers putting in falsehoods about the angling. Every now and again one reads 'Jack or Joe So and So had a rare day amongst the roach or dace or barbel or something.' One goes down and congratulates Jack or Joe, who are of course perfectly ignorant of such glorious luck ; they laugh, and say, 'Oh, sir, you must not believe them papers.' I have read some supposed exploits of my man Ben, who has been perfectly innocent of these, and I am quite sure he has had nothing to do with such deceptive conduct."

When will the Thames fishermen learn the value of truth, and the detriment to the interest of the whole fraternity by lending themselves to the salting of reports ? Creel.

SILKWORM GUT.

Sir.—With reference to my communication in last week's Fishing Gazette, and to the editorial note thereon, I wish to mention that the experiment referred to was made with dry gut, and arose as follows :—I was out fishing last season at the Welsh Harp, and while fitting up, my winch slipped from my hand, and I had the pleasure (?) of seeing it make two bounds down the embankment, and disappear with nearly fifty yards of Nottingham silk-twist in the deep water of the well-known "Bridge Hole." Fortunately, another winch was handy, and the misfortune was temporarily repaired. I had, however, to replace the loss for my own comfort, and this time with a Nottingham plait, as fine as a thread. Naturally, I wished to test the new line for strength, and, trying it in comparison with gut, I made the discovery of the effect of a breaking strain to which I have called attention. Since the appearance of the letter, and the appended note, the experiment has been repeated and varied, with the result that, with dry gut, the strength is, by once breaking, reduced to less than half; and with well soaked gut the loss of strength is, if anything, greater, although the difference is but very slight. Certainly, the fact of the gut being wet does not improve the conditions of the test. I have further tried the effect of soaking gut which has been broken when dry, and find that the water, to a small extent, restores the temper of the gut so strained, but in this case a subsequent breaking is altogether fatal. The lesson, therefore, under all the circumstances, whether wet, dry, or re-wetted, remains the same. Never trust a gut cast which has once been strained to breaking, however good it may appear, or the loss of the best fish of the day may give rise to a loss of, let us say, patience and equanimity, which several pipes will hardly restore and soothe,—I am, &c.,

W. B.

"SPECIMEN FISH."

Sir,—Your correspondent J. M. D., in his letter of February 4th, is not correct in his supposition that B. is solitary in his opinions as to fishing for specimens only. Our club "The Kingfisher," has been lately formed for the purpose of taking and showing only fish that can be classed as specimens ; and you will observe, by perusal of the rules enclosed, that our standard weights are higher, I believe, than any other in London. The Kingfishers as a body are composed of all-round anglers of many years' experience, and can assure J. M. D. that they feel much greater pleasure when returning the juveniles to the water, and, by so doing, providing future sport for their brother anglers, than J. M. D's. typical "sticker" would have in consigning the unfortunate brats to his basket and glorifying himself therewith at his club-house,

I write this on behalf of our society, to assure B. of our hearty co-operation in his laudable endeavour to induce anglers to return under-sized fish to the waters, to raise the standard of specimen fish shown at clubs, and to abolish all gross-weight prizes, which we are convinced are more destructive to sport than all the nets, netters, trailers, "stickers," steam launches, would-be riparian owners, or other abominations that anglers are at present afflicted with.

Only by the united efforts of London anglers—including J. D. M. and the novice who, seduced by the "Flesh-pots of Egypt," left his ledger and so caught his supremely innocent specimen, that so obligingly took the bait and quietly remained until his return—can this happy result soon be realised. G. A.

Hon. Sec. Kingfisher Angling Society.

The Royal Saxon, Alfred Road, Harrow Road.

The following are the weights which the "Kingfishers" have fixed as their standard :—Trout, 2 lb ; jack, 3 lb. ; chub, 2 lb. ; carp, 2 lb. ; bream, 2 lb. ; barbel, 2 lb. ; tench, 1½ lb. ; roach, 1 lb. ; perch, 1 lb. ; dace, ½ lb. ; rudd, 1 lb.

[This is quite refreshing, and we hope the club will be able to stick to their weights.—Ed.]

TABLES OF ARTIFICIAL FLIES.

Sir,—Your readers very generally must have been interested in the valuable table of the comparative deadliness of artificial flies, which your correspondent kindly gave at the cost of a very great deal of time and labour—and, that doubtless, to an extent greater than many may imagine—and the best thanks of readers of the Fishing Gazette are due to him. In connection with such valuable statistics —the result of long observation and accurately registered results— will you let me suggest that it would add to our obligation to know in what waters the flies were used, whether in Scotland, the Devonshire streams, the Hampshire waters, or elsewhere.

May I also ask yourself or one of your experienced correspondents to give a helping hand to young anglers who may not be very wise in selecting flies—for on many days and many portions of days there does not seem to be any particular fly on the water—by jotting down three or four casts of a representative character. A paper which would give general hints as to the selection of flies under particular circumstances of water, weather, and time of the day, would be valuable to those who do not find in the practical part of fishing their greatest difficulty.—I am, &c. X. Y. Z.

[The fence months for coarse fish will commence soon, and then we shall have more space for trout and salmon fishing matters, which are now becoming of greater interest.—Ed.]

DOTTERIL FEATHERS.

Sir,—I have a dotteril bird, with not a feather out of place. Any one can have it for a sovereign, or a wing, large size, for 7s. 6d. each. These feathers are very scarce and exceedingly dear. I can make 5s. per dozen for real dotteril flies, as many as I can make.—I am, &c., George James Eaton.

Starkholmes, Matlock Bath.

P.S.—There are are hundreds of dozens of flies made nowadays, that are sold for real dotteril flies, but are nothing else but plover and starling feathers.

GRESHAM ANGLING SOCIETY.

Sir,—I did not know that you would have any, even an imperfect, report of the few remarks I had the honour to make before this society on the 9th inst., on the subject of trout culture, or I should have taken care that the name of my friend, Mr. Byram Littlewood, of Huddersfield, to whom I referred, should have been mentioned, not only as the originator of the successful mode of carrying ova and fish without changing water, but also as the man who has in the present day given his time, energies and money, without stint and without reward, to the improving of fish-culture apparatus.

As an instance of what he has done, I mentioned how he had hatched and reared fish in his cellar in the middle of Huddersfield, and that at the present time he has over a million of ova and fry in his tanks, while in the same cellar he is now devoting himself to the propagation of oysters, and no doubt we shall see at the coming Edinburgh Exhibition young oysters, born and reared in my friend's house in Huddersfield.

Many of the improvements that I endeavoured to describe to the members of the Gresham Society were the suggestions, and some were the invention, of my friend Byram Littlewood, and it is only fair that he should have the honour due to him.—I am, &c.,

Hawley, Dartford, Hayman Cummings.

HOW TO FISH A BREAM HOLE.

Sir,—Your correspondent should have no difficulty in fishing the 35-feet bream hole. It can be easily done with what we Trent fishers call a running float. When fishing a water too deep for the ordinary method, we use a long thin cork float, or large swan quill, which has a small loop or fixed ring of wire near the top, instead of the ordinary keeper or cap. Having ascertained the depth of the hole or swim, we make a small loop in the line at the depth we wish to fish, and put into this loop half an inch of line or fine string, then draw the loop tight. After putting on our running float and a gut sufficiently weighted, we wind up the float to the top of the rod, and throw out from the reel. The weighted tackle runs the line through the float as it rests on the surface till it reaches the stop. By this plan water of any depth may be easily fished. Another advantage of the running float is that when you have a bite you can strike direct to the fish, instead of having the stroke partially broken by the float, which must be the case when fishing 20 or 30 yards off.—I am, &c.,

H. Page.

[We have notes from Mr. E. Gosling, of Budleigh Salterton, and several other gentlemen also recommending "Mark Antony" to use the sliding float and Nottingham style. We, of course, did not forget this style in answering the querry, in our note to "Mark Antony's" letter, but it appeared to us that it would not help the matter much. In the first place, "Mark Antony" will have to invest in a new rod, line, and winch, new float, &c., and learn to throw from the reel in the Nottingham style, which is not so easy as it looks; even then, if the hole is thirty-five feet deep, we do not see how he is going to get his line out much better than before—he will have to make a loop in it or tie a bit of stick to it thirty-five feet from his hook; and, although his float will slide down to the shot, how is he to get the odd thirty feet of line with the knot or loop in it through the rod rings every throw? This is the knotty question which prevented our recommending the Nottingham style to "Mark Antony." P.S. Since writing the above we see some of our correspondents mention this difficulty, but say it is easily got over by having large standing rings, and tying a loop in the line, and inserting a short bit of stiffish line to run through the rod rings and yet not through the float ring, this would answer.—Ed.]

TO FISH A 30-FOOT HOLE WITH A 14-FOOT ROD.

Sir,—If your correspondent will purchase a sliding float, *i.e.*, a float with two brass rings, minus the float cap, he will have little difficulty in performing this "feat" to his satisfaction. Any respectable tackle-dealer keeps them in stock, and I have no doubt will show him how they should be brought into operation.—I am, &c.,

James Gregory.

GIMP.

Sir,—I have frequently found in jack-fishing that the gimp has been completely bitten through. Could this be remedied by having several pieces of gut instead of gimp?—I am, &c., Winch.

Stoke Newington.

[We should not recommend gut for jack-fishing, though to use it treble, and not twisted or plaited, is the best plan, because it is not likely the fish will bite through each strand of gut. We intend to make our own gimp in future, thus:—using a piece of Messrs. Carswell's braided silk line; wind fine copper wire round it. The line is by far the strongest we know of (far stronger than the floss silk used by the gimp makers) and the wire can most easily be put on. You only want about 6 or 8 inches of line protected by wire in this way, and should use a stout gut trace, which is stronger and in every way better than gimp.]

YOUTHFUL ANGLERS.

Sir,—The question of allowing the sons or brothers of members only to be admitted to the Gresham (if not quite of full age) at a somewhat reduced fee for the time being, seems to be wholly misunderstood by "Piscator," who, if he is a member at all, judging by his very comical letter, can hardly have been present when the subject was discussed.

I do not purpose raising the question now, as the matter can best be dealt with by those whom it most concerns; meanwhile, until the whole facts are before us, your readers will kindly, as good contemplative anglers, suspend their judgment.

One or two points in "Piscator's" letter call for remark, and, as I am a frequent attendant at the Gresham meetings, you will perhaps allow me to say a word in their favour as against the insinuations "Piscator" appears to convey.

It is true they do take place at a tavern, some of the members do drink whisky, others do not, and a few of us really may be found enjoying the fragrant weed. We are not obliged to do so, or to meet at a tavern; and, although our host is a very worthy man, I am sure if our committee see their way to take suitable rooms where none of these things are obtainable, they will find very many members to support them.

I have just looked through my book of rules, but cannot find that they prohibit cards on the one hand, or encourage language of the kind "Piscator" seems to sometimes indulge in, on the other.

I am very far from classing these together. but neither are wanted in our club. The Gresham is yet so young that "Piscator's" experience of an angling society, and its effects upon its members, must have been acquired elsewhere.—I am, &c.,

A Grasshopper.

YOUTHFUL ANGLERS.

Sir,—I have read with pleasure the remarks of my valued friend "Piscator" (as I think I can fairly assume who the writer is), in reference to "Youthful Anglers." He knows my proclivity for defending and protecting the "small fry" in the river and looking after the "youngsters." In his great fame as an angler, "Piscator" goes in, as George Hone has it, "Big ones or none." I have given the quotation in more correct spelling than the venerable Walton fisherman does. "Piscator" will, however, agree with me that the subject of dealing with "Youthful Anglers" is entitled to free ventilation, whether anything results from it or not. I did not wish to imply in my first letter that the names I mentioned were favourable to it, but that I knew they each had sons who were likely to inherit the well known skill and prowess of their worthy parents.—I am, &c.,

B.

JUNIOR ANGLERS.

Sir,—As the originator of the motion for the admittance of junior members to the Gresham Angling Society, I shall feel obliged if you will kindly permit me to explain that by the terms of my motion junior members will not be entitled to attend the meetings of our society; but, as gentlemen interested in angling pursuits are always welcomed at our meetings, it would open to members to take their young relatives to hear papers read. Until your remarks of 4th instant, I was not aware that card playing was practised at any of our fishing clubs, and can only say it is not at the Gresham. Many gentlemen have lately remarked that they thought the time had arrived for conducting all angling associations, as far as possible, on the basis of scientific societies, and suggested that the Gresham should lead the van, by which means the objectionable practices you mention in your issue of 4th instant would be overcome. "Piscator's" remarks in your last week's number, require some qualification as to Mr. Jardine's objection; this gentleman having stated, towards the close of the debate, that he was in favour of the motion provided the junior members pay both an entrance fee and annual subscription.

B. having so ably invited the attention of all angling clubs to this matter, I beg to supplement his remarks by summing up the advantages, both to clubs and junior members, viz.:—The former would benefit by increased facilities for recruiting their ranks, as well as by an addition to their income, whilst the later would receive instruction from papers read, or lectures delivered; would obtain railway privilege tickets; and would, no doubt, look forward to the day when they might claim to rank as senior members of the society, from which they would derive both instruction and edification. With regard to juniors starting an angling club of their own "like other youthful clubs for cricket and football," as recommended by "Piscator," the case seems to me quite different. In those clubs members should be matched for strength, as well as skill, whereas it is both preferable and advantageous for juniors to fish in company with their elders, which they cannot now do in the society's water under existing regulations.—I am, &c., A. W. Parker.

Gresham Angling Society.

[We consider whiskey and tobacco as anything but "objectionable" (if good). As regards cards, we certainly think they interfere with discussion, and we should like to see them relegated to another room during the meeting-time, if certain members must have their whist.—Ed.]

THE WEST CENTRAL ASSOCIATION, &c.

Sir,—There are many points in "Roach's" communication of Saturday last thoroughly deserving the attention of London Anglers; and I am quite sure he will pardon me if I point out to him and the leading authorities of the West Central Association a few reforms desirable and which must take place before they can hope to attract representatives from the better class of clubs. It is not all indifference or apathy, it is simply that the business requires to be conducted in a different style and on a different basis. In the first place, the locality where the association holds its meetings is not at all central and is difficult of access for a great many men; and again, the late hour at which the society meets precludes numbers from attending. The chairman is supposed to take the chair at 9 p.m., and when any important business is on hand the discussion lasts to 12 p.m., when many gentlemen who live in the suburbs find, to their sorrow, that the last train is gone, and there is nothing to do but walk or stay in town. Now, if they could move to a central point, and begin business at 8.0 p.m., or even earlier, it would be an advantage. Of course, I may be met with the remark that the delegates are "hard working men and mechanics;" true; but, as a rule, they finish their work long before the class whose absence "Roach" is bemoaning. And, after all, what is wanted is organisation; and, in order to have that, you must go in for central offices and a thoroughly good secretary, wholly paid by the association. Give the present secretary, and if not him some other man, a good salary, and let him devote the whole of his time to the business. He might attend the offices by day, and visit occasionally the clubs at night; and I am quite sure you would soon find a different result. That there is plenty of work to do, requiring more time than the present secretary can devote to it, is shown by the fact that at the last meeting I attended, I urged, as you are aware, the great necessity for unity among anglers, and we carried the resolution of a special committee in spite of the undisguised opposition of the officials.

Yet, from that hour to this, I have heard nothing of the deputation to the third association, although I find that another gentleman, who was not present, and consequently knew nothing of the discussion, was invited and actually took part in the discussion. It may be that no discourtesy was intended—simply, probably, over work of the secretary—that I was omitted; but still I cannot help feeling sorry that an outsider should have taken my place, especially when I had so strongly advocated the holding out the hand of friendship to the third association. I am glad that the result has been that the associations are going to work together, but what a boon to anglers it would be if the two associations would go a step further and amalgamate—until that is done, the work of looking after the interests of anglers must be a divided one. You bear double expenses, good men's time wasted. Your hands are tied; for, if you propose some legislation for the benefit of anglers, the first cry is, What will the third association do? The fact is, if the prominent men in both associarions would sink their petty jealousies and put their shoulders to the wheel, we should have an association which it would be a pleasure to attend, and every club would not hesitate to send its best man as delegate, and the work of propagation and preservation could be carried on in a manner which would command the attention of anglers throughout the world.

I think all right-feeling men must agree with me, that the energies of anglers are being wasted by the multiplicity of societies. There is the Thames Angling Preservation Society, the Marlow and Maidenhead, the Windsor and Eton, the West Central Association, the Central Association, (I omit the East End, as they are united in the work of preserving the Lea), the Anglers' Benevolent Society, the Thames Rights Defence, &c., and now we shall have the Propagation Society, which is an important one. Now why should not all this be done at one office? Look at the saving of time and money; they are all intimately associated with one another, and a great many anglers begin to feel that, with the Thames especially, all the work in connection with it, should be guided by a body of practical men. At the present moment we are wasting our time and money by having a delegate to this, another member to that. Whereas if we had unity of working, our expenses would be lessened by one half, and the energies of the representatives concentrated on one object alone. "Unity is strength," and I invite other anglers to think of these remarks, which are made in the interest of all; and "Roach" may possibly find that men or clubs are not lukewarm, but sincerely desirous of doing all they can for the benefit of their poorer brethren. I will not assume to be anonymous, like "Roach," although it can add no weight to my letter.—I am, &c. FRED. C. CLENCH.

Chairman Richmond Piscatorial Society.

CLUB AND OTHER JOTTINGS.

By L. B.

IT is very pleasant to be able this week to begin my jottings by chronicling the capture of two good jack. The first was taken from Old Father Thames at Dockett Point, Shepperton, on Sunday last by a bank angler, and weighed on the inn scales nearly 19 lb. My informant, Mr. Castell, the Secretary of the City of London Angling Club, who had a good look at it, says it was an exceedingly handsome fish, and in first-class condition.

The other fell to the rod of our old friend, Mr. Vincent, of the Bostonian Angling Club, now residing at Watford, who sought and found his fish, a 14 lb. "avoirdupois" pike, per club-weight and scales, in the prolific waters of the Colne. I am this morning (Wednesday) in receipt of a note from Mr. Vincent, in which he says:—"I believe the fish taken by myself on Friday last to be the heaviest taken by fair means about here for some time; it was in splendid condition, and gave rare sport, being but very slightly hooked on the finest tackle; in fact, had I not had the assistance in landing it of Mr. Horn, a brother angler, I am afraid it would have bid me good-bye. I have duly forwarded it to friend Lancaster to be set up. We took two others, but of no particular weight. My neighbour had a nice well-fed fish of about 5 lb. a day or two ago. I think the fishing is improving, and the river is in grand condition, but live baits are very scarce, and run small."

A visit was paid on Monday evening last to the Eustonian Angling Club, the King's Arms, Swinton Street, Gray's Inn Road, W.C. There was a capital muster of piscators, and some very excellent singing. The Eustonians' new premises are roomy and very central.

I am sorry to have to announce that our much-respected friend and colleague, Mr. R. Ghurney, is very unwell. I am sure that all anglers who know what a steady, never-wearying worker Mr. Ghurney has been—and who does not?—will wish him a speedy recovery.

From Haslett, of Chertsey, I have this week the following note:—"Sir,—My report is not so heavy as it should be, not because there is no fishing, but because so few anglers come down. Better weather could not be, and the time glides by and presently it will be all over. Jack are well on the feed; I got four with Mr. Allan, two with Mr. T. Hoole, and on Sunday, with Mr. Smith, six jack, four perch, one chub (3 lb.). I fancy my list will be heavier next week, as I have other fishing on hand besides jack."

A sub-committee in connection with the International Fisheries Exhibition, Edinburgh, has, agreeably to a wish expressed by our Scotch friends, been formed in London, whose principal object is to obtain the loan from angling societies and others of preserved specimens of Thames trout and coarse fish for exhibition. Beyond the facts that Mr. F. C. Clench has consented to act as secretary, and Mr. R. B. Marston and Mr. L. Bonvoisin as committee-men, I am not at present informed how the committee is composed; though I have no doubt, when the names come to be published, as they are sure to be shortly, we shall find many well known and trusted ones among them.

Mr. Caborn, the hard-working secretary of the Sir Hugh Myddleton Angling Club, and a first-class exponent of the mysteries of the Nottingham style, has been getting some very good chub, the heaviest fish weighing, I understood, within an ounce and a-half of 5 lb.

This (Friday) evening a special meeting of the West Central Association of London and Provincial Angling Societies takes place, at which every club enrolled on the association books have received notice together with an urgent request for the attendance of all delegates.

What has become of our friend "Thames Fisherman"? I feel sure many beside myself will have missed those capital letters we had quite learned to look forward to each week.

Apropos of "Thames Fisherman," it is worthy of note, as emanating from a professional puntsman, that he is totally adverse to trout culture experiments, and, as far as the Thames is concerned, seems to consider them a perfect farce, a total failure, and an utter waste of money.

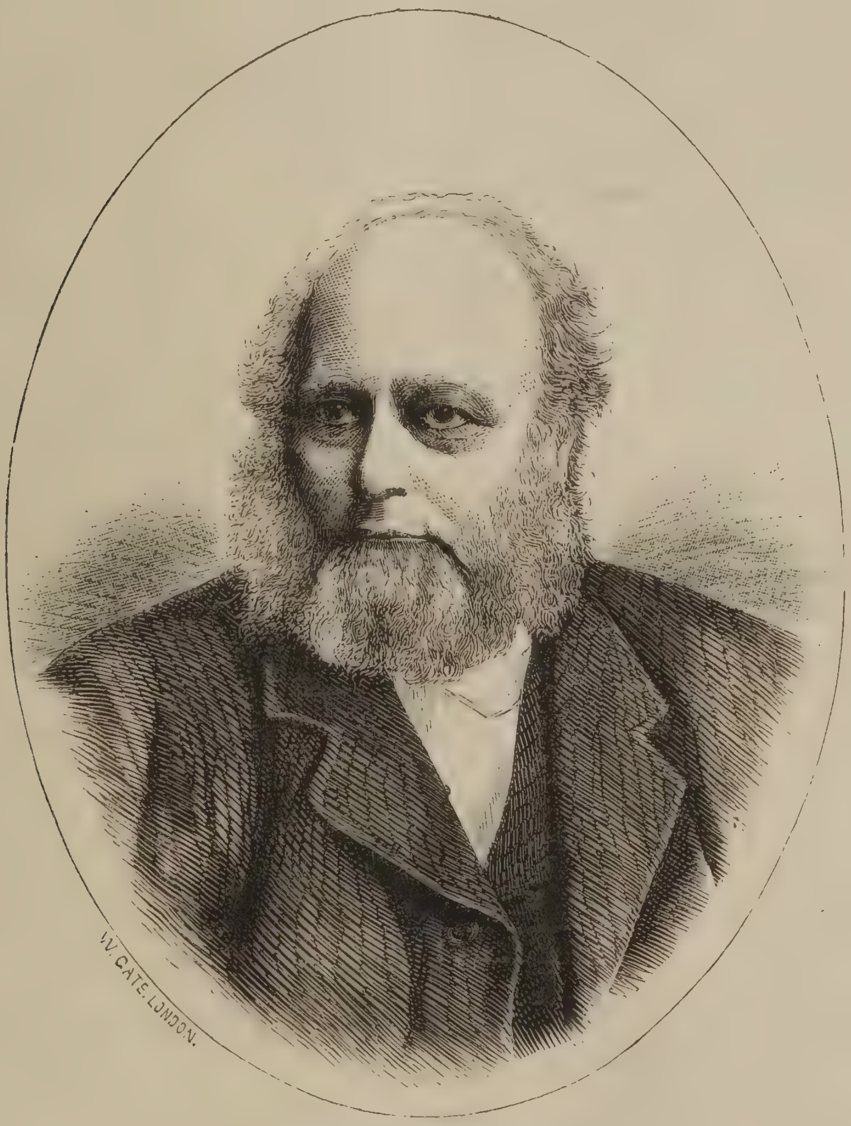
I am pleased to be able to state that our good friend, Mr. T. Hoole, is much better, and once more back in business. He forwards me a copy of the West Central Association new visiting lists; they have been most carefully drawn up, and I feel sure cannot fail to give satisfaction to the various societies concerned.

The annual supper of the Good Intent Anglers took place at their home, the Crown Inn, Church Street, Shoreditch, on Tuesday evening last, between 130 and 140 members and friends sitting down to do justice to the worthy hostess, Mrs. Roberts, capital catering. Mr. H. J. Tibbatts occupied the chair, and a better chairman it would be impossible to find, while Mr. H. Brookwell efficiently supported him in the vice-chair. Among the visitors were Mr. L. Bonvoisin, West Central Association, Mr. Samuel Morgan, United London Anglers, Mr. J. P. Wheeldon, *Bell's Life*, Mr. Crumplen, hon. sec. Gresham Angling Society, Mr. Bates, Piscatorial Society. I cannot hope, within the limits of these jottings, to give full particulars of the whole proceedings, and cannot do more than give the heads. Among the toasts proposed were the usual loyal toasts, the chairman remarking that the fact of the Prince of Wales, England's future king, being a keen sportsman was beyond doubt, while his interest in our branch—the gentle craft—was amply attested by his having accepted the post of President of the National Fisheries Exhibition of 1883. The next toast, "Success to the Good Intent Anglers," was responded to by the hard-working secretary, Mr. R. Murphy, in a telling and practical speech, in which he traced the rise and progress of the society, and making *en passant* some very flattering allusions to their guests that evening. Messrs. Wheeldon, Crumplen, and Bates, gentlemen who, by their presence on that occasion, testified to the high esteem and respect in which the Good Intent was held by them—esteem and respect which he sincerely hoped his society would always continue to deserve. To the toast of "Angling and Angling Institutions," proposed by the chairman in a capital speech, during which he introduced to the meeting several angling novelties he had purchased at the Sportsman's Exhibition, coupled with the names of Messrs. Bonvoisin and Morgan, these gentlemen duly responded. The former, touching upon the important topics of coarse-fish culture, the renting of waters, coarse-fish legislation, trout culture as carried on by the Upper Thames Preservation Societies to the detriment of what should be their principal care—the preservation and increase of the coarse fish, which was comparatively easy, and certainly less expensive. The speaker quoted from the report of the report of the Reading and District Association, which appeared in last week's GAZETTE, and said he really thought the time had arrived when serious representation ought to be made to the Upper Thames Preservation Societies by the various associations in London, clubs and anglers generally, to discontinue their trout experiments, which past experience proved to be nothing less than a total waste of publicly subscribed money. Mr. Morgan in his remarks having feelingly alluded to the absence through illness of his colleague, Mr. R. Ghurney, the chairman remarked that it was now his pleasing duty to present to their good friends, Messrs. Murphy and Beckett, marks of the society's respects of the great value set upon their services to the society, and indeed to anglers generally, at the same time unveiling, amid loud and continuous cheering, two handsomely-illuminated tablets, with suitable inscriptions, in massive gold frames. Messrs. Murphy and Beckett (the former of whom was visibly affected) having made suitable replies, the chairman proposed the "Visitors," coupling with the toast the names of Messrs. Crumplen and Bates. Those gentlemen having suitably responded, the former in one of his plain, practical speeches, in which he remarked that he heartily endorsed Mr. Bonvoisin's remarks anent trout culture in the Thames, and firmly believed that every penny spent upon it was wasted; the latter, in a few short, witty remarks, which kept his hearers well on the laugh the whole time. The chairman next proposed the "Press," coupling therewith the name of Mr. Wheeldon, of *Bell's Life*. Needless to say, Mr. Wheeldon made a capital speech in reply, during which he touched upon the duty anglers owed themselves in supporting the Thames Rights Defence Association. He also remarked that he had no doubt Mr. Harry Brookwell's splendid case of five Lea trout was the handsomest of the kind in the world. Being obliged to leave early (12 o'clock), the last toast I heard was the worthy hostess, Mrs. Roberts, who not only on these occasions tries her best but at all times, together with her son, who is an active member of the club, identifies herself with the Good Intent Angling Society. I understood from the chairman that that was the last toast down on the programme, and that the rest of the evening (extension till 2 a.m.) was to be spent in harmony, I only regret that the exigencies of business, and the indifferent state of my health, made it impossible to stop and see it out among such a jolly lot of fellows, as I would so much like to have done.

NOTICES OF BOOKS, &c.

Little's Angler's Annual. Comprising Articles and Practical Information on all matters relating to Fish and Fishing. By the ablest Writers. Illustrated with Portraits of Gentlemen eminent in the Fishing World, and many Engravings. To which is added an Almanac with notes of "Events" published by the proprietor, G, Little, 15, Fetter Lane, E.C.

Mr. Little is certainly determined to keep pace with the times; it was only the other day we noticed his elaborate and handsome volume, "The Angler's Companion," and here we have another literary venture bearing his name. It is a square 8vo. book of some hundred pages, very nicely printed, and illustrated with some good engravings, one of which—a capital portrait of Mr. W. H. Brougham—Mr. Little has kindly lent us.



W. CATE. LONDON.

W. H. BROUGHAM, Esq.

(SECRETARY OF THE THAMES ANGLING PRESERVATION SOCIETY.)

The Annual is sold at the small price of one shilling, it offers a good fund of entertainment to the angling reader. First we have a good portrait of Mr. Spencer Walpole, Senior Inspector of Fisheries, with a short biographical sketch; then an article on English Coarse Fish Culture, by Mr. J. H. Keene; we think we may credit him also with "Fishing in Winter Time;" in fact, there is a good deal of his pleasant writing in the annual—some of it, it is only fair to our readers to mention, having first seen the light in our own pages.

There is a most lucid and useful article on "The Culture of the Salmonidæ," by Mr. W. T. Silk; then follows, most appropriately, "A Day at Burghley," by "Diomed." By a printer's error "Bass" is printed "Bars," throughout this description of the Marquis of Exeter's piscicultural establishment which has succeeded so well under the able superintendence of Mr. Silk. Mr. W. H. Brougham, gives a short history of the "Rise and Progress of Lower Thames Preservation," "Norfolk Natural History," is the title of Mr. Greville Fennell's able contribution. Then we have a portrait and biography of Mr. Thomas Spreckley, "The Early History of Fly-Fishing" is evidently by Mr. Keene. There are many other articles, and the portraits of Mr. Brougham and Professor Huxley are very good. There is a list of London Angling Clubs, of Fishing Stations on the Thames, with names of fishermen, hotels, &c., and then we come to the Calendar, with its long list of "Events" in the angling world; for instance, opposite Jan. 20, we find "Howill Considine, a fisherman of the Shannon and Lough Derg, brought me a pike he had killed. It weighed 65 lb., and was in bad condition. I kept the head for some time (W. A. Hackett, Cork, Jan. 20, 1877.)" There are one or two blunders in this list of events, for instance, on page 91, Dr. Norman is credited with a 36¾ lb. pike, and on page 103 the same fish is said to have been caught by Mr. Cooper—the fact being that Mr. Cooper merely set it up. But this is a little matter, and we think we have given a sufficient index of the contents to show that anglers will find much to amuse, and not a little to instruct them in this the first issue of Mr. Little's "Angler's Annual." Next year, we have no doubt, the work will be more valuable still, as some little drawbacks are inseparable from the first issue of a novelty of this kind. We heartily congratulate Mr. Little on the very enterprising manner in which he caters for the wants of anglers.

FLIES AND MINNOWS FOR NORTH DEVON WATERS.

IT is quite a pleasure to receive from Mr. Rowe, fishing-tackle maker, Barnstaple, three favourite old friends—the deadly "blue upright," the "half-stone," and "pinket." The latter is good on warm, wet days, and the two former are the best general flies for the Exe, Barle, Lynns, Taw, Torridge, Bray, Mole, and other moor streams. The flies are all made, with good, stiff hackles. The blue upright is particularly good. Mr, Rowe claims to be the original maker of the real Devon minnow. At any rate, the sample he sends us is the best we have ever seen, and spins in the most perfect manner. There is no better artificial than the Devon, though the Derby killer is as good.

CARP-FISHING.

TO make paste for carp your hands must be very clean, and well rinsed from soap; dip a piece of wheaten bread, a day old, into clean water for a moment, then press and squeeze and work it up into a stiff paste with honey; ascertain the depth of the spot where you propose to angle the day before, and mark so that you may know whether the river has risen or fallen. Ground-bait the place with bread made into paste, mixed with a little barley meal, and a small quantity of honey, the night, or even two nights, before you angle; your hook must be short in the shank, and the hook should be hidden by the paste; the whole bait should be about the size of a marrow-fat pea. You must approach the bank very quietly, not too close, drop in your bait gently, and let your rod lie down; the shot should nearly rest on the bottom but not quite, so that your float, which should be very light, will have its lower end a little depressed; the bait will be about nine inches from the shot; the gut must be fine but round and strong. Throw in, one at a time, very quietly, little pellets of plain paste, about the size of peas. Angle in a still place near an eddy, in from four to six or more feet of water. The carp will suck in the bait, the end of the float will dip under water. As soon as you see this, carefully, and without shaking it, put your hand to your rod, and, in a second or two after, the float darts off; then firmly, but not violently, only with a mere turn of your wrist, strike, and the struggle commences; the fish will endeavour to run in between roots of trees, if there be any near, and, if large, will put your skill to the test. On the front of the dorsal or back fin the bone is like a sharp saw. When he is hooked, he will make many very short turns iu his endeavour to escape, and it is possible that the line, from bad management on the part of the angler, will in some instances pass across this bone, and, if so, will be instantly severed.

The angler should calmly watch the route the fish he has hooked takes: let him have more line as may be necessary, and wind up whenever practicable with safety. Be in no haste to see the fish, for many a good fish has been lost through the angler throwing himself into a flurry; and be cautious to play your fish away from the place where he was hooked, or other fish near will be driven away.—From W. Wright's "Fishes and Fishing," published in 1858.

FISH "SOUNDS."

IN Dr. Andrew Wilson's very interesting paper on "Found Links" (KNOWLEDGE, Jan. 6, page 195), "the *swimming-bladder, air-bladder*, or *sound*," are described as synonymous. There is a small mistake here, a misunderstanding of fishermen's technology, that, may mislead some readers. The same mistake occurs in anatomical textbooks. Dr. Wilson will readily understand the nature of the error by simply buying some "cod sounds" from any fishmonger. They are regular articles of separate commerce, salted by millions in Norway and exported in small barrels.

He will find that the sound is not the air-bladder, but the aorta, or chief blood-vessel of the codfish, laid open, and with some of the larger branching vessels attached. This vessel, forming a stout membranous bag, is attached by its edges to each side of the under part of the spine of the fish, from which the Norse and Newfoundland fishermen tear or rip it when they split the fish for salting.

I have a theory of my own concerning the etymology of the word, viz., that it of Scandinavian origin, like the commercial article, and is derived for *Sondre*, to sever or rip, from which we also derive our word asunder. W. MATTIEU WILLIAMS, in "Knowledge."

Ye fools wha live wi' care oppres't
An' scarce a joy tae cheer yere breast,
'Twad add tae life a brichter zest,—
Forebye a blessin',—
'Gin ye obey this my request,
Tae try the fishin'.—G. D.

THE man who goes fishing and sits in a cramp-inviting position on a narrow thwart from early morn to dewy eve, and calls it fine, is the same man who never goes to church because the pews aren't comfortable.—*American Sea World.*

GREGORY'S SPINNING BAITS. "The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by he press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[ADVT.]

THOMAS H. CHUBB,
Manufacturer of FISHING RODS, ROD TRIMMINGS, FLOATS, REELS, TROLLING SPOONS, Brass and Wooden Landing Net Frames, Camp Chairs, &c. Also turned stock of ash, lancewood, hornbeam, &c, furnished to pattern.
ADDRESS:

⁂ The "FISHING GAZETTE" SPINNER (Registered) is sold by all the above firms.

ANNUAL SUBSCRIPTION.

The Annual Subscription, payable in advance, for the United Kingdom is 8s.; or post free, 10s. 6d.

To any part of Europe, the United States, and Canada, the Annual Subscription, including postage, is twelve shillings and sixpence.

ADVERTISEMENTS.

All communications respecting advertisements must be addressed to the Manager of THE FISHING GAZETTE, *No.* 12, *Fetter Lane, London, E.C.*

N.B.—All Remittances must be sent, and all Cheques and Money Orders must be made payable to Messrs. SAMPSON LOW, MARSTON AND CO., the Proprietors.

The Fishing Gazette.

SATURDAY, FEBRUARY 25, 1882.

AN OFF-DAY IN MILFORD HAVEN.

BY RED-SPINNER.

THERE is no train till evening, and in sleepy old Milford something must be done wherewith to kill time. Were the month twice removed from January, one might wander up into the distant hills and try the virtues of a March brown upon the small trout in the downward-bound brooks. Still later, the lively sewin would assert some sort of claim upon the attention. In the town itself there might be unearthed many interesting local traditions of Lady Hamilton and Lord Nelson; but this description of sport requires a peculiar temperament, and I will none of it, unless it come in my way, as the windfall of autumn drops into the lap as you sit reading under the favourite pear tree. Standing at the pier-head, from which some day the Atlantic steamers may take their departure, I can count four small boats at anchor, and the sight at once suggests a means of bridging over the hours. It needs only to mention the idea to a hospitable gentleman, standing near, to have a whaleboat ordered at once, and an experienced fisherman summoned to receive peremptory orders to provide lines and baits, and, if he value his life, to see that we catch fish. Knowing right well that, foremost of all mortals, 'tis not for anglers to command success, nevertheless we resolve to deserve it, according to the oft-quoted dictum of the play.

Milford Haven is a glorious piece of water, presenting all the necessary conditions for good sea-fishing of the kind common around our coasts. From the entrance at St. Ann's Head, to the ferry at Pembroke, the length is 12 miles, and the inlet winds round like a horseshoe, the width varying from one mile to some thing over three at the widest part. Between the entrance and the new docks, especially opposite the great round fort that commands the mouth, there are rocks famous for bass in the proper months. The uniform depth of the water tempts many of the larger sea-fish, and there are any number of "grounds" favourable for operation against whiting. The hills around this lake-like expanse of water, are neither very high nor picturesque, but they are parcelled out into fields, adorned here and there by old or new farm-buildings, villas, and forts, and coloured in their season by furze, heather, fallow, corn, or grass. And they are always near enough for the eye to roam over when the patience of the fisherman is exhausted, and the mind, too long concentrated on the line, which will not lend itself to the desired signalling from below, craves for variety. There are some literary cynics who are fond of ridiculing the anglers' love of scenery and notice of points in landscape as a miserable affectation. Let them enjoy their opinion, if—which I doubt—*that* also is not an affectation. The fisherman, be he humble or exalted, fresh water or salt, fly-fisher or bottom-fisher, even by virtue of the peculiar character of his sport, has begotten into him very early in his career, if, indeed, he does not start with it, an honest appreciation of the beauties of Nature; and from it he obtains solace under disappointment, and a placidity of temperament that have become proverbial.

So pondering, as we get afloat, and push on towards the headland, I neglect my tiller, and am respectfully admonished to keep the head of the boat a 'pint or two the other way. What a wonderful day, too, it is for the month of January! Before starting we had strolled through the grounds of Castle Hall, down which a very trouty little stream tumbles into the sub-inlet, called in the district a "pill"; and I plucked from the hedgerows a dozen primroses, some golden furze blossoms, and a solitary violet. There is no sun and no wind, but the mildness of the atmosphere is such that, though we are on the water, and there is a greyness over sea and shore, an overcoat is not necessary. And the fields are of the brightest green. It seems as if;—here I lose the thread of my thought, being once more admonished by the skipper, and soundly abused by my companions for further eccentricity at the helm.

However, at last we reach the "ground." We have passed probably a score of boats, the occupants of which are men and boys fishing for a livelihood. Some of them have been there for hours, and, I am sorry to be informed, with unremunerative results; others have just come out as we have, to take advantage of the half hour before the tide begins to flow. We anchor in about twelve fathoms of water, and prepare the lines. In the bottom of the boat there is a bushel odd of mussels. Too much bait, I have, somehow, learned to regard as a harbinger of ill-luck. It is when the worm-bag is empty, and the last live bait defunct, that the perch and pike think fit to awaken into hungry life; whip off the solitary fly that remains in your book and you may take odds that the trout will suddenly conceive a violent affection for it, and for none other. Besides the ominous plethora of splendid bait we must also be aware that the season is not quite the thing. The poor fellows who, like Davy Llewellyn, in the "Maid of Sker," turn an honest penny by selling their fish, must come out at all times, but there is no denying that for the amateur, January is not May, nor June, nor July. Next, the lines and tackle generally are too coarse. Why is it that our sea fishermen will persist in acting as if anything will do for the fish of the sea? My line is big enough for the Dogger Bank, and the three sprays branching from the cross-stick, though they are made from the delicate ribs of a paragon umbrella, are yet affixed with altogether unnecessary clumsiness. We begin, therefore, hopeful but not sanguine. Still, we do get something, and after shifting our ground several times, we flatter ourselves that we are at last in luck's way. I have the honour of catching the first fish, a small whiting of some ten inches long, and thenceforth, for perhaps a couple of hours, we, at longish intervals, haul up whiting, and an occasional pout. But they are all under a pound weight, and the four dozen would not make a very heavy inroad upon the avoirdupois table. Fortune's gifts are unequally divided, as usual. There are a couple of urchins in a small, dirty boat astern of us, who haul in two whiting at a time incessantly, and there is a wrinkled veteran about the same distance ahead who has fished Milford Haven for over half a century, and who has not caught half-a-dozen fish during as many hours. If we ourselves could have killed a fish for every strike we made we might have quadrupled our take. The bites are fast, but not furious, the silvery rascals of the whiting brigade evidently worrying the outposts without boldly advancing to the central point. In this sense it may be said that they came to the barb-i-can, but stopped short of the barb.[*] We fain confess ourselves beaten. The fish have the best of it. A smaller hook might alter matters, but we have none, and so every five minutes we are compelled to haul up and re-bait, trying, now mussel, and now a dainty morsel from a fresh caught pout, but all to little purpose.

The boatman in the bows has put a small whiting upon a cod hook, and at one of our anchorages he allows an exclamation to escape his lips, and is seen struggling with something heavy at the end of his line. His mate leaves the heap of mussels which he has been told off to open, and stands by with a very workmanlike, short-handled gaff. The big one turns out to be a ling, about four feet long, and in prime condition, of solid flesh, and of good girth to the tail. It is my first acquaintance with this fish, otherwise than in a salted condition on the breakfast-table of ocean-going steamers, and after examining its wolfish mouth and strong teeth, I can quite believe certain wonderful yarns told of its voracity. Eaten fresh, the ling is not equal to cod, of course, but it is much superior to some of the flabby, over-iced stuff we sometimes get from the fishmongers. But, like the hake, I suspect there is a prejudice against the ling. Soon after the specimen is received in our whale boat, a hullabaloo is raised in a small craft abreast of us, and we have the pleasure of seeing a boy cope with a large fish on his small whiting gear, and bring it neatly to the gaff. It is a cod of 20 lbs. or thereabout—a beautifully-shaped fish (for a cod) being remarkably thick and short, considering its weight. That boat, where there already lies a ling that matches well with our own, is looked upon by many envious eyes, and as such a slice of fortune is not likely to be repeated to-day, the fish biting less and less as the tide increases, the boy's father decides to go ashore and dispose of the cod while it is fresh. Before nightfall he will have sold it, probably at the Lord Nelson Hotel, at threepenee per pound. We, soon after the departure of the cod man, get a passing sensation from the capture, on one of our whiting hooks, of a skate that measures over a yard across, and that, lying on its back in the boat, amuses us by that grotesque caricature of the human countenance always afforded by the underpart of the creature's head, and evokes perhaps a moment's sympathy through the laborious manner in which it sighs out its tenacious existence. Then comes a dapper little dog-fish to receive execution without sentence, and a little later we conclude business with a small thornback ray.

We change our ground continually when, convinced that we have outworn our welcome, we, in the afternoon, leave the place from which the ling, cod, and rays have been taken. The professional fishermen also now give it up as a bad job. On our way up the Haven to our final anchorage, abreast of the seedy-looking "Great Eastern," I hear a good deal from our boatman as to the general fishing at Milford. The statements of local fishermen everywhere should, of course, be taken with prudent reservation. The men may not deliberately mislead, but they are prone to be carried away by two perfectly natural impulses, namely, the desire to present the rosiest view of affairs in general, and the patriotic wish in particular to place their own waters in the foremost place. Wherefore, I make due allowance, and take care to secure such corroboration as I can from independent gentlemen who can make an intelligent estimate of probabilities, and would not mislead. The result of what I hear, mark, and inwardly digest is an entry in my notebook to look after Milford Haven at the first available opportunity. I doubt whether there are many fishing grounds that are better. During the summer months, the mackerel, bass, and pollack fishing is described as magnificent, and last year the bass, which so unaccountably decline at many places once famous for them, were unusually numerous. The fishermen get a good many salmon and sewin in their nets, and, in the autumn and winter, excellent takes of cod are yielded by a rough-and-ready sort of floating trot, with from 20 to 50 hooks attached. Many of the methods invented for sea-fishing are just so many fancies that do neither harm nor good, but the Milford Haven fishermen, I should say, might greatly increase their income by adopting a more artistic system.

It is probable that we shall, in time to come, hear more of Milford as a fishing station. A fishing association is making it a depot for the transmission of fish from the smacks and trawlers. In one of the "Pills" I saw four well-appointed steam carriers, almost ready for use, and two of these will start next month for the mackerel fleet. The rapid service of trains which the Great Western Company have promised, when the new line of ocean express steamers to America is financed into existence, may therefore assist in making Milford as much a new Yarmouth as a new Liverpool, though there is not any immediate fear that the supremacy of the one as the metropolis of Bloaterdom, and the other as the second port in the United Kingdom, will be challenged. It is not generally known that Milford has to some extent a fishy origin. Sir William Hamilton was one of the early landowners, and he brought over a number of Nantucket men, for the purpose of starting a South Sea Whale Fishery. The scheme came to nothing, but the parallel lines and right angles of the streets are said to be a reminiscence of the Yankee element in the original population.

---

[*] This simile, be it noted, is strictly in accordance with the art of war, but though it may be far-fetched, I let it stand, knowing to how many readers it will afford an innocent opportunity of describing it as a *barb*arous pun.—R.

ANGLING CLUB DINNERS.

THE season of the year has arrived when the angling clubs of London generally have their annual dinners, and which are now carried out with great spirit, collecting together not only the members, but inviting amongst them, as guests, those gentlemen whose names are well known either as angling authorities or connected with the Press. Amongst those that have been recently held, and to which I have been invited, are, first of all, the Friendly Anglers, whose quarters are situated at the Albion Tavern, Albion Street, Hyde Park; but owing to a severe domestic trial at the time I was, much to my regret, unable to attend. Not only was the dinner a great success, but the operations of the Society are specially successful, both as regards the practical character of the members, and the amount of prizes raised for this years' competition. Mr. Paine is a capital treasurer, and Mr. C. M. Le Good a most energetic secretary. The dinner is always held in the spacious and elegant club room, and the proprietor of the hostelry, Mr King, is a good caterer. The next club in the order of dinners is the Richmond Piscatorial Society, which took place on Thursday week last, in the splendid club room at the Station Hotel, Richmond, where the host, Mr. Munro, put on the table as *recherché* a dinner as it is possible to give. Under the chairmanship of Major Bell and Mr. Dickinson, and Mr. Little as vice-chairman, with an attendance of fifty members and visitors, the result was an unquestionable success. This society, as a suburban club, under the rule of Mr. F. C. Clench, is perfectly unique in the annals of angling societies for having obtained in so short a period so large a number of members. Mr. Clench has great occasion to feel proud at his magnificent success, and in having an army of 130 full-grown anglers, as he was pleased to designate them the other night, who are united heartily with him in true angling interest and are determined to support fish preservation and coarse-fish culture. On the same evening, the oldest angling club in London, the Walton and Cotton, had their annual spread in the Duke's Salon at the Holborn Restaurant, presided over by Mr. John Jones. It was, both as regards the dinner and attendance of members, a very successful evening. Next we have two important dinners, the first in rotation being the Piscatorial Society, which took place in the Prince's Salon at the Holborn Restaurant, on Wednesday evening, the 15th of February, under the presidency of Mr. Edward Birkbeck, M.P., and Dr. Brunton. Since the introduction of these dinners at the Holborn the attendance has increased to something like 130 guests, and this year, the elegant salon was filled to an overflow. It is much to be regretted the father of the society, Mr. F. G. Pearce, was absent, and his absence was significantly felt. Mr. Lander, in his energetic services as honorary secretary, keeps up the prestige of the society as a West-end club, and with its age of nearly half-a-century of establishment, it is entitled to great veneration and respect. The dinner in every way was a conspicuous success. This dinner will be succeeded on the 23rd. of March, by that of the great City club—the Gresham Angling Society—which is also to take place in the Prince's Salon at the Holborn Restaurant. There can be no doubt as to its being an immense gathering, and with Lord George Hamilton, M.P., in the chair, it will be influentially attractive. With the originality of thought which has distinguished the career of this society, it is the first angling society to adopt the plan of a list of stewards, and I am assured that the number of gentlemen who have already accepted that position is remarkably strong. The arrangements that have been made at the Holborn by Mr. Crumplen, who was assisted by one of the best epicures in London, Mr. Alfred Jardine, will, under the active superintendence of Mr. J. J. Hacup, ensure a first-rate dinner, for which the establishment is becoming, and has already become, famous amongst the angling clubs of London. B.

HIGHLAND NOTES.

'Lives there an angler with soul so dead,
Who never to himself has said "—

A LITTLE altering of a good text can do no harm, and if I can help it the little change made above need cause no blush of shame to mount the face of any honest man, be he Scot, or be he who he may. There is nothing in this world which excites more enthusiasm than angling does in the votaries of the gentle craft, unless grouse-shooting, on the part of those who delight in seeing the trigger-finger answer the eye with that quick, sympathetic move which is so essential to the successful "right and left" shot, does so. I confess that for breathless interest—for an excitement which set every nerve vibrating—a lively seven-pound grilse going "like mad," now rushing in the water, then leaping out of t momentarily, beats everything. A heavier fish gives far less port, but, truth to say, any fish hooked puts one on the tenter hooks of suspense until it is landed. The great drawback to angling for salmon is, I take it, the many days on which, owing to one disadvantage (of air or water) or another, the fish seem to know too much to be cajoled into taking even a "highlander" or a "butcher," a "jockscot" or a "black doctor," a "dusty miller" or a "blue doctor." Patience is often tried, and temper not seldom. One must be patient when there are no "rises;" and he must be quite angelic who, after playing a fish for some time, sees the fly come back to him. But what serenity must be his who, without fault on his own part, sees two, or it may be three, salmon leave him late on in the day; leaving him the utmost certainty that there can be in angling, that is, of his returning to his quarters with an empty basket! He who can keep calm under such circumstances, must indeed possess an amount of equanimity which should commend him to the good graces of the most fickle fortune on another day.

I have seen some queer pools fished, and some extraordinary bits of good and bad luck in my time, and certainly during the eason just ended my experiences were sufficiently varied. You may talk of perch and roach, of dace and trout, and they certainly are interesting enough in themselves. Not only so, but the reports of what accomplished anglers have been doing in your southern atitudes, as given in the Gazette, while away, most pleasantly, many an hour in a remote and picturesque region, on days when o be out is not half so comfortable as lying content within doors. But, I am forgetting the "muttons," and no mistake, for instead of speaking of what I saw done, I have been writing apropos of nothing pretty much. In July last—and the angling was nothing ike superlatively good, I saw men returning to their hotels with most extraordinary baskets of brown trout, and that even on very ndifferent days. No doubt there might have been seen gentlemen with brand-new rods, tackle, baskets, gaffs, landing-nets, and flies, –flies of the most marvellous descriptions—coming home empty-handed. One dear, dried-up old soul, who had been many years n India, in a civil capacitv, and made "pots of money" there, was pecially notable. Hear him talking at the dinner table, or in the smoking-room, or on the "battery," and you would be impelled nto putting him down as an Admirable Crichton of the most esplendent order. In Ireland—at Balina—"Balina" was never out of our hearing for ten minutes together! — what prodigies he performed! Yet with us he was somewhat of a crew when it came to the pinch. Possessed of plenty of coin, but *not*, like Rory O' More, having the "heart for to spend it," was our nabob. He would enter on a disquisition of endless length; would speak of his store of materials for fly making; would spend Sunday manufacturing flies (the heathen!); would accept leave to angle on a friend's boat on a river; but only once was he known to go in for twelve and sixpence worth of salmon-angling on his own hook. And then "Piscator" produced his stores of home-made flies. Extraordinary productions they were! They glistened with gum, and the wings reached only half way down the hook! Well, one day, out the manufacturer went, with very keen, good, common-sense angler for his partner. The ne fished up stream, the other down, and they met at a given pot. The nabob had nothing—his companion had three salmon. Of course, there were the usual explanations, exchanges of sympathy, and the poor reaper who never got a good sickle was reroduced again. Said the successful man, "Allow me to try a ast on this pool with your rod?" "No. If you try at all, do it with your own." No sooner said than done. At the third cast a fish "came," and not only "came," but hooked itself through both jaws! got smothered and done for at once, and was on the green grass in a couple of minutes. Would you not, Mr. Editor, as soon be any one else as that looker-on, even with his heaps of coin? That evening in our smoking-room he was somewhat subdued, but he soon revived and—left! Had he been a genuine disciple of old Izaak Walton, you don't suppose that I would relate this anecdote, dear reader; but, being only a curmudgeon, let him have it!

I was told by a gillie, who had a very persevering master, that one day they got the largest fish of the season, just as a wind-up to the gentleman's angling; and the man, being determined to make his master's success as much beyond a peradventure in weight as well as in number of fish, no sooner saw the gentleman's back turned on him than he began to stuff the big captive with stones! Of course, the fish weighed well, and no doubt the person who prepared it for cooking would be rather surprised to find that Highland salmon had such a desire for food as to swallow large pebbles, and therefore such digestive powers as would enable them to fatten on such hard stuff.

There is a medical man resident somewhere in the western islands who is remarkable for the very tough "stories" he tells —tells, yes, with a gravity of deportment partially derived from long experience in the department of fiction; and partly, perhaps, from the circumstance that he is blind of an eye, in consequence of which he may assume ignorance of the incredulity of those of his audience who are seated on his dark side. This doctor had a Skye terrier, a most marvellous brute, a canine *enfant terrible*, in fact. One day the medico was crossing a ferry, the tide in which runs at the rate of several miles an hour. Suddenly the terrier espied a salmon passing below, and down he dived after the fish. The owner thought he would never see his dog again, but see him he did, improved in value by the value of that salmon, which he had safely landed on the pier, awaiting his master's stepping out of the boat.

A NEW KIND OF TROUT-ROD.

PROBABLY most trout-fishermen have experienced at times the need of a rod that is both a light, single-handed weapon, for the fly, and can be readily converted into a longer and double handed rod for fishing either minnow or worm; that shall not be troublesome to change from one to the other style of fishing, and yet leave the fisherman unhampered by an attendant, carrying spare appliances. Following in the path marked out by Stewart in his "Practical Fisherman," let it be assumed that the angler requires a light, stiff ten-foot rod for up-stream fly-fishing, while the fish are feeding on the surface, and a longer fourteen-foot rod for fishing fly or minnow. as soon as the take is evidently at an end as regards fly. Stewart has advocated such a rod, but seems to have failed in some of the details necessary to give effect to this idea. His ten-foot rod, in two long joints connected by ferrules, had a hand-piece, with winch fittings one foot in length. This hand-piece being removed left the joints nine feet in length, and a butt of slightly more than five feet, of somewhat massive build, was required by the angler at the riverside, when fishing bait, either worm or minnow. This longer rod is, moreover, stout enough for grilse-fishing, and not, therefore, quite the class of weapon preferred by the trout-fisherman in the rapid rivers of Wales or England.

An attempt has been made to meet and remedy these wants by a specially constructed rod, which will be found fully to answer the following circumstances:—

The fisherman has a very light and rather stiff ten-foot rod, free from double action, for up-stream fly-fishing, and uses in the disengaged hand a landing handle four feet long, fitted with spike and clearing hook, which well answers the purpose of a wading-staff. In order to obtain a longer rod, the net is removed from its handle, which now becomes the butt-joint of a fourteen-foot rod. The change can be effected in a couple of minutes without taking the line out of the rings; both the long and short rods are perfect as regards action, play, balance and lightness. It has been built, from the instructions given him, by Ogden, of Cheltenham; is a thoroughly good piece of workmanship, and, being an advance upon his well-known "Multum in Parvo" pattern, has been named the "Ne plus ultra."

We consider this is a splendid idea, and, when known to trout anglers, will speedily become popular. It originates with Major Bruce Seton, of the Royal Engineers.—Ed.

Mr. F. C. Clench, chairman of the Richmond Piscatorial Society and a member of the committee of the Thames Angling Preservation Society, has been appointed Honorary Secretary of the London Committee of the Edinburgh International Fisheries Exhibition, which opens in April next.

THE PRINCE OF WALES AND LONDON ANGLERS.

We beg once again to remind our readers that H.R.H. the Prince of Wales is to preside at the public meeting to be held at Willis's Rooms on Monday next, in furtherance of the objects of the Great International Fisheries Exhibition, which is to open in London next year. Proceedings will commence at 11·30 a.m., and we sincerely hope the London anglers will come forward on this occasion to support H.R.H., and prove to him that we appreciate the interest he shows in our affairs. For further particulars, see our advertisement columns for notice respecting this meeting.

LONDON ANGLERS AND THE EDINBURGH INTERNATIONAL FISHERIES EXHIBITION.

It is with great pleasure that we direct the attention of our readers to the letter of Mr. Fred. C. Clench, which appears in our correspondence this week. Our Scotch friends are most desirous of having exhibits of stuffed fish from the London clubs and private anglers. They offer to undertake all risk and expense connected with moving the cases and returning them, and also will give awards. Under these circumstances there can be no possible excuse for refusing to help to make the Scotch Exhibition a success. We are glad to state that some clubs have decided to exhibit, and feel sure that in the end the London anglers will be well represented at Edinburgh.

RIVERS OF ENGLAND.

Would it not be well for those in authority and who have legislative influence over our rivers and national watersheds to take a leaf out of the book of the Board of Works, who are simplifying the nomenclature of our streets and do the same good office for the various streams which intersect our lovely country? It may be said that we are more than personally interested in such a movement, having promised to give our readers a digest of all the fishable running waters in England, in order to extend that area of the sport of angling which is being so rapidly narrowed around us.

To exemplify the little difficulty we find ourselves under, and the confusion of titles which must result from such a plurality of names which at present exists, we give, from works now before us, a few of the rivers having similar names, and, it may be, to clear our way for more useful material.

Arrow.—There are two of this name; the one a tributary of the Upper Avon, in the counties of Worcester and Warwick, and the other a feeder of the Lug, in the Welsh county of Radnor and the English county of Hereford.

Avon.—Of these there are no less than eight: (1) In the counties of Wilts and Hants; (2) or Upper Avon, in the county of Northampton; (3) or Lower Avon, in the counties of Wilts, Somerset and Gloucester; (4) the Middle or Little Avon, a tributary of the Severn in the county of Gloucester; (5) or Anne, in Devonshire, off the wilds of Dartmoor; (6) or Avon Water, in the county of Hants, (7) in the county of Glamorganshire, South Wales, and (8) Avon Llwyd, a tributary of the Usk. It will be observed that, not content with having eight rivers of the same name in England and Wales, there absolutely exist two (1 and 3) in the county of Wilts, literally making confusion worse confounded.

Axe.—There are two of these, and both partly in Somerset.

Brain.—Then we have a Brain, in Essex; a Bran, on the Dove; a Brant, at Witham, in Lincolnshire; a Bratha, in Westmoreland; a Brent, in Middlesex; a Bret, on the Suffolk Stour; a Bride, in Dorsetshire, and a Brit, in the same county.

Calder.—Of these we have three: one on the Aire, in Yorkshire; another on the Ribble, in Lancashire; and a third in Cumberland, not to say anything of the Caldew, likewise in Cumberland, on the Eden.

Colne.—Of these we find three (1) a tributary of the Thames, (2) in Essex, and (3) a feeder of the Calder.

Derwent.—Here we have four rivers all designated alike: (1) in Derbyshire, (2) in Cumberland, (3) in Durham and Northumberland, (4) a feeder of the York Ouse.

Dove (Cotton's "beloved Dove"); then the Dove, or Dowe, in Yorkshire, and the Dovey, in North Wales.

Eden.—In Westmoreland and Cumberland and another in Surrey and Kent.

Esk.—One in Cumberland, and a second partly in the same district.

Eye.—There are two of these; perhaps this is as it should be, as both are in the same county of Leicester.

Frome.—Of these we have (1) a tributary of the Lower Avon, in Somerset; (2) a tributary of the Lug, Hereford; (3) Froome, Dorset; (4) Froome Upper, or Stroud River, on the Gloucester Severn, and (5) Froome, the Lower, Gloucestershire.

But, if our readers are not sufficiently impressed with such continued "damned iteration," we are. We will, therefore, jump to the letter O, and shortly conclude.

Ouse.—This important river runs through seven counties, but even that claim to its name being respected, does not seem sufficient, for we have another in Yorkshire, a third in Sussex, a fourth in Norfolk and Suffolk, and an Ousel.

Creel.

AT THE GURNETS.

It may happen that readers of the Fishing Gazette have either not much experience in, or much taste for, sea-fishing. But there can be no doubt that were people to engage in it oftener than they do, they would come to enjoy it heartily. There is something very exciting, and not exciting only, but invigorating, in the business. Then there is the strong sea-air, with its health-giving qualities, together with that desirable exercise which pulling a boat in a good swell gives. It may be that there is a breeze of wind, upon the advent of which sail is set, and variety is given to movement, a thing not undesirable in itself. Perhaps there is no species of motion so smooth and pleasant as that of a boat running before a smart breeze of wind which does not raise the waves. On a mild, pleasant day, such a trip as can be taken with a boat under sail on the numerous arms of the Atlantic which indent the shores of the West Highlands, is often looked back to with most pleasurable feelings by many men whose avocations call on them to reside in the great cities and towns of the country which are far from the sea. Or men may be so much occupied as to be unable to avail themselves of such healthful excursions as these, to which they fondly return in spirit "after many days."

In the Highlands of Ross-shire there is often nothing much more amusing for the ordinary class of residents to engage in than boating and fishing. Angling and shooting are amusements reserved for the favoured few; and therefore, when gale succeeds gale, and tempest comes after tempest—when there is hardly a fine day in the week, or, it may be, in a fortnight, as has been the case from the middle of October 1881 to the end of the first week of 1882—very little can be done out of doors, and indoor life becomes weariness and vexation of spirit difficult to describe. About a fortnight ago, however, there were two cold, frosty days, with only enough wind to make sailing agreeable, and likewise to make one remember that he had finger-tips and toe-points apt to be cold in the extreme.

A very short time, half an hour, say, brought us to a part of Lochcarron to which we were attracted by the immense number of gulls which were flying about there. On some small frames we had sundry lines coiled, at the end of them were lead sinkers, one to each, and weighing about a quarter of a pound. To the sinkers there was a continuation of line attached, and some gut, to which a good large hook was attached. It happened, fortunately enough for us, that we had fresh herrings for bait. The size of each individual bait was about an eighth of an inch broader where the hook was inserted than at the other end. As a general thing, each fisherman works two lines. On the occasion under notice, my companion and myself had, however, only three lines in the boat. The *modus operandi* was, each line was let out a distance of 10 to 15 fathoms, and the lines were kept jerking backwards and forwards until a good hearty tug was felt, upon which the line was pulled in, hand over hand, as quickly as could be. The gurnets were "taking" with great freedom, and so it happened that no sooner was one fish taken off the hook, and the sinker pitched overboard, than the next line had to be similarly dealt with. Thus for two or three hours, with an occasional slackening in the "biting" for a few minutes, we went on until we had got 270 gurnets into the boat. Now, cold as the day was, it is a fact that seldom on a steephill side were we warmer than on the day in question. Your readers are of course aware that the gurnet is one of the "cussedest" fishes in the sea, and that it has a head full of the most abominable prickers imaginable, a dab from which, ten to one, is sure to fester. This circumstance causes great circumspection to be necessary in handling the "beastie," and most adroit many men are in the unhooking process. Generally we go out oil-skinned "to the masthead," from the sou'-wester to the pants of same material. Some men, as soon as the fish comes over the gunwale, place it tightly between the left arm and their side, and so get it off—others put it between the knees; while some manage to pin it down with the foot and so manage, but the latter is the worst plan, for very frequently the hook gets broken in the process, as the foot is brought down with such force, in order to crush the head and kill the fish, as to give the hook bad usage if got in an awkward position. As regards the use of gurnets, it may safely be said that no fish resembles salmon in taste so much. Plain boiled or fried, when newly caught, they are excellent, and the ordinary run of Highlanders say that they are so also, when, after having been in pickle for a short space, they are smoked—"kippered" we may call the thing.

What adds zest to the amusement, is the care with which a man manipulating two lines has to act to keep them getting "droll." When a fish strikes one line he lets go the other, and hauls in vehemently. Very often the fish slips off the hook into the water, and joins a regular escort of its companions which accompanied it up on the way boatward. If herring bait cannot be had, a very small bit of the white part of the gurnet will do well, but so tough is the skin that, before the hook will penetrate it, a knife is required to make a hole for the hook. This kind of bait may last a whole day and save a heap of trouble.

The nearness of a lot of great whales makes some people feel nervous, but, although the writer almost steered his boat on to the top of one, which most quietly and good-naturedly "went below" in time to avoid a mishap, he does not remember hearing of any accident occuring through their means. Many a time has the writer been within a very few yards of the brutes—almost so near in fact as to get a share of the spray they spouted. They look uncommonly fierce some days, however, as they chase each other at something like railway speed. Indeed, on more occasions than one, we could almost declare that they must have been fighting, as they lashed the water furiously, and sometimes jumped high out of it. Such a mass of fish as was there!

The surrounding scenery has its attractions even to a boating-fisherman, and certainly anything grander than that to be met with on the West Coast of Ross, Sutherland, and Inverness-shires, would hardly be fallen in with anywhere. And it may be frankly stated that Lochcarron is overlooked by hills and mountains worth going far to see.

CLUB AND OTHER JOTTINGS.

By L. B.

On Monday evening, the 20th, the joint committee of the three associations met at the Star and Garter, St. Martin's Lane, W.C., over thirty members signing the "attendance book." Mr. Murray was voted to the chair, Mr. T. Hoole occupying the post of secretary. Among some important items of business done, was the election of a sub-committee of nine, empowered to draw up a short practical code of rules for the committee's future guidance. I was pleased to see our friend, Mr. R. Ghurney, present, and so far recovered from his recent indisposition as to be able to take an active share in the business of the evening.

Apropos of Mr. Ghurney, he has had printed, and caused to be circulated among club anglers and others, a number of tickets upon which is printed the following:—

"Anglers' Benevolent Society.
"New Foresters' Hall, Clerkenwell Road, E.C.

"To be disposed of, for the benefit of the funds of the above Society, a handsome old painting in gilt frame (subject, a favourite angling resort), painted and presented by Greville Fennell, Esq., to be drawn for on the Art Union principle. The result to be published in the sporting journals. Tickets 1s. each. Tickets unless paid for by Friday, March 31, 1882, will not be drawn for."

The cause is too deserving a one to need a single word of recommendation from me; but let us hope Mr. Secretary Ghurney will during the next three or four weeks be kept hard at it answering by every post applications for tickets.

I regret to announce the death, after a short illness, of Mr. Alex. Stone, quite a young man, an ex-member of the North-Western Angling Club, and well known among London anglers, particularly in the N.W. district.

I have just received notice that the first meeting of the London Committee of the International Edinburgh Fisheries Exhibition will take place on Friday next, at five p.m., at 20, Moorgate Street. Messrs. Ghurney and Morgan's names have been added to the committee.

Apropos of this exhibition, there is a capital article in this week's number of that excellent publication *Chambers' Journal*, dealing in a most interesting manner with fisheries exhibitions in general, and this one in particular.

In a contemporary appears the following:—"Providing Dagenham Lake is not converted into a dock before then, it is proposed to organise a grand angling sweepstake on the Sheffield principle, some good money prizes being given, and a fairer piece of water could not be chosen." Well, tastes differ, and I only profess to express my own views; but, judging from the one or two big things which have taken place in London within my recollection (the Ponder's End affair in particular), I should unhesitatingly say they are big scandals, and do more to bring the true angler's name into discredit than any other cause. Of love of sport proper there is not one jot, either among the promoters, the several hundreds of competitors, or the motley crowd, composed, with a very few exceptions, of the very lowest of the low; the three-card-trick man is there, the thimble-rig man ditto, tossing for money goes on freely, betting; and, in fact, every other objectionable feature of the lowest suburban racecourse, not omitting the roughs and the light-fingered gentlemen. One friend of mine was severely maltreated at the £100 sweepstake at Ponder's End, and another was eased of his gold watch and chain, while the scene en route by rail to and fro is better imagined than described. Supposing, however, that all that is really objectionable in these big things *could* be done away with, what is there to commend them to the notice of the true angler? Are they a test of skill? It is absurd to suppose it, even the promoters and those interested cannot maintain this view. Are they really enjoyable in the sense of a pure country outing? No, they are none of these; they are a big gamble from beginning to end—a gamble to join which the working man must first lose a day's work, invest from half-a-crown to five shillings, as the case may be, as entrance money, and pay railway fare and refreshments, all for the very remote chance of winning a money prize. No, no; though these things may commend themselves to the sporting man, they cannot but be repulsive to the sportsman, as utterly lacking every element of sport.

Mr. F. G. Young succeeds Mr. Jenkins as secretary of the Bridgewater Brothers.

The Peckham Brothers' annual supper is fixed to take place on Tuesday evening, March 21st, Mr. A. Brodie in the chair.

From Haslett, of Chertsey, I have this week a very meagre report, the rise of water not having improved the fishing. A few good perch and a tench of 2 lb. being all worth recording.

The Hoxton Brothers fish for a number of valuable prizes of the total value of between £6 and £7, presented by Mr. T. Bevington, proprietor of Ratly's Weir Fishery, with another additional £1 1s. presented by Mr. G. C. Ransom. On Monday, Feb. 27th, a great number of entries are expected, particularly as the day's fishing is to followed by a snug little dinner at "Ye Old Rye House."

On Wednesday evening, 22nd inst., a West Central Association, No. 2 District, visit was paid the Amicable Brothers, Bald-Faced Stag, Finsbury. Mr. Medcalfe occupied the chair. Owing, possibly, to its being Ash Wednesday, the meeting was by no means a large one. Some good songs, however, were sung. The following clubs being represented:—City of London, Good Intent, St. John's, Sir Hugh Middleton, in the district; and also the Hoxton Brothers (Mr. Ghurney), North-Western (Mr. L. Bonvoisin), Westbourne Park Piscatorials, Phœnix, Bridgewater Brothers, North-Eastern, and Hearts of Oak. The roll being called by Mr. L. Bonvoisin, who has undertaken the duties of No. 2 District Officer until such time as a gentleman is elected to permanently fill the office. A cordial vote of thanks to the Chairman brought a pleasant evening to a close. The next visit will be paid the Acorn Angling Society, of which due notice will be given.

BURE PRESERVATION SOCIETY.

On Wednesday the annual general meeting of the subscribers to the Bure Preservation Society was held in the Grand Jury Room at the Tolhouse Hall. There were present, the Deputy-Mayor (T. B. Steward, Esq.), who occupied the chair in the absence of the mayor, and Messrs. W. Worship. C. Woolverton, J. Tomlinson, C. J. Greene (Norwich), H. Stafford (Norwich), A. J. N. Chamberlin (Wroxham), J. Chamberlin, T. Elliot, J. Ecclestone, H. R. Harmer, and W. J. Hall. The report was read by Mr. Harmer, one of the secretaries, and was of a very gratifying character. It referred to the steps which had been taken to put a stop to the poaching on the Bure and its tributaries, and to the satisfactory results which had followed the efforts made in this direction. Reference was also made to the question of the eel-sets, which has been recently so fully discussed in the newspapers. The increase of subscriptions from anglers from London and elsewhere beyond this district was encouraging, and showed that the society was appreciated; and during the present year efforts would be made to bring the society under the attention of anglers in the metropolis and elsewhere who did not know of it. Allusion was made in grateful terms to the liberality of the Great Eastern Railway and the North Norfolk Railway in the facilities which they offered to anglers visiting fishing-stations on their lines.

The balance-sheet was then read, from which it appeared that the receipts were £135 10s. 8d., and the expenditure £57 18s. 6½d., including the watcher's salary, £46 16s., thus leaving a balance of £80 19s. 1½d.

The report and balance-sheet were adopted, Mr. A. J. N. Chamberlin expressing his satisfaction at the state of affairs, and pointing out that they had not touched the balance from last year nor the subscription from the National Fisheries Exhibition. He thought that as they had such a good balance in hand it should not lie dormant, but be invested in the best possible way. After some conversation it was resolved to invest £50 of the balance.

The election of officers was then proceeded with. The Mayor (C. C. Aldred, Esq.) was re-elected president. Mr. Worship proposed the re-election of the Deputy-Mayor as vice-president, and referred to the interest Mr. T. B. Steward took in all matters concerning angling and the local Boards and rivers. Mr. Elliot seconded; agreed to. The Deputy-Mayor thanked the meeting for the compliment paid him, and promised to continue his support of the society. Mr. E. P. Youell was re-elected treasurer; Messrs. H. R. Harmer, A. J. N. Chamberlin, and W. J. Hall, secretaries; the committee being also re-appointed, with the addition of the names of Mr. Elliot and Mr. Ecclestone. Mr. Greene proposed that a list of members of the society should be annually published and a copy sent to each member. This was seconded by Mr. Ecclestone, who proposed in addition that the report and balance-sheet should be printed with the list of subscribers, and this was agreed to.—*Yarmouth Gazette.*

George James Eaton, of Starkholmes Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[Advt.]

RIVER REPORTS.

MID-THAMES.

"He is well paid, that is well satisfied."
—SHAKESPEARE.

I am satisfied that very little successful fishing has taken place during the past week. This is to be accounted for by the presence of snow in the water, which seems to have fallen heavily above Oxford, but not lower in the valley of the Thames. I have some miscellaneous records of takes of roach and chub, but they are hardly worth record. The river, from personal observation on Thursday, is in fair trim for all-round angling, and evidently hourly improving, and good sport may, at the end of the week, be confidently anticipated.—MARLOW BUZZ.

Ancholme.

Some splendid sport has been had during the past week amongst the bream, and the pike fishing also continues very good. The water is in capital order, and the weather all that can be desired. I caught twelve beautiful trout in a tributary of the main stream on Saturday last. Not one under $\frac{1}{4}$ lb., and the largest $1\frac{1}{2}$ lb. They were in prime condition and cut quite pink. A small black spider fly is on the water, but none of the drakes have yet made an appearance. A few early browns are out in the middle of the day.—THOMAS FORD.

Ballynahinch (Ireland).

The waters have not been fished for this last week. The lakes and rivers in good order, but some days very calm. Any wind we do have is from the south and south-west. Weather very mild.—WALTER BLACKADDER.

Broxbourne.

Water in splendid condition. Amongst other takes of jack during the past week, Mr. Grimmo one of 7 lb. and Mr. Bainbridge ore 16 lb. Considerable quantities of perch continue to be taken, the largest I have seen weighed 3 lb. —F. B.

Chichester.

The water here is, if anything, too fine for successful angling, no take of importance being recorded. The Rother is in good order but pike have been chary of feeding the past week, but few fish taken and those small. The weather the past few days has been mild and summerlike with cold nights and mornings. Perch should afford good sport but roach seem entirely off. The commencement of the week on the Rother proved almost a blank, rodsters, like wandering Israelites, finding no resting place, many not having a touch the whole day. For pike and perch live gudgeon on this water seem most killing, while at Chichester gudgeon or strange roach or dace seem entirely useless. A meeting was held at the Globe Hotel, Chichester, on Wednesday evening, when Mr. Bracey and Mr. Buck of the Portsmouth Waltonians, and Mr. Gambling of the Brighton Anglers' Association, attended as delegates to confer with the Chichester society respecting the preservation of the fish during the repairs necessary to Birdham lock. A resolution was passed empowering the Chichester committee to take what steps may be necessary for taking and returning the fish to the upper water above the dam, and watching the canal during the progress of the work.—GEORGE F. SALTER.

Colne (Thorney Broad).

Water in first-rate order for all-round fishing. Every prospect of getting good takes of roach, perch, and jack. The weather is as fine as the middle of spring. A few jack, perch, and roach have been taken. A number of trout have already shown up in different parts of the water.—E. GODFREY.

Dove.

We have had fine mild days and cold nights this week. The water has been in nice condition, but still I do not think it can be said that trout are biting with their customary freedom. There has been a rise on when the sun has been out in the middle of the day; but when old Sol disappeared, the speckles (and the grayling too) left off coming to the surface. I suppose things will mend by and by. There are lots of flies out, principally reds and duns, and perhaps the reason the fish do not accept the artificials very readily is that there is so much natural food in the water. The average of baskets runs to about four or five brace per rod—I am now referring to our open lengths of water. A good many of the locals were out on Saturday, and a few on Shrove Tuesday, but most of the Ashbourne folks were footballing on the latter day. The goals here are two miles apart, and the whole town can join in the sport. I prefer fishing myself to having my shins kicked, as a good many were on Tuesday. However, the folks appear to like it, and so it is not for yours truly to complain.—THE SPLODGER.

Exe (Tiverton).

What a magnificent opening we are having. The weather is all that can possibly be wished for. The few night showers we have had have helped to increase the streams, and also the sport. Yesterday (Monday) certainly was rather a sneezer, the wind being due north, but, true it is, to-day (Tuesday) is one of the most magnificent spring days one could possibly realize at this time of the year, perfectly warm, in fact, first-class fishing weather. Salmon are very plentiful, and had our net fishermen the privilege of fishing this month, as they had some few years since, some thousands might have been taken, and very probably, when their season really sets in, we may have the usual floods to prevent their commencing at that time. I have not heard of a single fish being taken with the rod up to now; but trout have come to grass in good numbers, the heaviest of which turned the scale at three-quarters. Dace and roach are very fine, perch and pike small, the larger, seemingly, are well fed. and refuse other luring bait at present. There are great quantities of "gravelling" and "parr" marked fish in the various streams. Fishing in the estuary very poor, but excellent sport may be expected should the weather continue favourable. I hope to send you a few notes from "Culmstock" in my next.—FRANK GOSDEN, Exeter.

Ilfracombe (N. Devon).

There is very little sea fishing to report this past fortnight. A few cod and some small whiting pout have been taken occasionally. On Monday a small seine was set at low water, and about 50 lb. of fish were taken, consisting of soles, dabs, flinkets, and plaice, a few small glovers are caught with hand lines from the jetty. Weather very fine for the present.—E. COMER.

Lea (Rye House).

The water is in good order at this time and the weather very mild; N.W. wind. There were some nice fish taken on Sunday, Mr. Bates took the first prize with a jack, 5 lb., and several other gentlemen had some very nice roach and perch.—WM. COWELL.

Medway (Tonbridge.)

The water in a couple of days will be in first-class condition for all kinds of sport. During the week small baskets of pike and perch have been made, but the water has been too thick for successful angling. Will wonders never cease? I hear that the anglers in the county town of Kent have serious thoughts of establishing a preservation society for the lower Medway, and have actually called a public meeting. Go it, Maidstone! You ought to raise sufficient to employ two water-bailiffs, and then the whole of the river that is of any use for coarse fish will be preserved. With poaching from Hartslake to Maidstone knocked on the head—and I am sure the riparian owners would meet any society on fair terms—what a magnificent river it would make! No one would rejoice to see such a thing brought about more than YE MEDWAY WATER RAT.

Ouse and Ivel (Blunham).

The former the beginning of the week was thick, but now is in fine condition; the latter has been in good fishing order all the week. One of the association, Mr. Thompson, had a large take of roach on the 22nd, weighing 23 lb., the largest 2 lb., and several from $1\frac{1}{4}$ to $1\frac{3}{4}$ lb. each. This day, the 23rd inst., several fine pike have been taken.—E. B.

Taw, &c. (N. Devon).

Water still going lower and remarkably clear. Cannot expect to get many fish. Only chance is to try tops and bottoms of very deep pits, where a few fish in the middle of the day, probably, will be hoodwinked and brought to the creel. I have only heard of three or four catches in the various small streams, 13, 16, 7, during the past week. To-day (the 23rd) I was told of a fish (large for us) $1\frac{1}{2}$ lb. in weight, caught out of a gutter running into a very small stream, and the person said he saw many more in the same hole, larger and smaller. I fear the preservation of salmon will destroy all the trout. Now the water is so low in the small streams, and salmon so plentiful, and cannot go back into the sea, they will help themselves to a few trout; nothing better to be had. I was told of eight or ten fish (salmon) gaffed out of a short distance of water this past week.—RUSTY GAME.

Thames (Goring).

Water in good order for jack, perch, and chub. Not much doing; water too thick; have been taking some good roach; best day, 5 dozen of roach, largest 1 lb.—JOHN RUSH.

Thames (Halliford).

Owing to the bad state of the river the fishing has been very bad, but it is now rapidly improving. Since my last report different gentlemen fishing with me their takes have been as follows, viz.:—Mr. Thomas Abbot, on the 10th inst., caught a barbel of 4 lb. and six nice roach; 12th, Mr. Innis and Hutchings, sixteen nice roach, some over 1 lb. each, and a perch; 13th, Mr. Wilson, ten nice roach and three small barbel; 17th, Mr. Thomas Abbott, owing to the river being so high, took one barbel only; 21st, Mr. Rogers one jack; 22nd, Mr. Nichenson, one jack weighing 9 lb. 6 oz.—GEORGE ROSEWELL, fisherman.

Thames (Richmond).

The river has run down to a nice height now, and the water is a splendid colour now for fishing, but the fish are not at all well on the feed. I think it very likely that two-thirds of the dace went over the weir on Sunday with the high tide, as there has not been the fish jumping at Teddington that there were a week ago. We have had plenty of patrons down during the past week, but beyond two gentlemen, fishing with Wheeler on Tuesday, who had $19\frac{1}{2}$ lb. of roach, there has not been much done. The time for each fisherman during the past week is as follows:—G. Howard, 1 day; C. Brown, 4 days; Wheeler, 3 days; H. Howard, 2 days; Job Brain, 3 days; H. Munsell, 3 days; J. Bushnell, 5 days.—JOHN BUSHNELL.

Thames (Walton).

Mr. Bevington fishing with G. Rogerson, on the 19th, one bream, 4 lb.; two ditto, 2 lb. each; and one roach, 1 lb. On 20th, one perch, $\frac{3}{4}$ lb. On 21st, one jack, $1\frac{1}{2}$ lb.; and one bream, $1\frac{1}{2}$ lb. Weather dull; wind changeable. Water falling, and very low for the time of the year; very thick in early part of week, but clearing now and rising. Prospects uncertain; nothing biting but bleak and gudgeon.

Thames (Windsor).

Water here is a very bad colour though not high, and this last week it has been as thick as possible in spite of it James Gray, last Sunday, with two patrons, got a nice brace of jack from the Surly Hall water going 5 lb. to 7 lb. At Boveney the lock-keeper, Croft, has had three barbel this last week; and this morning he was unfortunate enough to lose a nice jack of quite 8 lb. which took a worm. Being single gut and on the weir stage with no one to help land it, in trying to get at his net, which was some distance off, a frantic effort on the part of the fish just at the time allowed him to get away, with doubtless very little harm to the fish. At Cookham, Godden the fisherman tells me, before this very thick water, he was getting very good sport with patrons, having with one gentleman some handsome roach up to $1\frac{1}{2}$ lb. each, besides four jack, largest 4 lb. Two days out with J. H. Hill, Esq., resulted in three jack 3 lb., 6 lb. and a very handsome fish of

9lb. They had very bad luck, running no less than seven fish and breaking away with one. The two men I mentioned in my last report as having to appear at Beaconsfield Police Court last Monday, for taking fish with a net up Boveney Ditch, were each fined 14s., and of course net destroyed. Water will be in better order by Sunday if no rain, though it will not be clear.—B. R. Bambridge.

Torridge (Woodford Bridge), North Devon.

Some splendid dishes of dorsal fin "daisies" have been grassed during the past week, and I hear of one or two gents intending making a prolonged visit shortly, when I hope to report accordingly. The worthy host of the hotel is ever ready to render any assistance either upon the land or water, as occasion may require, at the same time not forgetting the inner man or his outdoor beast.—Frank Gosden, Exeter.

Trent (Newark).

The water went down much more rapidly than I expected from the heavy flood of last week; and by Monday it was in fairish condition for worm fishing; and has been improving ever since. At the time of writing, it is in capital condition for general angling, and the prospects, as far as I can judge, are fairly satisfactory. Chub fishing, in my opinion, will be the best sport to indulge in under the present circumstances, and pith and brains will yet be the best bait; although I should advise anglers not to forget their worms, in case the chub should not be on at pith, for roach and bream are now in capital condition and rather inclined to take a worm. A roach of 1 lb. 6 oz., and a bream of 3 lb. have been weighed-in as specimen fish this week. Heavy bags have been the exception, not the rule this week, but still I believe fish are now to be taken if the anglers will take the necessary precautions for making a good bag.—The Trent Otter.

Trent (Nottingham).

The river in this district has run down rapidly, and a rather large number of anglers have been out. Sport, however, has fluctuated; pike have not run at all well, and it is reasonable to suppose that ere long they will be in their spawning quarters. It is gratifying to know that from Shardlow on Tuesday several very fine chub were caught with the cockspur worm; the largest weighed 4 lb. 13¾ oz., and it was forwarded to Mr. Stanley, taxidermist, Trent Street, for preservation. Some fair samples of roach have also been killed in the same length, and on Thursday a friend of the writer succeeded in getting a pike of 8¼ lb. From the lower waters I learn that a bream of 5 lb. odd has been taken by Mr. Kirk, jun., of this town.—The Man at the Clubs.

Tweed and Teviot.

Floods having rendered the river unfishable during last week nothing was done till Saturday, when on that occasion a few uuclean fish only were landed. During the interval between that and Monday the rivers fined down a good deal, and angling was again in full swing on Monday, and with better results On the Sprowston casts a brace of fish were killed by Mr. Chas. Kerrs, one on Monday and one on Tuesday. On the Hendersyde waters on Monday two clean salmon were killed by Mr. James Kerrs, and on the day following Mr. Thomas Johnston, wine and spirit merchant, Kelso, killed one salmon on the same casts, while on the same day Dr. M'Kenzie, Kelso, was also successful in getting a nice clean fish. On Wednesday nothing was done on the same waters, two unclean fish only having been landed by Mr. J. Mickie, sen., Kelso On the Floors water the Duke of Roxburgh angled on Wednesday, but caught nothing, and the same story has to be told of the Makerstoun and Ednam House water. The weather is very mild, and as the rivers are again getting very fine, fish are now beginning to fight shy of the angler. Since the opening of the net fishings, the takes have been most encouraging, the produce being much better than at the corresponding period of the last four or five years. Prices, consequently, are low, salmon selling at 1s. 9d. and trout at 1s. 6d. per lb.

Wye and Derwent.

Both rivers are now in first-class condition for fly-fishing, and some good baskets have been made off of both rivers, during the past week, one angler taking 8½ brace of both trout and grayling in the Derwent (free water) between Darley Bridge and Matlock Bath. Last Tuesday every fish was killed with the bumble, red-fly, and spider-fly, the bumble killing the greatest quantity of fish. The fish have rose the best from one to three. Very few bottom fishers have been out on the Derwent during the past week. Several trout have been killed by trolling with the Derby trout-killer. The fish are running small, but in splendid condition. The same kind of flies I mentioned in last week's Gazette are killers.—G. J. Eaton.

Wye (Ross).

Owing to the mild winter, spring fishing has been much earlier than usual, and the fish are in good order. Salmon netting this year commenced a month earlier under the new bye-laws, and some capital fish have been taken in the Ross and Glewstone fisheries. A week ago, Mr. John Wale, one of the most expert anglers in this district, caught a strange fish of about 1 lb. weight, which gave capital sport. On examination it was found to be a salmon pink, and it is supposed that it must have been one of the very few which had not gone down to the sea at "sculling" time. Some nice trout have been taken by Mr. T. De la Hay, jun., and Mr. Roy and others. Mr. Ackerman the other day took a good perch about 2 lb. These fish are very scarce in the Wye here. It is a pleasing fact that the authorities seem determined to put down poaching. At the recent Petty Sessions, men have been fined for using cleaching nets, and at Hereford on Saturday five fellows were fined £2 14s. 6d. each for taking unclean salmon at Fownhope.—John J. Counsell.

LOCH TAY.

Our Aberfeldy correspondent sends the following record of sport on the middle and eastern sections of Loch Tay:—On the Ben Lawers Hotel water Mr. Brood, London, one salmon, 20 lb.; Colonel Philpot, one, 21 lb.; on the Ardeonaig water, Mr. Fielden, Leeds, one, 21 lb.; on the Kenmore Hotel water, Mr. W. R. W. Smith, Glasgow, one, 25 lb.; on the Auchmore reserved water, the Duke of Roxburghe, one, 17 lb.; on the river Lyon, Mr. Jacob Burns, one, 16 lb.; and on the Grandtully water, Mr. Alex. Robertson, one, 21 lb.—*Scotsman.*

SOUTH OF IRELAND.

With genial and seasonable weather, and water in settled condition, there has been a great improvement in angling. The improvement has manifested itself not only on the Lee, but on the Blackwater, and on the lordly Shannon, which courses through the heart of Ireland. The captures on the Lee weae:—Mr. Bass, 4; Mr. Dunscombe, 4; John Connolly, 4; Mr. Angler, 2; Mr. Pursee, 2; Mr. Geo. Haynes, 6, one on Sunday and five yesterday, including two fine unspawned fish. Three of these were taken on the worm in one stream, with the worm which in the light water still continues to be the most destructive of lures. On the Bandon river, which was formerly under one conservatory with the Lee, but which has been on its own account for the past five or six years, Lord Bandon took 3; Capt. Rye, 1; Mr. John Rye, 2; Mr. Herrick, 1; Mr. Somers Payne, 1; Mr. Pridgman, 1; Mr. Perry, 1. On the Shannon some large fish have been taken, one of 33 lbs. having been landed during the week with rod and line. Mr. O'Connor, on the Blackwater, has landed two, and several other gentlemen have been also successful. Again some trouble has been experienced with the poaching fraternity. There was a serious conflict on Thursday night, in which both boats of the conserving interest were attacked. In one case the launch was surrounded by poachers' boats, and an attempt was made to board the vessel. The bailiffs held their own. Stones were interchanged, and one of the poachers was placed *hors de combat.* The other launch shaved nine unfortunately. It proceeded to a remote part of the harbour with a summons-server and two policemen to serve summonses. An effort was made by a howling mass of men and women to prevent a landing; the policemen succeeded in reaching the shore and in arresting the ringleaders, but they were unable to hold their own, and were hustled away while a volley of stones rained on the devoted bailiffs' head. One stone, fully half a hundredweight, was cast at the machinery in order to disable it. An effort was made to man the boats in order to attack the launch on water, but this was frustrated by the launch steaming off. Since those episodes a force of six men of the constabulary proceeds on board each time the launch goes down the river.

THE BEST TONIC.

Short days lengthen: dark days brighten:
  Fog and mist have fled away:
Anglers' hearts, like lovers', lighten,
  Drawing near their bridal day.

Falling on the warm and thirsting
  Earth, soon April showers shall show
Spring's sweet signs, where buds are bursting,
  And where early blossoms blow.

Soon the wandering voice comes crying,
  "Cuc-koo," loud, across the lea:
And the song-birds all are vieing
  To make utmost harmony.

Merle and mavis, lark and linnet—
  Every warbler of the dale
Pours its wood-notes-wild forth in it—
  All save donna nightingale.

Not with that orb o'er her beaming,
  But beneath a tend'rer light,
Are her heavenly strains outstreaming,
  Peerless songstress of the night.

'Tis the day when clouds are coming—
  And are going—o'er the sun;
Bees in cowslips'-bells are humming:
  'Tis the day when deeds are done—

Fitly done, with fur and feather—
  By the crystal, fishful stream—
Fairer day of angling weather
  Never love of sport did dream.

Then thou—that wert longing, yearning,
  Amid many an hour of pain,
For thy rapturous returning
  To thy yielding rod—again,

O'erwrought one—greybeard or stripling—
  By the soft winds whispered out,
Revel'st in the waters' rippling
  And the splashing of the trout.

Therein, whilst thy bending Bowness
  Stoops to conquer, shalt thou find
The best tonic for all lowness
  Of the body and the mind,

As each wrestle, as each tussle—
  To "the landing" from "the rise"—
Braces every flaccid muscle,
  And a new nerve-force supplies.

For all ills an angler's heir to—
  Few or many, mixed or pure—
O what physic can compare to
  The true magic trouting-cure?*

A.R.I.E.L.

London, Feb. 14th, 1882.

---

* For the inspiration of the foregoing lines I am indebted to one whose very spirited verses, "A Sporting Idyll," must live in the recollections of many of the readers of the Fishing Gazette. He has recently written me:—"I long for the ripple of the waters and the splash of a trout. *That* is the best tonic for lowness of body and mind, after all."

A Pig with Eight Legs.—One of the most peculiar freaks of nature ever seen has just been sent to Mr. William Howlett, the well known taxidermist and angler of Newmarket. It consists of a pig with eight perfect legs, four ears, one head; it was born on the 16th of February, 1882, and, after living some time, was killed and sent to Mr. Howlett to be preserved. It is a full-sized, plump animal, and has been seen by hundreds of people during the last few days.

ANSWERS TO CORRESPONDENTS.

D. G. C., Walthamstow.—The legal fence time for trout is from Oct. 2 to Feb. 1, but many clubs fence a longer period, for instance, at the Broxbourne fishery trout are fenced from Sept. 1 to April 1. —Ed.

F. P. Barnhart, Brownsville, U.S.A.—We never heard of ferns being of any value as bait for fish, but there is a little fly called the "Fern web," which is greedily eaten by trout.

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

INTERNATIONAL FISHERIES EXHIBITION, EDINBURGH.

Sir,—I shall feel obliged if you will allow me to call the earnest attention of all London clubsmen to this important exhibition, which takes place in Edinburgh in April. A London committee has been formed for the purpose of taking charge of intending exhibits, and the following gentlemen have consented, up to the present time, to serve on the committee:—Messrs. Marston, Wheeldon, Bonvoisin, Ghurney, Morgan, Hatfield, and Capt. Alfred. All representative men, and holding important positions in the angling world. As the date of entry is very near, it will be necessary for all clubs who intend to exhibit their fish to send a prompt reply, stating the amount of space they require. No expense will be incurred by any society, and it is sincerely to be hoped that London clubs, for their own credit's sake, will do all they can to further the labours of the committee, and give our angling friends in the north some idea of the sport obtained in southern waters. I shall be pleased to answer any questions, and no one need think they are giving trouble by calling on, or writing to, me.—I am, &c., Fred. C. Clench, hon. sec.

39, Liverpool Street,
Bishopsgate, E.C.

TABLES OF FLIES, GUT AND GIMP, &c.

Sir,—As I was the original occasion of the publication in your columns of Mr. Balderston's tables of flies, please allow me again to thank him, especially the last one, which I have studied with great pleasure and interest, and which I am sure must have cost him an endless amount of time and trouble to put in so lucid and complete a form. And now to refer to another subject—your correspondent "Winch's" complaint as to gimp. I can confirm your suggestion as to the best method of using gut as a substitute in pike-fishing, for I once fished for some time with a tackle consisting of 3 feet stout gut and a hook tied on a foot of double untwisted ditto, taking with it some two dozen fish from 2 to 4 lb. each before I put it by, still quite serviceable, though the hook length was somewhat nicked and frayed. It was a capital tackle fo: small baits and small pike; but I now use what I consider an improvement, viz., a similar tackle, but the hook on stout salmon gut, single, but covered for eight inches with silvered tinsel wound neatly on, and stained by burying in a box of flowers of sulphur for a day or two. This gives dead black, and is a capital stain also for silvered gimp, as it does not injure the silk in any way. For big fish, however, I do not like to trust to this tackle, as the strike in snap-fishing, live bait, or spinning, is too much for the knots occasionally, though I use Pennell's mode of whipping between the two knots of a fisherman's draw-knot. The single gut also is apt to go as the angle formed by the gut and hook shank just above the whipping. I then resort to fine twisted gut for the trace, and gimp for the hook, and quite agree with your correspondent as to the deterioration in the gimp, as I have to use it thicker than formerly. The reason, I think, is that thicker wire and less silk is used to produce the same thickness of gimp, and often the silk is adulterated with cotton besides. Many tackle-makers, however, dress hooks on such fine gimp that I do not wonder at fish being lost. The gimp, perhaps, is as fine as salmon gut, and after deducting the space occupied by the wire, the central silk is not thicker than say lake gut, and not nearly so strong. This is no tackle for a good pike unless there is unlimited elbow room to play him in, and a more pliant rod than the usual pike-rod is used.—I am, &c., W. T. S.

WEST CENTRAL ASSOCIATION OF LONDON AND PROVINCIAL ANGLING SOCIETIES.

Sir,—When I read Mr. F. C. Clench's letter, which appeared in last week's Fishing Gazette, I don't know whether I was most amused or annoyed—amused at the utter muddle into which the proverbial "little knowledge and over zeal" have landed Mr. C. in the, to him, by no means novel *rôle* of would-be reformer; annoyed at the possible mischief which might be the outcome of his injudicious epistle. Merely premising that I will be as brief as possible, I will note one by one the suggested reforms which, according to the "Daniel come to judgment," must be undertaken by the Association before they can hope to attract representatives from what Mr. C. is pleased to call the "best," but which might more accurately be described as the "wealthier" class of angling clubs.

Mr. C. says: "In the first place, the locality to many men, is not at all central enough." Well, Mr. Clench, we know that there is a locality which would be better, viz., within a few minutes' walk of Charing Cross, and nowhere else. The Association grew so rapidly that it was impossible for it to remain at its birthplace, the Star and Garter, St. Martin's Lane. The committee sought high and low, week after week, month after month, for a suitable room in that neighbourhood, but in vain, and we thought ourselves fairly fortunate when we secured a very good room, capable of accommodating the daily increasing number of our delegates, with a decent address, no rent to pay, and, above all, within two or three minutes' walk of the Metropolitan Railway (Baker Street), from whence trains can be had to almost every part of London and suburbs, including Richmond, up to a very late hour, to say nothing of several lines of omnibuses which either pass the door, or within little more than a stone's throw of it. At the same time, if Mr. Clench can help us to secure a room, in other respects as good as the one we have at present, in the district above named, we shall be his debtors. I need not remind him that, as the bulk of our members are working men, the refreshments must not only be good, but supplied at the usual (not hotel) charges.

Now, sir, after several years' experience, I am persuaded, that nine o'clock is not a moment too late to suit the convenience of our members, a great number, particularly during certain times of the year, do not leave their work until eight and even later. The prolonged meetings referred to by Mr. Clench are quite the exception, and if he will come up to the association's meetings for, say a twelvemonth, I will guarantee he shall catch his last train (11.28 from Baker Street) eleven times out of twelve; if he has to leave us before the meeting is quite concluded on the twelfth time, to do so, I for one will promise not to find fault with his going.

Whether or no the three associations could be advantageously amalgamated into one, discharging the various duties at present discharged by the Angler's Benevolent, Lea Preservation, Thames Rights Defence Association, &c., &c., is such a big question, and appears, upon the face of it such an unlikely event, that I will not venture an opinion, beyond saying that I do not think the anglers would be likely to acquiesce. Mr. Clench goes on to say, "We carried the resolution of a special committee in spite of the undisguised opposition of the officials."

When Mr. Clench stated, in the course of his speech, "the association had not gone the right way to induce the Central Association to co-operate," he was told by not only the chairman and vice-chairman, but by several delegates what had been done, and that his accusation was uncalled for, and I beg to state most emphatically not one word was said against the special committee being elected, in fact, the proposition was carried without a dissentient.

Mr. Clench says. farther on, "I heard nothing of the deputation to the third association." I had no minute entered upon my books wherein Mr. Clench's name appeared as a committeman, therefore he was not advised of the date of meetings. No discourtesy could be intended. I have known Mr. Clench for a number of years as a jolly, good-hearted fellow, and one that I should never think of slighting in the smallest degree. I could not attend that meeting myself, and therefore had no knowledge of an outsider being upon the committee. I know, whatever was done, was done for the general good. I must call Mr. Clench's attention to my circular, giving full particulars of each meeting of the joint committees, a copy of which was placed in his hands by his secretary (Mr. Gaunt) on Wednesday night, the 8th inst.; therefore it is scarcely correct to make this statement.

Yet, from that hour to this, I have heard nothing of the deputation to the third association.

I feel it to be my duty, as hon. sec. of the above association, to refute the accusation made against the officers, and more especially against myself for having neglected my duty. Mr. Clench ought to know me better than to think that I should treat him with discourtesy. I have too much respect for him, and for his labours in the angler's cause.—I am, &c., T. Hoole.

SPECIMEN FISH *v.* GROSS WEIGHT.

Sir,—In reply to your correspondent G. A., of the Kingfishers, allow me to state that I can find nothing in my letter of the 4th inst. showing B. in the light of a solitary enthusiast on the question of specimen fish; on the contrary, I know that B.'s views on the subject are shared by many good and true anglers. Further, if G. A. will again refer to my letter, he will see that I agree with the theory, but see great difficulty in its practical application to all clubs alike.

I believe that for some time to come yet the capture and weighing-in of specimen fish, and the abolition of gross-weight competitions will be almost exclusively confined to those clubs the members of which belong to the well-to-do classes, who are enabled to make frequent journeys to far-away fishing stations, and by their influence obtain admission to private waters, where it becomes more a matter of personal convenience than self-denial to retain none but the largest fish. For instance, who would not be satisfied with 57 lb. of large perch or 87 lb. of good pike in a day, as recorded in this week's Fishing Gazette under the doings of the Gresham and Friendly Societies respectively?

Such takes, however, very seldom fall to the lot of the working-man angler, the greater part of whose trips to the waterside are made on Sunday, when admission to private waters is rarely granted, and the state of whose pocket will not allow him to take a sufficient number of long journeys to gain that knowledge of the water necessary to success.

From this working-man class I drew the typical "sticker," who is by no means a self-glorifying individual, but a man who, although honestly and deservedly proud of his piscatorial skill, is remarkably quiet and wanting in "brag" on that or any other subject. He knows, too, that to bring to bank a few sizeable fish on a bad day is often a greater achievement than the capture of a basketful of specimens under more favourable conditions, hence his chagrin at his defeat by the novice's mere luck, an occurrence not so far out of the range of possibility as G. A. seems to imagine. Indeed, according to my own experience, the capture of the largest fish on a particular day is much more a matter of luck than skill.

In conclusion, I beg to express my admiration of the avowed objects of the Kingfishers, and to hope that their rules will not oblige them to spend more time in "providing future sport for their brother anglers" (*i.e.*, returning to their native element roach and perch of, say, ¾ lb. each), than in gratifying their friends who admire a good show of fish.—I am, &c., J. M. D.

Highbury Angling Society, Plimsoll Arms,
Highbury Park, N., February 20.

THAMES DACE.

Sir,—In reply to Mr. Bushnell's remarks in reference to the heading-up of the dace at Teddington Weir, I have to state the same instructions as last year have been issued to the energetic lock-keeper, as well as the offer of assistance. There has already been one large shift of the dace and they have gone safely above. In the report of assistant-river-keeper John Johnson, sen. at Kingston, he says: "There is an immense body of dace at Kingston, and the water is black with them." These remarks are confirmatory of the reputed safe passage from Teddington. We are always glad to get any suggestion or hint from the fishermen in the interests of fish and fishing, and they may rest assured every attention will be given to them. W. H. Brougham, sec.

7, Ironmonger Lane, Feb. 22.

FISHING IN THE NORFOLK AND SUFFOLK BROADS AND RIVERS.

Sir,—Permit me, through the medium of your valuable paper, to call the attention of your numerous readers, and particularly those intending to visit Great Yarmouth during the coming season, to the numerous fishing stations within a few miles of here, and to the advantages granted by the Great Eastern and North Norfolk Railway Companies to members of the Bure Preservation Society, in issuing to subscribers of 5s. and upwards, fishing tickets at single fare for double journey. I shall be only too glad to obtain and send any gentleman a card of membership and railway pass, upon receipt of subscription with addressed envelope, and to give now, or at any time, all the information in my power as to local fishing stations, &c. I shall feel indebted to any reader who will send me the names and addresses of any angling societies or clubs, particularly London ones, or to any secretary who will communicate with me on the subject.—I am, &c., A. J. Ecclestone.

South Quay,
Gt. Yarmouth.

GOOD PIKE-FISHING AT BEDFORD.

Sir,—Seeing in your edition of Saturday last an account of Messrs. Jardine and friend's take of pike, I send you the following, thinking it may prove acceptable and interesting to your readers. A friend of mine, Mr. J. G. Austin, an hon. member of the Bloomsbury Brothers' Angling Society, caught, on Wednesday, Feb. 15, whilst fishing near Bedford, a splendid show of pike, the gross weight of which was 80½ lb.; the fish were in beautiful condition, the respective weights being 20 lb., 18 lb., 10 lb., and six others averaging from 5 to 7 lb. each. There is no doubt the take would have been much greater but for the inclemency of the weather, Mr. Austin fishing two hours and a half only, when he was forced to quit the waterside for shelter, on account of the heavy fall of snow and sleet.

I may as well mention that last September the same gentleman caught in the same water thirteen pike (the gross weight of which I do not remember) the heaviest being a splendid fish of 35 lb., which has been preserved by Mr. Cooper, and can be seen in the bar of the Black Horse, Whitcombe Street, Haymarket.—I am, &c.,

J. Seymour.
Chairman of the above Society.

FISHING AT SNARESBROOK.

Sir,—Would you be so kind as to answer, or, if you are unable, to insert the following questions for some correspondents to do so, viz.:—Is there any fishing, and if so, of what kind, to be had in the Eagle Pond at Snaresbrook, or in any of the ponds in that neighbourhood? Trusting you will accord me this favour.—I am, &c.

Young Angler.

TROUT-FISHING WANTED NEAR LIVERPOOL.

Sir,—Can you, or any of your readers, inform me of any good trout-fishing within about a couple of hours of Liverpool? I should be quite willing to subscribe to or to rent a water. I am a busy man and cannot spare time to go far away, and so am anxious to secure a fishing within a reasonable distance, in order that I may get a day at it whenever opportunity offers.—I am, &c., G. L.

Liverpool.

[We should say that G. L. will not get much good trout-fishing nearer than Ribchester on the Ribble (the Tabley Arms Inn gives leave to fish), or Clitheroe. But, probably, Corwen-on-Dee would furnish better sport. The Owen Glendower is a good place to stay at; fishing can be had by day-ticket.—Ed.]

PAUCITY OF FISH IN THE THAMES,

Sir,—In reference to the letter of "Creel," in the Fishing Gazette of last week, I was surprised to find that the *Licensed Victuallers' Gazette* had made a statement that "the dace were well on the feed at Teddington," as it could not possibly be substantiated, as those fish here long since ceased to go to the head of the tide, as formerly, and I have all along stated that fact. The fish that have been taken the last few seasons, in any quantity, have been caught at Tickenham and Richmond, and there is no flavouring in the report of the week previous, which stated that Mr. Johnson, a member of the Richmond Piscatorial Society, had weighed-in, as the result of four days' fishing at Tickenham, 80 lb. 4 oz. of sizeable dace. I am sorry to differ from so good a correspondent as "Creel," whose writings I generally admire; but I can hardly go so far as to say the glories of Thames fishing have departed. He must bear in mind it is more largely fished; and if anglers would be satisfied in only taking away a portion of the fish they catch, and the system of "gross weight competitions" was abolished, there would be plenty of fish left for future sport.—I am, &c., B.

"PATERNOSTER," "LEDGER," AND "TAFT."

Sir,—I shall be much obliged if you or your readers can inform me of the meaning of the above angling terms.

I have to thank your correspondents for the information on bream fishing.—I am, &c. Mark Antony.

[The Paternoster is doubtless so called from its resemblance to the Rosary or string of beads used for counting the decades of the *Ave Maria* and Paternoster (or Lord's prayer) in the Roman Catholic Church. In old paternoster lines bone beads are fixed at intervals down the line and the hooks fastened round them on short stiff bristles. These beads are not often used now as being too clumsy. Ledger, or ligger, or leger: this word comes from the Dutch *legger* (anything laid or put so as to rest in a place) through ancient Saxon *lecgan* (to lay). We never heard the expression "Taft" before; perhaps it is some local slang name?—Ed.]

FISHING AT CANTERBURY.

Sir,—I should feel greatly obliged if you would insert the following query in your Gazette:—Is there any fishing near Canterbury, Kent? If so, how can I obtain permission? Thanking you, in advance, for the space I know your usual courtesy will allow me.—I am, &c.,

1, Liverpool Lawn, Dover, Harry Davis.
February 19th, 1882.

[There is very good good fishing at Canterbury, trout and coarse fish. We believe that day tickets are issued by the association to the public. Write to the Secretary of the Stour Fishery Association, Canterbury, but these tickets only apply to coarse fishing, pike, &c. Members of the Association can take a friend to fish for trout.—Ed.]

ELLIS'S BOOT STUDS.

Sir,—Some time ago I noticed your remarks upon Ellis's boot studs for fishing boots and brogues. Passing down Ludgate Hill, I procured a box from Woolgar's. I am pleased to say they answer admirably, being far better than nails. I advise all anglers to try them. F. Cotterell.

98, Walworth Road, S.E., Feb. 22.

[We quite agree with Mr. Cotterell, these new boot studs are just what we have been wanting for years for our brogues and fishing boots. We shall notice them more fully shortly.—Ed.]

A SHEFFIELD QUERY ABOUT THE NEW WINCH-FITTING.

Sir,—Would you, or any of your correspondents, kindly inform me if Hardy's new patent winch-fitting is to be obtained in Sheffield, and, if so, where? as I and a great many of our Sheffield anglers (whom you hear so little about) would derive a great benefit from such a valuable invention. I have made every inquiry, but cannot find a tackle dealer who keeps them. Trusting I have not encroached too much on your valuable space, I am, &c.,

Sheffield. A Constant Reader.

[Any Sheffield tackle maker can get it from Messrs. Allcock and Co., of Redditch.—Ed.]

A LITERARY QUERY.

Sir,—Should any reader of the Fishing Gazette, residing within the limits of a day's journey from town, possess Gosden's edition of "The Complete Angler," published by James Smith and dated 1825, he will confer a great favour on the writer by permitting him to come to examine the volume.—I am, &c., Thos. Satchell.

Downshire Hill, N.W., February 17th, 1882.

SALMON OVA WANTED.

Sir,—Kindly inform me where salmon ova can be procured, for artificial breeding; also what ought I to pay for it per 1000; is the present the most suitable time to obtain, and what is the best means of packing for a three or four days' journey? Information would be received with thanks, by W. Murch.

Street, Somerset.

A QUERY.

Sir,—I notice in your issue of February 11th, among the specimen fish of the "West London Angling Club," is a roach 3 lb. 15½ oz., and a dace 1 lb. 5½ oz. Surely this is a mistake, I never heard of such weights before—I am, &c., Thames.

Guildford Lodge, Teddington, Feb. 19, 1882.

[These weights are evidently wrong, but we cannot be responsible for errors of this kind in club reports which are often sent in at the last moment and written in a style that even no printer can decipher.—Ed.]

CLUB REPORTS.

ACT-ON-THE-SQUARE ANGLING SOCIETY.

The members of this society contested in a pegged down match on Saturday last for Mr. W. Mead's prize, and although the water was as thick as the proverbial pea soup, and rather high, one of the most exciting contests ever had between the members of the society took place. Fishing commenced at three o'clock and ended at a quarter past five. Mr. George, the hon. sec., in his second swim, soon made a start by landing a good dace; and after the first hour the match resolved itself into a contest between Messrs. George and Chapman, although at one time it looked a runaway affair for Mr. George, but fish after fish was landed by Mr. Chapman, until he ultimately caught up to Mr. George in point of numbers; and, as the fish were known to the members to average about the same weight on both sides, excitement ran high until the house was reached, and weighing-in commenced, every one hazarding a guess as to which of the two would prove the winner. Mr. H. Day, who officiated as clerk of the scales, ultimately proclaimed Mr. George the winner by 1 oz. only, thus ending one of the most exciting contests seen at the old Ferry Boat for many a long day, and one of the nicest shows of dace had this winter at this fishery, as there was only one gudgeon to relieve the dace.—A. George, hon. sec.

Feb. 21.

AMICABLE BROTHERS ANGLING SOCIETY.

The pegged-down match for seven prizes, which took place from Ware Lock to the Engine House in the River Lea, resulted by being all won. Mr. C. A. Medcalf, first, with a jack, 4 lb.; Mr. F. Harding, second; Mr. Howlett, third; Mr. Mour, fourth; Mr. Arnold, fifth; Mr. Marshall, sixth; and Mr. W. Say, seventh. Mr. Shury weighed-in roach and perch; he also caught a trout, which was landed by Mr. Murphy, of the Good Intent, who, with the best of intentions, returned it carefully whence it came. Mr. Patrick had roach from the River Lea. Wednesday, February 22, the return visit, No, 2 district, West Central Association, took place. Mr. Medcalf in the chair, Mr. Bonvoisin attended as district officer, also Mr. Thorley, ex-officer. The clubs answering to the roll call were:—City of London, Good Intent, St. John's, Sir Hugh Myddleton, West Central, North-Western, Hoxton Brothers, North-Eastern, Westbourne Park Piscatorials, Phœnix, and Hearts of Oak. The following gentlemen contributed to the harmony of the evening:—Messrs. W. Say, Thorley, Carrington, Pink, Fowler, J. Robinson, sen, Duncan, Freeman, Bentley, Bagler, H. Cooke, Bracker, Williams, and Lewis. The next visit will be paid to the Acorn Angling Society.—T. Worledge.

Feb. 19.

ANCHOR AND HOPE ANGLING SOCIETY.

The trays of the above society were not overburdened with fish on Sunday last, only two of our members weighing-in. Mr. A. Shakel, roach and dace, 4 lb. 5 oz.; Mr. A. Glass, 2 lb. 9¾ oz. of roach, from the Lea.—D. Davis, sec.

Feb. 20.

ANGLERS' PRIDE ANGLING SOCIETY.

The first No. 3 District visit was paid to this society on Wednesday, the 15th inst., when the following societies were represented, viz.: In the district, Excelsior, Peckham Perseverance, Peckham Brothers, South Belgravia, United Brothers. Outside the district: City of London, North Eastern, Original Alexandra, Dalston, Bermondsey Brothers, Anchor and Hope, Friendly Citizen, Great Northern Brothers. Mr. John Soar in the chair, faced by Mr. Thos. Fiddes. Mr. T, Beningfield, pianist, accompanied by Mr. Fiddes, senr., upon the violin. Mr. Hyams sang "A Negro Child"; Mr. Bignell, "Full Inside"; Mr. Rock, "Three Jolly Britons"; Mr. Tyler, "Down by the Riverside"; Mr. Bisley, "Sine quâ non" Mr. Hyde, "Silver Moonbeams"; Mr. T. Fiddes, "Here, Here"; Mr. Steddall, "The Belle of the Rose and Crown"; Mr. Bennett, "Happy Irish Boy" (encore); Mr. Page, "While Bathing," and many more songs followed, and a most enjoyable evening was spent. Mr. T. Hoole has undertaken the duties of District Office for No. 3, and promises to try and make the visits more successful. If secretaries will send him notice of the day decided upon for a visit he will assist in soliciting clubs to send delegates, and give any further assistance in his power. Speaking last night, at the A.P. visit Mr. Hoole said, "He was surprised, seeing that each club in the district had received notice of the visit, only five were represented; it was not the way to make their own visits successful. Mr. Fiddes is such a jolly good-hearted fellow that one would expect to hear every club's name responded to. Every member of the club are such good visitors themselves, therefore have a right to expect their friendship might be returned.—Multum in Parvo.

BRIGHTON ANGLERS' ASSOCIATION

The members held a competition on Sunday. All rivers open; all fish, bar eels. Mr. Upton, 1st, with jack; Mr. Amcombe, 2nd, with jack; Mr. Ingram, and A. Cardy, 3rd and 4th, with perch. A meeting between the Chichester, Brighton, and Portsmouth anglers this evening to consider the weeding of the Canal at Chichester. Each society sending a delegate. Mr. Tree and Mr. Ash went to the Adur on Sunday, the latter landing a carp between 4 and 5 lb., but was disqualified from the competition, owing to going out of bounds from that laid down by the association. Weather very fine.—Groundbait.

Feb. 22.

CITY OF LONDON ANGLING SOCIETY.

Mr. Mortimer weighed-in on Sunday, the 19th, 5 lb. 2¾ oz. of roach from St. Margaret's, winning Mr. Payne's prize. Mr. Castell 1 lb. 14 oz. of roach from the Thames at Wraysbury; no others weighed-in. The Amberley men came back very muddy, and had no fish. Mr. Pratt's prize will be fished for on the 26th.—Cas.

CLERKENWELL PISCATORIAL SOCIETY.

There was a nice show of fish weighed-in the club on Sunday last by several members. Mr. Davis gave a prize, value £2 2s., for the largest jack weighed-in during this month. I am sorry you were not at St. Martin's Lane last Monday.—R. Stebbings, sec.

FRIENDLY ANGLERS.

The weekly meeting of this society, at the Albion Tavern, Albion Street, Hyde Park, on Wednesday evening last, was graced with the presence of a lordly salmon of 24 lb. 12 oz., taken with the fly from the river Test, by Mr. Emanuel, and was one of nine fish taken by that gentleman, the smallest being 10 lb. Mr. Pugh brought up from the Kennett 15 lb. of perch, six of them weighing over 1 lb. each; one dace of 10½ oz, and 5 lb. 1 oz. of roach, Mr. Nickinson, a fine jack of 9 lb. 4 oz., from Shepperton.

GRESHAM ANGLING SOCIETY.

The meeting of this society was held, as usual, on Thursday, C. Bates, Esq., presiding. The hon. secretary read the correspondence, the various reports from the Thames representing the river as now in fair condition. Some nice roach were weighed-in by Mr. White. A packet of tickets for the art union prize-drawing on behalf of the Anglers' Benevolent Fund, were received from Mr. Ghurney, and the majority were immediately sold. Mr. Crumplen also mentioned that Mr. Bates and himself attended as delegates at the meeting of the West Central Association, and had duly represented to them the desirability of raising the scale of weights, and adjusting their own fence months in the waters it was proposed to rent. A little discussion followed on coarse fish cultivation, and the hon. sec. stated that he had been appointed one of the sub-committee to draw up rough rules, and make sundry suggestions in reference to the waters the three associations giving privilege tickets proposed to rent. The design for the tickets for the annual banquet (prepared by Mr. Harding, of Piccadilly) was handed round and generally approved of, the great majority of tickets having been already taken. The evening closed with a very hearty vote of thanks to Mr. Bates for presiding, coupled with a wish that he might soon appear again in the same capacity.

KELSO ANGLING ASSOCIATION.

On Wednesday night the twenty-second annual meeting of the members of this association was held in the White Swan Inn, when there was a large turn-out of the members. In the absence of the vice-president, Mr. John Croall, Mr. Walter Torrie was called upon to preside; the croupier being Mr. N. I. Mills. The secretary and treasurer (Mr. George Forrest) read the minutes of the last annual meeting, which were confirmed. Mr. Forrest stated that the income for the past year, including a donation of a guinea from Mr. J. J. E. Brown, of Rosebank, and bank interest, amounted to £6 12s. 3d., and the expenditure for prizes and advertisements amounted to £6 5s. 6d., leaving a balance on the right side of 6s. 9d. The committee had been authorised by the members to enter the association as a life member of the Scottish Fishery Association, and in order to do this they had subscribed two guineas, and their bank account was, of course, reduced by that amount. The total funds at the present date amounted to £28 5s. 4d., as compared with £30 0s. 7d. last year. Notwithstanding that fewer subscriptions had been received this year, the balance for the past year rather more than balanced the expenditure for the same period. The election of office-bearers for the current year was then proceeded with. The election of His Grace the Duke of Roxburghe as patron, Sir George H. S. Douglas, Bart., as president, and Mr. John Croall as vice-president, was unanimously agreed to. Mr. George Forrest, in resigning the office of secretary and treasurer of the association, which office he had held for ten consecutive years, stated that he did so on the ground that his time was full occupied with a duty of a similar nature. However, if it was desired, he was quite willing to become a member of the committee, and he would continue to do what he could for the welfare of the association. He begged to propose as his successor Mr. Archibald Steel. Mr. Steel was unanimously appointed secretary and treasurer. On the motion of Mr. Charles F. Brown, a cordial vote of thanks was accorded to Mr. Forrest for his past valuable services. The committee was then elected by ballot as follows:—Messrs. George Allan, N. I. Mills, George Lees, Walter Torrie, James Gibson, George Forrest, and John Michie, sen. Three new members were afterwards unanimously admitted. On the motion of Mr. N. I. Mills, it was agreed to fix the third Tuesday in February as the date on which the annual general meeting shall in future be held—in place of leaving it open as hitherto—in order that the rule providing that applicants for membership shall furnish the secretary with their names a fortnight previous to the annual meeting may be rendered workable. This was all the business, and subsequently the usual social meeting was held, when the loyal, patriotic, and usual lists of toasts were duly proposed and honoured; the hilarity of the meeting being enhanced by the singing of a number of excellent songs by Messrs. Steel, Mills, Young, Affleck, Clerk, &c., &c.

LITTLE INDEPENDENT ANGLING SOCIETY.

On sunday several of our members brought home some very choice fish, the quantity was not large, but the size and quality was good. Mr. Petrie had roach and chub; Mr. Heelas, roach; Mr. Atkins, dace and jack; and Mr. H. Moore, four jack.—H. Moore, sec.

Feb. 23.

NORTH-WESTERN ANGLING CLUB.

The following members showed us fish during the week:—Messrs. Harding, Halse, Grindley, Hillier, and Alder, jack; Messrs. Stead, L. Roxbee, Turner, Marshall, and Holmes, roach, dace and chub. The jack, showed by Mr. Grindley, and taken at the Welsh Harp, was one of the prettiest marked fish ever seen in our tray, and it was a pity it was not larger.—F. Hill, sec.

ODDS AND EVENS ANGLING SOCIETY.

A complimentary visit will be paid to the Odds and Evens on Tuesday, March 7. A brother member having taken the house, the members wish to have a convivial evening. Circulars will be sent to all clubs.—F. Parslow, sec.

Feb. 23.

ORIGINAL ALEXANDRA SOCIETY OF ANGLERS.

We had very few fish on Sunday last, the whole of our members having blanks, except who Mr. Brockett had a few roach. On Sunday next we have a pegged-down match at Waltham, the swims to be drawn at Mr. Wellers, King's Arms. On the 16th, Mr. Hammond, one of our week day fishermen, had a nice show of roach.—E. Dymond, sec.

ORIGINAL CLERKENWELL PISCATORIAL SOCIETY.

Fair trays of fish were seen at the society's house on Sunday last, the following members weighing-in:—Messrs. T. Longman, S. J. Edwards, and Obbard, roach, from the Thames; Mr. Neagus also roach from the Stort. On Monday next, February 27, a special meeting will be held, to transact some important business. Members please attend.—Thos. Wm. Lucy, sec.

Feb. 22.

PISCATORIAL SOCIETY

On Monday evening last, Mr. Thos. Gillatt in the chair, the distribution of prizes won during the year 1881 were distributed to the various winners. Of the twelve club prizes for specimen fish seven only were taken, which reveals the fact that no member had weighed-in a Thames trout of 5 lb., a grayling of 1½ lb., a barbel of 5 lb., a carp of 3 lb., or a tench of 2½ lb. from public waters. The seven prizes were distributed as follows:—Largest trout (Thames barred), Mr. T. Huggett; largest pike, Mr. Atwell; largest perch, Mr. Marsden; largest roach, Mr. T. R. Sachs; largest chub, Mr. H. Brown; largest bream, Mr. Blamey; and largest dace, Mr. Faulkner. The chief winners of private prizes, which amounted in all to nearly £100, were Messrs. Atwell and Shipway. Later in the evening Mr. Huggett called attention to the remarks made at the dinner by Mr. Marston, of the Fishing Gazette, in favour of the Edinburgh Exhibition, and advocated warmly the reconsideration of the decision that had been arrived at not to send specimens to Scotland. An earnest discussion ensued, in which a large number of speakers, including Messrs. Harrison, T. R. Sachs, Adlington, Edwin Sachs, Ross, Faulkner, &c., spoke in favour of the motion, and only two against it. The new committee will, therefore, consider the matter, along with some other important affairs. A large number of private prizes were offered, and Mr. Adlington volunteered a prize of £2 2s. for the best paper read to the society during the year—not less than twelve papers to be read. Some good pike were shown by Messrs. Goodger, Walker and Robinson.

RICHMOND PISCATORIAL SOCIETY.

There was a good attendance of members at the weekly meeting at the Station Hotel, Richmond, on Wednesday evening last. Mr. F. C. Clench, as chairman of the society, discharged his duties in his accustomed courteous and energetic manner, and, after the formal business had been disposed of and the election of a new member, expressed the pleasure they would all feel at receiving a visit from Mr. W. H. Brougham, and he was sure they would be glad to hear any remarks he was desirous of making. Mr. Brougham then addressed them on the satisfactory progress that was being made in reference to an extension of angling water in the tideway; the permission that was being sought to net the reservoirs on the banks of the Thames; the arrangements that had been made to assist the movement of the dace at Teddington Weir, and the prevention of anglers fishing on or near the Weir; and the further liberality of Mr. Byram Littlewood, of Huddersfield, in offering to contribute 10,000 more trout this year, his liberal gift of 3500 last year making satisfactory growth in the rearing pond at Sunbury. Mr. Littlewood's kindness being highly appreciated. Mr. F. C. Clench gave notice that, as the new rules now in force gave power to elect as honorary member any gentleman who had distinguished himself in the angling world, he should move at the next meeting that the first honour be conferred on Mr. W. H. Brougham, who was most richly deserving of it; the remark being warmly applauded.

ROYAL PISCATORIALS.

During the past week there has been some excellent show of fish at this society, the total weight reaching nearly 200 lb., among which was a very handsome jack, which turned the scale at 25 lb., taken by Mr. T. Hughes; this is another to add to the collection.—Pixie.

Feb. 22.

SECOND SURREY.

Some of the members of this society visited Staines on the 19th, but the river was not in a condition to enable them to compete for their prizes; the competition is therefore postponed. Two of the members visited Sharnbrook, but to no purpose, the river being in the condition of a little sea.—Pixie.

Feb. 22.

SOCIETY OF CAXTONIAN ANGLERS.

Mr. Cato, the president, had an extraordinary catch on the Lea on Monday last (Feb. 20). With roach tackle he took a brace of bream the larger being nearly 4 lb., a brace of roach 1½ lb. and a brace of jack, the larger 3 lb. All taken with worm on a No. 8 hook and fine gut.

SOUTH LONDON ANGLING SOCIETY.

On Sunday last, six of our members fished six of the Walworth Waltonians, at Bourne End, for a supper. The water was very thick and cold; and, although both parties scarcely left their seats all day, when time was called one roach, 7 inches, and one gudgeon, caught by the Walworth Waltonians, were only sizeable, the rest too small for weighing-in. Wednesday. Mr. Price had a jack, 7 lb., from Guildford. Thursday, Messrs. Morris and Boorman had a nice show of roach, from Wraysbury.—G. H. Field.

Feb. 23.

STEPNEY ANGLING SOCIETY.

On Sunday last, the 19th inst., Mr. Gerrard, of this club, while trying for jack at Ware, hooked and landed a trout a good 3 lb. It was at once relieved of the steel with the greatest care, and after being admired and almost adored for a few seconds it was returned to the river and disappeared from the view, but not from the memory. The bait was a live dace. We fish a pegged-down match on the 5th of March next. Whereabouts not yet settled.—E. N. Pierce, sec.

Feb. 12.

SURREY PISCATORIALS.

At the fortnightly meeting of this society, held on February 22, Mr. Beckett presided, owing to the illness of Mr. Meadway. The minutes of the last meeting having been read and confirmed, Mr. Hamlyn placed before the meeting the balance-sheet, in order that all members should know the financial condition of the society; this met the approval of all members present. A letter was then read from the Bermondsey Brothers, but it came to hand too late to appoint delegates to attend that society on February 23; but the support of the Surrey Piscatorials can be depended upon. Mr. Hamlyn is appointed to represent the society at Willis's Rooms on February 27, in furtherance of the Great International Fish Exhibition of 1883. The last competition of the season will take place on March 3, for three prizes, given by Messrs. Cant, Pay and Winter; condition, "Go where and fish how you like." A leg-of-mutton supper will take place at the St. Paul's among the members of this society on the same date, at nine sharp. Further particulars to be had of Mr. Beckett, Villa Street.—Pixie.

THE HIGHBURY ANGLING SOCIETY.

The trays of our society were abundantly filled on the 19th instant with a splendid assortment of bream and roach, particularly the former, Mr. Ballard having six scaling nearly 22 lb., from the Thames, the heaviest being nearly 4½ lb. Messrs. Higley, Anthony, E. Wheatley and others, also contributed some fine roach from the Thames and Colne.—Jas. Edward Wheatley, sec.

Feb. 20.

WALWORTH WALTONIANS.

The competition between six members of the South London and six members of this society took place on the 19th inst. at Bourne End, in spite of the thick water and heavy wind that prevailed in that neighbourhood. About a dozen of each society attended, all of whom were much pleased with the management made by Mr. Boalch for the arriving at and returning from that place. Arriving at Bourne End they were met by Messrs. Field and Brown, who led the way to the locality in which the pegged swims laid. The swims having been drawn for, each of the competitors tried to get the first fish. Time passed on and a few had managed to land either a pope, gudgeon, or else a bleak, but nothing was taken that would honour either party with victory till towards the evening. The signal was given to pack up and adjourn to the Red Lion to await the arrival of the train and also to indulge in some of "mine host's" good ale (whose soothing influence I need not mention). The train arrived in due time, and they were soon on their way to London, and reached the society's headquarters about ten o'clock, where a goodly number of both societies awaited their coming. The fish having been displayed and measured, Mr. W. Brown was declared the winner for the Walworth Waltonians. The fish of the other competitors not coming up to the standard. A vote of thanks to Messrs. Boalch, Field, and Brown, for the able manner in which the affair had been conducted, brought the competition to a close. The supper will take place at the St. Paul's Tavern, Westmorland Road. Gentlemen wishing to take part in it can do so by consulting Mr. Field, at the headquarters of the South London Anglers; Mr. Morris, the George and Dragon, Camberwell Road; or Mr. J. Boalch, Old Kent Road.—Pixie.

Feb. 22.

WALTONIANS.

Feb. 15, Mr. Waltham, 6 lb. 1¾ oz. roach; Feb. 19, Mr. Roland had four roach from the Lea going 4 lb. 9½ oz., the largest 1 lb. 8 oz., the next two 1 lb. 3¾ oz., and 1 lb. 2½ oz. There have been a few other shows but not worthy of mention.—A. J. Marriott.

Feb. 21.

WENSLEYDALE ANGLING ASSOCIATION.

The first annual meeting of this association (which was formed last year) was held on the 10th inst. at Mr. R. Mason's, the King's Arms Hotel, Askrigg, Yorkshire, at which there was a fair attendence of members, and great interest was taken in the proceedings. Captain Chapman, of Thornton Rust, president of the association, occupied the chair, and briefly stated the objects of the meeting; also of the association, which was to preserve the fish in the river Yore from the depredations of netters and other fish poachers, and so improve the sport of bona-fide anglers. The waters of the association extend the whole length of the river Yore (from the Bain Foot to Yore Mills Bridge, Aysgarth), also the river Bain and Lake Semerwater. The annual subscriptions and donations received during the past season have been very encouraging, the balance in the hands of W. E. M. Winn, Esq., the honorary secretary and treasurer (after paying all expenses), being £9 10s. The rules of the association were taken as read and adopted. The following gentlemen were elected officers for the ensuing year;—President, Captain Chapman, Thornton Rust; Hon. Sec. and Treasurer, W. E. M. Winn, Esq., Askrigg; Committee, John J. G. Lodge, Esq., Askrigg; Mr. Taylor, Aysgarth; Mr. John Willis, Carperby; Mr. James Hodgson, Bainbridge; and Mr. E. Chapman, Worton. A considerable amount of other formal business was transacted, and the prospects of the fast approaching angling season discussed, which is considered by those most competent to judge to be highly favourable, and with a strict enforcement of the rules, and a thorough piling of the river to prevent netting (which it is proposed to commence at once, or as soon as the state of the river will permit the necessary work being done) the fishing will improve every season. The meeting terminated with the customary compliments to the president and the hon. sec. and treasurer for their indefatigable efforts in promoting the objects of the association.

WEST CENTRAL ASSOCIATION OF LONDON AND PROVINCIAL ANGLING SOCIETIES.

The new visiting lists for 1882 have just been issued. Secretaries who have not received a copy, should apply at their club-house at once.

AMONGST THE PIKE.

"Bother the barber, I'll have to fish with that whipcord line after all!" What's up now, John, has he snipt a piece out of your ear, spokeshaved a bit off your chin, or been amusing himself cutting miniature steps up the back of your cranium? The fact is, my friend delayed his visit to the barber's—who deals in tackle—until half-past nine on Saturday night, when, making his wants known, Mr. Lather-em-shave-em, drew his face out like a fiddle, and said he was sure it would take twenty-minutes to find the box containing "Pike Tackle;" he had several customers to shave and it only wanted half-an-hour to closing time! John was never cleaner shaved in his life; with a growl, he bounced out of that shop like a parched pea. Moral: procrastination leads to disappointment, never put off till to-morrow what can be done to-day.

"Look here, Richard, it has come to this, clothes line or nothing; I don't mean to be baulked of my sport; be on the platform at thirteen-minutes past eight Monday morning, sharp! "All right, my friend." Needless caution that. Some considerable time had passed since I had thrashed that fifteen-pounder and I was quite as anxious as he to have another flip at them. A pleasant ride of half-an-hour literally along the Witham's sinuous banks and we arrive at ———, but no, I must not split; the knob of that umbrella of his has an ugly knack of dropping athwart the ribs of others besides dogs. We walk across to a neat little inn and take in something short, over which our swim was decided upon, and what a swim to be sure; eleven fish came out of that hole! John knew the spot to an inch; we made two long days of it and returned home with hearts light as thistle-down and 54 lb. of pike in our bag. Bravo whip-cord!

The Boston Bittern.

Gregory's Spinning Baits. "The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by he press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[Advt.]

THE POLLUTION OF RIVERS:

Being a lecture delivered on the 13th of January, 1882, before the Society of Caxtonian Anglers, by Compton Reade, M.A.

It is with much pleasure we notice that the Society of Caxtonian Anglers, have published Mr. Reade's excellent paper, and are distributing it widely. This is one of the most important directions in which an angling club can expend its energies; the dissemination of useful knowledge on important matters connected with angling. We wish this flourishing young society every success.

IMPROVEMENT OF THE NAVIGATION OF THE THAMES, DETRIMENTAL TO ANGLING.

The improvement in the navigation of the Thames has caused a great deterioration of it as far as angling is concerned; when a boy, I have gone into an osier ait, with a tolerably long rod, a short line, a few cockchafers, and, screened by the leaves, could pick out of a shoal of chub as many as I chose; or, more recently, with an artificial fly, I have filled a large bag with dace, six to eight ounces each, and chub from one to five pounds, besides occasionally, though rarely, a trout of a pound or a pound and a half, during a walk by the side of the Thames from Weybridge to Sunbury. The most expert angler could not do one quarter, or a sixteenth as much at the present day.—From Mr. Wright's "Fishes and Fishing," published in 1858.

We are informed by Mr. W. Oldham Chambers that the Norfolk and Suffolk Fish Acclimatisation Society has had a valuable present of 2000 salmo fario eggs from C. C. Capel, Esq., of Foot's Cray, Kent. The same society has also received a like donation from R. B. Marston, Esq., the spirited conductor of the Fishing Gazette, who has purchased of the society 200 young perch to give to the Cambridge and Ely Angling Society. Mr. W. O. Chambers will be pleased at any time to show the hatchery of the society to any friends visiting Lowestoft.—*Norwich Argus.*

SATURDAY, MARCH 4, 1882.

THE GREAT INTERNATIONAL FISHERIES EXHIBITION.

IMPORTANT PUBLIC MEETING AT WILLIS'S ROOMS.

THE most influential and successful public meeting ever held in connection with the fisheries interests took place on Monday last, at Willis's Rooms, the chair being taken at 12 o'clock by the president of the Exhibition, the Prince of Wales. His Royal Highness was accompanied by the Duke of Edinburgh, the Duke of Teck, and the Duke of Richmond, and among a distinguished company present were :—

Musurus Pasha, Turkish Ambassador; Count Münster, German Ambassador; Prince Lobanoff Rostrowsky, Russian Ambassador; Count Karolyi, Austro-Hungarian Ambassador: Count Charles de Bylandt, Minister for the Netherlands; Count Menabrea, Italian Minister; the German Consul, the Austro-Hungarian Consul, the Consul-General of Turkey, the Spanish Minister, the Swedish Minister, the Danish Minister, the Brazilian Minister, the French Consul; the Duke of St. Albans, the Duke of Sutherland, the Marquis of Salisbury, the Marquis of Londonderry, Earl Granville, the Marquis of Hamilton, Lord Elcho, M.P., Earl Percy, Lord Suffield, Lord Abinger, Lord Leven and Melville, Lord Reay, Lord Hylton, the Lord Advocate, Sir W. V. Harcourt, M.P., Mr. Shaw Lefevre, M.P.; Sir Alexander Galt, High Commissioner for Canada; Hon. H. Tyrwhitt Wilson, in attendance on H.R.H. the Prince of Wales; Baron Heath, Baron C. Hambro, Sir A. Young, Sir T. F. Buxton, Mr. W. S. Shoobridge, Mr. Harry Towse, Mr. A. W. B. Burdett-Coutts, Mr. A. J. Mundella, M.P., Mr. E. Birkbeck, M.P., Mr. A. P. Vivian, M.P., Mr. Montague Guest, M.P., Mr. G. Anderson, M.P., Mr. W. H. Smith, M.P., Mr. O. E. Coope, M.P., Sir Henry Peek, M.P., Sir Donald Currie, M.P., Mr. H. E. H. Jerningham, M.P., Mr. E. Marjoribanks, M.P., Sir Wilfrid Lawson, M.P., Alderman Sir Andrew Lusk, M.P., Mr. Alderman Cotton, M.P., Mr. Alderman Lawrence, M.P., Mr. R. W. Duff, M.P., Mr. John Pender, M.P., Mr. W. Caine, M.P., Colonel Gourley, M.P., Dr. Spottiswoode, President of the Royal Society; Mr. Spencer Walpole, Professor Huxley, Mr. Gordon Cumming, Sir Philip Cunliffe Owen, General Eyre, General J. H. Van Allen, Admiral Sir Claude Buckle, Sir John Rose, Colonel Custance, Sir Edward Parrot, Sir Harry Buzzard, Sir H. W. Petre, Sir Brandreth Gibbs, Admiral Sir A. Milne, Mr. J. A. Youl, Baron Francois Van Hurdt, Mr. H. Calcraft, Mr. Fryer, Mr. H. Ffennell, Mr. P. Soman, Mr. C. Stevens, Mr. S. Allcock, Mr. C. Farlow, Mr. William Senior (Redspinner), Mr. J. Temple, Mr. Crumplen, Mr. Francis Francis, Admiral the Hon. Sir H. Keppel, Sir Edmund Y. W. Henderson, Mr. E. Marston, Mr. R. B. Marston, Mr. A. Jardine, Mr. P. Geen, Mr. T. Hoole, Mr. Ghurney, Mr. Murphy, Mr. Bonvoisin, Mr. Rowe, Mr. Wheatstone, Professor Leone Levi, Major Flood Page, Mr. G. A. Sala, Mr. J. M'Gregor (Rob Roy), the Lord Provost of Edinburgh, Dr. Gunter, Admiral Phillimore, Mr. W. H. Russell, Mr. W. H. Flower, F.R.S., the Hon. Charles Ellis, the Lord Advocate of Scotland, Mr. W. Oldham Chambers, Alderman Sir C. Whetham, Mr. A. C. Butler, Mr. F. T. Williams, Mr. Frank Fuller, the Mayors of Liverpool, Southampton, Sunderland, Scarborough, Newcastle, Newark, Yarmouth, Ryde, Penzance, Bridgewater, Sheffield, and several other towns. Many ladies were also present, among whom were the Hon. Mrs. Birkbeck, the Countess Spencer, Lady Northcote and Miss Northcote, the Baroness Burdett-Coutts, Lady Tenterden, Lady Layard, Lady de Blaquiere, the Hon. Lady Keppel and Miss Keppel, and Mrs. F. T. Williams.

The report of the committee, which was read by the Duke of Richmond and Gordon, after detailing the circumstances under which the project had arisen, and the preliminary step taken, continued as follows: —

"The committee have bestowed long and anxious consideration on the prospect of the proposed exhibition. The classification, which has been compiled with the assistance of leading scientific men, comprises every object adapted for exhibition, illustrative of sea and fresh water fisheries; the preparation, preservation and utilisation of fish; fish-culture; the natural history of fish, and literature connected with fishing. Another department of the exhibition will relate to the economic condition of fishermen. It is proposed to give prizes on important subjects connected with fishing; and with a view of turning the exhibition to practical account, conferences are to be held for the purpose of reading and discussing subjects specially connected with the fishing industries. The exhibition is to be opened on the 1st of May, 1883. In order to illustrate the great extent and magnitude of the fishing industries of the United Kingdom, it may be stated that, at the lowest calculation, 550,000 tons of fish are annually taken in British waters by our own fishermen; that, according to Professor Huxley, 3,000,000,000 herrings are annually taken in the North Sea alone; that 130,629 tons of fish were delivered in Billingsgate Market in one year; and that the fisheries of the United kingdom are carried on by about 35,000 boats and vessels, giving employment to no less than 110,000 people afloat. The first International Fisheries Exhibition was held at Berlin in the year 1880. The total receipts were £19,116, and the expenses £17,304, leaving a surplus of £1812. It is obvious that to carry out the proposed exhibition on an adequate scale, having regard to its international character, a very large outlay will be necessary; it is, therefore, proposed to open immediately a subscription list for the general and prize fund, and also a subscription list for a guarantee fund to provide against contingent liabilities in the event of the proceeds of the exhibition proving insufficient to meet the expenditure. The committee have pleasure in announcing that the Fishmongers' Company have already promised the sum of £500, for the general and prize fund, and £2000 to the guarantee fund. It is hoped that the amount of support given both to the general and the guarantee fund will be of such a character as to free the committee from all pecuniary anxiety in relation to this great undertaking. At the same time, when it is remembered that the Berlin Exhibition was visited by 483,000 persons in ten weeks, and the Norwich Exhibition by no less than 70,000 in three weeks, it may fairly be assumed that in the Great International Fisheries Exhibition, to be held in our own metropolis in 1883, and which is to remain open for six months, there will be such an immense influx of visitors that the enterprise will prove a financial success."

The Prince of Wales, who was received with loud applause, then rose and said :—

Ladies and Gentlemen,—You will, I am sure, have been interested to hear the report which has just been read by the Duke of Richmond, as it presents to you the labours of the committee of which his Grace is chairman, and as it has also brought before your notice the many salient points as important statistics in connection with this great proposed fisheries exhibition. You are all aware of what a great success that held in Berlin was, and I am inclined to think that as that was such a great success, and as the population of Berlin is little over one million one hundred thousand, an exhibition held in this great metropolis, where the population numbers nearly five millions, has every chance of being successful in every respect. (Cheers.) We are also very anxious that foreign countries should co-operate with us, and we look especially to America in all important matters of fish-culture, whether inland or sea. I may state that the United States Fisheries Commissioners raised in 1878 no less than 15,700,000 shad. The United States Government, moreover, contributed £20,000 towards the expenses of the American exhibits at the Berlin exhibition, and I hope they will not be less liberal on the occasion of the exhibition of the next year. The statistics which have been given are with regard to the enormous amount of fish taken and delivered in our fish markets. I may say that I believe the amount is considerably larger. I believe I am right in stating that it amounts nearly to a million tons of fish taken in the British waters by our fishermen. Last year nearly 154,000 tons were delivered at Billingsgate. The value of the salmon fishery, as you are aware, in England amounts to £800,000. Of course, in the great exhibitions in 1851 and 1862, and the exhibition held on the Continent, there were exhibits of everything connected with fishing, but I may say that this great exhibition is a larger development of what was shown at those exhibitions, and those who had the advantage of seeing the remarkably well arranged exhibition at Norwich last year will have some idea of what the exhibition in London will be. It will be on a much larger scale, and it is intended not only to show you everything connected with pisciculture, and with fishing generally, but also everything connected with lifeboats and life-saving apparatus (cheers). Another point which has been alluded to in the report is that it is to be hoped that this exhibition will not only be a mere show, but that it will be productive of some good, inasmuch as international discussion and intercourse will arise from it. There are several resolutions to be proposed and seconded, and I will not, therefore, trouble you with any further remarks. This is such an exhaustive subject, that I might be addressing you for some time longer; but I think it will be better at once to call upon the Duke of Edinburgh to move the first resolution.

The Duke of Edinburgh, who was warmly applauded, said.—In obedience to the chair, I rise to move the first resolution, which is as follows :—

"That the report now read be adopted, and that this meeting, having regard to the great and increasing importance of fishing industries throughout the world, cordially approves of the proposal for a Great International Fisheries Exhibition to be held in London in 1883, under the patronage of her most gracious Majesty the Queen." I will not detain you at any length in introducing this resolution for your acceptance, but I think there are one or two points in the report to which I should allude. The Prince of Wales has himself touched upon almost all the heads; but in reference to the figures, I must say I think they have, if anything, erred on the side of caution, for in going round the coasts of the United Kingdom in the performance of my professional duties I have received the impression that the number of the fishing population employed afloat must be considerably in excess of the 110,000 mentioned here. It is clear, therefore that this exhibition, dealing with so large a population and with such an industry, must be one of very great importance, seeing that it provides food for so many of the population, and on those grounds I think this exhibition is well worthy of every support. Then, again, if the figures of 550,000 tons of fish taken annually are correct, the importance would be great indeed, for that would represent something like £11,000,000 sterling in value, and that gives an idea of the enormous value of this particular trade. (Hear, hear.) I hope that this exhibition will not only be one to exhibit fishing appliances as they are now understood or have been invented, but that great improvements will be the result. (Hear, hear). I am more especially glad to hear what was mentioned by the Prince of Wales, that there would be ample opportunities afforded for discussing all important subjects. There are several matters in which I am certain such a course would effect great good, and more especially in two points—one being the development of the fisheries of this kingdom. I might especially allude to the fisheries of Ireland, which are at the present time almost entirely neglected by the native population. (Hear). On the Irish coasts the fisheries are almost entirely being conducted by boats coming from the Isle of Man from Lowestoft, from Cornwall, and also by a fleet of French vessels. It will give an idea of how easily the development of these Irish fisheries might be effected to mention the fact that, during the year of distress in Ireland, the Canadian Committee gave to one of the districts £200 worth of nets, and in that same year the people to whom the gift was made realised £1200 by their take of mackerel (cheers). That shows that if perhaps some assistance could be given, if some regulations could be made, if there could be some form of organisation, the native population on the coasts of Ireland might be considerably enriched and placed in a more prosperous condition (hear, hear). Another point I should like to allude to is one that it is eminently necessary should be discussed, and that is for steps to be taken to preserve the lives of these hard-working fishermen (cheers). There are many cases in which lives are lost in the performance of their duties, not only from great storms in which their vessels are sunk—such as the great calamity on the Scotch coast last autumn—but from minor and preventible causes, such as from risks undertaken in carrying the fish from the smacks to the steamers which carry them to market (hear, hear). I know that from this cause and from one port alone something like twenty lives have been lost in a single year; though I am glad to find that in the past year, so far as I can ascertain, only two lives were lost. Now, if some proposals were brought forward—and some have already been suggested to me—and were thoroughly discussed, it would be possible to make regulations, either by agreement amongst the fishery owners themselves, or else by some simple legisiation, that would greatly conduce to saving the lives of these hard-working men (cheers). With these few remarks, I have great pleasure in proposing the first resolution.

Lord Granville, who was called on to second the resolution, said:—

I own that at this moment I rather envy the fishes—that *species mutum* as they have been called, which, as far as we know, are allowed to pass their lives in complete silence (laughter). Besides, I am bound to say that it is difficult for me to do anything but add water to the wine of the excellent speeches made by their Royal Highnesses the Prince of Wales and the Duke of Edinburgh (hear, hear). Nothing could be more clear than the manner in which the Prince of Wales put before you the principal points of this great enterprise, while with regard to the Duke of Edinburgh I am sure you all felt that he speaks with a special authority on the matter, not only from his general knowledge but also from his being much more than I believe any one else in this room personally acquainted with the coasts of Great Britain and Ireland (hear, hear). The only excuse I have for trespassing on your attention even for a very short time is in this one way—that some of the most interesting moments of my life have been connected with exhibitions of different sorts (hear, hear). Some have been more brilliantly successful than others, but there has not been one of them, so far as I know, which has not had a most useful and excellent effect on some branch or other of commerce and of trade (hear, hear). Another reason is the office with which I am unworthily connected. I am glad to see that there are several eminent diplomatists present—whom we are very glad to see—but amongst the most difficult and complicated matters that we have to negotiate are the international arrangements with regard to the fisheries of different countries (hear). His Royal Highness has quoted some figures which are really stupendous and difficult to take in. When you think of 550,000 tons of fish, it seems perfectly enormous. There is one branch of the fisheries alone which is quite remarkable. I dare say some of you have read an interesting work on the subject of the herring fisheries, from which it appears that the take of herrings, including pilchards and sprats, amounts to something like 2683 millions, and that putting them at ½d. per fish, the value of herrings alone in the year amounts to over five millions of our money. So that you will agree that the trade is one of very great importance (hear). The part which Her Majesty the Queen, the Prince of Wales and the Royal family are now taking in this matter is following some very old Royal examples. It is said that Charles V. went a pilgrimage to the tomb of the man who invented curing; Edward III. took the greatest possible interest in the fisheries. Charles II. went to Yarmouth in order to encourage the fishing of that important place, and was presented on the spot with four golden herrings—a ceremony which I am quite sure has only been neglected on this occasion by the inadvertence of the committee (laughter). There have been several Royal Commissions on Fisheries, for Governments have always paid great attention to this matter, and there was a very remarkable Commission in 1856. You will readily understand that I don't know any pleasanter reading than the report which Lord Herbert, Professor Huxley, Professor Tyndall, and Mr. Caird took part in drawing up. His Royal Highness the Prince of Wales has referred to the exhibitions which have taken place; but there was also an exhibition at Arcachon, which was very successful, besides the International Exhibition at Berlin, which gives encouraging hope of what the London Exhibition may be. I was extremely struck by what his Royal Highness the Duke of Edinburgh said with regard to the results which we might hope to come from this exhibition. I think there was no point more important than his suggestion that it might stimulate what would be useful in every possible way, socially, materially, and politically, viz., the much greater development of the fisheries of Ireland. (Cheers.) But there are other questions. It appears that our modes of fishing, possibly arising from local circumstances, are different. I am told that our excellent neighbours the French—though they have rather an objection to our English-caught fish—have longer boats and nets than our own, and that their skill is even greater than ours. Now, there is no doubt the differences that we see greatly turn on such matters. We have always had a great fish trade with Italy, and we have recently had a trade spring up with Germany, which has been productive of the greatest possible advantage, both to our fishermen and to the German community. (Hear, hear.) But there are other circumstances which may arise from this exhibition. If amongst the prizes one could be given to facilitate our work in the Foreign Office in regard to international arrangements on the subject of fisheries I shall be only too grateful. (Laughter.) I shall be still more grateful if the result should be to devise any means of preventing that which, unfortunately, is too frequently the case, viz., bad feeling between the fishermen of two or three countries, though there are fish enough in the sea to suffice for the fishermen of the whole world. (Cheers.) I beg to thank you for your kindness and to second the resolution.

The resolution was then put from the chair and carried unanimously.

The Marquis of Salisbury, who was most warmly received, on rising to propose the next resolution, said,—

If the noble lord who spoke last felt it necessary to apologise for speaking on such a subject, and to indicate an intention of limiting his remarks, still more is such a necessity imposed upon me. In fact, he is the leader of the assembly to which I belong, and I should feel it a species of mutiny to make even so long a speech as he did. (Laughter.) Nor am I, I am afraid, qualified to address you by any extensive knowledge of the subject. The hours which I have spent on the sea have not been numerous, and they have not been interesting—(laughter)—but the matter is one which all of us must feel to be not a question of an individual industry, no darling of private fancy, or of special and peculiar tastes, but a matter of great national and international importance; for, after all, we are dealing with that which is the food of the most necessitous classes of the community. (Hear, hear.) Everywhere we may observe, in all countries, from whatever cause, the price of meat seems to be gradually rising, or, at all events, has risen greatly, and there is ground for fear that the time may not be distant when it may be sufficiently depressed to bring it easily within the reach of the great mass of mankind. But the supply of fish, if only we could get it, if only they were brought in sufficient numbers and in the most convenient and successful manner within the reach of the consumers, the supply of fish seems abundant for any demand which the human race is likely to make upon it. His Royal Highness has pointed out to you how large this industry is; but there is reason to believe that however large it may be, it is nothing compared with what it might be, if the pursuit were better organised, and if the combined experience of mankind were brought to bear on the apparatus by which it is pursued. (Cheers.) Do not let it be said that in this matter we are trying to assist an industry which is well capable of assisting itself. Of course, external interference can never supply the want of energy and enterprise on the part of those by whom that industry is conducted. But what we can do is to enable the various populations who pursue this industry by different methods, in different parts of the world, to bring their knowledge and experience together to supply each other's defects, and by help of their common effort to obtain a higher standard of excellence than that which they had at present reached (hear, hear). That is not a matter of theory. More than thirty years ago there might have been some doubt of the value of exhibitions, but owing to the efforts of members of the Royal family of this country (hear, hear) exhibitions were then introduced as part of the commercial apparatus of the world, and any one who has watched the successful exhibitions which have been held cannot doubt that they have lent a powerful stimulus both to the enterprise and to the intelligence by which all the various branches of industry and commerce are conducted (hear, hear). In fact, I have heard it put so highly, that the Exhibition of 1851 was so successful that it taught foreigners how to compete successfully with ourselves. But to be successful we must not only have our own efforts but the thorough co-operation of other nations. Now fishing, more than any other industry, is a pursuit about which each nation has something to tell its neighbour. The conditions of fishing and promoting the growth of fish are necessarily as different as are the various climates in which the fish live and the various races of men by whom they are pursued. We know that even our immediate neighbours have very much to tell us in this matter. The success of the Berlin Exhibition has shown us how far the knowledge of the northern races of Europe has gone, and I believe that in regulating the pursuit of fish so as to prevent their unnecessary destruction, and in avoiding those lamentable conflicts which Lord Granville has so feelingly alluded to, other nations have gone further than we have, and have probably pointed out the path along which we ought to follow (hear, hear). In the matter of pisciculture, again, such as the growth of oysters, I believe the other nations which line our seas have much to tell us as we have much to tell them.. More especially I believe have the French made great progress in that matter. There is a last consideration, which I will venture to reproach my noble leader for having stolen from me. The fishermen of the various countries may probably learn to pursue their industries in greater peace, if they can only meet together on common ground and learn to know and appreciate each other's industry (hear, hear). I have been asked to move this resolution, which especially calls attention to the necessity of inviting the co-operation of other nations in the great enterprise we have now in hand. It is as follows:—

That in the opinion of this meeting the co-operation of all other untries will be necessary to give full effect to the international vantages to be obtained from the proposed exhibition.” I earnestly pe that it will receive not only our support but that of others, cause it is only by common council that excellence can be reached, d it is only by meeting and discussing on a common ground that mentable causes for conflict and difference can be avoided (cheers).

The Count Charles de Bylandt said :—

Without in anyway committing the opinion of my Government, or ticipating their decision, I have not the slightest hesitation, but, n the contrary, the greatest pleasure, in seconding the resolution oved by Lord Salisbury; because I believe that such an international exhibition as the one contemplated to be held in this country ust be of the greatest interest for all fishing countries. I am sure would be so in my own country, where fishing may be considered be a traditional and national occupation. As, in this respect, my untrymen have for centuries since acquired a certain reputation, it pears to me that of all countries taking part in this exhibition, ine certainly ought to be well represented. I assure you I will o all in my power to induce my Government to do so. If I cceed I hope that my countrymen on that occasion will cut as good figure as they did at the last international exhibition of the same nd held at Berlin in 1880. I also hope that my colleagues here esent will follow my example and recommend to the consideration their Governments international and friendly co-operation in the ject of this meeting. (Hear, hear.) I will not detain you any nger, and I am the less inclined to do so because I believe one of e first duties of a diplomatist is not to talk too much.

The second resolution was then put and carried unanimously.

Lord Kimberley said—The resolution I have been asked to ove is—

“That in the opinion of this meeting, in order to ensure the success f the proposed exhibition, it is desirable to secure the support of ose interested in fisheries in all parts of this empire, including its olonial Dependencies.” I think I cannot claim the attention of this eeting from any knowledge or experience of my own in regard to sheries, but I may claim your attention on account of the ffice which I happen just now to hold. My noble friend poke of diplomatic negotiations on the subject of fisheries, and I an assure you that fish in their political characteristics are quite as uch present on my side of the square in Downing Street as that of y noble friend. Ever since the treaty of Utrecht, and probably a reat deal longer, fish have been the principal topic of the Colonial Office. You have heard how many tons of fish are imported into the ountry. I wish I could tell you, but I must leave it to you to conecture, how many tons of paper have been consumed in this neverending, probably never-to-end, controversy with regard to fishing. That s not unimportant on the present occasion, because it shows in a triking way of what extreme importance to the world is the industry concerning which this exhibition is to be held. You may almost lay down the importance of an industry according to the extent to which it engages the attention of the Government, and estimated n that way, I can assure you that fishing occupies a very important place. With regard to our colonies, it is not necessary for me to speak of that which is known to you all—that is, the immense isheries possessed by the Empire in the colonies. There are the great fisheries of Newfoundland, which we share with the French; there are the immense fisheries of the Dominion of Canada, concerning which the High Commissioner who is to follow me is more competent to speak. But this industry is important in our newer settlements, as well as in our long-established colonies. I was interested lately in reading the report of the Fisheries Commission appointed by the Government of New South Wales, which seems from the attention which it excited, to be an important branch of Colonial industry. Any one reading that report will be amazed at seeing the immense variety of fish utterly unknown to us, and their great value to the colony. I read also myself with alarm, when I know how easy it is in these days of rapid transit to move fish from one quarter of the world to another, and being like my hon. friend the member for Norfolk somewhat interested in the welfare of the fish in the Norfolk Broads, that there were in the rivers of New South Wales a monster fish of the pike kind which reached the enormous weight of 120lb. You can well imagine what the effect would be of such a fish being introduced into our waters. Our colonists have been much interested in the advance of pisciculture, a point which I cannot omit to mention, because everyone must be interested in the extreme importance of introducing salmon into that part of the world—the Australian colonies. Trout have been successfully introduced; but with regard to salmon there has been a controversy into which I am unwilling to enter, though I have been assured that salmon have been successfully introduced into Tasmania. It is unnecessary that I should detain you longer, except to say that I am perfectly certain that this exhibition will meet with great sympathy and great interest in our colonies, and I believe the proceedings in regard to that exhibition are likely to prove of the greatest advantage to the fishing industry in all parts of the world.

Sir A. Galt said :—

I feel myself highly honoured on this occasion in being permitted to second the resolution moved by Lord Kimberley. In speaking for the Colonies, I am glad that his lordship has made you acquainted with the attention bestowed in America and Canada upon the cultivation and preservation of fisheries, and I therefore feel myself more at liberty to confine my remarks to the fisheries of North America. I am happy on this occasion to be able to state that I have the authority both of the Dominion of Canada and of the colony of Newfoundland to express their hearty desire to co-operate in the objects of this exhibition. (Cheers.) I may say that in the colonies generally, and certainly in Canada, we are, perhaps, too apt to take the direction of our thoughts and memories from this country; we try to follow public opinion here. We try to study the resources from whence the greatness of this country has arisen, and we are proud of it. Looking back upon the history of England we think we discover in her commerce the main source of her greatness. Going a little further back, I do not think I shall be contradicted if I say that the germ of that commerce came from the inshore fisheries of the kingdom. We need not go back more than 300 or 400 years to learn that the naval greatness of the nation was derived from those hardy fishermen, the comfort and happiness of whom it is desired by this meeting to promote. Perhaps, following that, Canada may have shown an undue anxiety in reference to her inshore fisheries. We look to their development as the means of affording us naval strength, and helping us to keep pace with the Great Republic to the South. Notwithstanding the fact that the population of the United States is ten times greater than that of Canada and Newfoundland, the amount of shipping belonging to the latter is almost as large as that of the former. In estimating the extent of the Canadian fisheries it may be forgotten that she has the largest sea-coast of any country. There are 4000 miles of coast open to Canadian fishermen, and the take of fish is valued at five millions a year, while half that amount is exported to foreign countries. The fisheries give employment to about 45,000 men and a like number of boys, so that there were 90,000 to whom to look as a source of future naval strength. I therefore think if there be one part of the community more than another in which we should feel interested it is this; and we must feel very grateful to his Royal Highness for the support and encouragement which he is giving to the step now being taken. The objects of the exhibition are very valuable. Necessarily our methods of fishing and of curing fish are of the crudest kind, as we are away from the opportunities of being informed by the fishermen of Holland, France, Sweden and Norway. We are fishing with less intelligent means than we ought to have, and I hope that by coming to the exhibition our fishermen may acquire an amount of knowledge which will enable them still further to develop the means under their hand. Another important point has been referred to in the address of his Royal Highness to-day, and that is the discussion which will be given to the best means of preserving fish. Fish is acknowledged to be essential as one of the great food products of the world, and therefore it is of the greatest importance that it should not be destroyed. I am aware that the scientific report referred to by Lord Granville stated that the opinion was held by eminent scientists that it was impossible to exhaust the sea. I speak with great deference to those important authorities, but, at the same time, I have had great opportunities of learning the views of fishermen on the American coast on the subject, and there testimony is that large and wide as the sea is the inshore fishery is liable to be exhausted by fishing at improper seasons. I have already mentioned that I have been authorised to express the co-operation of both the Dominion of Canada and the Colony of Newfoundland in the object you have in view, and I have further to say that I have this morning received a message from Sir John M‘Donald authorising me to subscribe an amount equal to that subscribed by the Fishmongers’ Company to the general and prize fund. (Cheers.) In Canada we have a department devoted to fishing, with a responsible minister at the head of it, and I am sure he will feel it his duty to recommend the Canadian Parliament to support the object of this exhibition. (Cheers.)

The resolution was put and carried unanimously.

The Lord Mayor of London proposed :—

“That two subscription lists be opened forthwith, one for the General and Prize Fund, of the proposed exhibition, and the other for the Guarantee Fund, to cover the contingent liabilities in the event of the proceeds of the exhibition proving insufficient to meet the expenditure.” Lord Granville had said a fish was a creature to be envied; for his own part, he thought it seemed a creature to be destroyed, as the means adopted was not so much to supply fish as to destroy it. He, therefore, was extremely pleased to support an exhibition in which the means of preserving fish would be explained, and the means of using them with the least cruelty would be taught. He would urge, therefore, that the subscriptions should be large and liberal, first, because the object was not only national but international; secondly, because it had been taken up in a humane spirit; thirdly, because it would teach the most useful means of following the pursuit of fishing; and fourthly, because means would be taken to preserve the lives of the noble fellows who went forth, with out fear, to pursue their dangerous calling whilst we sat comfortably at home. He trusted other committees would act in unison with us to make this exhibition a great success.

The Prime Warden of the Fishmongers’ Company in seconding the resolution, which was unanimously carried, said :—

That the duties of his company were chiefly to destroy fish unfit for food, and therefore he feared that if they were to present a dish of fish it would not be one to “set before a king.” (Laughter). One of the objects of the exhibition, however, would be the preservation and transportation of fish, and its distribution to the consumers. His object now, however, was another kind of fishing—it was fishing for the “golden fish,” to which reference had been made by Lord Granville. If the masters of the great City companies would take up this matter he had no doubt the corporations of great towns would follow their lead, and then they would be able to get such a contribution as would make the exhibition a great success.

Mr. Edward Birkbeck, M.P., chairman of the executive committee, moved a vote of thanks to the Prince of Wales for presiding.

In doing so, he said that he had to express on behalf of the executive and general committee, and on behalf of the whole of the fisheries of the United Kingdom, their deepest gratitude to his Royal Highness for having presided, and he ventured to say that no one had done to promote, encourage, and develop the fisheries throughout the world as the Prince of Wales (cheers), especially by becoming president of the exhibition of 1883.

The Duke of Sutherland, in seconding the motion, mentioned that having been in the United States recently he was astonished at the amount of interest taken in fishing, especially in the inland fishing; and he felt sure the Americans would cordially aid in this exhibition if properly asked to do so.

The resolution having been adopted,

The Prince of Wales said:

I beg to return you my warmest thanks for the kind way in which this resolution has been proposed and received by all of you. I need hardly tell you that it has given me the greatest pleasure to preside, and it is most gratifying to me to see the interest taken in this great work. I wish also to express my thanks to the foreign ambassadors (cheers), who are clearly manifesting to us that the countries which they represent are taking a warm interest in this exhibition, which they look upon as an international question. I must also express my thanks to the gentlemen who have so kindly moved and seconded the resolutions, for the able, interesting, and valuable speeches they have made. I must also express regret, on behalf of my brothers, the Duke of Connaught and the Duke of Albany, as well as on behalf of the Duke of Cambridge, that they were unable to be present; but I have to state that they earnestly sympathise with the objects of the meeting. In the hands of the committee, I feel that the cause will not suffer, and the public need not fear to subscribe largely. Before I sit down, there is one name which I cannot help alluding to, and I think you will all join in the feeling of sincere regret that he is no more among us to give his valuable assistance. I allude to Mr. Frank Buckland. But in Professor Huxley and Mr. Walpole we shall find able successors. I think this meeting ought to look with gratitude to the work of Mr. Edward Birbeck, to whom the success of the Norwich exhibition was owing, and I feel sure that as chairman of the executive committee he will do all he can to render that assistance needed in so great an enterprise (cheers).

The meeting then terminated.

The following subscriptions have been promised to the Guarantee Fund:—The Company of Fishmongers, £2000; Sir J. M'Donald, Prime Minister of Canada, £2000; the Baroness Burdett-Coutts, £300; Mr. A. B. Burdett-Coutts, £200; the Duke of Richmond and Gordon, £100; Earl Granville, £100; the Earl of Kimberley, £100; the Marquis of Salisbury, £100; Sir W. Harcourt, £100. To the General and Prize Fund:—The Company of Fishmongers, £500; Sir J. M'Donald, £500; the Baroness Burdett-Coutts, £200; Mr. A. B. Burdett-Coutts, £100.

ANGLING IN THE SOUTH OF IRELAND.

THE accounts of Irish discontent and lawlessness are not calculated to make Ireland attractive for the English sportsman. It is true, the country has been thrown back, and chaos has hitherto prevailed instead of order. Political or social agitation in any country begets confusion and disorganisation. But the crisis has passed in Ireland. There is a rift in the clouds, and the horizon begins to clear. A brighter future seems in store for this unhappy land, and the incubus which has long depressed the cultivation of the soil has been partially, if not entirely removed.

This is a digression. Fishing, not politics, is more directly within the lines of this journal. Our object, however, is to show that, though Ireland has been the battle ground of a fierce social revolution, peace is again asserting itself, and the English lover of sport and scenery may enjoy both here with perfect safety, and with a thorough immunity from the evil consequences of the late party strife. The angler has a large field for sport. The south of Ireland is intersected by different rivers and tributaries, which afford excellent trout-fishing. Salmon fishing is more restricted, but for £20 or £30 a really good preserve may be secured. Cork is easy of access, and it is a centre from which radiates numerous railway lines that command the best fishing in the country. Within an hour's journey from any of the railways, streams teeming with trout and salmon can be reached. In a former notice the names and particulars of many of the rivers were given. Since then, two important arteries have been opened in the west of the county, and with them numerous rivulets full of fish are placed within easy distance. Some of these are streams that are seldom visited by the keen and dexterous angler. The natives occasionally fish them with a primitive contrivance when the waters are flooded. The clear, limpid stream offers no attractions to them. Their coarse tackle scares the fish, and brings no reward for the labours of the fisherman. A good angler will easily fill his basket on these remote and well-stocked streams. If the fly fail, the worm may prove effective. But with fine tackle a good angler can always find thorough enjoyment as well as practical results. The West Coast Railway has been extended to Skibbereen and to Bantry, and upon either branches the angler will find magnificent streams.

FRESHWATER FISH AT THE ROYAL AQUARIUM, WESTMINSTER.

IT will be of interest to anglers to know that a change is being made in the stock of the Royal Aquarium, Westminster. The twelve large tanks on the south side of the building which have hitherto been stocked with sea fish, are being prepared by Mr. John T. Carrington, the naturalist, for the reception of the angler's favourites.

Rarely has such an opportunity been afforded for the observation of the living denizens of our ponds and rivers as will be afforded at Westminster. The tanks are expected to be fairly stocked by the end of March.

We can promise Mr. Carrington that London anglers will welcome the change, and, if he requires it, will help him in getting specimen fish.

NORTH COUNTRY FAVOURITE FLIES.

MR. ROBERT C. STEVENS, fishing-rod and tackle maker, of 38, Western Lane, Berwick, called on us the other day. He had come up to town specially to be present at the International Fisheries Exhibition meeting at Willis's Rooms. He is fully alive to the value of these fisheries exhibitions; obtained a silver medal and diploma at Norwich, and will exhibit at Edinburgh and also at London in 1883. He showed us some samples of his salmon and trout flies, from which we have chosen a few beautifully made Greenwell's Glory and Johnson's Professor, both deadly flies on the northern trout streams. Also we chose a few samples of a new pattern stone fly, which looks "likely," if only the yellow colour will stand. Who knows of a permanent bright yellow dye, something which will not wash white before it has killed three trout?

Mr. R. C. Stevens lives in the midst of some of the best trout and salmon fishing in the country, and will be happy to give information to customers respecting where to go for comfortable quarters and good fishing. If any of our readers want to change their fishing grounds this year, we can most warmly recommend the lovely Berwickshire streams. Living is good and cheap; sport is to be had by all who can kill trout with fly, worm, or minnow; and the air and scenery are unsurpassed.

VACANCIES ON A GOOD TROUT PRESERVE.

If any of our readers want to have a rod on a first-rate Hampshire trout stream, and will send us their names, we will give them further particulars.—Ed. F. G.

ANOTHER TAKE OF LARGE PIKE BY MR. JARDINE.

MR. JARDINE must in his time have saved the lives of many thousands of roach and dace. Twice recently this season we have heard of big takes of pike by him, and at the Gresham Society, on Monday last, he weighed-in the following fish:—

(*a*) A pike, taken on Saturday and weighing on Monday evening 27½ lb., length 44½ inches, girth 25 inches. Taken on a gut paternoster, with single hook, the bait being a small bleak. It took Mr. Jardine twenty minutes to kill this fish, and he made two unsuccessful attempts to gaff him.

(*b*) Fifteen pike, also taken by Mr. Jardine, on Saturday last, weighing 89¼ lb.

(*c*) A brace of perch, caught also on Saturday, weighing 4lb. 12 oz. on Monday.

Mr. Jardine's friend, Mr. H. Brett, also captured ten fish, weighing 61 lb. The bulk of the fish were taken either by spinning or paternostering.

Comment is needless. All we can say to our readers is, "Go and do likewise."

We regret to notice in the New York papers an announcement of the death of Mr. Jardine's uncle, at the ripe age of 82. He was an enthusiastic and skilful angler, and one of the most successful organ builders in America. We hope his nephew may live and flourish even longer.

George James Eaton, of Starkholmes Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[Advt.]

THE GREAT MEETING AT WILLIS'S ROOMS IN CONNECTION WITH THE 1883 FISHERIES EXHIBITION.

WE have the pleasure this week to present our readers with the most complete report which has been published of the important meeting which took place last Monday, in furtherance of the aims of the Great International Fisheries Exhibition, which is to be held next year in London.

It must be very gratifying to the promoters of this gigantic undertaking to see their efforts so warmly and thoroughly appreciated, and especially do we congratulate Mr. Edward Birkbeck, M.P., the leading spirit of our English fisheries exhibitions. It was pleasing to notice the great number of London and provincial anglers who were present, many of them having come hundreds of miles for the purpose. We devoutly wished every fishing-tackle maker in Great Britain and Ireland had been present, they would most assuredly have gone home with a fixed determination to give their support to the affair by sending the best exhibit in their power. Copies of the prospectus of the exhibition were distributed to the visitors. This prospectus gives full details; it is a model of what such a prospectus should be, and reflects the highest credit on its compilers. A single glance at it shows the enormous scope of the exhibition, and we can strongly advise all anglers who have not yet seen it to write for a copy to the secretary of the Exhibition, 24, Haymarket, London. Prizes of the value of £100 each are offered for essays on various subjects, and this prize list is to be augmented.

PERMISSION FOR A DAY'S FISHING.

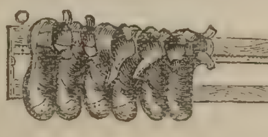
WHILST on our way the other day with an angling friend to the river we intended to fish, he added pleasure to the enjoyable walk in the fresh sunlit morning air, by relating some of his angling experiences. Amongst others, we remember the following, which was new to us, and will be so, we think, to most of our readers.

Parson F —— had got permission for a day's trout-fishing, and one fine afternoon made his appearance on the water. The keeper came by after a time and duly examined his *permit*, and wished piscator a good afternoon. "Good evening," said the parson, and went on fishing until dark.

Next morning found him early on the water hard at work, and when the keeper came along and asked to see his permit he produced the same he had shown him before. "But," said the keeper, "this only gave you permission for one day's fishing, you are having a second day." "Not so, friend," quoth the parson, "refer to Genesis, chapter i, v. 5, and thou wilt find that the evening and the morning were *the first day!*"—Ed.

MACDONALD'S BOOT AND SHOE RACK.

This is by far the best kind of rack for holding boots and shoes. By means of a couple of nails, it can in a minute be fastened to any wall or passage, and the boots or shoes are held in place by metal teeth, on which the heels are hung. One's boots and shoes are thus always out of the way when not wanted, in the way when wanted, quickly aired and dried, and kept free from the damp and mould which always attacks leather in cupboards and closets. Messrs. Macdonald and Co. have a patent for their excellent invention.



CLUB AND OTHER JOTTINGS.

By L. B.

THE great piscatorial event of the week is undoubtedly the numerous and influential meeting held at Willis's Rooms, King Street, St. James's, on Monday 29th ult., over which H.R.H. the Prince of Wales presided in that practical, yet kindly and genial, manner which has won him the respect and goodwill of Englishmen and foreigners of every possible shade of political opinion. As lengthy reports of the meeting appeared in all the leading daily papers, and as, moreover, my worthy chief was there in person, and will most probably give the readers of the Fishing Gazette the benefit of the notes he no doubt took, I will say no more on this point, except that it is my opinion that this big exhibition will be an opportunity of advancing the interests of fish and fishing in their every possible form—an opportunity which may not occur again in a lifetime—and of which all interested should eagerly avail themselves *re* coarse fish preservation.

As the annual close time draws near so this question seems to come to the surface. An active correspondence is taking place between the representatives of the Sheffield Association, and those of the West Central Association of London Anglers, having for object the means of taking early united action in the matter of getting the amendments to the Freshwater Fisheries Act, decided upon at the last meeting at the Society of Arts, passed into law.

The committee of the West Central Association meet on Friday next, and this question will undoubtedly be the principal one on the paper for discussion.

There is a strong growing feeling among anglers that no law that is ever framed for the protection of coarse fish, however stringent, will be effectual unless an authority is created whose business it will be to see the law carried out, and any infringement of it punished; in one word, the appointment by Government of a Coarse Fish Commissioner. Surely the interests of fishery proprietors and the public are of sufficient interest to warrant such an appointment?

I regret to hear that Mr. Frederiek Hill, the indefatigable secretary of the North-Western Anglers, has been very unwell.

The Anglers' Benevolent Society continues to have applications for relief from necessitous members (three on last meeting night), and Mr. Secretary Ghurney is eagerly looking forward to the merry month of May, when the donations and subscriptions, which will assist to replenish the society's cash-box, will become due.

From Haslett, of Chertsey, I am in receipt of a few lines. He has been getting some barbel. One day, with Mr. Allan, five barbel; heaviest, 5 lb.; and adds, he thinks, a fair take of these fish could be had, if customers would only try.

THE KENT, WESTMORELAND, ANGLING ASSOCIATION.

There are few older angling societies than this in the country, for it was established so long ago as 1824. During that time it has doubtless had many vicissitudes. The annual meeting was held on Monday evening last in the Kendal Town Hall, when there was a capital attendance of members. Mr. Rawdon B. Lee presiding. The chairman said he was sorry to see a gradual falling off in the subscriptions. Last year they amounted to but £21 9s., whilst in 1878 they reached £38, and ten years prior to that to £47. This was, no doubt, due to the half-crown trout licence which had to be paid to the Fishery Board; but this notwithstanding, he thought an association so important as theirs should have a larger income, and it should be a voluntary one. Allusions was next made to the connection between the association and the Board, which the chairman hoped would continue and be satisfactory. He also expressed a wish that the staking of the river at places to prevent netting would be proceeded with during the coming season, and he likewise hoped that the net which the Board had furnished to provide for the destruction of pike in the river would be ready for use shortly. Pollutions and fish disease were mentioned by the chairman, who drew special attention to the fact that last season the salmon were affected with the fungus when on the spawning beds, and even prior to that period he thought that portions of the fungus would be attached by the action of the fish turning over the gravel, and thus would the disease be spread. The heavy floods at the commencement of winter appeared to carry the diseased fish away, and since then very few had been seen. After further remarks from the chairman on the fall season of 1881 and the great increase in the number of salmon in the district in the early autumn of that year, for which some credit should be given their association, the meeting proceeded to pass the accounts. This was soon done, as was the adoption of the rules, with certain alterations of little moment. The officers for the year were elected as follows:—Hon. secretary, Mr. G. Fisher; treasurer, Mr. G. A. Hutchinson; committee, Messrs. G. F. Braithwaite, F. C. Grayson, W. A. Mann, R. B. Lee, J. Whitehead, B. Garnett, J. Shaw, W. Thompson, T. Atkinson, P. Bateman, C. Beadle, N. Eadson, C. McDonald, G. Redding, F. H. Watson, and T. D. Walker. A vote of thanks was then passed to the secretary for his efficient and valuable services during the past year, and a similar vote was accorded to the landowners who granted the association permission to angle upon their estates. Other votes of compliment followed, and with them the business of the meeting terminated. The statement of the accounts of this association is as follows:—110 subscribers, £21 9s.; balance from last year, £17 18s. 11d.; received from conservators, £8 8s. 9d.; total, £47 16s. 8d. Expenditure watching, £34 7s.; of room for meeting, 10s.; printing, £2 1s. 8d.; balance, £10 18s.; £47 16s. 8d.

More Large Pike.—Mr. G. Lopez, of 1, Seymour Place, W., who not long since was successful in catching a splendid pike, weighing 25¼ lb., succeeded a day or two since, at Tring, Herts, in landing one of over 21 lb.

A New Species of British Whale.—The Royal Society met recently in the Royal Institution, Edinburgh; Professor Maclagan, vice-president in the chair. Professor Turner stated the results of investigations he had made on a specimen of "Balœnoptera borealis or laticeps," captured in the Firth of Forth, at Bo'ness, in September, 1872. No properly authenticated specimen, he said, of this species of Finner whale had been previously got in Britain, and he had the satisfaction of adding this animal to the British fauna. He said the formation of the hyvid or tongue bone in these Finner whales was highly characteristic, and they might determine the species just as well from this part as from the examination of the skull. Several other papers were read during the evening.

Gregory's Spinning Baits. "The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[Advt.]

RIVER REPORTS.

MID-THAMES.

"The nature of bad news infects the teller."
—SHAKESPEARE.

The Thames is once again unfortunately bank high, and successful angling for the remainder of the season, which ends on the 14th of this month, seems out of the question. This is a great blow to the river side professionals and to the bulk of Thames anglers, who, from the late excellent trim of the water, had been looking forward to a grand final go-in. The reports from most of the Mid-Thames stations are devoid of interest, and only contain uninteresting details of small catches of roach and chub; but at Hurley, on Monday, Mr. Brooksbank succeeded in catching trom one swim eleven tench, scaling respectively as follows: 2 lb. 2½ oz., 2 lb. ½ oz., 2 lb. 7 oz., 2 lb. 5½ oz., 2 lb. 10½ oz., 2 lb. 2 oz., 2 lb. 4 oz., 1 lb. 14½ oz., 2 lb., 2 lb. 4 oz., 2 lb. 3 oz., in all 24 lb. 5½ oz. The physicians were evidently holding a deep consultation on the relative merits of the "diet of worms" and gave it in favour of lobs, with which seductive bait they seemed indeed to be very much taken. Is this not an unprecedented catch of doctors in the Thames with one rod, and in only a few hours? The catch was enviously observed by another man, who the next day was busy with three or four rods and evidently reaped the benefit of a four-quart baiting. I hardly deem this sportmanlike, as possibly Mr. B. might have wished to fish his undoubted swim the next day. The members of the Wycombe Angling and Trout Preservation Association held a special general meeting on Saturday, at which the financial position and general prospects of the association were fully gone into, and it was resolved that from the 1st of March, 1882, old members may continue their present rate of subscription, with certain restriction as to water fishable, and that new members shall in future pay £2 2s. per annum and £1 1s. entrance fee. A number of piscators are anxious to join the association as soon as there are vacancies. Thursday evening: Weather very wet and unsettled and river rising rapidly into flood. Wind S.W.—MARLOW BUZZ.

Ancholme.

Some further fine catches of pike and roach have taken place since the issue of my last report. The weather and water have been excellent. We now have a lower temperature, with cold rains. I have not yet heard if the fishing has been affected thereby. About a fortnight ago I had the pleasure of presenting 5000 Salmo fontinalis fry to the watercourses hereabouts, and shall in a short time turn out a similar number of common trout. If my Manor Fishery succeeds, as I hope it will, I purpose turning out a similar number every season. In this way I hope to earn the gratitude of succeeding generations of anglers.—THOMAS FORD.

Ballynahinch (Ireland).

Since my last report, we have had a slight spate, which has raised the water a little. Yesterday and to-day we had east winds. There has not been an angler on the water since the season opened. I feel certain good sport would have been got before these east winds set in.—WALTER BLACKADDER.

Chichester.

The recent heavy pluvial visitations have rendered the principal waters totally unfishable. The canal, Chichester, is now a nice colour, and with fine weather some good takes may be anticipated. This evening, after a boisterous day, the barometer is rising, with every appearance of a change for the better in the weather department. A day on the Rother, the early part of the week, was decidedly a trip to sell 'em, anglers returning with nothing but wet jackets. At Chichester, Mr. Summers took a tew small roach, and the nocturnal fishermen, Messrs. Young and Salter were, in the small hours of Monday, rewarded with a couple of bream, weighing together close upon five pounds, a heavy carp breaking away. On Saturday last four roach-fishermen were, by the kind invitation of Mr. Baker, of Aldingbourne, selected by the Chichester society, to angle for roach to place in the canal; in return taking some few dozen bream with them to stock the mill pond. A boisterous day kept the fine weather rodsters at home. Mr. Young and Mr. Summers bringing back close upon three dozen roach which were placed in the canal the same evening. Weather fine, wind S.W.—GEORGE F. SALTER.

Dove.

We have had heavy rains every day this week, and there have been few anglers out. The river to-day (Thursday) is running like a sea, and looks like being over its banks before long. It will be Monday at least before, under the most favourable circumstances, the water again gets into condition. There have been no trout captured since my last worth speaking about, and, indeed, all that I can hear of in the way of fishing at all is that two or three fair takes of coarse fish have been made near Uttoxeter and Sudbury with the cockspur worm. After I had despatched my last week's letter Messrs. Foster of Ashbourne, informed me that H. C. Okeover, Esq.'s keeper recently caught a trout scaling 3¾ lb., in that gentleman's capital length of water, with the artificial minnow. The fish has been sent to town for preservation.—THE SPLODGER.

Exe (Tiverton).

The river to-day is in flood with the rains of yesterday and to-day, and if there be no more rain it will be fishable in the upper portions of the association water to-morrow. Some good sport is looked forward to during the week. Some very good baskets were made on Monday and Tuesday last, the flies best were half stone, gold twist, blue upright and heron's body blue.—WILLIAM MUDFORD, March 2.

Lea (Rye House).

The water is very thick, and not at all fit for fishing now; if we have no more rain it will be in good order by Sunday. Wind S.W.—W. COWELL.

Medway (Tonbridge.)

The river is over the banks, and the fish can, if they please, be enjoying themselves in the fields. There will be but little chance of angling for at least a week. As far as the pike are concerned, this is not to be regretted.—YE MEDWAY WATER RAT.

Norfolk.

There has been no lack of sport amongst our local anglers, and good "all-round" fishing has been pursued with as much zest as if it were the height of the season. Since the Yare has got back again into its purified state, some splendid takes of bream and roach have been obtained from Thorpe, and from ten to twenty pike per week have been landed from the Whitlingham Dyke. This is at it should be, for those sportsman who have not the time to spare find this a great boon to be able to leave Norwich and be quite on to the fishing ground in something less than about half an hour. At Brundall, too, roach are feeding well, and one angler, a most inveterate "roach-fisher," succeeded in landing one hundred and eighty good-sized fish in about four hours; one thing, no doubt, being in his favour, that of having used some gentles which had been preserved since last summer. But the greatest excitement amongst the Norwich piscators have been the splendid exhibits of pike during the season, and I think I may venture to say that the members of the E. A. P. S. have carried off the palm in this respect. Many have been the grand shows which it has been my pleasure to witness in the club house of this society. A few of which, and more especially those which have come under my especial notice, I will enumerate;—1st, Messrs. Palmer Bros. and E. H. Holly, Esq, from Bawburgh, fifteen fish, weight 128 lb.; 2nd, the same gentlemen from the same place, twelve fish, weight 84 lb.; 3rd, same gentlemen, same place, nine fish, weight 54 lb.; 4th, same gentlemen and same place, four fish, weight about 21 lb. This is private water, and the above-named gentlemen were allowed the liberty to fish through the kindness of the agent of the estate. From Bowthorpe, on the same stream, through the permission of Geo. Rinder, Esq., Messrs. A. Palmer and M. Cullington in one day landed six fish, weight 38 lb. From Upland Broad, another splendid piece of water of about 20 acres, Messrs. Palmer Bros., Holley, Hicks, Cullington and Pepper succeeded in taking in three days fifty-five fish, the aggregate weight of the three days' take being 282 lb., the largest fish going 18 lb. The next noticeable event being the pike contest of the East Anglian Piscatorial Society, which took place on Horeton Broad on Thursday last, when nine members entered for the match. The day was beautifully fine; and when the members returned at night the result was as follows:—1st boat, Messrs. A. Palmer and Pepper, fourteen fish; 2nd boat, Messrs. R. Palmer and R. Otty, nine fish; 3rd boat, Mr. J. J. Rice (who fished alone), three fish; 4th boat, Messrs. Cullington and Tillett, none; 5th boat, Messrs. Hook and Howard, none. The entire weight being about 9 stone 6 lb., no one fish of any particular weight being taken throughout the day, the largest, scaling 7 lb., falling to Mr. R. Palmer. The contest was for a friendly supper, which took place on Wednesday evening last at the club-house, the affair throughout being an entire success. Minor other takes have also been exhibited, and one and all have succeeded in reflecting great credit on the society. If secretaries of other societies could prevail upon their members to exhibit their catches at their respective clubs they would find it would give a greater stimulus to the cause.—ANGLER.

Ouse (Littleport).

We have had no fishing in the Ouse since my last report worth mentioning, as the water has been too thick for roaching, and though I have heard of some good pike having been taken I have seen none, with the exception of a nice bag each Messrs. Titterton and Howard of Ely had on Tuesday. But at the mouth of the river Lark, where the clear water from that river meets the thick water of the Ouse, the roach have gathered in great numbers, and as they have taken very kindly to the gentle some splendid sport has been had there. Unfortunately, but few anglers have been able to enjoy it, as there are only about three swims fishable. A gentleman from Newmarket started the fishing there with a 17 lb. bag of roach, which he followed up two days later with one of 20 lb. Major Ferris, of Ely, getting a basket of about 19 lb. same day. Mr. J. Goaten, Newmarket, fishing with two friends got, in about six hours, a splendid take of roach going 80 lb. the lot. Messrs. S. Allpress and Lavergne, Ely, had 56 lb. roach; Mr. Allpress also taking three pike live baiting, going 17 lb. the three. Mr. George Bassingbourne had a nice show of 8½ lb, largest 1 lb., in two hours. Mr. Andrew Antony, London, finished up yesterday with a bag of 20 lb. good roach and dace; the only takes in the Ouse worth naming were by Messrs. A. Lemaire and Cooper, Newmarket, of 5 lb. and 4½ lb. roach.—CHARLES SOUTH.

Suir (Clonmel).

We have a heavy flood at present, and the rain still continues so that the rods will have some day's rest; even the cots below Clonmel cannot fish, river so high. There was very good sport on the upper waters last week; in fact, since the season opened each rod has enjoyed its own share. At Rochestown Miss Wise succeeded in landing a fine salmon weighing 18 lb.; Dr. Donaldson, at Spring-mount, got nine fish in two days, the largest weighing 21 lb.; Colonel Mangles got two fish, 14 lb. and 16 lb.; Captain the Hon. Miles Stapleton, one fish of 10 lb.; John O'Keeffe, one fish; Mr. Stevenson, at Kilcommon demesne, landed a fine salmon weighing 22½ lb. The professional fishermen have had good fishing during the week, Patrick Moloney, Michael Moloney, and John Moloney killed fourteen, weighing respectively 36 lb., 24 lb., 14 lb., 10 lb., 8 lb., 28 lb., 16 lb., 12 lb., 11 lb., 28 lb., 21 lb., 28 lb. 13 lb., 14 lb. Dr. Campbell heads the list, killing since the season opened 268 lb. weight of salmon. The cot-men only got twenty during the week. The boys about Clonmel are killing numbers of trout with worms, but they are still in poor condition; however, the trout on the streams seem to be in very fair condition.—DORA.

Taw, &c. (N. Devon).

Water has risen since last report; Taw has been flooded. Some good fishing to be had every day for some time. Wind rather high. I have heard of many good dishes since last week. Trout not yet in good condition. Mr. Connop caught in the Mole his basket full; Mr. Payne took 3 dozen on the Yeo; Mr. Harding 20 in the Bray; Mr. Tarr killed some good fish on the Yeo; a stream at Braunton a few days' good sport; and a gent took 20 fish in the Bray.—Rusty Game.

Thames (Goring).

Water now very thick and high; too thick for jack and chub. Roach-fishing is all over for this season now. Prospects for this week look very bad. It will take a week, if it is very fine weather, to get the water in good order for all-round fishing. Nothing much doing. Have been taking some good roach. Have had two days' fishing since my last report; best day, six dozen of very good roach and two jack.—J. Rush.

Thames (Halliford).

The river is now very high, and very few places where you can get any chance of fishing, and that is only by ledgering. I have been out twice this week. First day, Monday, February 27, Mr. Johnson, fishing with me, tried the jack up till three o'clock, and never touched a fish; then went ledgering for barbel, and caught twelve in about one hour and a half. Second day, Wednesday, March 1, Mr. Nickinson, fishing with me in the afternoon, caught three barbel and two roach, ledgering.—George Rosewell.

Thames (Kingston).

There has been little fishing done here. The dace have gone ahead. I saw on Friday last three trout feed, one a good fish of 9 lb., the other two about 2 or 3 lb. each. Since then the water has come so thick that I have not seen them. I am glad the dace have gone up, they were all fine fish. I hope we shall have a good season.—J. Johnson.

Thames (Richmond).

The water is now very thick and is running down the river at a great pace, and the heavy rain that we had in the night and this afternoon will nearly, if not quite, put a stop to the fishing here for this season, as it will take quite a week to get in anything like order again without anything to interfere with it. There was a good lot of anglers down here up till Sunday last, but since then the river has been quite out of order altogether. I hear from Teddington that there is a large body of dace at the weir again. Any one that has never seen the dace at the weir should, if it is a fine day, go and see them, for you never believe it unless you see for yourself..—John Bushnell.

P.S.—This would be a good opportunity for "Creel."

Thames (Walton).

Feb. 26, Mr. Lavey, from bank, one jack 13½ lb., taken from Sale, a nice fish; Feb. 27, Mr. Bryning from punt one bream 4 lb., and lost a larger one. Feb. 28, Mr. Mackriell, with G. Hone, two roach, ¾ lb. each. Wind S.W., very high and squally, rising to a gale; very rough, with heavy showers, continuous last night. Water rising all the week and over the meadows, every appearance of being higher. Prospects very far from good. Nothing to be done until water falls.—Henry Wood.

Thames (Windsor).

Water, owing to heavy rains, rising rapidly; is now over the low-lying land, and out of condition for anything but worm-fishing.—B. R. Bambridge.

Trent (Newark).

Heavy and continued rain most of the week has caused the Trent to rise rapidly, and the water is now (Thursday evening) all over the meadows and far away; there is every appearance of a very heavy flood; will take several days to get it in anything like order if it begins to go down now and everything goes on satisfactorily. A personal inspection of the water just now tells me that it is still rising, so I am afraid it is goodbye to sport for the remainder of this season. I heard of three very nice jack being taken down at Collingham last Monday, 17 lb., 8 lb., and 7 lb.; rather too bad to take them so late in the season though. A friend and I had a day's chubbing last Friday; best fish 4 lb., pith as bait, with brains as the enticing power. Sport on the whole has not been very good. A fish was weighed in at the club this week, which was pronounced to be a dace, but somehow or other I am of opinion that it is not one (there has been two or three of the same sort weighed-in during the last year; they were all caught in the Witham); it had the bright silvery scales of the dace, but it differed from the dace in several particulars, it was shorter and deeper, had a very large bold black eye, and had only forty-six scales on its lateral line, whereas a dace has fifty-two; 8 or 9 inches its extreme length; it was nearly as deep as a white bream of the same length, and its weight was, I believe, between 9 and 10 oz.; its pectoral, anal, and ventral fins were tinged a slight orange red. I remember once reading a description of a dace and a graining, from the pen of J. H. Keene, and, as far as my memory serves, I am rather inclined to believe that these odd, peculiar dace from the Witham are graining. I have written to Mr. Keene on the subject, but if any naturalist can recognise this fish from my description, and will kindly answer in the Gazette, I shall be greatly obliged.—The Trent Otter.

Trent (Nottingham).

Angling this week has been out of the question. The river is in flood, and on Thursday the water was still rising, with no immediate prospect of abatement. Most of the pike fishermen have now laid aside their rods for the season, which, it is to be hoped, has been a successful one.—The Man at the Clubs.

Tweed and Teviot.

Since our report of these Scottish rivers, the anglers living on the banks thereof have had their hearts gladdened by a four-and-a-half feet flood, which occurred on Sunday, heavy rain having fallen in the west during the two previous days, and then bringing down both rivers. Harking back, however, to the Thursday previous, Mr. James Kerss killed one clean salmon on the Hendersyde water on that day, and another the day following, but got nothing on Saturday, the river slightly rising as the day advanced. No clean fish were got on either the Floors Castle, Ednam House, Makerstoun, or Sprouston waters, and the same report reaches us from the Melrose, Mertoun, and Pavilion waters, as well as that of Rutherford, while on the Birgham water no fishing has yet been done. On Monday, the 27th ult., the rivers were too heavy for angling purposes; but on Tuesday the various "casts" were occupied, but little sport was got, although a good run of fish had teken place during the flood above mentioned. The only successful angler was Mr. J. Kerss, who, on the Hendersyde water, again got a beauty of nearly 12 lb. On the Innerleithen waters last week a few clean salmon were got, but the takes in the Melrose district were nil. Angling for salmon on the Teviot in this district has not yet commenced, but a good number of fish have been seen disporting on the various casts. On Wednesday the weather atmospherically was dead against angling—raining in torrents nearly all the day, accompanied by a bitterly cold wind from the east. Thursday was a better day for the partisans of the gentle art, and a few here out trying their luck, but with little success. Trout fishers lately have had very fair sport, but these fish are still in a backward condition, being very soft and colourless, with little or no flavour; and it is surely high time that something was done in the direction of having an annual close time for this species, instead of allowing them to be killed at all periods of the year, and more especially when in a state such as is given above. Since the opening of the net fishings very good takes have been got, and lessees are in much better spirits than they have been for a few years back. The report of last week's netting in the Coldstream district of the Tweed is as follows:—Little Haugh and Damford, over 30 salmon and a few trout; Twizel Boat House, nearly the same; Lennel Haugh and Tweedmill, 40 salmon and 20 trout; English water, 25 salmon and a few trout; Great Haugh, over 30 salmon and trout. The disease is still appearing amongst clean fish, which affects the market value of them to a great extent. Kelts are scarce and in very poor condition, and a large number of dead and dying fish (diseased and mostly unspawned) are still to be seen. The river came down in flood on Sunday, which had the effect of carrying salmon seaward, and also of allowing a fresh run of clean fish up the river, which will be the means of stocking the pools, and thus improving the fishing for the week. Owing to the heaviness of the river, little or no netting took place during the early part of the week, but operations were to commence yesterday (Wednesday anticipated). As I close the report (Thursday) the weather has again settled down, with the glass on the upward move; but the wind is still cold and raw, being the east.

Maxwheel (Kelso).

Wye and Derwent (Derbyshire).

A very great quantity of heavy rain has fallen on most days all the week, both up in the Peak and also in the woodlands, which has caused both the above rivers to have continued floods on them, which has quite put a stop to angling of any description for a few days; the only parties that have killed fish during the last week have been the cleach-net fraternity, who, I heard, have done well in the Derwent at various places, killing trout, grayling and coarse fish. These floods will cause the greater quantity of trout to leave the brooks and come into the river again, for as the water drops the fish will work down into the main channel again, where they will remain till spawning time if not captured. There will be no chance of fishing on either the Wye or Derwent before the middle of next week, as both rivers are now very high and muddy.—George James Eaton.

SOUTH OF IRELAND.

On Thursday and Friday last there was exceptional sport with the rod. The water, as I stated in my last report, was in supreme condition. Sir Augustus Warren and party landed two on Thursday and two on Friday. Mr. Bowen took four on both days, Mr. Dale two on Thursday, and Sir Oriel Forster two. On Friday evening a desirable change set in, the wind went round to the south, and a steady downpour prevailed during the night. The rain continued on Saturday, and a red flood, bank high, was the result. On Thursday there was a heavy run of fish over the weirs, and the takes in the nets at Blackrock and Tivoli were large. A huge salmon was landed in one of the nets on Thursday morning at Blackrock. It was the finest specimen of the salmon species I ever saw in Cork. It weighed 32 lb., and was nearly four feet long, with corresponding proportions round the girth. An important meeting of the fishery conservators at Cork was held on Saturday last. Sir George Colthurst occupied the chair, and there were present Sir Augustus Warren, Sir Oriel Forster, Mr. Geo. Haynes, Mr. Henry Dale, and Mr. Robert Dunscombe. The report of the inspector showed that twenty-three illegal nets had been seized in the tidal way since the opening of the season on the 1st of February. The preservation of the river goes on satisfactorily, and illegal fishing in the tidal waters has been very much abated. An important subject affecting the future preservation of the river was discussed. The expenditure has greatly increased of late, and the ordinary resources of the Board have failed in producing a sufficient revenue to meet the demands of the river. It has been rendered necessary to make continual "whips" in order to meet extra expenses incurred for sudden emergencies. The "calls" have invariably been responded to by a few generous proprietors, but many of them—some, indeed, who receive a respectable rent for their fishing, and who derive all the advantages of increased preservation—have failed to contribute a penny to the funds. Mr. Dale said he had been in correspondence with Major Hayes, Inspector of Fisheries, with the view of having the fisheries on the Lea valued for the purpose of contributing a tax towards the expenses of preservation. He was informed by Major Hayes that the Act of Parliament gave them power to tax fisheries for the purpose of preservation, and enabled the secretary to levy the rate in the courts of summary jurisdiction. The principle of Mr. Dale's argument was generally admitted, and a communication was ordered to be addressed to Major Hayes for the purpose of ascertaining further particulars in the matter, particularly as to the liability of the fisheries so taxed to the ordinary poor and other rates. An extraordinary machine for the capture of salmon; which was taken the previous day in the river, was exhibited. It consisted of a piece of drift net fastened on a long bent pole. It was found stuck in a stream, with a beautiful spring salmon trying to wriggle itself out of its meshes. The machine is one of the many contrivances used by poachers for the destruction of fish. Twelve months ago a similar engine was found fastened at the mouth of a fish pass, so that any fish that ran the gap was instantly caught in the net. Along the Macroom railway, which starts a train at nine in the morning, returning at seven in the evening, there are several trout streams, upon which good fishing is to be had. Several of the salmon fishings on the Lee are also commanded by this line. In a few years an extension of the Macroom line to Kenmare will bring the angler into easy communication with some of the best rivers along the coast of Kerry. There are streams flowing into Kenmare bay, and into the tributaries of the Kenmare river, that are alive with trout and salmon. Here the keen angler, with his beautiful and deadly appliances, seldom appears. Here the primitive rod and tackle of the native is the only thing used for catching fish, and when the direct line between Cork and Kenmare, now about to be begun under favourable auspices, has been finished, the south of Ireland will form the most attractive part of Europe, perhaps, for the true Waltonian. By the way, a letter appeared in a contemporary the week before last in reference to the difficulties of fishing in this district. The letter was teeming with absurdities and misrepresentations. On one or two fisheries the tenants have insisted upon the right of fishing upon their own land. At first a little trouble was threatened, and menaces were used to the effect that the tenants would fish, in spite of the lessee of the fishing. They have carried out their word; and, beyond little occasional conflicts between the lessee and the aforesaid tenants, the contemplated attacks, the conspiracy to throw him into the river, the assembling of crowds, and the grand denouement of the police appearing on the scene, are pure fiction, and arose only in the imagination of over-timorous people. An angler from any part of the world may fish in the river, and may stroll over the country with perfect safety and freedom from molestation.

SCOTCH NOTES.

(From the *Scotsman*.)

Loch Tay.—Since the opening the result of the fishing in the middle and eastern stations of the loch has been extremely disappointing to anglers. A change of weather set in on Saturday, and it is to be hoped that the worst has been passed, and that better sport will now be enjoyed. Anglers state that there appear to be plenty of fish in the loch. The same holds good of the river. On the Killin Hotel water on Saturday, Colonel Cameron, Inverailork, caught one salmon of 20 lb.. and Major Thompson, London, one of 20 lb. On the Ardeonaig Hotel water on Friday, Mr. Wardle, Leeds, one fish of 17 lb., and Mr. Fielden, Leeds, one of 16 lb. On the Ben Lawers Hotel water, Colonel Hercy, one of 18 lb. The Taymouth Castle party tried the net on the Auchmore reserved water on Friday, and succeeded in landing 6 salmon, 3 of which were badly affected with the fungoid disease, 2 kelts, and only 1 clean fish. Capt. J. E. H. Heathcote's keeper killed a splendid newly run salmon of 24 lb. on the Lyon Garth water. Sir Donald Currie's keeper caught a fine salmon of 18 lb.

The Tay.—On Saturday Mr. T. G. Dundas, of Carron Hall, Larbert, fished the Murthly water, leased by Mr. Robertson, Athole Arms Hotel, Dunkeld, and landed a fine clean salmon weighing 23 lb. Mr. Kincaid, on the Stobhall water, caught one fine fresh run salmon of 17 lb.

The Dee (Banchory).—Since the salmon fishing opened in this district poor sport has been obtained, except on the Cairnton water, leased by Viscount Arthunot, where during the past two weeks 22 salmon have been caught, varying in weight from 8½ lb. to 19 lb. Mr. Thomas Barker killed a fish of 9 lb. on Saturday on the Woodend water, and Mr. Simpson another on the Blackhall water; and on the Imery water, General Oliphant secured a good fish.

The Tummel.—On Fisher's Hotel water, Pitlochry, on Saturday, Mr. Adam Conacher caught a clean run salmon of 20¼ lb. It took fully an hour to land, as the tackle used was a single gut on a trouting rod.

Large Burbot and Roach.—A fine specimen burbot was caught recently near Bardney. Length, 26 inches; girth, 12 inches; weight, 4½ lb. Also, at the same place, a roach of 2 lb. 4½ oz. Length, 16½ inches; girth, 12½ inches. Both were taken by Mr. W. Foote, manager of the Bardney Liberal Club. These fine specimens have been forwarded to Mr. W. Barber, 19, Sincil Street, Lincoln, to be preserved.

Conviction for Taking Trout out of Season. — On Tuesday last, before a full bench of magistrates at Ware, Arthur Pollard was summoned by the River Lea Angling Preservation Society for taking from the river Lea at Ware a trout and not returning the same to the river, in contravention of the fishery bye-laws. Richard Ghurney, fishery bailiff, prosecuted on behalf of the Central Committee. The defendant pleaded guilty, and was fined 10s. and costs, amounting in all to £1 17s.

Mr. E. Birkbeck, M.P., must be careful, or he will share the fate of most men who work too hard. We are not among the least of his admirers, and therefore it is that we wish he would be less prodigal of his labours. He should remember it is not the distance travelled, but the pace that kills, and no one will question that the junior member for North Norfolk is trying to go too fast. We know his desire is to be first and foremost in every good work, not only in the interest of his own constituents, but in behalf of the whole county with which he is so proudly connected; while in the affairs of the country generally he is at one with the national and patriotic Party, and ever ready to sacrifice his personal convenience to support Church, Queen and Country Having spoken generally of Mr. Birkbeck, we may just refer to his presence at the great angling dinner of the year, which was held in London last week, and at which he presided. The Piscatorial Society is getting on towards the half-century of its existence, and no wonder need be felt at the interest taken in its welfare. About 200 sat down to the banquet, and among the guests were some notable personages. References were made in the speeches to the increased interest taken in the supply of fish as a food question, to the loss angling and art had sustained by the death of Mr. Rolfe, whose works figured so conspicuously at the Norwich Exhibition, and to the fact that Mr. Birkbeck had promised to preside at a meeting of anglers to be held shortly at the Society of Arts in London. Mr. A. G. Jardine, whose monster pike were the admired of all and the envy of the few at the exhibition referred to, was full of praise of the Press, and especially of the Fishing Gazette, whose editor (Mr. R. B. Marston) has done so much to promote fish supply and the art of angling. Some mention was made of the selfishness of some of the riparian owners on the Thames who assert their exclusive rights over the banks. Mr. Birkbeck thought anglers should make a strong stand for a free Thames, and then went on to describe what he himself had done. He said in this connection, where this very matter of angling rights, on the river Bure, in Norfolk, had come before him, and when he had purchased title-deeds, giving him unquestionably the exclusive right to fish, he had said to himself that it would not be fair to preserve it merely for himself and his friends, and he had unreservedly thrown it open to all fair anglers. That is just what might have been expected of him, for it is this unselfish spirit which has endeared him to all who know him, and which prevents him saying "no" to any demand made upon him. We are glad to say that the Scotch Fisheries Exhibition is progressing favourably, and that every help will be given by the promoters of the latter to the international exhibition announced to be held in London next year.—*Norwich Argus*.

ANSWERS TO CORRESPONDENTS.

Juvenile Piscators.—We should advise you to go to Lowestoft. You can get very comfortable lodgings there in any of the streets away from the sea and at modest charges. At Lowestoft you are only three minutes by rail from Oulton Broad, which contains all kinds of coarse fish; make inquiries at all the inns and you will find some charge much more than others for a boat for the day. 1s. or 1s. 6d. is the most you should pay. Take perch and roach tackle. You will soon learn where else to go. Brundall, Buckenham and Cantley are within easy reach by rail and at either place you will be very comfortable at the inn close to the water. The fishing is first-rate, better than in Oulton Broad. Stay at Coldham Hall Inn, Brundall, near Norwich, for a day or two and if you will write again before you go, we will give you further information. At Lowestoft, you, of course, get the benefit of sea-air, sea-bathing, and sea-fishing as well.—Ed.

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

CEMENT FOR AQUARIUM.

Sir,—I should be much obliged if you will inform me if putty is injurious to fish, and, if so, what cement I should use in making an aquarium.—I am, &c., Yorkshireman.

[In 1879, we published information on this point. Here is one recipe: Take ½ gill gold-size, 2 gills red lead, 1½ gill litharge, and sufficient silver sand for a thick paste. This sets in about two days. For a fresh or salt water aquarium, take ½ gill powdered resin, 1 gill dry white sand, 1 gill litharge, 1 gill plaster of Paris; sift; and for use mix with boiled linseed oil to which a little driers has been added. Mix fifteen hours before using, allow two or three hours to dry.

G. Y. stated, July 4, 1879, that genuine white lead, made stiff with red lead, makes a watertight cement, but must be allowed to dry at least a week.

On July 11, 1879, we also published a useful article on "How to Make and Stock an Aquarium.—Ed.]

MISSING ROD AND TACKLE.

Sir,—On Sunday last, while waiting at West Drayton Station, I left my rod and tackle, also four fish in bag, and though away from it only one or two minutes some person took it away. If it was a mistake on their part I shall be glad to have it returned to the Little Independent club-house, and will pay all expenses up to 15s. I may mention that whoever had it did not leave another in its place. The rod has eight joints, and a monogram, F.S., inlaid in the butt. Flax haversack with gut lines and hooks. I trust if brother anglers come across the rod they will let me know of it.—I am, &c.,

35, Crowndale Road, Oakley Square. Fred Spencer.

"TAFT."

Sir,—Very pleased with explanations of derivations, but "taft" is almost the only term used in Notts, Leicester and Lincolnshire, and means the bottom tackle complete, *i.e.*, the hook, shot and gut. If I were going to write to Dale, of Nottingham, I should say, send me three roach tafts, four bream tafts, five plumbing tafts, &c.—I am, &c.,

Mark Antony.

Sir,—In reply to "Mark Antony." In the Leicestershire and Nottingham dialect—to taft: verb, to bind on. A taft: subs., twine, thread, &c., used for binding on hooks, &c.

I do not know from whence the word is derived, but it is very probable it is Danish. The Danes, from their long occupation of Leicestershire, left many traces of their language behind them. The word is in common use at the present day among the Soar and Trent fishermen. It is used by Bailey in his "Angler's Instructor," page 109.—I am, &c., E. Gosling.

Budleigh Salterton, Feb. 28, 1882.

Sir,—I beg to inform your correspondent "Mark Antony" that the word "taft," of which he asks the meaning is, as you correctly supposed, a strictly local term. In Lincolnshire and other Midland counties the word is common. What its derivation is I don't know; but *to taft* means to bind together. A hook is said to be tafted on with silk. I have never heard the word used in any other manner than this; but in this application it is common enough in the counties I mention—Leicestershire and Nottingham.—I am, &c.,

18, York Road, Great Yarmouth, Feb. 28. Cyprinus.

STOVE FOR CAMPING-OUT TRIP.

Sir,—I shall be greatly obliged if any of your numerous readers can furnish me with the following information:—The best stove for cooking purposes during a boating and camping-out trip; also the cost and where to get one.—I am, &c., T. H. C.

[The "Rob Roy" Cuisine, invented by Mr. John McGregor, and sold by Hepburn and Cox, of 93, Chancery Lane, is extremely convenient.—J. H. C. will find an illustrated description of it in "The Voyage Alone in the Yawl Rob Roy," published by Sampson Low, Marston and Co.—Ed.]

HARDY'S WINCH-FITTING.

SIR,—In answer to "Constant Reader's" query as to where to obtain Hardy's new winch-fitting: he can obtain them any time, from yours, &c.,
W. H. HARDY,
149, Green Lane, Sheffield. Fishing-tackle maker.

[Mr. C. Shaw, of 6, Fitzwilliam Street, Sheffield, has also written to say that he keeps them in stock.—ED.]

FINE TAKE OF PIKE.

SIR,—Having taken in your paper for some time, and knowing your love of sport, I send you the following:—Three friends of mine (S. Simpson, J. Fryer, A. W. Ramsey) and myself have just had four days' pike fishing in Hampshire, and I think you will say the sport was grand, as in the four days we killed thirty-eight pike, weighing 201 lb. These were, with one exception, all taken spinning, small natural dace as bait. Mr. Ramsey and myself had the pleasure of taking the two largest fish—13 lb. each. Following are the weights. February 21, seventeen pike; total weight, 75 lb.—best fish 6 lb. February 22, eight pike; total weight, 40 lb—best fish 7 lb. February 23, seven pike; total weight, 47 lb.—best fish 9, 10, and 13 lb. February 24, six pike; total weight, 39 lb.—best fish 10 and 13 lb.—I am, &c.,
KEPPEL H. GIFFORD.

2, Hudson's Buildings, Victoria, S.W.
Feb. 22.

REARING TROUT IN SMALL PONDS.

SIR,—Possibly some of your numerous readers may be interested in the rearing of trout in small pieces of water; for the benefit of those who have such places, and may have thought that only the commoner kinds of fish would thrive in them, I wish to give my experience for the past few months. I have a small reservoir forty yards square, cut out of a stiff clay bank, with an inflow from drainage pipes at one end and an outflow at the other; when perfectly full it is fifteen feet deep, but this is very seldom the case; the inflow of water is also uncertain, and during the summer months very little, if any, comes into it, and consequently it gradually decreases during the summer, and rises again in winter. The place had never had any fish in it until I thought of trying the experiment of rearing trout in it, and last May procured 2000 of Mr. Chas. C. Capel's ordinary Cray trout fry from his fishery in Kent; they had journey of something like 200 miles to perform between Bexley and Llandulas stations, with two or three changes on the way, but I received them without a single death. Little mites of things they were, not looking more than half-an-inch long. On their arrival they were immediately placed in the pool, and for a few days afterwards were seen all round the sides, when they suddenly disappeared, and for quite two months not one was to be seen.

I had quite given them up as a total failure, believing that something had eaten them, when, all at once, they came to the surface again, and during fine evenings the water was perfectly alive with them, jumping and playing about; when the winter came on, they were not seen very much, only now and then a rise could be detected. Last week I had the curiosity to try and find out to what size they had grown during the nine months they had been in, so took my rod, with the finest cast and small woodcock fly, and whipped the pool a little; it was not long before I hooked my fish, which, on examination, gave the following results, viz.:—Length, 6½ inches; girth, 3¼ inches; and weighed 1½ oz. I think this is very encouraging for such a short existence, and for not the most favourable of places where trout are supposed to thrive. I think a good deal depends upon the breed of the fish; in this district, for instance, in all the rivers and streams the last five years' hatchings are not above half the size of the above, with always a good supply of water and food.

Those of your readers who have small pieces of water, but always full, or a tiny stream running into them during the whole year round, I am confident can in a very short time rear some splendid fish and enjoy some sport in their capture if they will but try.—I am, &c.,
GEORGE T. RAYNES.

Pen-y-bryn, Llysfaen, near Abergele, Feb. 25.

TROUT-FISHING WANTED NEAR LIVERPOOL.

SIR,—If G. L. will send his address to the undersigned, he may obtain the information he seeks.—I am, &c.,
G. P.

196, Vine Street, Liverpool.

[G. P. might well stand for "great prudence."—ED.]

THE RIVER ARUN.

SIR,—Wishing to do some fishing in the River Arun during the coming season, could you or some brother angler kindly inform me how to obtain the cheap privilege tickets issued to Amberley, &c., by the South Coast Railway Company. Any information will be thankfully received.—I am, &c.,
H. T. R. ARUNDALE.

George Street, Richmond, Surrey, Feb. 28.

[Join the Richmond Piscatorial Society; it is a first-class club, and being in connection with the London Angling Associations, it will entitle you to get privilege tickets on the railways.—ED.]

THE YARMOUTH FISH-WHARF—MASTER'S OPINION.

SIR,—The Prince has done it and no mistake, and 500,000 tons of fish is a long way ahead. There are not so many fish caught nowadays as there were, and others think so too. A fish merchant was talking with me yesterday; he says there's a fair lot got, but they make no money. I have lost £3000 in trawling, and I am now getting out of it before too late. Many are of the same opinion; they hope much from the new fish-market, but that must take time to establish. I can well recollect old Smithfield and the cruel sights one had to witness in the streets; also Newgate and Leadenhall markets. There is no doubt the Prince will do much good in the long run by taking it up, and it will be impossible to keep one wholesale fish market for 5,000,000 people. You might as well do away with the underground line.
A CONSTANT READER.

PERCH.

SIR,—Perch are, like the soles, getting scarcer than ever; the fishermen about here roar about that big chap only 10¼ lb.! The largest ever taken in the Thames was just 6 lb. less, *i.e.*, only 4¼ lb. I wonder that Mr. Cooper has never replied, as it was stated he stuffed the fish; that would settle the matter at once, and, for his own sake, I would do it. I think he told me a 4½ lb. (my perch) was the largest fish he has done. We do not mind the Londoners getting a big one, but like them to remember the collecting boxes and be truthful about the weight of their capture. The Brundall line to Yarmouth will be a rare accommodation—just fancy, only half an hour to Norwich!—and they are getting on well with it, so as to open about Midsummer's Day.
ESOX LUCIUS.

["Esox" can't swallow that big perch; but, really no one believes it to be other than a sea perch.—ED.]

WEST CENTRAL ASSOCIATION OF LONDON AND PROVINCIAL ANGLING CLUBS.

SIR,—I had no idea, when replying to "Roach's" communication in a previous issue of your paper, that I should so suddenly rouse the ire of my esteemed friend, Mr. Hoole; but I fancy that if he will kindly read my letter again, he will find I made no accusations, and only desired to point out to the rulers of the association the desirability of making certain alterations which, in my humble opinion, would have the effect of attracting members from the better class of clubs to its meetings. It is, of course, a matter of opinion, and certainly one for discussion in your columns, and Mr. Hoole is kind enough to suggest that he will guarantee my getting to Richmond about midnight every time I attend his meetings. Unfortunately, I do not reside at Richmond, and a dreary walk of some distance would not altogether compensate me. But, while wishing to avoid discussing personal matters, I am surprised at Mr. Hoole so completely missing the point of my letter. My complaint was "that I was selected as one of a deputation to wait upon the Third Association for a certain purpose," and I said truly that from that hour to this I had received no notice of the meeting of such deputation; but Mr. Hoole candidly admits that he had no note of my being so appointed, and consequently did not send me any notice of the day and hour of meeting; but, strange to say, in a circular sent to my secretary on the 8th inst., it states at the top "that a deputation consisting of Messrs. Geen, Bonvoisin, Hoole, Marston, Crumplen and Clench, were selected," &c. Now, I should like to ask Mr. Hoole how it was that he had no note of my appointment? and yet he must have suddenly remembered it when he was drawing up the circular which he sent to the different clubs. The inconsistent statement which he makes, comes forcibly from one who seeks to convict me of "having little knowledge and great zeal." I should like to ask the association how far "my epistle is an injudicious one," and how much reliance can be placed upon Mr. Hoole's reply? But, sir, he ventures still further, and poses that I stated "that the resolution was carried in spite of the undisguised opposition of the officials," and, if that is not correct, I never saw "co-operation" manifested in such a peculiar manner before. The deputation was chosen, but ignored by some irresponsible person, who no doubt thought it was a stroke of masterly policy to omit myself, and, as I understand, another gentleman. So far, so good—I am quite content; but let not "Roach" bemoan again the absence of representative men from the better class of clubs—or wealthier, as Mr. Hoole prefers to call them—if you are going to treat them in this way. No one admires working men more than I do; but I fancy that they would not mind giving up some of their time to meet a little earlier once a month, especially if it would have the effect of making the association more representative than it is now. I may or may not be desirous of becoming a reformer, but I am quite convinced that something more is required to meet the wants of the anglers of London. To consolidate the different bodies dealing with the Thames especially (and in my letter I omitted the Lea and the East Association) is to simply mean devoting the energies of anglers to one common object, and having the work done efficiently, and the work of preservation and propagation would be carried on in a grand manner, and the London anglers would be enabled to point to their organisation as a model one next year. We shall have in London the International Fisheries Exhibition, and what have we to show the intelligent foreigner as to our system of protecting the interests of anglers? Associations not working in unison, but with separate organisations, all trying to do the same work; double sets of officers, five secretaries doing the work of one, all dealing with the river Thames; the funds of anglers wasted in the perpetuation of a system where the minimum of good is obtained at a maximum of expenditure. Surely at least some effort should be made to stop the waste of time, energy and money, and if the governing spirits of both associations could unite their minor differences, all the anglers of London would benefit by their concord.—Yours, &c.,
FRED. C. CLENCH.

ROACH-FISHING AT BLUNHAM.

SIR,—Sitting down here, "taking my ease in mine inn," I think it not uninteresting to give your readers an account of one day's roach fishing. I begin by saying that I am a tyro, a mere bungler in the patient but exalted art, and indeed aim only at the fly. Nevertheless, I wish I were a roach-fisher if good baskets were the criterion; and if good baskets are, here is the place to get them. I am not of an envious turn of mind, but I should like to get a lot like this in one day—say yesterday's take by one rod. Total, 23 lb; largest roach, 2 lb.; several (six or eight), $1\frac{1}{4}$ lb. to $1\frac{3}{4}$ lb.; half-pounders average, or nearly so.

Read this, my fishing friends of the Thames—ye of the punts—let your eyes goggle and let the tears trickle down to the tips of your innocent and envious noses. Gird up your loins, put on waterproof and sackcloth, bait your swims, recruit your energies from inexhaustible stone bottles, spare not your pockets to the fishermen, put your hands to the plough and look not back; match it if you can, and pronounce yourselves to be fishermen.

I am told in a "pig's whisper" that the captor, who is one "of ours," receives from some other association, of which he is the light and ornament, a flitch of bacon for the champion roach—the whale of his domestic circle—and the take deserves it. However, there is no gammon about the fish, whatever there may be about the pork, as I sat a neophyte at the feet of that Gamaliel of anglers and saw them taken. He, of roach-fishers, is, I should say, *facile princeps*.

The angler is Mr. W. W. Thompson, whose name in your columns I desire to immortalise. He is not only a good fisherman but he is glad to assist with his fish lore others of the rod. One big roach does not make a basket, as one swallow does not make a summer; but when you scrape acquaintance with a two-pounder and his kith and kin even to the third and fourth generation, and all his sisters and cousins and aunts at the same address, in due time you may expect the aged grandfather to accept invitation.

Blunham is not a lively place, and you may leave your lardy-dardy clothes at home; but if you like a quiet country and good fishing you are "about on the spot." I have remarked incidentally that fishermen eat fish, talk fish, and think fish—possibly they dream fish—but when they relax from the serious business of the day, they take kindly to good dinners and are particularly powerful at breakfast. Now, here is where you get them, and "Aye, there's the rub," the charges are in an inverse ratio to the cuisine. And then, if a quiet game at whist in the evening is not a too violent distraction, you can have that, too.

However, let us return to the cold-blooded animals, their ways, their numbers, and their proportions. They cannot speak for themselves, having "poor, dumb mouths," so let me be their humble exponent.

The roach having been dealt with, I will say something of his fellow lodger in these waters—the jack, who, I grieve to say, seems to board freely at the expense of his neighbour. "John" has been a little bashful lately, the water in the Ouse having been rather thick and pea-soupy, but one man took back three fish yesterday, and, if the present fair weather continues, a good many more will probably want railway tickets—single express.

Our fisherman here, Buck, has capital live bait, and plenty of it. He is a capable man, and of some muscular development, as a man need have to handle the "grains."

Eel-spearing is not a high style of art, but when the fish were off the other day we took a few hours in the boat.

It is of no use leaving a card on the eel at this time of the year. You must go into the high-ways and bye-ways with a gigantic toasting fork and compel him to come, willy-nilly. They did come in, too, to the number of about forty, but protestingly, the prodding of their backs and sensitive sides being doubtless disagreeable, and there must have been deep mourning in the mud.

One good thing about the fishing here is you can get plenty of roach, and some jack, close to the house. The Ouse, which is getting in fine order, is within a mile, and a man chooses his own ground. A few days ago, before the rain, eight or ten, some heavy fish, were taken in one day by two rods.

I have referred before to the creature comforts, and can only add that I know of no angler's resort, where a man can get better fare and lodgings, or at nearly the same rate, as at Mr. and Mrs. Elliot's, who do everything for the comfort and assistance of the angler. I enclose my card, and call myself, One in the Swim.

The Old Horse Shoes, Blunham, Beds, Feb. 24.

[For the guidance of our roach-fishing readers we may mention that, before they hurry off to fish in the waters described by "One in the Swim," they should ascertain from Mr. Elliot if day tickets are issued or not—we have an impression this fine water has recently gone the way of all good public waters, and has become a private preserve.—Ed.]

BLOOD WORMS FOR FEEDING FRY.

Sir,—Will any of your numerous readers inform me where I can purchase the small red blood worms mentioned by Mr. Buckland in his British Fishes (p. 401), as being sold by Mr. Newman, 32, Thanet Street, Euston Road? I have written to that address several times without success. Any information through your columns, or direct, will oblige greatly.—I am, &c., H. Cummings.

Sutton House, Hawley, Dartford.

OYSTER-CULTURE.

Sir,—Knowing that oyster-culture is a very interesting subject advocated occasionally in your paper, and wishing to destroy the general belief that oysters are almost extinct and beyond the reach of consumers through scarcity and excessive prices, we beg to inform you that we have begun re-stocking our fisheries at Queenboro'. We have imported up to the present:—On the 16th January, 1882, by the steamship "Widgeon," 108 packages, containing about 230,000 oysters; on the 6th February, by the steamship "Gannet," 166 packages, containing 350,000 oysters; on the 13th February, by the steamship "Lapwing," 144 packages, containing about 250,000 oysters; on the 20th February, by the steamship "Gannet," 225 packages, containing about 500,000 oysters; on the 27th February, by the steamship "Lapwing," 378 packages, containing about 740,000 oysters.

These oysters are natives, bred and cultivated in our grounds in the South of France. They arrived here in prime condition, and have been immediately laid in English waters, where they will acquire that fine and delicate flavour so much appreciated by connisseurs.

The two next months (March and April) are the most favourable in the year for importing and bedding oysters, and, if you will allow us, we will duly advise you of our weekly arrivals; they will be on an increasing scale,—We are, &c., H. Saunion and Co.

16, Mark Lane, February 28.

CLUB REPORTS.

ACTON AND EALING ANGLING SOCIETY.

A visit of the No. 1 District of the West Central Association has been made to this society since my last. A pleasant evening was spent by the members and friends. About a dozen clubs were represented. A club match has also been fished in the Grand Junction Canal, the winner of the first prize being Mr. Slater, with 7 lb. $2\frac{3}{4}$ oz. of roach from Harefield; the second prize was won by Mr. Cook, with 1 lb. $14\frac{1}{2}$ oz. roach from same place. The following members have weighed-in since my last report:—Mr. Howell, 21 lb. 2 oz. roach and dace; Mr. Slatter, 17 lb. $11\frac{1}{2}$ oz. roach and dace; Mr. Head, 21 lb. $14\frac{3}{4}$ oz. roach and dace and perch. Messrs. Edbrook, Cook, W. Eydman, and E. Eydman have also weighed-in fish.—Black Bag.

AMICABLE BROTHERS ANGLING SOCIETY.

Mr. Harding had a handsome show of roach and dace, weighing 16 lb. 13 oz., winning Mr. Patrick's prize; Mr. Arnold, roach, 7 lb. 4 oz.; Mr. Patrick, 2 lb. 3 oz.: Mr. Howlett, 1 lb. 7 oz.; Mr. Shury, roach and dace. The next two Sundays will settle who are the winners for a silver watch, given by Mr. Farebrother; value 15s., given by Mr. Mees; value 10s. 6d., given by Mr. Brearley; value 10s. 6d., given by Mr. Clarke; and a bottle jack, given by Mr. Howlett.—T. Worledge.

Feb. 36.

ANCHOR AND HOPE ANGLING SOCIETY.

A roving match will take place on Sunday, the 5th inst., for six prizes, Rye House Bridge to the Fish and Eels.—D. Davis, sec.

March 1.

ANGLERS' BENEVOLENT SOCIETY.

Since my last report I beg to acknowledge the receipt of the following subscriptions: £1 1s. from J. Hughes, Esq., and 10s. 6d. from G. Colls, Esq., with thanks. On Friday last, February 24th, grants were made to three applications for assistance.—R. Ghurney.

March 2.

BRIGHTON ANGLERS' ASSOCIATION

On Monday last the competition was almost a blank, owing to the river being so thick. Mr. Tomkins took first prize, with perch. Several members went, but returned with empty baskets. I wish to correct an error of last week. On looking through the book, I find that Mr. Ash, whom I said was disqualified owing to going out of bounds, was not in the competition, and was only fishing for his own pleasure. Weather very showery.—Groundbait.

March 2.

BRISTOL GOLDEN CARP ANGLING ASSOCIATION.

On Monday last, February 27, our worthy treasurer (Mr. W. G. Leigh) and Mr. F. David were out at Chippenham. Notwithstanding the weather being of a most unfavourable character, they had a splendid show of fish, viz.: three jack weighing about 20 lb., and about the same weight of roach. The latter member has been most successful at jack fishing this year, this making his eighteenth capture in four weeks.—Lewis Wride, sec.

CITY OF LONDON ANGLING SOCIETY.

We had a very poor show of fish on the 26th; the only successful members being—Mr. Mortimer, weighing-in roach, perch and dace, from Chertsey, and winning Mr. Pratt's prize; Mr. Ditz also had roach, and Mr. Lundy a jack, from Tottenham. Mr. Marks's prize will be fished for on March 5.—Cas.

CLAPHAM JUNCTION ANGLING SOCIETY.

Since my last report the only members weighing-in were Messrs. W. Maslin, perch; E. Brewer, perch; E. Wilson, roach and dace; and J. Innes, roach. On Sunday next, March 5, the members fish at Windsor for several prizes, presented by Messrs. E. Wilson, H. Smith, and E. Brewer, from railway bridge to lock in Thames only. Weighing in at club house not later than ten p.m. Members to start by first train in the morning.—E. Wilson, sec.

Feb. 28.

GREAT NORTHERN BROTHERS' ANGLING SOCIETY.

Messrs. J. K. and J. Fitch had a handsome show of roach on Thursday, a considerable number of fish weighing nearly 1 lb. each. Sunday, February 26, we had a very fine show of fish, nearly all roach. Messrs. Theobald, W. Parkin, J. K. Fitch, and J. Fitch had a fine show of roach from down the Great Eastern line. Mr. Theobald having 13 lb. 9 oz.; W. Parkin, 7 lb. 2 oz.; J. K. Fitch, 2 lb. 5 oz.; J. Fitch, 10 lb. 14 oz., one roach $1\frac{1}{2}$ lb., six weighing 5 lb., two perch nearly 2 lb., from the Thames; Mr. F. Watling, 10 lb. 1 oz.; Mr. Page, 3 lb. 5 oz.; Mr. Newman, 1 lb. 5 oz.; and Mr. Young, 2 lb. 5 oz. Messrs. Walker, Kirk, Baker, and Warne had roach and dace from the Grand Junction Canal.—J. A. Fitch, jun., sec.

Feb. 28.

GRESHAM ANGLING SOCIETY.

The members of this society met as customary on Thursday evening, H. L. W. Godwin, Esq., in the chair. Mr. Crumplen, the hon. secretary, read the usual reports from Mr. Wood, of Walton; Mr. King, of Windsor, and Bartholomew, of Goring, from which it appeared that the river was so far out of order that there was no good fishing prospect at present. The society had an excellent show of fish during the week, Mr. Jardine being again well to the front with another great display of pike. This famous piscator weighed-in fifteen fish, of a total weight of 89 lb. 2 oz., and later on a magnificent specimen (taken at the same time) weighing 27½ lb. This was a remarkably fine example, being some 44 inches in length, to a girth of 24 inches. A hearty vote of thanks was, it is needless to say, promptly passed to Mr. Jardine for this exhibition of skill. The same gentleman also took two perch weighing together 4 lb. 8 oz., the largest going 2 lb. 11 oz., and these, having been kindly offered to the society's museum, have gone to be preserved. Mr. Brett also fishing with Mr. Jardine, weighed-in ten fine pike, total weight 61 lb., as his share of the spoil. These two anglers have, therefore, weighed-in pike alone, during the present week, of a total weight of 177 lb. 10 oz. Mr. R. Ghurney, fishing the society's water at Waltham a few days since, also succeeded in taking two pike, one of 10 lb., another of 4½ lb., the former being a remarkable handsome fish and in fine condition. Mr. Brougham, one of the few honorary members of the society, gave some important details of the recent interviews of the T.A.P.S. with the water companies, from which very beneficial results were anticipated. A discussion followed, in which several members joined, having reference specially to the work of the society, and the propagation of coarse fish. Mr. Crumplen mentioned that Mr. Bates, Mr. Bentley, himself, and other members, attended the meeting held at Willis's Rooms, in furtherance of the International Fisheries Exhibition of 1883. The hon. secretary stated that there was a steady demand for dinner tickets, and the success of the society's banquet might be considered assured. The announcement that Mr. Alderman Cotton, M.P., would occupy the vice-chair (Mr. Alderman Fowler, M.P., being unavoidably absent) was received with great satisfaction. Grace will be said by the Rev. J. J. Manley, M.A.; and the musical arrangements will be in the hands of Messrs. Aveling, Winterbottom, and Woods, a sure guarantee that these will be of an efficient character. A paper, "Izaac Walton and Sir Thomas Gresham," will be read before the society on Thursday next, followed by a discussion and music.

GOOD INTENT.

We had a fair show of fish on Sunday last; Mr. Maybury having a tray of good roach, Mr. Raynor, G. Robinson, and Philpott having good fish, but the takes small. The members are going to fish for thirteen prizes on Sunday next at Harlow, pegged down, perch fishers roam. Six of the members of our club fished a friendly match for a leg of mutton supper for twenty on last Monday at Tottenham, Day's water, the members being Messrs. Roberts, Courcha, and Wood, against Messrs. Parker, Hughes, and Donovan. They began fishing at 11 p.m. and left off at 5. Mr. S. Morgan and H. Brookwell being umpire and referee. But their duties were very light, as there was not a fish taken that would measure; but the supper was had, and a right jolly evening was spent.—R. Murphy.

HAMMERSMITH UNITED.

On the 23rd, Mr. Hobden had some chub, roach, and jack from Eynsham, Messrs. Aldridge and Walters had a show of roach, perch and chub from the same place. On the Sunday following, Messrs. Reynolds and Lewis exhibited eels, bleak and dace from the Ouse, at Huntingdon.—Vortex.

HAMMERSMITH UNITED ANGLING SOCIETY.

On the 9th inst., Mr. Pitts weighed-in roach from the Thames. Mr. Geen being to the fore with roach and chub. We had a nice tray of roach on the 10th, taken by Mr. Bacchus, who captured 15, the biggest bumping the scale at 1 lb. 5½ oz., the gross weight being 9 lb. 10 oz. Messrs. Penny and Reynolds had roach, bleak and gudgeon, from Bourne End on the 12th. A good show of chub, roach and perch, by Messrs. Hobden, Aldridge, and Walters, on the 22nd, one chub, taken by Hobden, weighing 4 lb. 15 oz. On Sunday last, Messrs. Elms, Lewis, and Reynolds, had fish from Godmanchester, near Huntingdon. They left London on Saturday evening, and put up at the Horse Shoes, of which Mr. Enfield is proprietor. I particularly desire to make known to anglers, through the medium of this paper, of the good and comfortable quarters, combined with very moderate charges, to be found there.—*Hammersmith Argus.*

HIGHBURY ANGLING SOCIETY.

Owing to the unfavourable state of the weather on the 26th inst., many of our members were not so successful among the finny tribe as hitherto, but, notwithstanding, there was a nice show of capital roach from the Thames and Colne, principally contributed by Messrs. Anthony, Higley and others. In reporting on Mr. Ballard's take of bream on the Sunday previous I omitted to mention that they were all brought to the bank with single hair, the largest scaling between 4 and 5 lb.—Jas. Edward Wheatley, sec.

HOXTON BROTHERS ANGLING SOCIETY.

The members of the above society fished for four valuable prizes, given by T. Bevington, Esq., and one prize given by G. C. Ransom, Esq., and three money prizes. Twenty-four members were in the competition. The roach anglers were pegged down round the banks from the Tumbling Bay at Ratty's; the jack and perch anglers had the roam of the water, the boundary being from the weir to the end of the Oak Tree Field, on the meadow side of the Forty Guinea Water. Very few fish were taken, the water being rather high. The following were the winners: 1st, G. H. Wood; 2nd. W. Agombar; 3rd, J. Hallam; 4th, J. Mann; 5th. H. Steadman; 6th, B. Simpson; 7th W, Cooper; 8th, G. Gibbs. The dinner was provided at the Rye House by Messrs. Teale in their usual efficient style.

IZAAK WALTON.

Mr. A. C. Critchfield had a nice show of fish on Thursday, February 23; the following are the particulars of the same:—Three chub, 4 lb. 8 oz.; ten roach, 8 lb. 15 oz., the heaviest one, 1 lb. 7 oz.; twelve ditto, 5 lb. 8 oz.; two dace, 9 lb.; two perch, 1 lb. 8 oz.; two jack, 8 lb. 7 oz.; 1 eel, 2 lb. 15¼ oz., making the total weight, 32 lb. 6¼ oz. Mr. G. Wood had a splendid pike from Waltham on Sunday last, Feb. 26, the heaviest one weighed 12 lb. 4 oz., the other, 9 lb. 14 oz., total, 22 lb. 2 oz. The members will fish for three special prizes, given by Messrs. J. Twohey, T. Ward, and C. Hambridge, on the 12th inst., at Sawbridgeworth.

March 2.

JOVIAL ANGLERS.

Sunday last proved a very bad day, in fact, almost a blank, the wind being so boisterous; but we hope for something better next week A new chairman was elected in place of Mr. Green, resigned. Our new chairman is Mr. Thos. Lomax.—H. W. Platt, sec.

P.S.—Some of our members are very anxious to know the weight of the largest Thames roach caught this season, could you kindly inform them?—H. W. P.

LITTLE INDEPENDENT ANGLING SOCIETY.

Our members were again very successful on Sunday, a handsome show of fish being the result of their day's labour, and which is quite pleasing to them just before the close of the season. Mr. Humphreys, while fishing the Colne, managed to take a fine carp on a tight gut line, 4 lb. 14 oz., he also had a nice lot of perch and roach; Mr. Heelas had roach and dace; Mr. Petrie, roach and dace; Mr. Gray, roach and dace; Mr. Thompson, roach; Mr. F. Moore, jack; Mr. Banfield, jack; Mr. Welsh, jack and Mr. H. Moore, jack, each member being well on the job.—H. Moore, sec.

March 1.

NORTH-WESTERN ANGLING CLUB.

On Sunday last Messrs. Plumpton, Smart, and Hillier had jack from the Welsh Harp, Mr. Aldis ditto from Elstree; Messrs. Stead, W. Roxbee, L. Roxbee, and Holmes, roach, &c., from the Thames.—F. Hill, sec.

March 1.

ORIGINAL ALEXANDRA SOCIETY OF ANGLERS.

I have very little to report this week, we had a pegged-down-match on Sunday last but only one fish was taken. We go out on Sunday next for twelve prizes; go where they like, all fish to weigh, sign club rules, and go down by first train in the morning.—E. Dymond, sec.

ORIGINAL CLERKENWELL PISCATORIAL SOCIETY.

Several members were out on Sunday last and they met with very good sport, the following weighing-in:—Mr. Obbard, perch and roach; Mr. Gorsuch, perch, both from the Thames; Mr. Lucy also weighing-in jack. On Sunday, March 12th, the members fish a peg-down match at St. Margaret's (G.E.R.) for three valuable prizes.—Thos. Wm. Lucy.

March. 2.

ROYAL PISCATORIALS.

The members of this society visited Windsor on the 23rd inst. to compete for the £10 10s. dressing case, case of champagne, and several other prizes. Most of the members in for jack-fishing during the best part of the day; runs were plentiful, but the job was to land the fish (I say land, but I think I ought to say punt the fish, as all the competitors were punt fishing). One gentleman hooked a beauty off Clewer Point, but the tackle being fine "Mr. Johnny" had his own way, and after visiting the side of the punt he resolved not to visit London town on this occasion, and therefore wished Mr. G. L. good day, much to that gentleman's displeasure. Just before the leaving off time, Messrs. T. Hughes and J. Frith started roach-fishing, and at the close of the competition Mr. T. Hughes was declared the winner of the dressing-case, and Mr. J. Frith the winner of the champagne. The other prizes will be competed for at an early date.—Pixie.

Feb. 28.

ST. JOHN'S.

The show of fish at this club did my eyes good on Sunday, the 26th. There were only sixteen members weighed-in fish, but the sample was first-rate, and the weight good. Mr. Gill, the worthy host, was so pleased with the show that he gives another prize to be fished for (this will be the fourth), and Mr. W. Clark gives another gold pin for the same day. The fish all came from the Thames and Lea, and consisted of dace, chub, roach, perch, jack, and one eel of 1 lb. 7 oz. I beg to remind members that a general meeting will take place on Friday, March 10, when some very important business will be brought forward. I have also much pleasure to inform you that Mr. Gill has secured a mile of fishing in private water for the use of members of this club. Bravo, Gill, you are second to none.—Index.

Feb. 28.

SURREY PISCATORIALS.

Mr. Beckett visited Windsor on the 23rd inst., and succeeded in getting a very nice lot of roach, the heaviest turning the scale at 1 lb. 5 oz; Mr. Boalch had also some nice roach from Windsor, the two lots going about 15 lb.—Pixie.

Feb. 28.

WESTBOURNE PARK PISCATORIAL SOCIETY.

At a special meeting of the above society it was resolved to abolish the one gross weight prize from the list of prizes this year, as also the 10 lb. weight of fish to be taken before they were eligible to take a prize, considering it tended to the unnecessary retaining of small fish; and, on the principle of live and let live in future perch and roach less than 8 oz., and dace under 9 oz., will not count for any prize in this club. We do not, however, quite endorse the enthusiastic remarks of G. A., who seems to think the Thames is to be cleared out with a rod and line. The successor of Mr. Frank Buckland does not think so, but rather agrees with angling all the year round.—Henry Adeane, sec.

WALTONIANS.

Feb. 22nd, Mr. Clarkson weighed-in a jack from Tring 3 lb. 3 oz.; Mr. Horsey had a jack also from the Harp, 2 lb. 9 oz. Feb. 26th, Mr. Phillips had chub, roach and rudd, 5 lb. 10½ oz.; Mr. Roland, roach and dace, 3 lb.; Messrs. Bowring, Togwell, Horsford, and yours truly, also weighed-in fish.—A. J. Marriott.

Feb. 28.

WINDSOR AND ETON ANGLING PRESERVATION ASSOCIATION.

On Monday, Feb. 20, Richard Binfield and Albert Binfield were charged at the Beaconsfield Petty Sessions with attempting to take fish illegally upon the land of Thomas White, farmer, of Dorney. The offence was fully proved by James Gray, water bailiff to this association, who, with aid of the lock-keeper at Boveney lock, caught them using a net in Boveney ditch on Sunday, Feb. 12. They were fined 14s. each.

The Absent-minded Parson.—The "Reverend" William Musters, at one time minister of Colwick, was an ardent disciple of old Isaac Walton. Indeed, his attention seemed to be engaged in piscatorial pursuits when his mind ought to have been occupied in matters of a more sacred character. It is said that one beautiful morning he was deeply absorbed in his favourite occupation of angling in the "silvery winding Trent," at Colwick, when he was approached by an individual, who was soon recognised as his parish clerk, who thus addressed him: "Please, sir, the place is full, and the people are waiting for you." "What place is full, and what people are waiting to see me?" "Please, sir, the church, and the congregation. It's Sunday, you know, sir." "Bless my life, I had forgotten it was Sunday; I will be there in a minute or two."—Briscoe's "Book of Nottinghamshire Anecdotes."

The Fishing Gazette.

SATURDAY, MARCH 11, 1882.

ONE DAY OF MY LIFE.

(*Continued from page* 51.)

THE next pool above, "Carrion Pit," is said to be the deepest in the river. It is a large, weird-looking pool, and always contains salmon. It lies in an angle of its hill, which here takes a sharp turn at right angles, and the pool being thus sheltered, and overhung on both sides by many large trees, its bosom is seldom ruffled, and, unless there is a "cockle" on the water, fishing here is hopeless. It is beautifully placid to-day, so I skip the pool itself, and merely fish the rough water at the head of the pit, and here I kill a small peal. This fish seemed to prefer the air to its natural element, if I may judge by the number of times it leaped from the water, and, after some little trouble, owing to the high bank, I am able to gratify its apparent wish, and it lies in my bag. In the fording place above, I have a rise from a nice fish, which I cannot see, but which declines to make a second offer, so I pass on. I have now arrived at the weir pool, which is as high as I intend to go to day, for it is getting late, as I find by consulting my watch, and as I might have known long since, had I given heed to a feeling of hunger which has been gradually coming over me. So, before I fish this pool, I determine to have a rest and some luncheon.

I am particular about my luncheon places whilst fishing. I love to select a beautiful spot, lay out my spoils on the grass or gravel, and divide my time in looking at my victims, my flies, and the scenery.

I could not have selected a more charming spot on the whole river, charming alike to a lover of scenery and a fisherman.

Above the weir, calmly flows the deep river, fringed on each side by spreading beech and oak trees, reflecting on its mirrow-like surface, the furze-covered hill, studded here and there with huge boulders of rock, which forms such a charming background to the scene.

Away to the right rises a wooded hill, and there, nestling in its very bosom, is the pretty whitewashed cottage of the keeper, from which the blue peat-smoke is curling upwards amidst the trees.

Close at hand is the foaming weir, over which plenty of water is passing, now looking dazzlingly white as it is lit up by an occasional gleam of sunshine.

Below the weir spreads out the broad seething pool, across which the brunt of the current sets towards the opposite side, where it strikes an old wall, evidently the remains of a salmon trap, and then glides deep and eddying along for a considerable distance under the hazel bushes, till it finds itself about eighty yards below the sill of the weir, at the fording place, then over tossing, broken water, until it gains a resting place once more in the still depths of Carrion Pit!

On my side of the river, at the higher part of the pool, there runs out a shelving gravel beach, which will enable me to wade out for a considerable distance, but, even then, I fear I cannot reach across to the other side.

I fix upon a rock standing out of the shallow water below this beach, as the spot on which to regale myself, for it lies in the shade of the clump of beech trees overhead.

With the fish spread out before me, I am soon sprawling on this rock, with my feet dangling over in the shallow water, and thoroughly enjoying myself; now looking through my fly-book, now throwing a piece of bread to a shoal of minnows—which, like a small dark cloud, are sailing hither and thither over the gravelly bottom, but which, when the bread falls amongst them, become a mass of sparkling little pieces of silver. I have lighed my pipe, and am overhauling my tackle, when "Whew!" over there in the dark water, about forty feet below the weir, I see the unmistakable boil of a salmon. By wading out, I feel sure I can reach this fish, so I am busy again in a moment. It does not take me very long to be in fighting order once more, and I am soon wading out, paying out line as I go. I am getting within reach of the fish now, and halt for a moment to mature my plan of attack.

That is where he rose, over there under the shadow of the wall; I must get a little higher up.

And so I move up a step or two, but the foothold is not good. I am on the edge of the bank of gravel, which, just beyond me, shelves down rapidly into dark black depths, and the stones on which I stand have an unpleasant habit of moving in that direction. However I am high enough up now, and throw over into the white water, some distance above where the fish rose, but not quite far enough out yet. Moving down a step or two, and letting out more line, the next throw is well over into the enemy's quarters. I work the ground carefully inch by inch, and now I am just opposite where I saw the fish, but I have thrown over it twice and don't get an offer.

That must be some feet below where he rose. My fly has not moved a foot or two, when there is a small boil in the water, followed almost immediately by a huge swirl; my fly is sucked down into the whirlpool, I raise my rod, there is a taut line, and, "By Jove, I am into him; now look out for squalls." But the squalls don't come, so I give a gentle jerk, just to feel my fish, and make the hold sure, and then back out of the water on to the shingle, as I can move more freely there.

I am thankful for this breathing time, as it gives me time to see that all my gear is free.

But now I have glanced at my reel, and up at the point of my rod, which is bowing most gracefully to the water as the fish every now and then shifts about uneasily; I have lifted the strap of my fishing bag well up on to my shoulder; I have seen that my gaff is all ready in its place, and I am quite prepared. Why doesn't he begin?

In that short interval I notice everything about me. The water ousel which has just perched on a piece of stone, which projects out of the sill of the weir, and sits there ducking its white breast and looks at me. I notice the large white butterfly fluttering about under the hazel bushes on the opposite bank. I notice my shadow, and the shadow of my bending rod on the water above me; and then wonder, again, why the fish does not begin.

The delay makes me nervous, so I put on more pressure, and move the fish slowly at first; and then, in a moment, as if feeling the hook for the first time, he is off with a rush up stream towards the weir, apparently bent on going up it, and I am running along the shingle endeavouring to keep alongside. The strain on my tackle is very heavy as my line cuts against the rapid water. Presently, when he is right in the middle of the torrent, he comes surging up, shooting clear out of water. "He's a monster a good deal over twenty pounds, I'm sure." And my feelings are of a decidedly mixed character, despair of ever landing him almost outweighing the exultation of having hooked him. But little time is left me for reflection, as he falls splashing on to the water again, and drops down with the current for a few yards. Presently there is a great swirl in the water as the fish, very near the surface, turns and heads down stream. I gather myself together for a bit of steeplechasing, when, presently, here he is coming rapidly towards me. I run backwards across the shingle, winding up rapidly, endeavouring to keep a taut line on him; when, all of a sudden, I trip up, and find myself on my back in a bed of wild leeks, for I have traversed the whole of the shingly beach, and have reached the bank of the meadow, Lucky for me I had not a taut line then! I pick myself up, cast a hurried glance around, fearful lest some one saw me in that awkward mess, find the salmon is now forging diagonally up stream, and, thank goodness, I am still into him. When he gets close to where I hooked him, he comes head and tail out of water, but I contrive to keep the line clear of him as he falls, and now he is making rapidly up again through the white water. Presently, another salmon springs out a few yards below, evidently his mate; but there is no time for thinking of her, for, repeating his former tactics, but this time perilously near where the water falls over the weir, he again shoots out, falls again, and then drops down stream, and, close by the spot where I rose him, he stops suddenly, and lies there sulking, deep down. I hate this; it will never do to allow him to rest here and recover his wind and wits; so, getting well alongside of him, I gradually coax him to move. He comes towards me a little distance. Then there is a tremendous curl in the water, his huge tail appears above the surface, the fish turns, and is now going down stream at a very hot pace, whilst I am running over the shingle endeavouring still to keep up with him; for there is no mistake now, he means going. Down he goes, rapidly through the weir pool, and I have reached the end of the beach, and have to take to the water again, as the bank here is studded with trees. He is at the bottom of the pool now; I must stop him here, for if he gets below the fording place there will be no holding him until he is well down into the "Carrion Pit," where the bank is high and there are many trees and bushes. So I stop short, throw my rod well back, and try to put on the curb. I try it for a few seconds, but am compelled to give him line, for hold him I cannot. So I scramble up on to the bank which is clear here, and start off again. There he goes through the broken water below the fording place. "Good heavens! I had forgotten that rock!" I see it right ahead now, though only too plainly, as it stands out almost in mid stream, with the current swirling round it. I must bring the fish this side of it, or he will break me as he rushes past; so again I put on considerable pressure, but the fish is ahead of me, heading down stream between the rock and the opposite bank, and I cannot get much lateral power over him. A moment or two and I see that it is no use to attempt, from where I am, to steer him on my side of the rock, so I "put it on," in order to gain on the fish, shorten up my line, and jump in. The water is over my waders, but I rush out as far as I dare, towards the rock, and, as the fish sails past, raise my long rod, and almost succeed in clearing my line of the rock, but not quite. For a moment it hits the rough edge of the rock on the opposite side, the beads of water fly from the line as it grates over the rough stone surface; my heart is in my mouth, I raise my rod still higher, and the line drops over the rock on to the lower side, and this danger is past. Splashing and stumbling, I reach the bank again, and scramble up, and, waterlogged and bedraggled, am now following my fish again, who has gained more line than I can afford to give away here, and there are no signs of his stopping yet.

About a hundred yards below where the fish is, close down, overhanging the deep water of "Carrion Pit," on my side of the river, grow a number of large oak and ash trees, and there is a thick hedge beyond which I know I cannot pass, so I must gain line, for I shall want all I can get down there. I increase my pace and gain on the fish, and have saved a considerable amount of line, and am going easier, looking ahead to the danger that awaits me at the corner, when presently I am brought up, with my rod bending double, against the stump of a small pollard ash, which I thought I had raised my rod sufficiently high to clear. This difficulty has been caused simply by my too great anxiety as to future dangers. However, there is little time for regret. For a moment or two, as the line runs through the rings, owing to the strain upon the rod I cannot lift it over, but I pay out line rapidly, ease the strain, raise my rod, and we are going freely again. I run rapidly down to the trees, arriving there just after the fish has sailed by; and now here, I know, the real struggle must be fought out, for I can go no further. I climb down on to the moss-covered stump which overhangs the water, and throwing my rod well back, give every foot of line grudgingly—most grudgingly. But still on goes the fish. I look anxiously at my reel there is a good deal left still, but the fish is a good fifty yards off and most of the line under water. Thank goodness the water is deep, and free from sunken rocks, and this knowledge gives me infinite relief. Rapidly my stock of line diminishes; my greenheart, with the fish and the weight of the line out, is bending as I have never seen it bend before, and the great question is, will the salmon go round the corner at the bottom of the pool, and over into the rapid beneath? If so, "Good-bye." He must be down near that corner now. I know that the crisis has come. I must stop him now, or break. Checking the line gradually for a few moments; presently I hold the fish hard—the strain for a few seconds is tremendous, and then, as the salmon springs out of water at the very end of the pool, I know that the crisis is passed, one way or the other, but how? Has he broken me, or do I still hold him? The strain is over; I can wind up, though winding is heavy work. But that may be the weight of so much sunken line only. A few seconds of anxious doubt, and I am reassured. I feel him for a moment or so, as he turns restive and objects to being led, then yields to my pressure, and comes.

Now, for the first time, there comes over me a feeling that triumph is not impossible. I have got the salmon up to within a few yards of the stump on which I stand, and catch a momentary glance of his great broad back, and then he sees me; there is a flash of silver, a large wave in the water, and the salmon is rushing down the pool again at a greater pace than he has shown at any time before.

My heart sinks. "He means going right down, now, No! he has stopped, and I don't think he went so low down as before."

I am once more bringing him up to me. I have got him into close quarters again, when, with another rush, he is off once more.

Twice again is this performance repeated, and now, for the fourth time, here he is coming up to me obediently. I get him up to within a few feet of the stump now and catch his eye fixed upon me in a way that is not pleasant. "There he goes again!" But it is a slouching, slovenly turn this time.

I do not let him go far before I am able to turn him, and lead him back again.

I can see him plainly as he comes up, for he is showing a great deal of his side now. For the first time during the whole fight I become really excited, for as he comes up this time I determine to bring the gaff into play. I have it ready. The fish is slopping about on his side, but a few feet from me. I wind up short, kneel down on the stump, take my rod in my left hand, draw the fish up under the stump, on which I kneel, put the gaff well below him, strike, and "Got him! Hurrah!"

The fish is evidently quite exhausted, for he lies almost still, until I try and lift him, and then he begins flapping and twisting about, almost dragging me from my rickety perch. I find both fish and rod more than I can manage, so I drop the butt of my rod into the still water above the stump, against which I rest the rod, and then edge my way backward off the old trunk which has served me so well, lift the salmon up the bank, throw him down on the grass, pull out the gaff, keep him down with my knee—feeling rather like a murderer as I do so—a rap or two on the head, a convulsive shiver passes through the fish, I get up, and there he lies, my own now, indeed. He must be nearer 30lb. than 20lb. How beautiful he looks. I feel very grateful to him for having deigned to take my fly.

Then I assume a business-like calmness I don't feel, just as if such fish were common prizes to me. I look at my watch, find it half-past five, take a pull at my flask, throw off my fishing bag, lay out my fish side by side, and, as I look at them and load my pipe, I am really brimming over with pride, though I try and persuade myself that I am not.

Now I know that my uncle dines at half-past six; to be late is to commit an unpardonable offence, so, as I have a good two miles walk before me, I must fish no more. My rod is soon taken to pieces, the peal and the salmon are lovingly deposited in my "Freke" bag, and I notice with pleasure that a great deal of both extremities of my salmon show out, almost too much indeed, for safety of carriage. I shoulder my load, which, heavy as it is, I would not be without for sums untold, take a last look at the friendly stump, and with my pipe all aglow and my heart too, I step out jauntily across the meadow, homewards. When through the meadow, I cut across the wheat field, where the harvesters are still busy, and have not proceeded far, when a "Beg your pardon, sir," from a man I have passed, brings me up. The man touches his hat, remarks that I have "a good 'un there!" comes up and looks at it, lifting the bag to try the weight; and then others, women as well as men, crowd round. There is a chorus of "Oh, my's," and "lors," then a dark hint as to the fish being worth a quart or two, and I, who pride myself upon ignoring suggestions of this kind, find myself, in spite of my philosophy, minus half a crown ere I pass on, amid a regular volley of good wishes and laughter, and so, by the little bridge over the mill leat, up the winding lane through the covert, across which the rabbits are scuttling merrily, and out into the turnpike road.

It has been market day in Torborough to-day, and the farmers and their women folk are all going homewards in their market carts.

So I pass along, amid a running fire of good-natured chaff and laughter, listening every now and then to the call of partridges in some deserted stubble field on the opposite hillside, or the cooing of a wood pigeon in the wood below, where, every now and then, I catch a glimpse of the glistening river: and overtaking a herd of cows being driven home for milking, I get into conversation with the farm boy, who grows quite eloquent over a day's "clatting for yulls," which he had last flood.

Ah, now the old town is in sight on the steep hill crest, and there is my uncle's house with the church spire beyond, all ruddy in the evening sun.

My bucolic friend with his cows, turns down a lane leading to the mill, and I step out more briskly as I breast the steep hill.

I leave the road and ascend by the rough path. It is stiff work with my load. I begin to feel that I am not yet in training as I toil upwards, and the top seems a long way above me. But I am up at last, have let myself in at the garden door, and, as I walk down the gravel path, remember for the first time that I am a trifle wet, and the cook will bless me for messing her kitchen floor when I haul off my waders.

Good old Susan thinks much more of my wet things than of the fish, but the cook gives vent to a series of "lors," and at last the infection spreads to Susan, who is equally loud in her assurance that I must be "a wonderful fisher to be sure." The noise brings my uncle out into the kitchen, rubbing his hands, and looking blithe and jolly.

He does not say much, but I see that he admires the fish, as he turns them over, and is very particular in superintending the weighing, when, to my joy, I find my salmon turns the scale at 26 lb.

As I go upstairs, I hear my uncle ask for a candle, and catch the sounds of his footsteps as he descends into the cellar, and I know that we are to celebrate the event in something "extra" to-night.

What a cosy dinner it is! How jolly it is to feel really tired after a good day, and to chat away comfortably of scenes in other lands that we have beheld together, of the fight and ultimate capture of my uncle's big salmon "a many years ago" below Copswell bridge, and a hundred and one other pleasant topics.

Dinner, over we attack the port; and we can do so safely, for the port is old, whilst we are both young; yes young, though my uncle has passed his three score years and ten. Then I tell the story of the day's adventures as I have told them here.

And now we draw our chairs to the fire. I light my pipe, and my uncle prepares himself for a nap, which apparently he has not long to wait for. Gradually a gentle lethargy steals over me, I believe I go off to. How delightful is this feeling of luxurious laziness that comes over one sometimes during the after-dinner pipe, after a hard day's work in the open air.

Presently I wake up. My uncle is still in dreamland, so I determine to sally out to the club—for we have a club at Torborough—and I am sure to meet some old acquaintance at the billiard table or in the reading room, where fishing gossip is the staple article of conversation.

I am walking down the now quiet High Street, when Jim Burrowes comes up to me. "Well, I got 'un, sir. He was a good 15 lbs." "Did you Jim? I am very glad."

And then I tell him of my sport. Nothing will do but he must look at the fish. So we return to the house, and are in the midst of our inspection, when my uncle walks into the kitchen. My uncle and Jim are old friends, and I shrewdly suspect I could make a good guess who it is that presents Jim with his salmon license, if I were pressed to do so. Now the good old gentleman pretends that he has been wanting to see Jim to arrange as to the attack on the Monkworthy water to-morrow, and, after some pressing, Jim consents to come into the dining room, to talk over the the details.

So we gather round the fire again, and there are more drinkables and tobacco consumed—we have such delightfully simple ways at Torborough Jim, who is ill at ease at first, soon begins to feel more at home; there is a long talk over things piscatorial and political, for Jim is an ardent politician, and then he leaves us, on the understanding that he is to be here at nine o'clock to-morrow morning, when the dog-cart is to take us to Monkworthy Chase.

The long evening is passed, the day is now well over, "and so to bed," as old Pepys says, and bring to a close this happy day.

Many happy days have I since spent, many bonnie fish have I killed since I captured that 26-pounder, but still there stands out brightly in my memory, as a very pleasant thing to dwell upon, the recollection, which I lovingly cherish, of this "one day in my life."

THE PISCATORIAL SOCIETY AND THE EDINBURGH AND LONDON INTERNATIONAL FISHERIES EXHIBITIONS.

It is with much pleasure we have to announce that the Piscatorial Society has decided to send a fine selection from its splendid collection of stuffed fish to the Edinburgh Exhibition. This collection has just received a most valuable addition in the shape of a forty-pound pike, well set up in a glass case, which was presented to the society, last Monday night, by Mr. Fennings; it is a grand fish, and will doubtless lead the way at Edinburgh.

The committee of the society, at the suggestion of the secretary, have also unanimously resolved to vote fifty pounds towards the guarantee fund of the 1883 exhibition, subject to the approval of the next general meeting. There can be no doubt about general approval being most warmly accorded to this proposal. Six new members were elected last Monday, and other names are waiting the approval of the committee.

We most heartily congratulate the Piscatorial Society on its enterprising action, and trust its example may be followed by the other London clubs.

Mr. Fred. Clench, hon. sec. of the London Committee of the Edinburgh Exhibition, 20, Moorgate Street, will be happy to give any information respecting the Exhibition, and especially with regard to the forwarding of specimens from the clubs.

NEW SPLIT LUG RIG.

We have received from Messrs. W. and A. K. Johnston, of Edinburgh, a large chromo-lithograph of a fishing boat, rigged with what the inventor calls "a new split lug," according to the design of Mr. Macleod, of Cadboll. The great difference between it and the ordinary lug sail is that the canvas is divided into two parts, the cloths abaft the mast travelling on hoops, like an ordinary cutter's or yawl's main-sail. Indeed, if it had a boom, it would resemble this exactly, except in the form of the gaff, which is an ordinary lugger's fore yard, and in only having a single set of halliards; the portion of the fore-sail forward of the mast being attached to that portion of the yard. The one great advantage of this over the ordinary dipping lug is the doing away with the necessity of lowering and "peaking" over the large and heavy yard and sail every time it is necessary to wear or go about

We venture, however, ourselves, to think that the same advantage would be gained in a much more satisfactory manner by doing away with the fore yard entirely, substituting an ordinary gaff for it, and converting the fore part of the foresail into an ordinary staysail or standing jib; in fact, rigging the boat as a yawl, with the exception of the main boom. This is done on the south coast in many cases, and, we were informed by the skipper of one of the boats, with the greatest satisfaction to the crew. This also has the advantage of enabling the crew, in bad weather, to lower the fore (which would probably then become the main) sail, and run under the mizzen and headsail only. The split lug has shrouds to the mast, and the halliards never have to be shifted over; but so has the yawl, which must always remain the handier rig, although her mainsail requires throat and peak halliards, instead of one set like a lugger.

Whatever may be individual opinion as to whether the yawl or split lug be the better rig, all must agree that the latter is a great improvement on the old dipping lug. Mr. Macleod's invention is practically the application of the principle of the double square topsail yard to a fore and aft sail.

CAMBRIDGE AND ELY ANGLING SOCIETY.

THERE will be an important meeting of the members of this flourishing society on Tuesday evening next, at the Red Lion Hotel, Cambridge. The object of the meeting is to revise the rules. The committee to whom the subject was referred at the annual meeting, have agreed to a number of alterations which, it is hoped, will prove beneficial. After the special meeting, the annual supper will take place. The president of the society, the Rev. Dr. Porter, Master of St. Peter's College, and Vice-Chancellor of the University, will be in the chair. He will be supported by the Mayor of Cambridge, Mr. Ald. Death; and a goodly gathering of leading members of the University and town may be expected. The waters preserved by the society have yielded abundant sport during the past season, and, as our report from South at Littleport testifies, some excellent takes of roach and pike have been reported recently.

SILKS FOR AMATEUR FLY-TYERS.

WE have just had, for our inspection, a case placed before us, containing skeins of all the exquisite silks manufactured expressly for that most unique work, "A Quaint Treatise on Flies, &c.," by Mr. Aldam. These silks are now in course of distribution, and each case contains sixty-four skeins of three-fold and four-fold tying, and twenty of floss silks. They are not of ordinary make or quality, and cannot be procured either in the tackle makers' or any silk shops. Every amateur fly-tyer ought to possess a case, and applications made to this office shall be forwarded to the proper quarter. The price, including case, is £2 18s., and we should say that there is, in each case, much more than this value, seeing that the silks cannot be procured anywhere else, and would cost over fifty pounds to re-manufacture.

STOCKING OUR HIGHLAND LOCHS.

SOME months ago the Trout Preservation Association resolved to stock Loch Ard with Loch Leven fry, and approached the Duke of Montrose, the proprietor of the loch, through Mr. Murray, his factor, on the subject. The consent of the Duke was cordially given, and along with his consent he sent a handsome subscription to the funds of the association. A deputation from the association shortly thereafter went to Howietoun Fishery, where they were received by Sir James Gibson Maitland, Bart., and Mr. Guy, secretary of the fishery, who obligingly showed them through the fishery, and it was agreed that 15,000 fry from Loch Leven trout should be put into Loch Ard. Accordingly, on Saturday last, Sir James Gibson Maitland met Mr. Brown, and the secretary of the association, at Loch Ard, and 25,000 fry were put into the burns flowing into that loch, under their superintendence. The work was accomplished successfully. The fry were sent in the van belonging to the Howietoun Fishery to Bucklyvie station in two tanks, the gross weight of which was 10 cwt. Arrived there, the tanks were transferred to a cart, which conveyed them to the loch, and on their arrival the fish were distributed over the following burns:—10,000 in Conn burn, 2000 in Culiegarten burn, 6000 in Ledard burn, 3000 in Blairhulichan burn, 2000 in Clarichan burn, and 2000 in Altmeach or Horse burn.

It will thus be seen that 25,000 have been put into the burns, the additional 10,000 having been generously presented by Sir James, who is taking much interest in having Loch Ard well stocked. The operation of having the little strangers put into the water was watched with much interest by a considerable number of gamekeepers and others residing in the district, who, it is hoped, will take an interest in their preservation, and prevent them from being destroyed. The association have appointed a keeper to be permanently on the spot for the purpose of watching the fry and destroying the pike in Loch Ard. He is to have a stake-net, and is also to fish sixty trimmers, and with these instruments it is hoped he will clean Loch Ard of pike, and thus allow the trout to multiply. Indeed, before the fry which have now been put in the burns shall have betaken themselves to the loch, the pike may be so reduced that little danger may be apprehended. It is expected that the fry will not leave the burns for a year after May next, and, meantime, there is no danger from pike or large fish. There is, however, danger from gulls, water ouzels, and thoughtless boys, and it is here that the assistance of friendly gamekeepers can prove so valuable.

The burns were particularly examined with a view to ascertain the supply of food which they are likely to yield, In the opinion of Sir James, save the Conn river, they are deficient in this respect. The other burns have short distances to run, and during the heat of summer they become small. It is well known that upon the feeding of the fish his size and quality depend. The food of trout is principally worms, insects, and larvæ of various descriptions, and several smaller kinds of fish, but chiefly minnows, on which he preys with the greatest avidity. Those streams which run through barren soil, or whose bottoms are grassy or clayey, seldom produce large trout, and this is principally the characteristic of the streams flowing into Loch Ard. This is an interesting experiment, and as it is the intention of the association to continue to work in the same direction until the lochs over which they take supervision are stocked with trout, the result will be looked for with interest by anglers, and indeed by all who would wish to see our Highland lochs and streams populated with their proper denizens.—*Scotsman*, March 8th.

NOTES FROM THE LAKES.

THE season for trout, char, and salmon fishing within the jurisdiction of the Kent, Bela, Leven, and Duddon district, opened on Thursday, March 2. The mild winter experienced in all parts of the country has not avoided us in the north, and an almost total absence of frost and snow led all to expect a favourable commencement. Unfortunately for fly-fishers heavy rains have prevailed for a long time, and the brooks and rivers, lakes and tarns, were and are, unusually high; but to set against this the weather is mild for the time of year. On the Kent, on Thursday week, though big clear water, trout about midday rose well, and several very nice little takes were had, a great majority of the fish being in fine condition. One angler took twenty-six with fly, others with the same bait took fewer; but up some of the smaller becks, with worm, I heard of at least one more numerous capture. Since then more or less sport has been had daily, but heavy rains continued to keep the river an unusual height; indeed higher than on the 2nd. One or two fair captures with fly were made in the neighbourhood of, indeed close to, the town of Kendal, one well-known disciple having about 4 lb., and another of lesser note, 3½ lb. Coming to this week I heard of, but did not see, a pannier of 6 lb. of trout from below Kendal. On Tuesday heavy rain fell, and following it the Kent and other tributary streams were in flood. There was a "worm water." The trout, however, did not begin to bite until towards 3 p.m., when all who braved the somewhat severe elements were rewarded for their trouble. John Nelson and James Whitehead had the heaviest takes, 6 lb. each or so. Wednesday was very stormy, the wind blowing strong enough to carry one into the river. Fishing out of the question. On the Bela moderate sport has been had; but as this stream is confined to a private club of some thirty-five members, a chronicle of the takes thereon would be of little use. On Windermere the fishermen were busily at work on Thursday, but at night their takes of char and trout were limited in the extreme. One boat failed to take fish, others had but two or three char each, and even the most successful did not take a dozen. and things have been no different there since. Fishermen are loud in their complaints, but these poor hauls necessarily do not prove a scarcity of fish. They are rather owing to the unusual amount of water in the lake, and the very mild season. The latter has doubtless induced the char to leave the deeps where they are usually found in "schools" in the early spring, and whence they have, in former years, been caught in enormous numbers. Now they are squandered up and down the lake, and up to the time of writing I have not heard that the fishermen have as yet found the whereabouts of their prey. It will be a natural result that should the nets fail to take their usual share of fish, the anglers will have better sport later in the season. The waters of our lakes and tarns is so cold that little with the rod is done until well on into April.—SPRINT.

SPINNING FOR SEA-GULL.

AN angling incident of a very unusual kind occurred on the Tay last week. While Mr. William Barlass, a well-known Perth angler, was fishing from a boat with a phantom minnow near Fancy Station, a sea-gull dived into the water and caught the minnow about the middle, clear of the hook. The gull instantly soared into the air, running out the reel like a fish. The angler gave the line a pull, when the minnow dropped out of the bird's mouth into the water. Not to be baulked of its prey, the gull again dived underneath the water, and secured the minnow in the same way, only to be again pulled out of its mouth by the sportsman. The bird repeated its attempt a third time, and it was a third time taken from its grasp in the same way. Meanwhile the novel sight was creating a good deal of attention and amusement on the bank, and as the bird became startled at the loud laughter which was created by its performance, it flew away, evidently more frightened by the noise of the anglers and spectators than at the peculiar character of the fish which it had three times captured. The minnow was made of indiarubber by Mr. Barlass himself. Dr. Brunton, at a pleasant piscatorial party at which we were present, about two years ago, described a similar adventure, only in his case the bird was well hooked on a fly, if we remember rightly, and repeatedly ran out all the doctor's line. Our host, Mr. Addlington, also a piscatorial, gave as a setoff a most amusing account of a terrific struggle (at Elstree Reservoir) between himself and an open umbrella which had got blown into the water and which made most life-like gyrations, probably owing to the movement of the boat. It had some valuable spinning flights on it, and doubtless to this day some anglers are living in happy remembrance of losing "that monster."

Since writing the above we learn that last week two Galashiels gentlemen were fishing on the Tweed, in the neighbourhood of Elwardfoot. A number of sea-gulls were fishing also. They dived down and picked up the salmon flies, lifting them out of the water and then dropping them. This went on until first one gull, then another, and a third were fairly hooked and brought in succession to land. The hooks were carefully taken from their bills. Two of the birds were set at liberty, but the other was kept as a memento of the incident.

SHEFFIELD ANGLERS' ASSOCIATION.

A GENERAL meeting of delegates from the various clubs connected with the Sheffield Anglers' Association was held at the Crown Inn, Scotland Street, on March 1. There was a large attendance. The chair was occupied by Mr. C. Styring, president.

The Secretary (Mr. T. Walker) read the minutes of the annual meeting, which was held in December last, and which contained the following:—"That the recommendation of the committee be approved and that in future the members of this association have only one ticket, which shall act both as water ticket and travelling ticket, and that the price of such ticket do not exceed 3d. each."

The President said he thought the only minute which required any attention was that with regard to one ticket being issued this year instead of two, as formerly. Last year, the charge for each water tickets was 6d. each, but as the association had funds in hand and the committee wished to make the fishing as cheap as possible, they had decided to reduce the price of the ticket. The committee had got a few tickets printed as specimens, and they would be handed round the room for the inspection of the delegates present.

After the tickets had been circulated amongst the delegates,

Mr. J. Wheatley moved that the form of ticket produced be adopted.

Mr. W. Rickson seconded the motion, and it was unanimously agreed to.

The President said it had been reported in some quarters that the close season had been altered. He hoped they would take no notice of the report; but the Secretary would read the resolutions which were carried at the Anglers' Conference, which was held in the Society of Arts' Rooms, London, on the 7th of June last.

The Secretary read the following:—"In the opinion of this meeting, the period between the 1st day of March and the 30th day of June, both inclusive, should be the close season for perch and pike. In the opinion of this meeting, the period between the 1st day of April and the 30th day of June, both inclusive, should be the close season for all fresh-water fish other than pike and perch. In the opinion of this meeting, the sale clause of the Mundella Act should be altered so as to make the possession of fish an offence, unless the possessor can satisfy the court before whom he may be brought that the fish were taken from a private fishery by the consent of the owner."

Mr. T. Guest stated that there were 300 persons at that conference, who represented associations in all parts of England. The question of fishing for eels and flounders during the close season was also before the meeting, and a resolution was passed to the effect that persons should be allowed to take both eels and flounders by rod and line all the year round. He and the president saw Mr. Mundella with reference to his Act. He said that in the position he was in he did not think he could interfere with it; but he would give all assistance he possibly could. He thought the resolution passed by the conference would amend the Act a great deal, and said he would endeavour to persuade Mr. Wortley to take charge of the amended Act. Mr. Wortley had promised he would do so, and would bring it into the House. (Hear, hear).

The President said the secretary had written to Mr. Geen, to know what steps were being taken with reference to obtaining an Act to enable them to kill eels and flounders all the year round. The secretary had received a telegram from Mr. Geen, which he would lay before the meeting. The committee were anxious to know whether it was the opinion of that meeting that they should do all they could to obtain the alteration required in the law with reference to the time allowed for killing eels and flounders.

The Secretary read the following telegram, which he had received that day from Mr. Philip Geen:—

"Glad to find Sheffield anglers determined; Londoners are in earnest. Together we can and will amend law, so as to protect our fish all the year round. Letter shall follow." (Applause.)

On the proposition of Mr. T. Shipley, it was unanimously agreed that the committee should endeavour to obtain permission to fish for eels and flounders during the close season.

The President briefly referred to a prosecution which had been undertaken by that association. A person who was not connected with any of the 240 clubs belonging to that association was found fishing in the river Trent, which was the private water of the Sheffield Anglers' Association, and they prosecuted him for the purpose of maintaing their right to the water. The man was fined a small penalty.

Mr. T. Guest said as the association could not afford to employ watchers at all times to protect their private waters, he thought it was very desirable that every member should do his utmost to protect the waters, and report any person he found fishing who was not the holder of an association ticket.

The Secretary read some correspondence which has passed between him and Mr. Day, the secretary of the Boston Association. The Sheffield Anglers' Association paid the Boston Association £6 last year for being allowed to fish in their waters, but when Mr. Walker wrote and asked for permission to be granted during the ensuing year, Mr. Day replied that the committee of the Boston Association would grant such permission on payment of £30. (Laughter.) He replied that he was not in a position to promise any amount, but he could assure the committee that the Sheffield anglers would treat them in the same liberal manner as they did last year.

Mr. T. Guest stated that one association which promised the Boston one £20 for permission, only paid £2. Sheffield promised nothing, but they paid £6, and when they paid it Mr. Day appeared perfectly satisfied.

The President said the matter had since been settled, and the members of the Sheffield Anglers' Association would have the pleasure of fishing in the Boston's Association's waters during the coming season.

In answer to a question,

The Secretary stated that the members of the Sheffield Association had 46 miles private water, and other 166 miles which they could, by arrangement, fish in, giving a total of 212 miles of water.

On the motion of Mr. John Birkhead, seconded by Mr. Richardson, it was agreed that the correspondence which had passed between the secretaries of the Sheffield and the Boston Associations was satisfactory and that that meeting support the committees.

The Secretary stated that Mr. C. Stuart Wortley, M.P., has forwarded a subscription of £1 1s. to the funds of the society, which was the same amount as contributed by Mr. A. J. Mundella, M.P.

This concluded the business of the meeting.—*Sheffield Independent.*

CLUB AND OTHER JOTTINGS.

By L. B.

MR. T. HOOLE, the secretary of the West Central Association of London and Provincial Angling Societies has just issued a new list of clubs affiliated to the associations. Since the issue of the last list, about this time last year, the number has increased from 125 to 159, all situated, with two or three exceptions, in London and suburbs. The societies affiliated to the West Central are distinguished by an asterisk (*) and number 85, the remainder being in connection either with the United London Anglers' Central Committee, or the Central Association. On the 5th the North-Western Anglers were saved from the much-dreaded blank by Messrs. Patching and Smart, the former having roach from Boxmoor, the latter jack from the Welsh Harp. A number of valuable prizes are to be competed for by the members of this society at Pangbourne on Sunday next, and a rare muster is anticipated. On Monday evening last the monthly meeting of the United London Anglers' Central Committee took place at the Bald Faced Stag, Worship Street, Finsbury. The principal business done was the discussing and approving of minutes already accepted by the other two associations with regard to renting, stocking, and preserving waters. A long discussion also took place, in which Mr. C. Smith took a prominent part, anent the preservation of the River Lea; that gentleman's views, however, were so little in harmony with the feelings of the delegates that he failed to find a seconder for a motion of which he had given notice, and which consequently fell through. I am quite sure my friends at the East End will take in a kindly spirit a little bit of good advice from an old stager like myself. It must, however, be apparent to our friends that a great proportion of valuable time is wasted by the various speakers wandering away into matter, no doubt of interest, but entirely foreign to the subject under discussion, and this never was more plainly apparent than on Monday evening. My good friend Mr. Morgan I know has a difficult task, but, surely, showing too great kindness to the speaker is very often doing quite the reverse to the listeners.

After the 24th Mr. P. Geen's address will be Lowther Lodge, Lonsdale Road, Barnes. Among those who rejoice at the prospect of having this active and successful worker once more amongst us are Messrs. Hoole and Bonvoisin. As for the members of the Hammersmith United, of which Mr. Geen is an active member, I am informed a movement is about to be set on foot among them for the purpose of erecting a triumphal arch, and presenting the wanderer with an address.

On Thursday, 9th inst., a meeting of the Thames Rights Defence Association took place, at Simpson's Hotel, in the Strand. It is a burning shame that the anglers—and, indeed, the general public, who are interested in keeping the Thames a river free to all—do not better support the small committee of gentlemen who are ungrudgingly giving time and thought, and labouring very hard, without fee or reward,, to assure this most desirable object.

Take, again, the Anglers' Benevolent Society. No one has a word to say against it; it has been the means of affording prompt and efficient relief to a great number; done away with what were undoubted evils, &c.; yet it only boasts a few hundred members among a community variously estimated at from 5000 to 8000. And even these are not the spontaneous outcome of general appreciation, but rather the result of the indefatigable exertions of a small number of secretaries of angling societies; who manage to enrol a few, often in the face of rebuffs, by dint of persistently urging upon their brother members, night after night, the benefit of this excellent institution; or of a no less deserving working-committee, who, receipt-book in hand, are present at most meetings to enrol members of angling clubs anywhere, even those they meet in the streets, and certainly working quite as hard for pure love as if their living depended upon their exertions.

Next Friday week, 17th inst., is the monthly meeting of the West Central Association, when matters of the greatest importance will be brought forward for discussion.

Apropos of the above association, I have it on the very best authority that at the annual meeting night in April, when the money grants to the river preservation societies are voted, those to more than one society in the upper Thames will be strongly, and, I firmly believe, successfully opposed; and those wretched useless little trout fry, with a sprinkling of Wycombe and other bottlers, are at the bottom of it all. It is well known—indeed, has been repeatedly stated by them in these columns—that the president, chairman, and secretary of the association, are strenuously opposed to what they designate wanton waste of publicly subscribed funds.

Of course the pecuniary loss of a grant of £5 5s., or possibly £10 10s., would not be very great; but the moral effect, widely published, as it would be in the newspapers, and carried back by the delegates to their various societies, could not fail to be very considerable.

[We are not responsible for, and do not quite agree with, the opinions expressed in these two last paragraphs.—ED.]

RIVER REPORTS.

MID-THAMES.

"For love, thou know'st, is full of jealousy."
—SHAKESPEARE.

Anglers' love of their art is girt round with any amount of jealousy, and one brother would bet his brother or father his shirt, or any or all of his habiliments that he beat them in a fair, all-round day's match. The result is generally some dozen roach each, and high words over a gudgeon or a pope; but peace eventually reigns supreme, and the "feast of reason and flow of soul" get into the same fishing-basket, and it is well it is so; but for all that, there is an immense amount of jealousy in angling, but after all, it is only the sauce which adds a relish to a too often insipid dish. The Thames is now dropping down from flood, and some excellent work may be confidently anticipated before the close of the season, on Wednesday next. At Maple Durham a rodster fishing alone during the past fortnight has taken 28 lb. of perch, and one jack of 3 lb., all had on paternoster, with two hooks, worm on bottom, and minnow top. At Hurley on Saturday last Messrs. J. Bellingham and Blower Smith out with Townsend, under very adverse circs. of wind and water, essayed the roach. Messrs. Brookbank and Mason, fishing in the Hurley waters yesterday (Wednesday) got a nice lot of roach, but were bothered with popes—especially Mr. Mason—not the first time in the history of the world that Masons have been worried by Popes. Marlow, Maidenhead and Bray reports only contain uninteresting details of catches of roach and chub; but the fishermen are mostly sanguine of a few grand days' wind-up of the season 1881-2, as the water is certainly dropping down into prime trim—MARLOW BUZZ.

Ancholme.

The advent of comparatively adverse weather caused a corresponding deterioration in the fishing during the early part of the week, but owing to an improvement in the former the latter has showed some signs of recovery. A few fair baskets of pike and roach have fallen to the anglers in the upper reaches of the stream. As the close season is kept on these waters my reports thereon will cease for three months after next week.—THOMAS FORD.

Chichester.

The water, both in the Rother and Chichester Canal, is in fair condition, but cold winds have materially interfered with sport, roach seeming quite off the feed. There is no other prospect but a bad close to a bad season. From the Rother a few small jack, a 2 lb. carp, and 1¼ lb. roach, are the best takes I hear of. From the canal a few small perch and roach, a bream of 1½ lb., and a small jack, are the only takes at all noticeable. The celebrated Hunston jack had another escape last week. This fish is considered a 20 pounder, and has broken away several times. A Portsmouth angler, on this occasion, after an hour's fight, was left lamenting.—G. F. SALTER.

Dove.

During most of this week our river has been in rattling order for minnow spinning, though just a trifle too thick perhaps for the fly. At the time of writing, however, it is all right even for the fly, and if the weather only holds as it is at present, I fancy there will be some great sport next week amongst both trout and grayling. The minnow has proved particularly killing in the brooks, which are tributary to the Dove, and in the majority of instances the trout that have fallen victims have been large. A splendid dish of eleven fish were taken in the Manifold with the Excelsior spinner on Monday, and the improved heavy Devon has also been used with good effect. I hear that the poaching fraternity were again busy with the cleach-net in the late flood, and it is high time something was done to stop the depredations of these gentry.—THE SPLODGER.

Exe (Exeter).

The weather is most charming, perfectly summer, and the season has opened with the greatest success. The river, after the few genial showers we have had, has improved wonderfully, and the flies most taking are—as Mr. Mudford, of Tiverton, stated in last week's FISHING GAZETTE—the blue upright, half stone, and gold twist, with which some good creels have been filled, numbers of them weighing ½ lb. each, and in two or three cases ¾ lb. each. Our local anglers have been doing well in all-round fishing, which, as the time is now drawing to a close, will not leave that blank it was expected to have done. Perch and pike have been very small all the season through, but roach and dace have been very numerous, and many of them turning the scale at 1½ lb. to 2 lb. With regard to salmon fishing, Mr. George Lee, of the Elephant and Castle in this city, commenced with his usual good luck, and brought to grass on Tuesday two splendid clean fish, one of 14½ lb. the other 15½ lb., weighed home. He was out again on Wednesday and doubtless returned again with as good, if not a better, creel. I believe I am right in stating he lost a third fish on Tuesday. It is a treat to see him wind up his tackle and guide him (the salmon) to shore, then with the gaff land him, for the pot to be sure. A splendid fish of 23½ lb. weight was landed by the net fishermen, with several others, in the lower waters on Wednesday also. I have no news from the upper portion of the river, but expect some shortly. Nothing particular doing in the estuary, the herrings having all gone, and the mackerel have not arrived, but this beautiful weather will no doubt hasten their arrival.—FRANK GOSDEN.

Exe (Tiverton).

The water is now in very good order for fishing. Trout sported well at the commencement of the week. Some very good baskets were made. To-day (Thursday) sport has been very indifferent; too much wind, almost blowing a gale, which made it very difficult to keep one's flies on the water. Flies that have been killing best are the halfstone, blue upright, rat's fur, silver twist, and hare's flax.—W. MUDFORD.

Ferry Boat (Tottenham).

The water is now in fine condition, and catches will be the result for the next few days; anglers should take advantage of it. The late flood should greatly improve the prospects of good catches. This water will close on March 15 for fence months. The catches have been few of note. Messrs. Williams, Hughes, Chapman, Dodd, and many day anglers have had a few roach. A perch, 3 lb., was taken at Ford's, and also the chub now at Mr. Edell's for preservatoincam rome fthere.—H. GAME.

Lea (Rye House).

The water is in good order, the wind south and mild. There were some nice roach taken on Tuesday, and one chub weighing 4 lb. No perch taken. Some small jack were taken, but they were thrown in again.—WM. COWELL.

Medway (Tonbridge).

The water has been too thick for any kind of angling during the past week—a most fortunate thing, as the pike are seeking the spawning beds, and it is a pity to take them. The river is now going down, and in the absence of rain there will be just time to catch a basket or two of roach before the close season commences on Tuesday.—YE MEDWAY WATER-RAT.

Ouse and Ivel (Blunham).

These waters are in good fishing condition. On Saturday last some fine bags of fish were made; two jacks, one weighing 25 lb. and the other 20 lb., and seven tench, weighing 30 lb., by one gentleman; and Mr. Tompson, having his usual good sport, a large bag, varying in weight from 2 lb. to 1 lb. Mr. Wetherhead having taken a large bag of roach and jack, the gross weight 23 lb.—E., B.

Suir (Clonmel).

There has been no rod fishing this week, owing to the heavy water. Great numbers of fish have gone up the river, and good sport is expected when the water fines down, which won't be for a few days. The Clonmel cotmen took more fish this past month than they did for the same month during the past ten years. The following is a return for the past three years:—February 1882, 122 salmon, price 1s. 6d. to 2s. per lb.; February 1881, 89 salmon, 1s. 8d. to 3s. per lb.; February 1880, 69 salmon, 1s. 6d. to 2s. 3d. The trout fishing is improving, Mr. W. Bagwell got 27 good trout at Kiltman, the killing fly was, as usual, the favourite gold spider wren.—DORA.

Swale.

Very rough and boisterous weather has prevailed during the past week, and the river banks have been full of snow broth, consequently all angling has been put a stop to. With the advent of finer weather we may soon expect to see the earlier hatchings of the spring flies, notably the March brown, early brown blue drake, early spinner, &c.—THOMAS FORD.

Test (Hampshire).

A very fine jack, weighing 21½ lb., was captured on 6th inst. by Waterman Smith in a trammel net just above the railway bridge at Testcombe. It had not spawned, so was taken just in time. They will very soon be getting up the drains and back water, when they will fall victims to the wires. They are terrible fellows in a trout stream.—HAMPSHIRE.

Thames (Goring).

Water in good order for all-round fishing. Prospects good for all this season. Not much has been doing here. I have had two days, best day three jack and some good perch.—J. RUSH.

Thames (Walton).

Nothing of any description taken this week, nor do I believe there are any fish to take, through the heavy rains from the upper waters. It is very disappointing to have such weather just so close to the finish of the season, but prospects are a bit brighter now. The water has gone down, and is clearing very nicely, and I am in hopes that something will yet be done before the 15th. It is certain, however, that unless some have the heart to try next week will be as barren as the last. The weather now is dull, but warm, and looks like a light shower coming on, and I should think there will be a good chance from near the bank for bream. I wonder where are the roach.—HENRY G. WOOD.

Trent (Newark).

The water has gone down very nicely from the very heavy flood of last week, and is now in fairish condition for bottom fishing. The annual close time for coarse fish will commence next Wednesday; so I should advise anglers to put in full time while they have a chance, for I believe a few fish are to be caught under the present circustances. In my opinion chub can be had, and pith and brains will be the best bait for those fish; cockspur and brandling worms will be found the best baits for roach and bream. A bream of nearly 4 lb. has been weighed-in this week, and a report has just reached me to the effect, that a chub of over 5 lb. has been had to-day. I am just going to ascertain particulars. Water to-night (from a personal inspection) is fining down very nicely. Anglers should be in the swim; in fact, I hope all my readers will finish up the season with a rattling catch. The netters were again at work last Sunday, with the result that about 8 stone of fish went to Nottingham; no doubt to be weighed in at the various clubs, as captured with rod and line; one fish was a bream, that weighed over 6 lb. I am quite digusted with these netters' tricks; but they must be on the look out during the close season; for if they will be up to their old tricks they will probably come under the eye of—THE TRENT OTTER.

Trent (Nottingham).

As the close of the season approaches, there is considerably more activity noticeable amongst the various angling associations. During the week the river in this district has been extensively patronised, and some capital specimens of roach and perch have been weighed-in. For instance, a roach killed at

Weston on Monday weighed 1 lb. 9¾ oz., and a second, taken by Mr. Theaker, turned the scale at 1 lb. 7 oz. A few perch were also caught, and one brought up from Stoke was more than 2¼ lb. On Thursday the chub fraternity were buys, but the water was too thick and the fish did not feed. The wind has been blowing a gale throughout the week, otherwise I should have had some even better news to communicate. To-day (Saturday) will doubtless see some hundreds of rodsters out.—THE MAN AT THE CLUBS.

Tweed and Teviot.

From the time of your last issue little has been done on the above rivers, floods being of very frequent recurrence since Saturday last. On Friday of last week both rivers were two and a half feet above their normal level, but being a "big thin water" it soon subsided, and angling was indulged in on Saturday. Little sport was got, however, the only capture being by Mr. James Keriss, who killed one salmon of 9 lb., the fish being taken in the now famous Hendersyde water. I may here remark that this is the only water that has been the least productive since the spring fishing began, nearly all the fish killed having been got on the "casts" in this water. A slight rise occurred again on Sunday evening, and put a stop to angling on Monday, the rivers being flooded to the extent of two and a half feet; but on Tuesday the rivers were in fair condition for fishing, and on the Hendersyde water Mr. Thos. Johnston, wine and spirit merchant, Kelso, killed one beautiful fish of 15½ lb. Nothing was done on any of the other rod angling waters. In fact, my reports from the Ednam House, Sprouston, Floors Castle, and other salmon angling stations are to the effect that nothing has been done during the week, and a return of fine mild and calm weather is very much desired by all the partisans of old Izaac, and no good angling can take place till the weather is more settled, when anglers expect to enjoy excellent sport, the frequent recurrence of floods which we have had lately having allowed of a free run of fish up the river, the various streams and pools being said to be now fairly well stocked. Trout-fishing proceeds apace; but these species are still far from being fit for table purposes, and it is high time that something ought to be done in the way of having a measure passed by the Legislature to enforce a legal close time for the yellow beauties, as well as having one for the *Salmonidæ* species, as many baskets of trout are killed during the months of November, December, January, February and March, that are not worth carrying away from the river's edge. In the salmon netting districts, between Berwick and Coldstream, takes have been fair, although not so productive as the previous week, but some stations have done exceedingly well. So far as the season has gone, there is a decided improvement on the corresponding period last year. The occasional showers of last week kept the river at a level condition, which is termed a big thin water, coupled at night with a waxing moon—circumstances under which it is very difficult to secure heavy takes. Salmon promise fair, but trout are very scarce. Owing to the mildness of the season, the market is being supplied from all quarters—hence the low prices. On Saturday salmon were 1s. 8d. per lb., trout 1s. 6d.; corresponding period last year, salmon 2s. 8d., trout 1s. 11d. The reports from Berwick, the fishings with the nets, show a falling off—especially in salmon—the takes being very poor compared with those of the opening week. Trout still continue scarce, but that is nothing remarkable, as this is not the proper season for the fish. Prices continue to rise. To-day they are: salmon, 1s. 10d.; trout, 1s. 7d. per lb.—MAXWHEEL, Kelso, March 9.

P.S.—I am happy to state the fungoid disease has now almost entirely disappeared from the Tweed, and reports from the tidal waters are to the same effect.—M.

Wye and Derwent (Derbyshire).

The weather during the past week has been moderately fine, but the wind has been very boisterous indeed. It has been with very great difficulty that anglers could keep their lines on the water, but still there have been some fair catches of trout, grayling, roach, dace, and perch killed. The coarse fish have been killed with the worm on the Derwent, between Cromford and Ambergate, and trout have been taken daily off of the free waters on the Derwent close to Matlock bridge, with both fly and trolling. There have been several very nice grayling killed off of the Wye between Bakewell and Filleford bridge, chiefly with large claret bumble and furnace flies. Last Tuesday morning F. C. Arkwright, Esq., Willersby Castle, Cromford, had a consignment of young trout by rail from Howietoun fishery, Stirling. There were 1000 yearling trout, from 2 inches to 4½ inches long. Nearly all these came alive; I did not see, when we turned them into the river Derwent near Cromford bridge, more than four or five dead fish out of the whole lot. There were also 5000 young trout about half-an-inch long, fish that have been recently hatched, and I should think, out of the whole lot, there were not more than fifty live ones when we turned them into the river Derwent. If these fish can only keep of the way of the pike, in three years from now F, C, Arkwright's private fishery ought to be one of the best fishing places there is in Derbyshire. About sixteen or eighteen years ago, this very same water, from Cromford down to the bottom of the Birchwood stream, used to be completely full of both trout and grayling; but the river got poisoned during the time the Derwent was very low, and every trout and grayling in the stream was destroyed. Yesterday (Wednesday) at the Matlock Bridge petty sessions, Henry and Frank Martin, brothers, master carpenters, were summoned for using a cleach net in the Derwent while the river was in flood. Mr. Eddowes, of the Trent Fishery Board, prosecuted, and Frank Martin was fined £1 and 7s. 6d. costs; the other man got off. I hope this will be a caution to others, as this practice wants putting a stop to; in fact, we want a water bailiff of the Trent Fishery Board to see that the Freshwater Fisheries Act is properly carried out on both the Wye and Derwent. Where does all the license money go to that is got off both the Wye and Derwent every season for rod licenses alone? Surely it would keep a water bailiff well on those rivers. Hoping that Mr. Eddowes will see to this at once.—GEORGE JAMES EATON.

Starkholmes, Matlock Bath.

Yore (Yorkshire).

There has been very little doing in this district for the past week or so, owing to the river being in high flood. One or two dishes of trout have come under my notice; these were taken with the worm, and were in very good condition for the time of year. Up to now there has been no opportunity to attempt fly-fishing on account of the floods.—FRANCIS M. WALBRAN.

GEORGE JAMES EATON, of Starkholmes Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[ADVT.]

SCOTCH NOTES.

(From the *Scotsman.*)

LOCH TAY.—On the Kenmore Hotel water Mr. Bruce Archibald caught one salmon, weighing 19 lb., and Mr. James Archibald, of Beechwood, Tillicoultry, one of 18 lb. Mr. Gow, of the Fort Lodge, Taymouth, gaffed a large diseased salmon in the bay behind the Kenmore Church, weighing 33 lb.

INVERGARRY.—The sport here continues to be very good. Up to Saturday last—three weeks' fishing, during the first two of which there were two rods, and during the last week three rods—121 salmon have been landed, and the ineications of future fishing are still very encouraging. There is no disease whatever here.

SOUTH OF IRELAND.

The Lee has, during the week, realised our best expectations. There has been exceptional sport, and appearances go to show that the fish are numerous. Sir Augustus Warren, on his excellent preserve, landed, on Monday week, four springers, and in the following day five. Since then he has added nine to his account. Dr. Gwynne, on Friday, took four springers, all taken with a lemon grey of a large pattern. J. Manning, on the preserves of Sir Oriel Forster, at Faigus, has been very successful, taking several during the week. Mr. Bowen killed two on Friday, and several since. Mr. Casey, of Carrigdrohid, took three on the same day. Mr. Perarse, postmaster, Macroom, has taken three during the week. Mr. George Haynes landed two on one day, and Mr. Angler two heavy unspawned fish, one of 16 lb. and another of 15 lb. Mr. Mat Manning took two fine springers. A fine springer of 10 lb. was taken on Saturday near Macroom by a one-armed man named Kennealy. This man's power to wield the rod and to play a fish seems an enigma to many. I have seen him angle, and he throws the fly well. At each cast he raises his knee, which becomes a rest for the butt of the rod, and enables him to throw the line well into the stream. When winding his reel he places himself in a sitting position, and crossing his legs he holds the rod between them and his body, while the hand is engaged with the wheel. He probably adopts the same tactics when playing a salmon, but his baiting of a worm hook is probably the most ingenious device of this man's angling capabilities. He sticks the shank of the hook into the heel of his boot and while it is thus fixed he puts the worm on. He has, however, practically abandoned this branch of his art and confines himself to fly fishing, in which he has been already very successful. It will be gratifying to the English angler, if he has a notion of visiting our southern rivers, to find that he can have angling on one of the best preserves of the river at 5s. a day. His train fare to the spot will be 3s. 6d., so that for about 10s. a day he can have a certainty of sport without the least interference. Mr. Wm. Haynes, Patrick Street, the angling warehouse, will supply full information to any gentleman desirous of paying a visit to Cork.—ANGLER.

THE ATTEMPT ON THE LIFE OF THE QUEEN.

HER MAJESTY has no more loyal subjects than the hundreds of thousands of anglers scattered through her dominions. The toast of the "Queen and the Royal Family" is always received with the greatest enthusiasm. In the name of the anglers of the British empire we congratulate her gracious Majesty on her escape and express our horror at the recent attempt to shoot her. May she long reign over us!

Respecting the man Roderick McLean, it seems pretty clear that he is a lunatic. The London Stereoscopic Company have brought out a photograph of him, taken immediately after his first examination. He looks a quiet, inoffensive young man, not the least like an assassin. We hope it will be proved he is mad.

LIST OF LONDON CLUBS.

The West Central Association of London and Provincial Angling Societies have just issued their new list of angling societies, a copy of which has been sent to every society whose name is upon it (158 in all). Fishing tackle manufacturers and proprietors of river-side public-houses, who are willing to exhibit these lists, will receive one, post free, upon application to the hon. sec., Mr. T. Hoole, Mortlake, S.W.

THE SIAMESE PIG IN EXETER.—Reading in the FISHING GAZETTE of the 25th of February, of one of the most peculiar freaks of nature, respecting a pig with eight legs, four ears, and one head, will you kindly allow me space to record another of these peculiar freaks of nature in the porcine way. Mr. Charles Blake, of the Royal Museum Hotel, here, kindly called my attention and assistance in preserving this curio. This pig differs from the above by having two distinct bodies, fully developed, each having the spinal vertebræ perfect; these bodies form one whole from just above the shoulder, thus leaving the major portions of their hind-quarters perfectly free of each other, consequently the hind legs are perfectly in their proper place; the two front legs appear as usual as upon an ordinary pig, there are two others just over the back where the bodies unite, and just below the base of a well-shaped head; thus showing almost two distinct bodies with one head. It is of the black Berkshire breed, well developed, two fine ears; and—to make an end, a finis, a wind up, a climax—two fine tails. This nature's freak is being seen by no end of persons daily.—FRANK GOSDEN, Exeter.

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

DACE, GRAINING, OR WHAT?

Sir,—I am excessively obliged to E. Gosling, Esq., and "Cyprinus" for their very lucid explanations tendered in your last issue. I quite agree with "Cyprinus," I have never heard the word taft used in any other manner, and this is all the more singular as there is scarcely an angling term that cannot be applied to the occupations of everyday life, from spinning for jack to stringing for flounders.

In reference to the singular-looking dace caught in the Witham, and so artistically described by the "Trent Otter," I can bear him out. Many years ago I took two singular specimens from Besthorpe Fleet. There were various opinions expressed on the subject, but, on showing them to an old experienced angler he gave it as his opinion they were a cross between a bream and dace, but I am inclined to the belief they were a cross between a white bream and a roach—not the carp bream proper, but the white or silver bream. And I will tell you why; mind I do not say there are not dace in the Fleet, but I never caught one, and I have caught plenty of roach and rudd when bream fishing. I am deeply interested, and hope to hear something definite in your next issue.

I distinctly recollect the orange tawny tint of the fins, as described by the "Trent Otter," and it is just possible this peculiarity might have been inherited from the roach.

I should feel greatly obliged if the "Trent Otter" would inform me the greatest weight he has ever known a white bream to arrive at, and what relation the white bears to the carp bream.

Apologising for taking up so much of your valuable space,—I am, &c.,

Mark Antony.

HELGRAMITE.

Sir,—Can any one tell me what a helgramite is? In the *American Angler*, of Feb. 18, is an article on black bass fishing. The writer says:—I have tried helgramite, frog and crayfish in the lake, and have never taken a bass upon either. Leaving the lake only a few hundred yards, the helgramite is, by great odds, the most killing lure that can be offered." Further on he says:—"But he was not disposed to be beaten, and passing up the stream to a shallow place, he procured six helgramites, and, returning to the pool, succeeded in a short time in landing five bass."

Fish from the Witham.

The "Trent Otter's" description would point to the Pomeranian bream, *Cyprinus Buggenhagii*, occasional specimens of which have been caught in the Trent. I do not, though, remember to have seen one with orange-red fins; the usual tint is a light brown and sometimes nearly white. The fish was certainly not a graining. Some years ago I caught, in a tributary of the Trent, a fish which resembled a dace in shape, the eyes in colour like those of a white bream, the fins as scarlet as a rudd's. This fish I intended to send to Mr. Frank Buckland, but, in my temporary absence from the kitchen, where I was packing it, the cat stole it. I sent a description to Mr. Buckland, who, in his reply, seemed to think it may have been a hybrid. There are certainly many varieties, if not species, of the cyprinidæ which have escaped the notice of ichthyologists—as, for example, the half-bred, so-called, of the Yare—which, though abundant in that and other rivers, has not, to my knowledge, been even alluded to by any writer on British fishes.

Undersized Crabs.

Our men here are much troubled by a decision of the Plymouth magistrates that crabs are to be measured across the narrow part of the shell. Now the Act of 40 and 41 Vict. says:—"A person shall not take, &c., any edible crab which measures less than four inches and a quarter across the broadest part of the back." This appears to me clear enough; and how the Plymouth magistrates make out that to measure from head to tail is across the broad of the back passes my comprehension.—I am, &c., E. Gosling.

Budleigh Salterton, March 7, 1882.

[All we know about the helgramite at present is that it is a little animal about 2 to $2\frac{1}{2}$ inches long when full grown, which is found under stones and crawling about the beds of some American streams. It is doubtless the larva of some large fly like our stone fly or May fly. We will look up some of our American angling books, and see if we can get further particulars.—Ed.]

A PERMANENT YELLOW DYE FOR FEATHERS AND SILK.

Sir,—In answer to your own query last week I beg to send you the following as a simple method of dyeing permanent yellow of all shades, taken from Blacker's work on angling and dyeing, and proved by practical experience, In the first place you must procure two earthern pipkins, each to hold a pint. Nearly fill one of them with water, set on a slow fire, take a tea-cup and put a table-spoonful of the best turmeric, pour over it some warm water and stir it well with a piece of clean fire-wood; when the water begins to simmer in the pot or pipkin put in the ingredient out of the cup and stir it well with a piece of stick; have your other pipkin about half full of soft water and boil it, into this put two table-spoonfuls of ground alum and one tea-spoonful of crystal of tartar. While these are boiling and perfectly dissolved, put into it your hackles, mohair, &c., and boil gently for an hour or half-an-hour, then take off your pipkins and enter the hackles into the yellow dye out of the liquor into which you put the alum and tartar, and boil them very slowly for an hour, taking them out at intervals in order that you may see the shade you require. If too pale, put in more turmeric, and if too heavy in shade the next trial put in less, and do the same with all colours till you get the exact shade or shades required. After having done so take them out and wash them in soap and hot water, draw them evenly through your fingers in the bunch and let them dry, as this keeps them in shape. There are various methods of dyeing permanent yellows, the great secret being in getting the oil out of your feathers, furs, &c., which cannot possibly be done without a strong mordant and plenty of boiling, always taking care not to over-do either. Knowing that the above will suit any who may try it,—I am, &c., John Tweddle.

Choppington.

[Many thanks.—Ed.]

THE BRUMMAGEM PERCH.

Sir,—I have again been in the neighbourhood of the "big perch." I should not, but for the evident uneasiness of "Esox Lucius" and his roaring neighbours concerning it, have troubled you with mentioning this. You, sir, suggest it is a "sea perch"; it may be so, but I don't think it.

If "Esox Lucius" ever saw a "sea perch" it might be well were he and a few of those roaring neighbours of his to take a run down to "Brum," and go and look at it; they would find it just as I had previously described it, and I feel sure would receive a friendly reception from Mr. Reynolds, who is himself no chicken with the rod.

I may add, Mr. Reynolds, while I was with him, caught a bream weighing $5\frac{3}{4}$ lb., which Mr. Gregory has sent to Mr. Cooper to preserve.—I am, &c.,

P. F. Davis.

Eliza Cottages, Chandos Road, Stratford, E., March 6.

FINE TAKE OF TENCH.

Sir,—A friend of mine took four tench on March 6, in private waters, weighing respectively $3\frac{1}{4}$ lb., 2 lb. 13 oz., 2 lb. 12 oz., and 2 lb. 11 oz.; they were to be seen here until to-day, when I sent them to Cooper to set-up; and when finished I shall add them to my show at the following address.—I am, &c.,

The Castle, Farringdon Street Station, Mar. 7. Geo. Reeves.

HOOKS FOR BURN-FISHING.

Sir,—Being a subscriber to your widely-circulated paper, and wishing to become acquainted with the best make of bait and fly hooks, I beg to take the liberty of asking you to let me know through your columns what selections are best suited for hill-burns, &c. There are also rivers (Devon and Allan) in this quarter, and which are partly quick-running and dead-water streams. Your letting me know the above will oblige.—I am, &c.,

90, Stirling Street, Alva, Scotland. Alex. Morrison, jun.

[Bartleet and Allcock, and Woodfield, of Redditch, make first-class hooks, so does Hutchinson, of Kendal. You cannot go wrong if you get the goods actually made by one of these makers. But unscrupulous dealers trade on their names, and even use their labels occasionally. We much prefer sneck-bend for the artificial fly—size according to state of water (No. 12 would do in clear water). For worm, use three No. 10 or 11 to make Stewart's tackle. If you use single hook, try those made for Messrs. Hardy Brothers, of Fenkle Street, Alnwick, short shank, size from 6 to 8 or 6. These hooks are of excellent temper, and much used by Northumbrian up-stream worm-fishers.—Ed.]

NETTING FISH FROM THE LARK.

Sir,—I am very sorry this disgraceful practice of netting fish, in their passage from the deep Ouse to the shallow gravelly Lark for the purpose of spawning, has again commenced. Bushels of very small roach, dace, perch, &c. were hawked about Newmarket and adjoining villages on Saturday last; pike, five to eight inches in length, strung on a line, and sold for about halfpenny per lb. It is a great pity some steps cannot be taken to prevent this occurence. Nothing can, I am sure, be more hateful to anglers than this cruel business. There is a dinner to take place at Cambridge on the 14th inst., when we hope something will be done to prevent, if possible, this netting.—I am, &c.,

Newmarket. William Howlett.

BLUNHAM ANGLING ASSOCIATION.

Sir,—Referring to the article in your paper of last week about the fishing at Elliott's, Blunham, I would say that you are quite right in your supposition that the water is private (it belonging to the above association). At the same time we have a few vacancies, and to any gentlemen wishing to join I shall be happy to forward full particulars.—I am, &c., Charles Forge.

11 and 12, Addle Street, Wood Street, London.

PROPOSED ANGLING CLUB AT OXFORD.

Sir,—Several influential parties in this town are desirous of forming an association for protection of fishing. I should feel obliged, therefore, if you could hand this to one of the London clubs. Perhaps then the secretary would forward me list of rules, &c. you will know best which to hand this to.—I am, &c., W. J. Mayo.

Walton Street, Oxford, March 8th, 1882.

[We trust some of our club friends will give Mr. Mayo the information he wants. It is high time there was a good preservation society at Oxford. We should imagine that the rules of such a club as the Maidenhead Angling Association would be most useful.—Ed.]

LINES.

Sir,—I should like to know, through the medium of your valuable paper, why fishermen cannot get real lines made up from raw silk without bleaching or other abominations having been applied? I feel sure these lines would be far stronger, and, at the same time, more durable. I should also like to know the name of some firm who supply gut without having been doctored in any way. I cannot help thinking that coloured gut is a mistake; what is wanted is something that will take off the gloss and grease without injuring the substance. And this, I fear, we shall have to wait a long time for.—I am, &c., Constant Reader.

22, Goulton Road, Clapton, E., March 6.

A GREEDY JACK.

Sir,—It may probably be interesting for you to know that a pike I caught on the 22nd ult. (weighing 5 lb.) bit the tail off my flight between the time I struck him and when landed, and on opening his mouth to extract the hooks we found in his throat two gorge hooks, thus clearly proving that he had been hooked and lost twice before. However, he had to succumb at last. Is it not very unusual for a fish to feed while in that state, and would the hooks prevent the fish pouching his food?—I am, &c., K. H. Gifford.

[It is certainly unusual to catch a jack with two gorge hooks in him; how he could swallow we are at a loss to understand.—Ed.]

FISHING NEAR LIVERPOOL.

Sir,—Perhaps the following may be of some use to your correspondent, G. L.:—

Ribchester on the Ribble.—To reach this place you book to Wilpshire station, and by a walk of about three miles, you are brought to the New Bridge and the De Tabley Arms, where tickets are issued at a shilling a day for fly-fishing, but the bottom fishing is free. The river here is badly polluted, and one doesn't stand much chance except at the subsidence of a flood.

Hacking Boat.—By rail to Langho station, and a tramp of about two and a half miles brings you to a charming stretch of the Ribble and Hodder. Here good fishing is to be had. Bottom fishing free; fly-fishing a shilling per day; tickets to be had at the boathouse, where a kindly-faced, motherly old woman is sure to welcome a body; and whose ham, eggs, cream and cakes have a wide reputation.

Clitheroe.—Here the Ribble is pretty well fished, both top and bottom.

Chatburn.—Tickets to be had at the Pendle Hotel, close to the station, and you are not more than ten minutes' walk from the Ribble, unpolluted and sparkling, and first-rate trout-fishing.

Sawley.—By rail to Chatburn, and a walk of about three miles along the highway. Here tickets are issued by the landlord of the hotel that stands on the river's bank. The fishing is about the best to be had in Lancashire, and any one intending to visit this place had better make all arrangements before hand, as the number of tickets are very limited—a place that can be recommended for its beautiful river, its good hotel, and the quality and quantity of fish caught, Hoping this will be of use to a brother of the angle—I am, &c.,

H. N.

FISHING NEAR CORK.

Sir,—Can you or any of your readers tell me of the best and quickest way of getting to Cork, starting from London? Whether a bachelor could get furnished apartments (two rooms) in that city for less than a pound a week? What trout and salmon fishing could be got, and are there any pike or perch?—being willing to pay, say, £20 a year for the latter. Possibly some of your readers know of a better place than Cork? Should like to know what the climate of Cork is like?—I am, &c., Herts.

CLUB REPORTS.

AMICABLE BROTHERS ANGLING SOCIETY.

On March 5: Mr. Harding, roach and dace, 5 lb. 7½ oz.; Mr. Partrick, roach, 4 lb. 12 oz.; Mr. Arnold, 1 lb. 7½ oz.; Mr. Squire, roach and perch, 1 lb. 8 oz.; Mr. Howlett, 1 lb. 5½ oz.; Mr. Shury, roach, 10½ oz.—J. Worledge.

ANCHOR AND HOPE ANGLING SOCIETY.

Sixteen of our members competed for six prizes on the 5th inst. (roving), Rye House Bridge to the Fish and Eels. Only three prizes were taken, the following being the result:—Mr. T. Bowling, first; Mr. D. Davis, second; Mr. R. Smith, third; Messrs. A. Shakel and A. West also had fish.—D. Davis, sec.

March 6.

BATTERSEA FRIENDLY ANGLING SOCIETY.

Next return visit in No. 3 District will be paid to the Battersea Friendly, Queen's Hotel, Queen's Road, Battersea, on Tuesday, March 14. Clubs in the district have been advised, and it is to be hoped a representative from each will attend. Mr. T. Hoole is the officer for 1882, and will attend, so now is the time if you want information upon matters pertaining to the association.

BOSTONIAN ANGLING SOCIETY.

We had a few nice fish Sunday last, Mr. Jennings weighing-in 22 lb. of roach and one jack, four largest roach 4 lb. 10 oz.; Mr. Constable, perch; and Messrs. Hart and Gratton, roach.

March 7.

BRENTFORD PISCATORIAL SOCIETY.

The West Central Association, District No. 1, paid us our annual visit on Thursday, March 2, seven clubs being represented, our Acton and Ealing friends mustering strongly. A very pleasant evening was spent, Host Thaxter excelling himself in his attention to every one. Since our last report the following gentlemen have weighed-in, viz., Mr. J. Mounstephen, jack 11 lb. 4 oz.; Mr. W. Ricketts, jack 3 lb. 2 oz.; Mr. J. Allen, one jack 5 lb. 3 oz.; Mr. J. White, one jack 7 lb. 10 oz., a very pretty fish; Mr. H. Clark, one jack 3 lb. 2 oz.—J. H. White, hon. sec.

March 8.

FIRST SURREY ANGLING SOCIETY.

The members of this club are earnestly invited to attend at the Duchess of Kent, Warner Road, Camberwell Green, on Wednesday, March 15, at 8.30 P.M., for the purpose of arranging the quarters of the above club.—H. Bates, treasurer.

March 7.

GOLDEN BARBEL.

In spite of the thick water and the wind that prevailed on Sunday last several of the members succeeded in getting enough fish from Father Thames to make a decent show at the headquarters in the evening. On the 12th there are several prizes to be fished for "where you like." I noticed a few names down for that silver cup given by a gentleman for competition among the members of the various clubs at this end of the town. The contest will take place at Bourne End on the 12th; that old and tried member of this society, Mr. H. West is the secretary and referee.—Pixie.

March 8.

GLOBE ANGLING SOCIETY.

At a special meeting of the members of this society, held on Wednesday, March 8, Mr. J. J. Holmes, of 104, Blackstock Road, Islington, N., was appointed secretary pro tem. Secretaries please take notice.—J. Churchman.

March 9.

GREAT NORTHERN BROTHERS' ANGLING SOCIETY.

We had a very fair show of fish on Sunday, Mr. J. K. Fitch heading the list with 10 lb. 15 oz. of handsome roach, one fish 1 lb. 3 oz., several of 1 lb., and two splendid dace, weighing 8½ oz. and 12 oz., Mr. Theobald 8 lb. 6 oz. roach, Mr. W. Parkin 5 lb. 15 oz., Mr. J. A. Fitch 3 lb. 11 oz.. Mr. F. Watling 2 lb. 11 oz.. one dace 7½ oz. Messrs. Hutchings, Armstrong, Newman, Baker and Young weighed some nice shows of roach and perch. A large number of the members will be out on the 14th, and we expect a grand show of fish for the last day. The dace taken by Mr. J. K. Fitch have been forwarded to Mr. Gibson, of Richmond Grove, Barnsbury, to be preserved.—J. A. Fitch, jun., sec.

March 7.

GRESHAM ANGLING SOCIETY.

There was a very large attendance at the meeting of this society on Thursday evening, and the room was densely crowded, A. Jardine, Esq., in the chair. After reading the minutes, correspondence, &c., the hon. secretary announced that Mr. Jardine, not content with his recent laurels, had been on the war-path again, and had added another 54½ lb. of pike to the record of his exploits during the present year. Mr. Brett, fishing with him, weighed-in five pike weighing 29 lb. 4 oz., and one perch of 3 lb. 4 oz. The latter was very generously presented to the society, and has gone to Saunders for preservation, and, with the other two lately presented, will make one of the finest cases in the metropolis. The great feature of the evening was the reading of an essay by Mr. George Austin, on "Izaak Walton and Sir Thomas Gresham," a skilful production, in which the vocation of both these celebrities, and the influence exercised by them, directly or indirectly, on the art of angling was clearly set forth. The paper was followed by a brief discussion, and at the close a hearty vote of thanks to Mr. Austin was carried by acclamation. Mr. Jardine then ably introduced the question of the Great International Fisheries Exhibition; after which Mr. Towse read the report presented at the late meeting at Willis's Rooms. The idea that the Gresham should take a leading part in this matter (which had previously been discussed in committee), was very warmly taken up, and in a few minutes Mr. Jardine had the pleasure of handing £11 2s. cash to Mr. Towse for the general and prize fund, and £101 16s. guaranteed, forming the first list of the society. We understand that one of the toasts at the society's banquet will be the "International Fisheries Exhibitions of London and Edinburgh," and it is sure to be warmly welcomed. Mr. Bates drew attention to small jack offered for sale in Leadenhall market, four of which he found weighed only 3 lb. in all. The proceedings of this very enthusiastic meeting were brought to a close by a vote of thanks to Messrs. Aveling and Winterbottom, finally terminating with the National Anthem.

HIGHBURY ANGLING SOCIETY.

I have the pleasure to report that a goodly number of our members were out on the fifth instant to contend for three valuable prizes given by Messrs. McDermott, Payne, and Edward Wheatley, the field of action being confined to the river Lea, the result being a capital show of roach and dace in our trays, the honours falling respectively to Messrs. Oakes, Payne and Cartwright. Will you kindly permit me to mention that the society have appointed a committee to organise and arrange the establishment of a smoking concert, to take place during the forthcoming fence months, on every Wednesday evening at our club house as above, when we trust that our members will exert themselves, by the introduction of their friends and brother anglers, to make it a success.—James Edward Wheatley, sec.

IZAAK WALTON.

There was a fair show of fish on Sunday last, the 5th inst., Mr. W. Mecham had a tray of good roach, Mr. G. Wood also had a good show of the same, Messrs. C. Green and H. Butt also had fish. Mr. W. Mecham was again well to the front on Wednesday, the 8th inst., with 4 lb. 5 oz. of nice roach. Mr. J. Hilliar, jun., had some beautiful roach and chub. Three special prizes will be fished for on Sunday next, 12th inst., at Sawbridgeworth, it being the last Sunday of the season, a good muster of the members is expected.

JUNIOR PISCATORIAL SOCIETY.

Our members have been hard at it, but with indifferent sport. On the 14th February, Mr. Palmer, at Bexley, eight roach, weighing 2 lb. 12 oz.; on the 12th, Mr. Mills, sen., near Guildford, two jack, one weighing 10 lb., the other 2 lb. 1 oz.; on the 16th, Mr. Palmer, at Richmond, dace, 4 lb. 1½ oz., one weighing 9½ oz.; on the 18th, Mr. Mills, sen., at Brookwood, one jack, 2 lb. 12 oz.; on the 22nd, Mr. Palmer, at Bedford, three roach, 1 lb. 14 oz.—Alf. H. Bisley.

March 7.

LARKHALL ANGLING SOCIETY.

There have been but few members out lately, owing to the bad accounts received of the river. Mr. E. Watkins and Mr. Deane weighed-in some nice chub, one going 4 lb. 2½ oz., taken by Mr. Deane. Mr. G. F. Spencer, on Wednesday, had a splendid show of dace from Twickenham, weighing 13 lb. 10 oz. The annual dinner of the society is to be held on Tuesday, the 28th inst., at Mouflet's Hotel, when a large gathering of members and friends is expected.—E. M. Mallett, hon. sec.

March 9.

LITTLE INDEPENDENT ANGLING SOCIETY.

Most of our members were at a peg-down match at Boxmoor on Sunday for three prizes, but only two were taken. Mr. Mead secured the first and Mr. Heelas the second. Messrs Pipe, Petrie, Thompson, Scott, Wightman and F. Moore weighed-in from other places. Our general visit to the eastern district takes place on Tuesday, March 21, when we hope all brother anglers will rally round and give a bumper on this occasion.—H. Moore, sec.

March 9.

ORIGINAL ALEXANDRA SOCIETY OF ANGLERS.

I have a little better news this week. Our members were out in strong force on Sunday last, for twelve prizes, go where they liked, and great excitement prevailed as member after member arrived with blanks. But later on Mr. J. Blackledge arrived with a handsome show of roach and dace from the Stort, Mr. L. Hewett came next with roach and dace from Harlow, and it was thought that no other member would show up; but Mr. Brockett came up just before time was called and upset the calculation of the other members with a handsome show of roach from a private water, some of the largest going over 1 lb. each; therefore, Mr. Brockett takes Mr. Clark's first prize, Mr. Blackledge the second, Mr. L. Hewett the third, and the remaining nine prizes will be fished for on Sunday next, go where they like, sign the club book, and go down by the first train in the morning. Mr. J. Lammack and Mr. Potter, two of our week day members, had a nice show of roach and dace from Twickenham, 5½ doz. on the 24th, puntsman J. Bushnell.—E. Dymond, sec.

ORIGINAL CLERKENWELL PISCATORIAL SOCIETY.

The following members belonging to the above society weighed-in fish on Sunday last:—Mr. Laundy, dace; Mr. Marles, roach; Mr. Richardson, dace; all three from the Thames. Mr. Neagus, roach and dace from the Stort, and Mr. Obbard, dace from the Lea.—Thos. Wm. Lucy.

March. 8.

QUEEN'S ANGLING SOCIETY.

On Thursday week Mr. Morgan had 5 lb. of roach and perch. On Sunday, Mr. Walford 2 lb 1 oz. roach; Mr. Pearce, 2 lb. roach; Mr. Morgan, 1 lb. roach.—S. Walford, sec.

RICHMOND PISCATORIAL SOCIETY.

The first smoking concert of the season took place at the Station Hotel, Richmond, on Wednesday evening, March 1, when the room was crowded by a most appreciative and enthusiastic audience. The chair was, of course, taken by Mr. F. C. Clench, while the musical arrangements were under the able direction of Mr. F. A. Crew. Mr. S. Oakley Parrott rendered three violin solos. Professor Guido accompanied himself with his guitar, while capital songs were given by Messrs. Yeats, Ripley, Plant, Griffiths, Hester, Embling, and Crew, with Mr. J. D. Johnson ably presiding at the piano. Where every one did so well, it would be invidious to individualise. Suffice it to say, that each vocal and instrumental performer was at his best, and a thoroughly artistic programme was rendered in a very efficient manner. During the interval a collection was made for the Anglers' Benevolent Fund, when, in answer to the chairman's appeal. the sum of five guineas was subscribed towards this deserving object. Mr. Beckett, secretary of this fund, thanked the society for the magnificent sum thus raised, and said the amount would be all the more appreciated by the poorer anglers when it was remembered that on account of the social position of the members of the R.P.S. none of the money would ever have to be returned to them. A hearty vote of thanks to all who had taken part in the proceedings brought a most successful and enjoyable evening to a close.

SURREY PISCATORIALS.

This day the members competed for the prizes that I mentioned in my last report of this society. The result is as follows:—Mr. Boalch, first with roach and dace, from Teddington; Mr. Beckett, second with roach and dace, from Rickmansworth; Mr. C. Bansback, third, roach and dace from the Kennett. I met Mr. Pugh at Reading, and he showed me his take of yesterday and today, and he must have had about 50 lb. of handsome perch, several going over 2 lb. each. I beg to acknowledge receipt of subscription with thanks from your humble servant. This being the meeting night of the society Mr. Beckett took the chair. The minutes of the last meeting having been read and confirmed, Mr. Hamlyn gave in his report of the duties that he had had to fulfil since the last meeting, all of which met the approval of all the members present. On Mr. Boalch's proposition, Mr. Hamlyn was requested on the behalf of all the members of this society to forward a letter of condolence to Mrs. Meadway on her recent loss of one whom all the members of this society admired and respected. The general meeting will take place on March 29, on which occasion officers for the ensuing year will be appointed; till that time Mr. Beckett has kindly consented to officiate as chairman.—PIXIE.

THE KNIGHTS OF KNIGHTSBRIDGE CLUB.

The members of the above have several good shows of roach, nnd Mr. T. Pratt weighed-in 63 lb. of jack, one roach 1 lb. 6 oz. The members are going to fish for several prizes next Sunday at Cookham.—C. SAUNDERS, sec.

THE TUNBRIDGE FISH PRESERVATION SOCIETY.

The annual meeting of this society, which preserves the Upper Medway, was held on Monday evening at the Bull Hotel, Tunbridge, Kent, when Mr. T. Elliott, of Tunbridge Wells, presided and there was a good attendance of members. The annual report stated that, owing to the strict preservation of the river, fish were improving both in size, quantity, and quality. This was especially proved by the enormous catches of pike (ranging from 16 lb. downwards), bream, roach, chub, carp, &c. During the year 12,060 carp and roach have been presented to the society by gentlemen resident in the neighbourhood and placed in the river without the cost of a penny to the society. Great regret was expressed at the death of W. Graham, Esq., who had been president of the society since its formation, and had rendered valuable assistance, having gratuitously carried out the legal work. During the year one prosecution had been undertaken, and a conviction obtained against a man for fishing without a ticket. The best thanks of the society were tendered to the riparian owners of the river for kindly allowing the members and the water bailiff to preserve the ground. The chairman moved the adoption of the report in a lengthy and interesting speech, in which he adverted to the loss the society had sustained by the death of the late president, who took the greatest interest in the welfare of the society. The measures adopted to stop poaching and stock the river had been productive of the greatest amount of good, as well as improving the fishing of the Medway. This was not only appreciated by the local anglers, but those living in London as well. Besides this, it increased the knowledge of the art of angling and the use of coarse fish as an article of food. The officers for the ensuing year were elected as follows:—President, Mr. A. T. Beeching, J. P.; vice-presidents, Mr. T. Elliott, and Mr. E. J. Gorham; treasurer, Mr. A. T. Beeching; hon. sec., Mr. E. Hollomly; water bailiff, James Foster; auditor, Mr. E. Plowright; committee, Messrs. R. A. Dallas Beeching, I. Buley, T. M. Dove, J. Le Fleming, W. A. Kirby, G. Gray, E. Greenwood, F. W. Hancock, F. Chalklin, C. Payne, G. Punnett, J. Snelling, G. Payne, R. Ware, W. Ede, A. Bartram, L. Browne, and W. Flood. Votes of thanks were given to the riparian owners; Mr. E. Greenwood and Mr. W. Flood, for their valuable services; Mr. E. Hollomby, the hon. sec.; and the chairman; and the proceedings terminated.

WALTONIANS.

March 1st, Mr. Skeats weighed-in a jack 3 lb. 11 oz. I also weighed-in a jack 2 lb. 2¼ oz. March 5th, Messrs. Giles, Roland, Crabb and Grace, the last gentleman being the only take worthy of mention; a mixed catch, 4 lb. 13 oz.—A. J. MARRIOTT.

March 9.

WALWORTH WALTONIANS.

The members of this society visited the headquarters of the South London on the 2nd, and met with a very warm reception from the members of that society. The supper that was competed for by some of the members of the two societies will take place on March 21st at the St. Paul's, Westmoreland Road. On the 12th all the members of this society are invited to the last competition of the season, which will be a pegged-down at Bourne End. The first prize will be a diamond ring, given by Mr. Renault; second, a guinea hat, by Mr. Richardson; third, 10s. 6d. by Mr. Cain. An omnibus will leave Bright's Coffee House (near the Gate) at 7.30 Sunday morning. Mr. Feuillade gives a diamond pin to be competed for on the last day of the season.—PIXIE.

DEATH OF MR. MEADWAY, OF THE SURREY PISCATORIALS.

It is with deep regret that I have to announce the death of that much-respected member of this society, Mr. Meadway. As the chairman he was always appreciated for the impartial manner in which he fulfilled that office. He was a great lover of the rod, and looked on a day's fishing as beneficial to his health. A short time ago, while out fishing, he rescued a child out of a cesspool into which it had fallen, and since that time he seemed to be ailing more or less. On the 22nd ult. informotion was received that he was obliged to keep his bed, and on the 24th he died, aged 53 years. He was buried at Abney Park on March 1, much lamented by all who knew him.—PIXIE.

BIRTH.

On Sunday, March 5, at 3, Lloyd Street, W.C., the wife of R. B. Marston, of a daughter.

THE PHILOSOPHY OF ADVERTISING.

MATTERS WORTH READING, AND VITALLY CONCERNING EVERY PRESENT AND FUTURE ADVERTISER.—By Henry Sell. London: Sell's Advertising Offices, 10, Bolt Court, Fleet reet. This is an extremely valuable volume to all who advertise, and even the general reader will be amused and astonished at the amount of interest Mr. Sell puts into such a dry subject as advertising. Some of the apothegms on advertising are so good that we will quote a few, and trust that their effect will be to cause our present advertisers to double the size of their advertisements, and to make them more attractive. Any one would imagine that every fishing-tackle maker in the country would make a point of advertising in the GAZETTE, the paper which has the finest congregation of angling readers in the world, but they will not. They are afraid of the expense, and afraid of competing against rival houses; afraid of having too much work to do, and yet they grumble at the hard times. Let them read some maxims from Mr. Sell's book.

"Advertising is to business what steam is to machinery, the propelling power."—*Lord Macaulay*.

The following are unquestionably worthy of the serious consideration of all business men:—

He was a profound philosopher who compared advertising to a growing crop. He said, "The farmer plants his seed, and while he is sleeping the corn is growing." So it is with Advertising. While you are sleeping or eating, your Advertisement is being read by thousands of persons who never saw you or heard of your business, and never would have done so, had it not been for your Advertising.

Reader, if you have a good Advertisement running, you have hundreds of thousands of servants out at work for you, whether you wake or sleep, whether you be sick or well. No monarch's slaves ever scattered at his bidding so fleetly, or faithfully, or in such bewildering numbers as the literary messengers that bear your individual word to the people of this great nation.

The proprietor of an extensive establishment in London, in sending his order for a new Advertisement, said, "I have doubled my trade in the last eighteen months through Advertising, and shall, in consequence, this year invest double the amount in Advertisements that I have done in any previous year.

If you have not business, Advertise; if you have business, Advertise. People go to places that are Advertised, and they pass by those that are not. A place that Advertises is known to the world; that which does not is only known to a few that may pass it, and most people pass without entering.

Ceasing to Advertise in dull times is like tearing out a dam because the water is low. The one plan prevents a full reservoir, and the other a full purse.

Bread is the staff of human life, and Advertising is the staff of life in trade.

No bell can ring so loudly as a good Advertisement. People will believe what they see rather than what they hear.

When people see a man Advertise they know he is a business man, and his Advertising proclaims that he is not above business, but anxious to do business.

An American Paper says:—"Trying to do business without Advertising is like winking in the dark. You know you are keeping up a powerful winking, but no one else has any idea of your exertions."

Publicity is money. This is a recognised fact in business. It is not sufficient for a tradesman to place a sign over his door for people to look at, he must send out his sign far and wide, so that it may be remembered by the many, not only by the few who saw his name over the door.

Advertisers in "class" papers are always amply repaid, because the Advertisement reaches those it is especially desirable to address, and who cannot be reached in the ordinary way.

THE MENACING COMET.—I should esteem it a favour (though I think I might almost claim a right) if those newspapers who have spread the news of my supposed prediction, would be good enough to explain that I believe the world is more likely to last fifteen millions of years than to be destroyed in fifteen. I only regard the absorption of the comet of 1843 as most certain—regarding the time as quite nncertain, and the effects as extremely problematical. I have, indeed, shown elsewhere (see "Suns in Flames," in my "Myths and Marvels of Astronomy") that there is every reason for believing that all comets of the destructive sort have long since been eliminated from the solar system. So that, as in the essay referred to by the *Spectator*, I refer back to an essay in my "Pleasant Ways in Science," in which essay I refer back to the other in "Myths and Marvels," without in either case indicating any change of view, I might fairly claim to have very definite views as to the perfect safety of the solar system, even if I had not recently pointed out, with special reference to the comet of 1843, our probable complete immunity from danger. In the *Cornhill Magazine* for December last there is a paper, bearing my initials, on "Dangers from Comets," in which it is shown—as sundry newspaper articles have been good enough to explain in turn to myself—that if there were any real danger, save for the comet itself, we should have known it by great increase in the solar emission of heat in 1843, when the comet was checked so importantly in its career, and again in 1880, when it was subjected to another equally severe interruption of its onward course. There is not the slightest reason to fear that the comet of 1843 and 1880 (assuming they are the same) will do any harm to the solar system when finally absorbed.—R. A. Proctor, in KNOWLEDGE, No. 16.

GIMP.

WHY do not tackle-makers dye their gimp? If they would give it us of some neutral colour, grey, for instance, it would be a great boon. It is easily done. In the "Book of the Pike" Mr. Pennell gives this recipe: "Soak brass gimp in a solution of bichlorate of platinum, mixed in about the proportion of one part of platinum to ten of water (twenty is safer) until it has assumed the colour desired. This will take from a quarter of an hour to two or three hours, according to the strength of the solution; then dry the gimp before the fire, and, whilst warm, give it a coat of lacquer." We have had lately in the *Field* a long discussion on the bad quality of the gimp now made. Mr. Francis says the recipe just quoted must be carefully used or it will rot the silk. Why, then, is the wire not coloured before it is put on the silk? We have an idea that a splendid gimp might be made by using the enormously strong braided silk line made by Messrs. Carswell, of Glasgow, as a core, and covering it with some oxidised wire. The wire is not added for strength, it is merely a protection against the pike's teeth, and, in our opinion, it is only necessary to use six or eight inches of it next to the bait. The rest of the trace should consist wholly of strong salmon gut, dyed a slate colour. Salmon gut is quite as strong as gimp, and is, of course, infinitely less discernible in the water. Gimp is treacherous, because any defect in the silk is covered over by the wire, and many a mysterious breakage of a gimp trace might be traced to this cause—the floss silk has been carelessly spliced, and thus a weak point may exist which is quite invisible to the eye. An angler very rarely cares to put his tackle to severe strains to try it, and when the severe strain comes in attempting to turn a big fish at a critical moment, the loosely spliced ends of the silk give, and the angler thinks his trace has broken, whereas it has really been partly broken all the time. Pike are getting so highly educated that only fine fishing succeeds in clear water. If tackle-makers would supply four-feet traces of strong dyed salmon gut with three brass swivels, specially for pike-fishing, they would soon come into general use.

Our Fires.—Whatever opinions may be formed of the merits of the exhibits at South Kensington, one result is unquestionable—the exhibition itself has done much in directing public attention to the very important subject of economising fuel and the diminution of smoke. We sorely need some lessons. Our national progress in this direction has been simply contemptible, so far as domestic fireplaces are concerned. To prove this we need only turn back to the essays of Benjamin Thompson, Count of Rumford, published in London just eighty years ago, and find therein nearly all the Smoke Abatement Exhibition *ought* to teach us, both in theory and practice—lessons which with all our progress since 1802, plus the best exhibits at South Kensington, we have yet to learn—W. Mattieu Williams, in Knowledge.

In "Old Nottinghamshire," a neatly got up and reliable volume, edited by Mr. J. Potter Briscoe, F.R.H.S., public librarian of Nottingham, and published by Messrs. Hamilton, Adams and Co., is an excellent article by Mr. W. Stevenson, of Hull, on "The Ancient Fisheries of the Trent at Nottingham," which should be read by anglers. We make two quotations from it:—"It may not be out of place to glance at the mode of fishing in our great rivers in Anglo-Saxon times. In the Cottonian Library (MS. Lib. A, 3) we have an original document, the gist of which is a dialogue composed by Elfric to instruct the Anglo-Saxon youths, part of which relates to the art or craft of fishing. The following is a translation:—What gettest thou by thine art? Big loaves, clothing and money.—How do you take them? I ascend my ship and cast my net into the river; I also throw in a hook, a bait and a rod.—Suppose the fishes are unclean? I throw the unclean out, and take the clean for food.—Where do you sell your fish? In the city.—Who buys them? The citizens; I cannot take so many as I can sell.—What fishes do you take? Eels, haddocks, minnies, and eel-pouts, skate and lampreys, and whatever swims in the river." . . . . . "The ancient fishery of Nottingham is mentioned in our local history (Temp. 1527, 19th Henry VIII.) It is alluded to as something of great antiquity. The following is an exact copy of the entry, taken from the Corporation records:—'Hit is an olde custome for the Mayre for the tyme being to give his bredren knowlege for to see the annual sporte of the fishynge.' From this we learn that there was an annual holiday or sport-day of fishing, one set apart for the clothing or members of the Corporation. We may infer from this that there was a close season, when fishing was prohibited, and that the opening of the season was marked by the Mayor and his brethren fishing there in person on what could not be other than a public holiday."

Gregory's Spinning Baits. "The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[Advt.]

A DAY AT SOUTH KENSINGTON.

After travelling over two hundred miles to that grand meeting presided over by H.R.H. the Prince of Wales, respecting the great International Fisheries Exhibition of 1883, I paid a visit to the above museum; I mean that portion now under the superintendence of Mr. Edon, viz., the pisciculture and fish museum, so ably collected by our late friend F. Buckland, and to which has been added the invaluable collection from India of H.R.H. the Prince of Wales; consisting of the most curious and splendidly preserved variety of fish it is possible to conceive. Mr. Edon, with his usual genial and happy manner, on leaving Willis's rooms, very kindly gave numerous invitations to visit the above on the following day, which was gladly accepted by many from various parts of Europe; when he, in a quaint, affable, yet scientific manner, explained, as far as time would admit, which was of some duration, the various exhibits of H.R.H., also the other presentations by various donors, not forgetting the American sunfish and rock bass, the telescope fish from China, and what the Chinese in London think of them, and how they came in the tank there, and the numerous other curiosities there in the flesh and plaster. The salmonidæ, although not numerous, were very healthy and growing fast; and the "pope," or "ruffe," in the tank opposite, were a sight in themselves, especially to those who know the "pope," or "ruffe," only by name, as they are not to be found in all streams. Your correspondent recognised several splendid casts of rare fish sent from Exeter by him during the past ten years, also some fine specimens of taxidermy, by T. E. Gunn, of Norwich. I am sure Mr. Edon must have been tired with his continual explanations; but, at the same time, I would advise all ichthyologists, pisciculturists and taxidermists to pay him a visit, if only to hear his true story of the Irishman and his fried pays (salmon ova) for breakfast. If any of your readers would like to hear the tale *in extenso*, I will endeavour to oblige.—Frank Gosden, Exeter.

Harbours of Refuge on the East Coast.—Mr. F. Johnson, 23, Norman Road, St. Leonards-on-Sea, has succeeded in getting a great many influential members of Parliament to take up this important question. We trust he will succeed in his efforts to give some little safety to our sailors.

The Young Idea.—Schoolmistress (just beginning a nice, improving lesson upon minerals to the juniors)—"Now, what are the principal things we get out of the earth?" Youthful angler, aged four (confidently)—"Worms."

Whist.—There are few points which distinguish more thoroughly the good from the inferior whist player, than the play second hand. We are not, of course, referring to players so inexperienced as to know no other rule than "second hand play low." Nor are the rules for play second hand, at least in the opening rounds of a game, less definite than those for leading. But somehow it happens that many players who very seldom lead unwisely, who know well when to play highest and when to finesse third in hand, and when it is essential to success to win partner's trick fourth hand, are apt to trust, second hand, to chances which are demonstrably against them.—Knowledge.

Our Ancestors.—The very earliest race of men who ever lived in England are probably not in any sense our ancestors. They were those black fellows of the palæolithic or older stone age, whose flint implements and other remains we find buried in the loose earth of the river-drift or under the concreted floors of caves, and who dwelt in Britain while it was yet a part of the mainland, with a cold climate like that of modern Siberia.—Grant Allan, in Knowledge.

The Microscope.—In the early days of the microscope, wonderful reports were made of its revelations, and in 1745 Baker complained that "some people made false pretences and ridiculous boasts of seeing by their glasses the atoms of Epicurus, the subtle matter of Des Cartes, the effluvium of bodies, the emanation of stars, and such-like impossibilities." One doctor declared that he had seen the effluvium of magnets as a mist.—H. J. Slack, F.G.S., F.R.M.S., in Knowledge.

Punning as a Mental Sympton.—It is not, perhaps, commonly known that a tendency to make puns is regarded by many students of mental physiology as a sign of cerebral disease, a circumstance which we would commend to the notice of those persons who are always on the watch to play upon words, without caring whether their word-play is amusing or not.—Knowledge.

Man and Nature.—Science tells us, and experience confirms her teaching, that in the game man plays (or his contest, if you will) with nature, the laws of nature are the laws of the Medes and Persians, that he must not expect to have his moves back, or any help outside the laws assigned (inexplicably, so far as we are concerned) to nature: if he does expect this, he will most assuredly be disappointed.—R. A. Proctor, in Knowledge.

The Trout.—The faintest olive passing through many gradations of colour is the natural ground-work of the normal trout, but, then, as he has a polished surface, his scales being imperceptible, out from him bursts little flashes of light. He is by no means the lithe creature in form that idealists paint him. He is rather a bull-dog, aggressive-looking fish. Do you turn the next time you see a trout in an aquarium and get a full view of him and not his profile. You will see he has a combative look. Remember, he is a fighter, and bullies all other fish. He is constructed for speed, strength, and agility, and a predacious life calls on all these factors."—*New York Times.*

NOTICE.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., must be addressed to the Editor of THE FISHING GAZETTE, *No.* 12, *Fetter Lane, London, E.C* and should reach the office not later than Tuesday morning.

Contributions are solicited, but the Editor will not undertake to return rejected MSS., unless accompanied with a stamped addressed envelope.

Correspondents are requested to write on one side of the paper only and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith Unless this rule be adhered to no notice will be taken of such communications.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls, and of the following, amongst other Fishing Tackle Dealers in London and the Provinces :—

Messrs. Alfred and Son, Moorgate-street.
Messrs. Price and Co., 8, Seymour-street, Euston-square, N.W
Messrs. Williams and Co., Great Queen-street.
Messrs. Gee and Co., St. Andrew's-street, St. Martin's-lane.

⁂ The "FISHING GAZETTE" SPINNER (Registered) is sold by all the above firms.

ANNUAL SUBSCRIPTION.

The Annual Subscription, payable in advance, for the United Kingdom is 8s.; or post free, 10s. 6d.

To any part of Europe, the United States, and Canada, the Annual Subscription, including postage, is twelve shillings and sixpence.

ADVERTISEMENTS.

All communications respecting advertisements must be addressed to the Manager of THE FISHING GAZETTE, *No.* 12, *Fetter Lane, London, E.C.*

N.B.—All Remittances must be sent, and all Cheques and Money Orders must be made payable to Messrs. SAMPSON LOW, MARSTON AND CO., the Proprietors.

The Fishing Gazette.

SATURDAY, MARCH 18, 1882.

THE RIVERS OF ENGLAND.

By "CREEL."

THE AIRE.

THIS is an important tributary of the Ouse, in the West Riding of Yorkshire. Its course is generally east-south-east, after it quits its mountain birth in the Deanery of Craven, to the levels, where it mingles its waters with the Ouse. Craven is a highly romantic district, displaying some of the finest scenery in the kingdom, and is eloquently dwelt upon in Armstrong's "Scenes in Craven." Its mountains and caves are striking features, and, being watered by several considerable rivers, it has an especial interest to the angler. The Aire has its source in the transparent tarn or lake of Malham Water, a solitary expanse embosomed in cloud-capped mountains. This lake is celebrated for its abundance of large trout and perch. Most of the latter have the Cyclopean reputation of having but one eye. The best inns here are at Kirkley Malham—Buck, by John Benson, and Lister's Arms, by Swinbank. From the tarn, which is the property of Colonel Morrison, who is very liberal in giving permission to fish, (of the tarn we shall have more to say anon) the stream takes an underground course for about a mile, and then issues from the sides of a huge cliff of limestone called Malham Cove, through which it escapes, and leaps from ledge to ledge, forming a series of waterfalls, unequalled for their combination of grandeur and magnificence, not-free from awe.

"Malham Tarn," says Murray, "is about three miles in circumference, two miles above the cove, and 570 feet higher than the outlet of the Aire at its base. This is the most important tarn in Yorkshire, and its wild seclusion gives it an interest hardly due to picturesque beauty."

The nearest station is Bell Buck, 3½ miles from Malham. The best inn at Malham is the Buck; and the landlord, if written to in time, will send a trap to Bell Buck station, where no conveyance is to be hired. This inn is at the village of Malham, a mile higher up the valley, and nearer Gordale than Kirkley Malham, where is the church.

The whole of this neighbourhood is wonderful for its grandeur. Even Gordale Scar gives an impression of absolute dread, particularly if it be visited alone towards evening.

"Gordale chasm, terrific as the lair
Where the young lions couch"

writes Wordsworth; and Pocock, according to Whitaker, "who had seen all that was great and striking in the rocks of Arabia and Judea, declared that he had never seen anything comparable to this place." "I stayed there," says Gray the poet, "not without shuddering, a quarter of an hour, and thought my trouble richly repaid, for the impression will last for life." "It has," says Murray, "been compared to the ravine above Lebanon, in which is the sanctuary of Trophonius; and the semicircle of Malham is not unlike the cliff above the fountain of Castalia at Delphi."

From one mile east of the Cove in Gordale, which has been styled a "divine piece of masonry," and, of which Dayes, in his "Picturesque Tour through Yorkshire," says, "none of the passes in North Wales equal this, the water tumbling down its bosom giving it greatly the superiority." The river Aire flows from the Cove along Malham Dale, and, after passing Cold Coniston (no inn) reaches Gargrave, whence it rambles on to the vicinity of Skipton (Devonshire Arms), and the capital of Craven. The town of Skipton is pleasantly seated about a mile from the river and is dignified by the stately structure of a castle. Most luxuriant meadows line the stream for some miles both above and below this. Leaving these green pastures, the Aire plunges into a deeper vale and takes a romantic course through rocky scenery to the neighbourhood of the thriving town of Keighley, where we enter the clothing district of Yorkshire. The appearance of Keighley when viewed from the adjacent height is strikingly picturesque, and the surrounding scenery is of the most varied description, the blue heath and the rough summits of the hills being strongly contrasted with the fertility and beauty of the winding valleys through which several rapid moorland streams flow to the serpentine channel of the Aire. Rugged features continue to accompany our river as it sweeps by the busy town of Bingley and between the large village of Shipley, and the remarkable elevation called Baildon Hill. At Shipley, opposite to Baildon, the Bradford valley joins the valley of the Aire. Lower down the river, we pass the mansion and woods of Isholt, and are then conducted between the village of Calverley on the right, and the villages of Yeadon, Rawdon and Horseforth on the left, onwards to the well-known quarters of Bramley Fall, and the far-famed ruins of Kirkstall. Among the monastic remains of England, Kirkstall Abbey may claim a conspicuous place, whether considered as a feature in a landscape or as a specimen of architectural skill. The ruin is still a splendid monument, and the scenery around it is well diversified. Remains so full of solemn interest cannot fail to detain every man of taste and feeling, as they arrested the poet Gray "for many delightful hours." From Kirkstall Bridge, the river flows below the beautiful neighbourhood of Headingley, and ere long reaches the town of Leeds, and pursues its course to Castleford, sweeping through fertile meadows below gently-elevated and mostly well wooded regions. On the rising grounds are the conspicuous seats of Temple Newsam, Methley and Kippax, while Swillington Hall stands on the immediate bank of the of the stream. At the large village of Castleford, the Aire is joined by the river Calder from the southern part of the clothing districts—whence we need not more closely follow it. as it runs through lowlands for a distance of 20 to 30 miles until it joins the Ouse.

We copy verbatim of the rules and regulations of the Aire Fishing Clubs, for there are two thus named, both under one committee, the one for the preservation of the River Aire, from Gorgrave to Eastburn Brook.

(1) The club to consist of not more than twenty members, and to be managed by a committee of not more than four members. (2) Any gentleman, on being elected a member of the club, shall pay to the secretary an admission fee of ten guineas. (3) The annual subscription of members shall be ten guineas, to be paid into the Craven Bank or to the secretary, on or before the 1st March in each year. (4) Each mem ber, on payment of his subscription, will receive a ticket, which will entitle him to fish with one rod for the season, viz., from the 1st March to the 30th of September inclusive. (5) Any member accompanied by a friend may lend that friend his rod. (6) No salmon spawn or medicated baits shall be used. (7) No trout shall be kept under eight inches in length, and no grayling under ten inches. (8) No grayling shall be killed before the 1st of September. (9) The keepers are authorised and required to inspect each member's ticket on his first visiting the stream. (10) Any gentleman desirous of becoming a member of this club shall make a written application to the secretary, who will place his name before the committee at their next meeting. (11) Any member wishing to retire from the club shall intimate his intention to the secretary in writing at the end of the fishing season :—

The second club, under the same committee, preserve the Aire from Carlton Stone Bridge to Eastburn Brook. Rules :—

(1) In addition to the members of the Aire Fishing Club, a limited number of subscribers shall be allowed to fish in the river from below Carlton Stone Bridge to Eastburn Brook. (2) The number of such subscribers shall be limited to thirty, and the annual subscription shall be thirty shillings, to be paid to the secretary before the commencement of the season. (3) Each subscriber, on payment of his subscription, will receive a ticket, which will entitle him to fish, with one rod only, for the season, viz., from the 1st March to the 30th September inclusive. Rules 4, 5, and 6 the same as in the other club. (7) No fishing shall be allowed after ten o'clock in the evening or before four o'clock in the morning, or on Sundays. (8) The keepers are authorised and required to inspect each subscriber's ticket on his first visit to the stream ; also to inspect each subscriber's basket, and measure the fish therein ; and, if any are found undersized, the keeper shall report the fact to the secretary. (9) The penalty for breaking any of the above rules shall be the dismissal of the offender from the club, and the forfeiture of his subscription. (10 and 11) Same as the first club.

The following quotations from an official letter of a member of the club may be, as coming from such a source, of value :—

"Lest you should be led to form too high an estimate of the fishing to be obtained in the upper waters of this club, Gargrave to Carleton Stone Bridge, where the entrance fee and subscriptions are so high, I must tell you that some three years ago we spent a tolerably large sum in the erection of a breeding-house, and the excavating of two ponds for the hatching and rearing of trout. These promise very well, and we are expecting great things from them in the next few years. Mr. J. H. Dewhurst, the secretary, has had the entire management of these works, and they do him great credit. Our last season, as in most other rivers, was but an indifferent one. The previous winter was exceptionally severe and protracted, and the trout, consequently, were unusually late in getting into anything like decent condition. Fly-fishing was of no use until the last week in April. The season was, therefore, a short one. Besides this, the trout were very capricious during the whole season. So far as I have been able to learn from other members, the above remarks fairly represent their views. The greatest number I took with the fly was thirty trout, on 30th July last, fishing the whole day, and in the afternoon of 2nd August I took fifteen trout with the same bait. The prettiest dish I got was one of twelve trout, weighing 8 lb., on the 25th June.

"I do not know whether you ever had the fortune to see a well-conditioned Aire trout (and it is rare to get an ill-conditioned one), but if you haven't, please note it down as one of the things worth seeing. They are as different from their congeners of the Wharfe, which flows down an adjoining valley, as it is possible for trout to differ.

"With a view still further to improve the breed, Mr. Dewhurst has within the last few years obtained a fair supply of ova from the noted trout of Malham Tarn, kindly granted by Walter Morrison, Esq., and also from the private lakes of Farnley Hall, the seat of Francis Hawkesworth Fawkes, Esq., which run moderately large. The trout caught last season in Malham Tarn (fly only allowed) averaged a little over 2 lb. each, and they run very uniform in size. We are contemplating this year (1882) the introduction into the Aire of a supply of Lock Leven trout fry."

Thus it will be seen that Gargrave is the highest point up the river at which the divisions of the Aire club commence fishing. The twenty members at ten guineas begin here and, if they choose, can fish down to Eastburn Brook, a distance of ten or twelve miles. Carlton Stone Bridge is midway between Gargrave and Eastburn, and here the 30s. members begin, and fish down to Eastburn Brook. In this length the water is deeper and more sluggish, and the fish not nearly so pleasant to follow, while the streams are few. Grayling do not yet count for anything, they are only just introduced. Trout do not run so large as formerly. When fishing with the minnow the average will be twelve ounces under that with the fly. The largest trout taken during last season was 4 lb., with minnow. Mr. Nayler, a member's, largest with the fly was 21 oz., and with the minnow $1\frac{3}{4}$ lb. There are very fine chub in the Aire, and roach in far too great an abundance. There are a few pike, but every effort is made to keep all these down. Likewise plenty of perch, gudgeon, minnows, loachers, and bull-heads.

The Midland Railway, from Leeds to Gargrave and farther, runs parallel with the Aire ; or rather from Gargrave to Leeds, since the river runs or flows in that direction, and empties into the Humber.

The railway stations on the club length are Gargrave and Skipton for the upper waters, and Cononley, Kildruk, and Streton for the lower waters. There are "pubs" at all these places. At the last three there are indifferent country village ones. At Skipton (first class), the Midland, Devonshire, Black Horse, Ship, and others ; and following are given in order of merit, Gargrave, the Swan, Mason's Arms, and Grouse, are fair country village "pubs." Gargrave, a small village, is chiefly the property of Sir Matthew Wilson, of Eshton Hall, situated a mile out of Gargrave.

The Deanery of Craven includes the river Aire from its source, at Malham, to Bingley, four miles below Keighley, a distance of some thirty miles. It also includes Wharfedale from the source of the Wharfe, some ten miles above Kettlewell, a little below Caw Fell (2245 feet), also in Craven, down to and including Ilkley. Craven also includes Ribblesdale from the source of the Ribble (a splendid river), which also has its rise near Caw Fell. But of the Ribble, justice will be done in its turn, and so also the Wharfe.

The Aire, until it reaches Skipton, is but a large brook in comparison to the Ribble, say ten miles above Settle, and the Wharfe, say, at Bolton Abbey.

Since the above was written, the following gives yet more information of the Aire.

The best fishing is between Gargrave and Skipton, a stretch of about four miles, the higher part of which is probably within twelve miles of the source of the river. It is very strictly preserved by the Skipton and Gargrave clubs (Aire clubs).

The fishing has of late years been much improved by careful watching. In low water fish are very difficult to get, as they are compelled to take refuge in the few deep pools there are, and remain very quiet during the day. In times of "fresh," however, the members often have good sport with the minnow and fly. As a rule the fish run small, though not so small as Wharfe trout, but they are often taken over a pound, yet half-pound fish are considered fair sport in this length.

Below Skipton to Cononley, a distance of about three miles, the water still belongs to the Skipton Club. There are not many streams and the banks are very high. Trout are not numerous, but chub are repeatedly taken from 2 lb. to 3 lb in weight.

Below Cononley, the Keighley and Stockbridge Angling Club, have a good stretch of similar water to the length above, except that the river is a little broader and deeper.

Bottom fishing is the principal practice, though many of the members do use the fly and at times do very well.

Coming still further down the river, the Bingley Club, and below that the Saltaire Club, have both lengths of from three to four miles. The water, however, below Keighley, is much contaminated by sewage and manufactures, and very few trout are now taken. Scale fish, *i.e.*, perch and chub and gudgeon are the main sport of the angler. Trout, and good ones, used not many years ago to be plentiful even as low as Saltaire, but they are now seldom taken ; and, were it not that some few are seen up the becks at spawning time, it might be doubted whether any trout had survived the slow poisoning process of filthy water. The Saltaire Club manfully struggle against this great hindrance in the hope that legislation will do something more to purify the stream, and they turn in year by year large numbers of trout fry from their hatching apparatus.

Below Saltaire, about a mile, the Bradford Beck enters the Aire, and as it is the great drain for all Bradford refuse, it destroys all animal life below its mouth. Whilst, by the time the river reaches

Leeds, it is more like the washings of ink barrels, but more obnoxious to the nose.

Easy access is got to the Aire by means of the Midland line—Bradford and Skipton—as it runs in the same valley, and is nowhere very far from it. There are stations at intervals of two or three miles.

THEIR LAST DAY.

By Redspinner.

The fourteenth of March had arrived at last, and with it the last day of angling on the open waters. Holiday time for the coarse fish honoured by mention in Mundella's Act would begin to-morrow morning, and would last until the midnight of June 15. May they be happy; may they prosper; yea, may they multiply and bring forth abundantly, that the heart of the angler may rejoice, and his bag and his creel be filled with good things. There was a frost on the previous night; not an ice-bearer, however, as was the stinging white frost of Sunday, but still an unmistakeable frost. The sun retired over the woods westward, rosy-faced, and making all the sky blush red for its boldness. The smoke from the village chimneys rose straight and blue into the clear air, leisurely hovering over the place, and dissolving into nothingness, rather than drifting away bodily, as it would have done had it been received by a regular blustering blast of March. Then the stars came out bright, fearing nothing, and by nine o'clock the stillness of the country, disturbed only by the regular strokes of the church clock, and the distant barking of an uneasy farm dog, settled over the place. In the morning, as I walked to the railway station to see how many anglers had come down to take advantage of their last opportunity, the glass glittered gloriously with frost, and the children were blue with cold.

The closing day of the season was hot as summer, after the sun was fairly up; and if our angling friends were not altogether satisfied with the result of the day's operations, they cannot deny that a more magnificent March day never came within their experience. I am aware that this would be poor consolation for an empty bag, but it is as well to be now and then reminded that in this world we cannot have everything; but it was, as one would have supposed, a good day for angling. The wind veered between west and south, the water was in fair medium volume and colour, and the weather appeared to be settled. Against this the brightness of the sun might be urged, but that is an objection, as applied to bottom fishing, to which I do not, especially at this time of the year, attach much value, though by and by, when the fly-rod comes into play, it is an objection that always holds. There were perhaps a score of anglers arriving by the early train, and they congratulated each other upon the promising look of things, as they went their several ways. A few had a three-mile walk before them to a subscription water to which they belonged; others hurried off to secure certain favourite swims in a half river, half-canal, commanded by a towing-path. For myself, not being violently fond of bottom fishing, unless the float goes down at every swim, and having discovered on the previous afternoon that the fish were not "on," I elected to ramble through the meadows, and watch how the brethren were faring at their several stations. The sum-total of fish caught must have been very disappointing, and I sincerely hope that the anglers who went in other directions found their last day more productive of sport. There was not enough to make me a respectable piscatory description.

In my ramble through the meadows to a certain mill, I had a thousand-and-one evidences of the forward character of the season. There was an abundance of insects on the water, and the cow-dung fly was in great force. That the lesser celandine and daisy, the anemone in the copses, and, in the meadow trenches, the king-cup, should be blooming, was not surprising. Under almost any circumstances one begins to look for them in the middle of March. But there were masses of frog-spawn in the ditches, the black speck in the nasty-looking globules already assuming proportions which bespoke an unusually early release of the tadpole; aud many of the aquatic plants were at least three weeks more forward than is their custom. The lapwings, a month ago, were in possession of some marshy fields which they haunt during the winter, but they had now disappeared, and, in their place, were vast flocks of wood pigeons. The cushat is one of the wild birds that I admire, spite of his bad character amongst the farmers. He has a portly form, and the slaty-blue back, the metallic pinky bronze of the breast, and the white marks of the neck, from which he somehow has obtained the name of ring-dove, make up a fine blending of colours, which if not brilliant, are still pleasantly striking. Butterflies were numerous up and down the sunny hedges. The air was choral with blithe lark music, and here and there with the sweet song of the mavis. The little brown rascal of a water rat was out and about, and the dabchicks were making the most of the day. I accidentally put up a couple of wild ducks, quacking their anger as they rose, and I nearly trod upon a lark, sunning herself under a tuft. These observations I take the liberty of mentioning as justification for selecting to saunter instead of fish. What I saw in the stream may be imagined, but it shall not be described; only, if those grand trout will be good enough not to change their lodgings during the next month, and those roach, dace, and chub will be there or thereabouts when the close season is at an end, I may have a good store of bricks wherewith to build a really angling chapter.

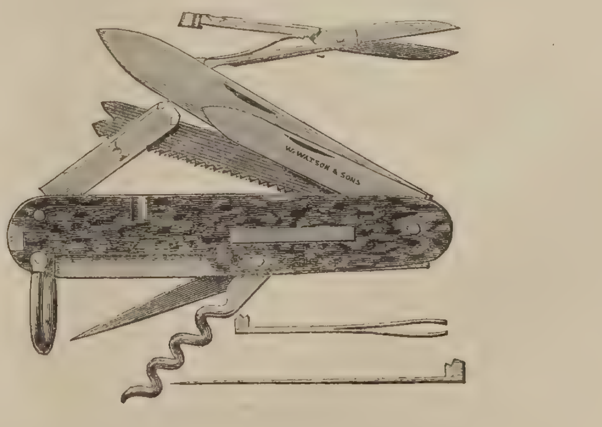
The first patient angler that drew my attention from the many claims there were upon it, was very angry at the minnows, which certainly were provoking. They worried his bait perpetually, and took down his float in the merriest fashion every other swim. He caught four while I watched him, and plump, handsome little fellows they were wherewith to tempt perch or trout. The minnows were equally on the rampage with nearly all the anglers I met with that day, and sufficient might have been taken to furnish one of those minnow tansies, which Walton says make a dainty dish of meat; "for," he observes, "being washed well in salt, and their heads and tails cut off, and their guts taken out, and not washed after, they prove excellent for that use; that is, being fried with yolks of eggs, the flowers of cowslips and of primroses, and a little tansy."

Three and four roach each seemed to be the amount of the average "takes" up to three o'clock in the open water, and as the sun smote fiercely upon them, and the barges were passing every half hour, the worthy anglers were not altogether happy. In the afternoon I walked up the towing path to a select subscription water where a friend had been fishing since breakfast. He had caught simply nothing, and another subscriber had taken only two or three small perch. They were, it is true, able to comfort themselves with the reflection that a five-and-three-quarter-pound bream had been taken "from this very hole, sir," two days ago; and that a London club angler, trespassing, and defiantly refusing to leave, had, on the previous Sunday, caught a goodly carp under that spreading elder clump. Neither carp, bream, nor roach, however, seemed to be now moving in this choice preserve where there are known to be plenty of fish, and from which it is not unusual for an accustomed angler to basket twenty and thirty pounds of roach in a day. But across the water, fishing from the towing path, was a free angler who was doing comparatively well. How often these things happen? The rustic lad with his hazel wand, line of whipcord, and coarsely mounted hook, catches strings of fish, while the well-appointed sportsman with the best appliances money can purchase, gets none. So, the fisher of a privileged river, strictly preserved, and well stocked with fish, after a day's hard work, is disgusted to find that a humble brother angler, in water open to the whole world, has "wiped his eye" ten times over.

The roaching gentleman on the towing path was fishing in a very workmanlike manner with paste, and in the course of an hour and a half he killed ten well-conditioned fish between half a pound and a pound, and seemed to be still catching when I left. It does not always follow that there is an explainable reason for these puzzles of an angler's life. Who shall say why a fish prefers paste to-day and gentles to-morrow? Why, in a moment, along the whole length of a river, fish will cease rising and biting, and as unaccountably begin again? But the excellence of the roach swim in question was, I think, explainable. It was opposite a triangular piece of land formed by a river on the one side, and a canal on the other, both merging into one at the point. The barges, constantly passing, no doubt caused a scour in the direction of the tow-path bank, upon which the angler had planted his seat with much judgment; and to this daily cleansed bottom, to which plenty of provender would be brought by the disturbed current, the roach would naturally be attracted even from the more secluded private water. On the whole, however, it is to be feared that the anglers who visited the waters to which I have been vaguely referring, will not be able to reckon their last day of the season as amongst the brilliantly successful, but it could harm no one to be in the country under such exceptionally pleasant circumstances.

WATSON'S ANGLER'S KNIFE.

Messrs. W. Watson and Sons, 308, High Holborn, London, have brought out the best fishing knife, at the price, which has ever been put before the angling world. It is thoroughly well made and of first-class material. It contains large and strong blade for cutting down branches, making splices, &c., a smaller blade for tackle-making purposes, a capital saw, a disgorger, a strong-spring scissors, always useful, especially to the fly-fisher, a most useful little vice for holding hooks when mounting them or making flies, a rimer, tweezers for extracting thorns, &c.; a pricker, a shackle to hang the knife to belt by; and, finally, a curiously-made serpentine pointed surgical instrument, which is used, we understand, for relieving stoppages in wine and whisky bottles.



Messrs. W. Watson and Sons have a very fine stock of first-class rods and tackle.

OGDEN'S "NE PLUS ULTRA" TROUT-ROD.

Mr. James Ogden of Winchcomb Street, Cheltenham (whose work on fly-fishing we have favourably noticed this week) has sent us one of his new "Ne plus Ultra" trout and sea-trout rods. We mentioned this rod a week or two ago as being the invention of Major Bruce Seton, of the Royal Engineers. We had not then seen it, but were convinced that the idea was a most valuable one.

The practice of wading up stream and whipping in front of you and under the bushes on each side, is becoming more popular every year. Anglers are beginning to find out that when the water is low and bright, this is the only way you can get at the fish. The best rod for this small-stream fishing is a short one of nine or ten feet; but in a day's fishing it almost invariably happens that you want a longer rod, either for fly, minnow, or worm. The greatest mistake the fly-fisher can make is to burden himself with extra rod or tackle, his equipment should be as light as possible. Now Mr. Ogden's "Ne plus Ultra" is a rod so constructed that, without taking a single ounce more with him than he now does, the angler has still two perfect rods, one a twelve-ounce ten-foot two-joint spliced one; the other formed by attaching the landing-net handle to the ten-foot rod, and thus obtaining in two minutes a powerful thirteen-foot rod, suitable for fishing a large water or for worm or minnow fishing. Both rods are beautifully balanced and the change from one to the other could be effected, as we before said, in two minutes. We purposely refrain from giving details of manufacture, because, although most simple and effective, they are so ingenious that it would be unfair to Mr. Ogden to make them public property. When not in use on the rod the long landing-net handle has a net attached, and this forms a most valuable help in wading. The rod Mr. Ogden has sent us is beautifully made, and we are glad to see is fitted with Hardy's patent winch fittings. We are having all our winches made to fit one or other of the three sizes in which the fitting is made, and we have lent Messrs. Allcock a London-made winch, so that they can get the fitting made to take the plate of the ordinary London winch. We feel certain that any troutfisher has only to see the "Ne plus Ultra" to accept it as a great improvement and an inestimable boon to the wandering angler who fishes in all kinds of water for all kinds of trout.

A CAPITAL BOOK ON FLY-FISHING.

Mr. James Ogden, fishing-tackle maker of Winchcomb Street, Cheltenham, has sent us his work on Fly-Tying and Fly-Fishing, for notice, and it is a long time since we read a work on fly-fishing which has given us so much pleasure. We can cordially recommend it to all our fly-fishing readers; they can get it by sending 2s. 8d. in stamps to Mr. James Ogden at the address mentioned above. We give the exact address, because there is another fishing-tackle firm in Cheltenham carrying on business under the same name—in part—and mistakes frequently arise in consequence.

Mr. James Ogden is well known as one of the most successful anglers and scientific and practical rod and fly makers in the country. In his work he freely gives to the angling world the experience he has gained during seventy years devoted to angling and tackle-making, and the trout fisher who can read his book without getting many a useful hint, must be indeed very perfect in the art.

What gives his book an additional charm to us, is the fact that he so frequently refers to some favourite trout or grayling stream with which we are familiar, such as Derwent, Wye, Dove, Test, Itchen, Arrow, Teme, Monnow, &c., &c. He refers to them to describe some particular day's sport, or some special mode of fishing which he has found successful. His instructions in fly-tying are very simple and good, and the list of his standard flies—about a score—include what we have found in our own practice to be the best killers in the endless list of artificial imitations—that is to say, on the rivers just mentioned, and on such streams as the glorious Eden, the Coquet, the Yore, Swale, and Rye, the Onny, Clun, Lugg, Arrow, the Dart, the Darenth, &c.

Here is the list of Ogden's standard favourites, and the angler who can not kill fish with these, had better devote his attention to the worm or minnow.

February Red
March Brown
Ogden's Fancy
Alder Fly
Coch-y-Bondhu
Tinkler's Dun
Stone Midge
Bluebottle and House Fly
Blue Dun
Iron Blue Dun
Cow-dung Fly
Golden Dun Midge
Oak Fly, or Down-Looker
Wren Tail
Whirling Blue Dun
Small Willow or Needle Brown
Hare's Ear, Blue Dun or Cock Wing
Red Spinner
Yellow Dun
Black Gnat
Furnace Fly
Little Orange Fly
Palmers
May Fly

Mr. Ogden says that he has always followed Izaak Walton's advice, viz., that of fishing "fine and far off." We believe it was Walton's friend Cotton who first insisted on this golden rule, as it was Cotton who first described the deadly and delicate method of killing trout by fishing up stream with a small red worm, using it almost as a fly is used.

We should much like to give some extracts from Mr. Ogden's description of how to use the floating may-fly. We mean, of course, the artificial; for we consider it nothing but poaching to kill trout with the natural may-fly. His remarks on the use of the dry fly are also most valuable. If our trout-fishers would give this "dry-fly" plan a place amongst their tactics for deceiving trout, they would much less frequently return home with poor baskets; they put their three wet flies in faultless style over a rising fish, time after time, and then think their flies are to blame; then they change them, and the first cast secures the fish. Why? Simply because the new fly happened to float over the fish because it was dry; they find it kills no better after a few throws. Ogden makes flies specially for dry-fly fishing; we have not tried them, but we have no doubt they are very good. Flies dressed on the eyed hooks float wonderfully well, as we have proved on the Test, and are quite as killing as the ordinary kind. These eyed hooks are the invention of Mr. Hall and are made for him by Messrs. Hutchinson, of Kendal. We have seen imitations, but they are worthless, Mr. Hall's pattern being peculiar in several respects. The worst of it is, the fly-tyers dislike these hooks, because they are more troublesome to make; in fact, one leading London tackle-maker in the Strand informed us his people would not make them, except at such a price as prohibited their sale. If Mr. Hall knows any fly-maker who will execute orders for flies tyed on his hooks, we should be obliged to him if he would give us the address.

Mr. Ogden, many years ago, invented a seat basket, it has numerous advantages over the ordinary French basket. His folding landing-net is also extremely useful. His "Multum in Parvo" trout-rod is too well known to need mention; and the new "Ne plus Ultra" trout-rod made by him from Major Bruce Seton's design, is such a great advance on anything of the kind that we have given it a special notice in another column. We have had so many inquiries about it in consequence of the short description we gave a few weeks ago, that we are convinced it fills a want long felt by trout anglers.

P.S. Since writing the above we have received a few samples of Mr. Odgen's flies, and are delighted with them. A new fly, called the Bittern, looks a very deadly fellow for a rough bit of water. An angler killed eleven brace of trout with this new fly the other day.

CAMBRIDGE AND ELY ANGLING SOCIETY.

THE annual supper of this society was held at the Lion Hotel, Cambridge, on Tuesday evening last. The president of the society, Dr. Porter, Master of St. Peter's College, and Vice-Chancellor of the University, occupied the chair; the two vice-chairs were filled by the secretary (Mr. W. Purchas), and Mr. Harold Archer, of Ely; and there were present the Mayor, Dr. Perkins, Dr. Cooper, Dr. Bacon, Dr. Moxon, Mr. C. Balls, J.P.; Mr. J. Evans, Mr. R. B. Marston, and other distinguished guests. After the removal of the cloths, a large pike, weighing 19½ lb., which had been caught that afternoon in Mr. Swann's private water by Mr. Mortlock, was brought in for exhibition. The Chairman then proceeded to dispose of the toast-list, which was rapidly gone through, the speeches made being remarkable for their conciseness. "The Queen" was first given, and received with all due marks of loyalty, and then followed "the Prince and Princess of Wales," in giving which the Chairman said he thought he suggested last year that the Prince would make a most gracious honorary president; and he still felt sure that His Royal Highness would feel it a pleasure and pride to occupy such a position in that very popular and successful society (cheers.)

Mr. Cockerell then proposed "prosperity to the University of Cambridge," with which toast was coupled the name of Dr. Perkins, bursar of Downing College, a great patron of all descriptions of sport, which gentleman, in replying, said that, in regard to the sporting proclivities of the University, he had always found the old adage about Jack and his play to be very true and good (laughter and applause).

Dr. Bacon was next called upon. He proposed "Prosperity to the Town of Cambridge." The presence of a society, he said, devoted to fishing at a time when the subject of fish preservation and cultivation as an article of food had been very much before the public, must be productive of some advantage to the town. He was well aware that the society existed not for commercial purposes, but for the exercise of pleasure only. Still it might conduce to some future benefit to the community, and he hoped it would tend to the prosperity of the town of Cambridge (applause).

The Mayor briefly replied. Cambridge had many advantages which other towns did not possess. It was evident that those engaged in trade could not of late have received so much benefit from the agricultural portion of the community as they had previously done; but the increase of members of the University had been very great, and must, to some extent, have made up the deficiency. It was mainly to the University that they had to look for prosperity.

Mr. C. Balls, J.P., then proposed the toast of the evening, "Proseperity to the Cambridge and Ely Angling Society." The society, h said, had been most prosperous, and there were several reasons why it had succeeded so well. In the first place, there was a necessity for the society. When they found there was a necessity for a thing, and especially in establishing a society, it generally succeeded. And then it depended upon the party who took the thing up at first. A few earnest men might do a great deal. That was the case with their society. A few very earnest men set themselves to the work of establishing the society. Then they were fortunate in the selection of officers. No doubt the success of the society might be attributed very much to having such a gentleman as the Vice-Chancellor as president. The primary object of the society was to provide true sport in angling, but it also gave amusement to many men engaged in a sedentary life, professional men and others, who were glad to get an outing, if only on the banks of the Cam. They had heard much of the Cam, its drawbacks and its advantages. He was not much of a fisherman himself, but he gathered from others capable of giving an opinion that the Cam was a very fine breeding ground for fish. He was old enough to remember when the Cam was fished not only every day in the week, including Sundays, but also every day in the year, and fish taken unfairly. The scarcity of fish was thus easily accounted for. But since the establishment of the society a change had been witnessed. They had not diverted the sewage from the river, but perhaps that was an advantage, as the fish were fed (laughter.) He was not about to dwell upon the breeding of fish, but upon their preservation at a time when preservation was especially required. It was very gratifying to find that the operations of the society had been so successful that they read from time to time of very fine takes, not composed merely of roach or dace; and he had heard of very fine specimens of salmon trout. And the society was making itself known. It was not confined to residents in Cambridge or Ely, but many gentlemen came from London and even more distant parts of the country to have a day's fishing in their waters. This was another gratifying success. Their chairman had made an allusion to the Prince of Wales; that if an application were made to him he might be induced to encourage their society. He would remind them of the likely interest that the Prince had taken in the fishing along the coast. He could quite understand that the cry of the widow and orphan had reached Sandringham, and that his Royal Highness felt for the misery that was endured by the men who supplied their tables with fish; and he could also understand that the Prince's object was to ameliorate the condition of those men, and to increase the supply of fish, so that their markets might be better supplied, and a most nutritious food brought to the public at much reduced prices. He hoped the day was not far distant when they should see their markets supplied with fish to such an extent that the poorer classes might be able to purchase and have good fish on their tables, as he was told that fish was very nutritious. It was just possible that their river might supply such a quantity of fish that they might see it exposed for sale in the market, and, if properly carried out, there was no reason why it should not be brought in in large quantities. He was sure they all felt a deep interest in the society, and he thought they were most fortunate in having such excellent officers to conduct their business. He coupled with the toast the name of their president—(cheers)—to whom the society was very much indebted (applause).

Dr. Porter thanked them for the extremely kind way in which they had received the far too complimentary observations that had fallen from Mr. Balls in respect to himself. He felt that he had been able to do nothing for the society. At their dinner the previous year he determined to know something of fishing. Although several officers had promised to undertake to give him lessons in the art, yet he confessed with shame and contrition that he had not taken advantage of them (laughter). He could not agree with opponents to the diversion of the sewage. He should like to see something done in taking the sewage out of the river (hear, hear.) He was quite sure every member of that angling society would be delighted if something could be done to make the Cam a purer river. He was certain that they would not then have to go down to Ely to catch their fish. He had begun to despair of having anything of that kind done during his term of office (laughter), but he was pleased to see something had been done by the members of the committee in reference to the matter by getting the Local Government Board to move in the matter. So he was not without hopes that, some time within the next half-century, some steps might be taken in the desired direction (laughter and applause.)

The Chairman then handed the prizes won at the fishing competition at Littleport on September 14 to the winners, as follows:—First, Mr. Webb, Ely; second, Messrs. Hayward and Thurston, Cambridge, tie; third, Mr. A. J. Ellis. Each competitor was warmly applauded.

The Rev. E. W. Cory gave "The Committee," for whom Mr. Ellis replied, commenting upon the advantages of angling as a pastime.

Mr. Harold Archer, of Ely, proposed "The Honorary Secretaries," especially alluding to the services rendered by Mr. Purchas, whose name he coupled with the toast.

Mr. Purchas said the society was in a most flourishing condition, and the number of members and amount of subscriptions exceeded that of previous years. They had received several presents of live fish from gentlemen; and Mr. Marston, the editor of the FISHING GAZETTE, had recently kindly presented them with eighty brace of perch, which had been put into the river near Clare College (applause).

Dr. Cooper gave "The Visitors." The number that had attended their gathering showed that the objects for which the society was founded had attained popularity amongst all classes. He had to couple with the toast the name of Mr. Marston, who was a gentleman they were very pleased to see there, because, next to catching fish themselves, their greatest pleasure was to see those caught. He felt sure if there had been a *Times* in the days of Izaak Walton they would have read with interest of the numerous monsters of the deep that were landed, and the various devices that were used to catch them. Mr. Marston was editor of a paper which was one of the greatest delights to him on a Saturday, as he not only read what others had done but there was a very useful column of notes and queries. Mr. Marston had done good service to the anglers by providing for them the means of inter-communication of ideas, and had also done a good thing to the world at large by opening up a way of increasing public interest in the subjects of fish culture and fishing generally. He was pleased to see the interest taken in the matter by the Prince of Wales, and that they were to have a grand exhibition next year, which showed the strides taken in the subject, and he had not the least doubt that fishing will become of more than local interest; that was, of national.

Mr. Marston replied. He thought the society ought to devote itself to the purifying of the river. He recommended to their support the Thames Anglers' Defence Association, more especially as they were the largest society in the world. There was not another club in the world that could boast of 500 members. He also referred to the London and Edinburgh exhibitions, and to the subject of coarse fish culture. He thanked them most heartily for the way they had received him that evening.

Dr. Moxon gave "the Ladies," and Mr. J. E. Whitehead responded. "The health of Mr. Archer" closed the toast list, and the Vice-Chancellor vacated the chair, which was taken by Dr. Perkins, and the remainder of the evening devoted to harmony and conviviality, speeches being made by Dr. Perkins, Dr. Moxon, Mr. Marston, Mr. Evans, and other gentlemen. A special vote of thanks was given to Mr. Marston for attending the meeting, which separated about twelve o'clock.

NETTING THE RESERVOIRS.

THE liberal concessions which have already been obtained from the Waterworks Companies by the Committee of the Thames Angling Preservation Society to net the reservoirs and turn the fish into their portion of the river, will be an immense boon to anglers; and it is intended that the different reaches between Teddington Lock and the "City Stone," at Staines, shall be equally benefited. On Tuesday last, a most lovely day, the netting commenced in the large reservoir of the East London Waterworks, at Sunbury, by the kind permission of Mr. George Seaton, the engineer of the company, who afforded every facility for the successful completion of the work by reducing the water to about four feet in depth, the reservoir itself being 15 feet deep, 800 feet in length, and 130 feet in width. Amongst the company who assembled to witness the netting were—Messrs. Thomas Spreckley (president), W. H. Brougham (secretary), F. H. Lemann, H. J. Alfred, A. J. Little, Alfred Nuthall, P. Geen (members of the committee), W. S. Edgar, J.P., Francis Francis, J. C. Chubb, C. T. Manley, James Temple, J. Cooper, J. Wotton, Thomas Hiscock, R. S. Fennings, L. Gow, J. Ross Faulkner, E. T. Walker, H. Dickinson, R. B. Matthews, W. T. Cosier, Russell Knapp, H. E. Wood, &c., &c. The netting was entrusted to Mr. Lewis Gibson, of Putney, several of the visitors being also very active in giving assistance. The netting commenced about half-past nine, under the direction of Mr. Thomas Spreckley, and continued for about six hours. As the boats came to the end with the nets laden with fish, the latter were hauled up in buckets and placed in four large fish-carriers. Near each end of the reservoir were large tanks, belonging to the waterworks, filled with clean water, and a constant stream kept running. Into these the fish were placed out of the fish-carriers, and they kept the fish alive until their time of removal. Too much praise cannot be awarded to Mr. A. Tucker, the indefatigable manager of the works, as he was unremitting in his attention, and rendered every help he possibly could. The first consignment of fish was sent about 12 o'clock to Chertsey to be placed in three different portions of the river there, the first being in the capital swim close to the Chertsey Bridge Hotel; Mr. James Forbes, who takes a great interest in Thames fishing, being present to witness the introduction of the fish into their native stream. The second and final consignment was sent to Chertsey under the orders of Mr. P. Geen, who proposed to turn them in the river above the lock, where some of the fish would be able to work their way up to Staines. It is a remarkable fact that, with the exception of a silver bream of about 4 lb., there was nothing in the reservoir except small fish, the number being estimated at about 5000, and these were principally perch, roach, dace and bleak. As regards the perch, of which there was a large proportion, and which are the kind of fish most wanted for the Thames, it is worthy of note they were all of one size, about 4 inches in length. Much pleasure was expressed by the visitors at getting so many beautiful perch. Amongst the bleak, there were so many remarkably fine specimens, a number of them were taken away for the purpose of preservation, notably three by Mr. Spreckley, as a reminiscence of so pleasant and successful a day; and Captain Alfred, for presentation to the Gresham Angling Society. The result of the day afforded abundant evidence of what will be the grand result to the river by the netting of the different reservoirs placed at the entire disposal of the T. A. P. S. Committee, which will keep the officials at work for some months; and the warmest thanks of the anglers will be due to Mr. George Seaton for the initiation of the work, a general expression of regret at his unavoidable absence on Tuesday last being felt by all present.

[There can be no doubt this netting is very useful work; but it will have to be repeated every year, unless some plan is adopted for stopping the influx of the fry into the reservoirs. We notice the expectations of Messrs. Francis and Brougham—who talked of getting tons of fish out of these reservoirs—are, as we said, far too high. If the great majority of the fish were perch of 4 inches, we may estimate the total weight of the take at a little more than 1 cwt.—ED.]

GREGORY'S SPINNING BAITS. "The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[ADVT.]

RIVER REPORTS.

MID-THAMES.

> "Saying good-bye is such sweet sorrow
> That I could say good-bye until to-morrow."
> —Shakespeare.

The angling season on the Thames for 1881-2 is at an end, and has certainly died in glorious weather. The season 1882-3 begins on the 16th of June, and it is to be hoped will be a more productive one than the past. Since the late push of water, fish of all kinds have obstinately refused to came to book, so there is nothing of interest to report since my last note, except that a few small jack have been had and some five tench. In my next I purpose giving a short *résume* of the past season's doing.—Marlow Buzz.

Ancholme.

The closing week of the season has been a magnificent one, both with respect to haul of fish and weather. The proverbial oldest inhabitant recollects not such a fine March. One angler had a perch weighing 2 lb. 10 oz., and I have not heard of a single fisherman going home empty-handed. Hip! hip! hooray! Mr. Editor I had the unspeakable pleasure of catching a magnificent trout of 3 lb. on Saturday last, and in the pink of condition. It was 20 inches long, and died like a prince. It was of the famous Wickham hook-beaked breed, and was placed by me as fry in the beck in 1878, consequently it was only four years old. I had another of $1\frac{1}{4}$ lb. on the same occasion, and four others of $\frac{1}{2}$ lb. each. I limited myself to six, as some recently established breweries have made sad havoc with my protegés. I placed the first trout in this beck in 1876, and have already caught out six of over 2 lb. each in weight. This fact shows the fine quality of the Lincolnshire chalk streams. With a small outlay they might be made quite profitable.—Thomas Ford.

Chichester.

The past week has been a most favourable one, both for weather and condition of water. Rodsters have been numerous. Yet roach have seemed off the feed, except an hour at sundown, when takes have been numerous but small in weight. At the Rother, on the 12th, when the Cicesterians, disgusted with previous ill success, did not put in an appeerance, jack were well on the feed, fourteen fish being landed, the largest $11\frac{1}{2}$ lb. At the Canal, Chichester, some fair takes of roach were made, but few of them weighable. Myriads of fish may be seen, many of them diseased. It has been a fair finish to an otherwise bad season. Bass and smelt fishing will now fill up the close time.—George F. Salter.

Coquet (Weldon Bridge).

On Monday, the 13th, the curate of Long Horsley caught two dozen and a half of trout, in good condition. Mr. Matthews, of Long Horsley, on the 14th killed one dozen of trout, the largest being fifteen inches. Mr. Hedley, on the 15th, killed one and a half dozen of trout, from eight to twelze inches in length; the trout are just beginning to take the natural fly. If the weather continues as at present there is every prospect of a good season for the trout fishing.—A. Glass, the Angler's Inn.

Dove.

We have had a wonderfully fine week for angling, the sun shining out warm and bright every day, and the river being in really capital order for both fly and minnow. Our trout fishers now increase daily at the river-side, and we shall soon be in the very thick of the season. Good dishes have been the rule and not the exception this week. Both trout and grayling have been rising freely and it would not be exaggerating to state that the average baskets have amounted to $5\frac{1}{2}$ brace each. Both in the brooks and the main streams good results have been attained. The March brown is now rapidly coming out on the surface, and in another fortnight will be at its height—that is, should the weather continue as at present. Wednesday last, of course, brought the close season for coarse fish, and I may say that several species of fish in the Dove were ripe for spawning at the end of February. The most killing flies for trout since my last communication have been the bumble, the March brown, the February red, and the cockwing.—The Splodger.

Exe (Tiverton).

The river is still in very good order for fishing, but soon will get low if this weather continues (sharp frosts by night and cloudless skies by day). Some very good baskets have been made during the past week, flies killing best—half-stone, hare's flax, blue upright, and iron blue. The half-stone has been doing extremely well.—Wm. Mudford.

Ilfracombe (N. Devon).

There has been a little better sea-fishing this week than there has been for the past fortnight. Several boats with fishing parties out this week, fishing with ground lines, the bait used is lob worm. Their catches have varied from 10 lb. to 20 lb. per boat per tide of tamlin cod, whiting pout, and pollack. A few skate, ling and cod have been brought in from the spillers, which they set just off the habour, There is some good sport to be had with hand-lines from the pier and jetty for small whiting, dabs, &c, Weather at present very mild but foggy,—E. Comer.

Medway (Tonbridge).

The season ended on Tuesday amidst beautiful weather, and, of course, there were a large number of the votaries of the gentle art out, some of whom were successful and some not. There have been no very large captures since last week. As an instance of the early season, a pike was taken on Monday, which had spawned, and in almost every shallow his friends and neighbours may be found attending to their family duties. On Friday no less than 8000 carp, chub, and roach, obtained from a pond in the neighbourhood, were deposited in the river near the Barden Bank.—Ye Medway Water-Rat.

Severn (Shrewsbury).

The water for eight or nine days past has been too high for anything but worm fishing, but is now fast subsiding, and on Thursday will be in splendid condition.—F. H. M.

Severn and Teme (Worcstershire.)

Water in excellent order for angling with worms, minnow, or fly; it is slightly stained, and when fishing in the deeps it has the appearance of a thick water, it has a clayey colour, but upon the fords it will do for the fly. In fact, a few good fish have been landed this week, both perch and trout are on the run. On most streams the fence months are in force, not so upon the Teme or the brooks in this district; the Act only takes effect in the Severn and the Avon. At the same time no one must have white fish for sale, but if you angle for them you can keep them; but I am glad to say that few are kept, the clubs do not approve of taking them. Mr. Davis caught a few brace of trout with the worm, myself landing a brace with the minnow. All looks well for a good season; there are more fish this season than I ever remember. Some large salmon have been taken with the nets near the city, many 30 lb. each, one fine fellow was 46 lb. The flies I recommend are the early brown, the March brown, and early dun, some call it the cock-tail, as it drops upon the water it is sure to float with wings and tail erect.—John A. Griffin.

Suir (Clonmel).

The cotmen here did well last week, killing thirty-two fish; this week they got only a few each evening, the water being too clear to use their nets during the day. The rod fishing has been very good; the water is in good order up the river. On Mr. Prendergast's preserves at Ardfinnan Mr. Jellicoe killed one fish 10 lb., same place Mr. Bouchier one of 14 lb.; the latter gentleman landed four salmon yesterday at Kilcommon demesne. Dr. Campbell got two at the same place, Mr. Massy two at Suir Castle. Ned Buttler landed three salmon last week up the river, and several, whose names are too numerous to mention, were equally successful. At Ardmagh Mr. Owen Mansergh landed two splendid salmon, and hid them by the river side under a bush, while trying his luck further down the river. When he returned for his two salmon, alas! they had disappeared, and on looking across the river he saw two men with his salmon in their hands, waving them in triumph at him, and then they made off as fast as they could, leaving the gentleman in question minus his fish. However, he had the satisfaction of having had fine play with the salmon previously. The trout fishing has been very good, Mr. W. Bagwell killing twenty-seven at Kiltinan on Monday, Captain Massy one doz. on Tuesday, and Mr. W. Bagwell two doz. on Wednesday, at same place. On the Tar, Messrs. Suther, Helen, Fitzsimon and Farrell killed six doz. and ten. Mr. Middling has killed some very large trout on the Suir.—Dora.

Taw, &c. (N. Devon).

Water not too high, but as clear as glass; the last two days have been cloudless, not much use for fishing, and scarcely, if any, wind, which is in the north. A little more rain, with wind, would be just what a fisherman wants (but, alas! he scarcely gets it). I do not hear of any kelts left in the higher water, the floods last week carried them off. Sir W. Williams killed two dozen on the Yeo, Mr. Paine 30 fish, Mr. Harding-Nott two dozen in the Bray; two gentlemen fishing in the lower Yeo has caught four or five dozen lately; a man in the Muddiford stream killed 30 good fish on Monday, and Mr. Quick took one dozen. A dish worth catching was had in the Mole on Monday. Taw getting right, and will be well fished from April. Mr. M. Rolle has given his usual number of tickets, and gentlemen are getting ready for salmon, which commences in April. Flies, rusty blue, silver twist, and a good blue upright, with silver tag.—Rusty Game.

Thames (Goring).

Water was in first-rate order for jack and chub. Roach did not bite much water too clear for them. About 30lb. of jack were taken last week, averaging from 5 lb. to 9 lb. each; also some good roach.—John Rush.

Thames (Richmond).

The river for the last few days of the season was in splendid order, but there was not much done with regard to catches; the fish left us down here when the high tide was on, and since then there has been nothing done. When the fish go over the weir at Teddington we used to think they were safe, but it is not so, as I hear from Hampton Court that at Molesey Weir it was quite a slaughter-house, some of the bankers taking from 8 to 10 dozen in one day. I hear that most of them were taken with a fly line, with two or three flies on it, and as the fish were all on the surface of the water they got one nearly every throw they had. I have only been out once in the last fortnight, but met with little success, but I had some splendid takes from private, waters the best day was 13 fish, $54\frac{1}{2}$ lb.—John Bushnell.

Thames (Shepperton).

The water has been in very good condition up to the end of the fishing season. The fishermen have been doing well with the perch, roach, and jack for the last of the season. Mr. Hewitson, fishing with F. Perdue, took a fine jack, weighing 11 lb., with a red worm on a paternoster. I have seen several trout feed, some very good ones.—W. Rogerson.

Thames (Walton.)

On the 9th inst., Mr. Bradley, fishing from bank, one jack, 7 lb.; on the 11th, Mr. Hickley, fishing with G. Hone, one jack $9\frac{1}{2}$ lb.; and one perch $\frac{1}{2}$ lb. On the 14th, Mr. Mackriell, with George Hone, fishing for bream, had a splendid carp of 12 lb. with a fine drawn gut line and a Little's hook baited with a red worm. This monster gave plenty of play for an exciting thirty minutes, when he was safely landed, although great anxiety was felt by reason of the rod and line being defective owing to an accident. The same gentleman had a splendid carp of $6\frac{1}{2}$ lb. on January 31st, but I understand this one is unprecedented in angling annals. Besides this monster, Mr. Mackriell had a fine bream of $5\frac{1}{4}$ lb., and also thirteen smaller weighing 13 lb., the largest 3 lb. Everything considered, Walton has reason to be proud of the take on the last day of the season. Wind S.W., weather very fine and warm, but with slight frosts night and morning. Water clear and in capital condition. Henry S. Wood.

Trent (Alrewas).

With the weather remarkably genial and spring-like, and the water in first-class order, the angling season for coarse-fishing has been brought to a close for the time being—the only cause of regret is that this agreeable change from atmospheric influences did not occur a little sooner. I should then possibly have had to chronicle better sport than has fallen to the lot of my brothers of the angle the last month, more especially the pike fishermen. It s, however, useless to lament over what is past, but rather look forward to he future with best wishes that the three months' close time will result in better stocking our rivers, and so be the medium of better sport to our craft. Although I do not believe in a three months' close time for roach, like all loyal subjects, I bow to the majority and put up my tackle for all other fish, but trout and eels, which can be angled for in the Trent during the close time; for the former a trout licence must be taken out, at the cost of one shilling; and in case any other fish are hooked they must be returned to their native element until the 16th of June. Since my last, the following catches have been brought to my notice:—Mr. Sale, a brace of fish, 11 lb., the largest fish 7 lb.; Mr. W. Reynolds, a few good perch and roach, and, what is a scarcity in our portion of the river, a fine bream 5½ lb.—this fish has been placed in the hands of one of our Birmingham naturalists to put in a case, and if it is only done as well as a perch I saw the other day, set up by Cooper, it will be a picture. Mr. Reynolds has also been fortunate in landing the best trout, 1 lb. 7 oz., among the members of the Birmingham and Midland Piscatorial Association, and which takes the prize. A strong contingent of anglers was on the banks of the river last Saturday, but I cannot glean of much doing. A youngster proved the most successful. With a very primitive rod and tackle, live baiting, he basketed in two days nearly 30 lb. weight of pike, the largest fish 10 lb. Mr. Sam Basnett is reported having an awful slice of bad luck. Hooking well a fish in the weir hole at Alrewas, and, after playing the fish for nearly half an hour, it ran round a sunken tree, broke the gimp and got away; the keeper writes me he has seen the fish several times this season and it cannot be less than 25 lb. This case is not near so bad as another member, who, on landing a fine fish, took out the hook, turned his back, and was drinking his success, when the fish suddenly gave a flop down the bank into the river and was soon lost to sight, if not to memory dear. Moral: always kill your fish before taking a "wee drap." With Mr. Henry Jephcott taking with a friend a couple of fish 10 lb. and 8 lb., and a few odd chub and roach, the last day of the season, by Mr. Reynolds from the river, is about the sum total. Our anglers fishing in the pools have been doing fairly well; some good fish have been landed at the Harborne Reservoir, the season for pike fishing closed in that excellent water on March 1. I may remark there are vacancies for two rods, and as the all-round fishing is good I can recommend it to anyone desiring good fishing an easy distance from town. Moderate sport has been had at Earlswood. I had the pleasure of a day, a week ago, through the kindness of our treasurer, Mr. John Allday. I nobbled five nice fish, spinning, the fish of the day, a perch 1 lb, 15 oz. was taken by Mr. W. Reynolds, which has been forwarded to Cooper to set up. The last day of the season it was my good fortune to receive a kind invitation from my friend, Mr. Sam Basnett, to join him and Mr. John Allday to some private fishing in Worcestershire. As the journey is through one of the nicest portions of the apple country, Mr. Allday, with his usual kindness, suggested, as the weather was fine, driving us over on the one day and fishing the next, a pleasure we were not very loth to accept. A little incident occurred when a short distance from town which might have proved very awkward had not Mr. Allday been an experienced driver. The horse was one of the good old sort, and when going at the rate of ten miles an hour, the pin which holds the shaft in position came out, letting the shaft on to the horse's legs. Fortunately, he did not commence kicking, but went on at an increased speed. When matters were looking most awkward, and our combined efforts to pull him up had little or no effect, the driver put him at a high embankment on the foot-path, which slackened his speed sufficiently for Mr. Basnett to alight and get at the horse's head. As the tackle was broken, and a steep hill had to be descended in a few more hundred yards, we may consider that our escape from any injury was most Providential. A fresh shaft-pin was brought into requisition, and the tackle repaired, and after a splendid drive we landed, at seven o'clock, at our journey's end, to meet our kind and genial host and hostess, and last, and by no means the least, a capital dinner, which, it is unnecessary to add, we did every justice to. After a pleasant chat about the probable results of the morrow, after sundry drinks and cigars, we departed to roost, determined to make an early start. We were on the road to the war path by nine, and about ten commenced operations in a pool by no means a good colour. Spinning was, however, useless, and live baiting only procured a fish 2 lb. So we made tracks to another pool, a few hundred yards off. This one was clear of everything but weeds. My friend Allday, however, managed to secure one fish, spinning, Basnett, ditto with live bait. I spun the place all over, and with the exception of landing weeds at nearly every throw, I left off tired and "fishless," at two o'clock. As matters could not be very much worse we determined to return to the pool of bad colour. Noticing a fish strike on the opposite side of the water, off I went round to the locality. At the second attempt I secured him—a nice male fish 5 lb., and quickly brought out another 6 lb. My friends Allday and Basnett following suit with a couple of nice fish. After giving the water a good spinning till five o'clock, with a result of having a one run and loosing the fish, we were informed there was still another pool if we chose to fish it; but the keeper remarked, "he did not think there were many pike in it," We packed up our traps and off we started to find a pool that had the appearance of looking anything but a place that did not contain pike, and the result proved that this occasion did not play false. Basnett at the second throw hooked a fish who got away and did not attempt to come again. Allday had in the meantime been by no means idle. By going through a sea of thick black mud he had landed at a nice quiet corner which must have been full of fish, A few throws and he landed a good fish, and was quickly into another, which proved over a 7 pounder. For half an hour the fun was fast and furious. Everything has an end, and so had this red-letter day. Night coming on, we were reluctantly compelled to give over. On counting up, we found we had taken 19 fish. The largest, 11½ lb. was secured by Mr. Basnett. I cannot guess what the result would have been if we had made the start in this pool, time only permitting our fishing a few hundred yards, while the fish at the lower end of the pool among the weeds were any size, if we could only have got at them. A pleasant and safe drive home brought to an end the second good day's fishing we have had this year in the same locality, which from circumstances must be unmentionable. In conclusion, our united and most hearty thanks are tendered to our host and hostess for their kindness and hospitality, and to which we are indebted for the permission to fish in such a lovely spot.—James Gregory.

Trent (Newark).

The water kept in pretty good condition for the last few days of the season, which ended on Tuesday last, and many rodsters availed themselves of the grand opportunity for a farewell swim or two, partly tempted, no doubt, by the splendid ply of the river and the genial weather. Fickle fortune was not very kind to many of them, for bags of fish were the exception and not the rule. I must confess that a bag of chub made by a friend and myself was the best catch that came under my notice all the week, consisting of nine fish that weighed nearly 19 lb , best 3½ lb.; and he finished up the season next day hy catching, among others, the best chub of the season, a rattler, that weighed close upon 5¼ lb., pith and brains being the fatal attraction. This fish, I believe, will take the special prize of one guinea, given by Mr. David Slater for the best chub taken out of the Muskham Fishery up to March 15. The chub that I mentioned last week, and which the captor estimated to weigh 5½ lb., only fetched 4¾ lb.; but it was in bad condition; if it had been in anything like the form of the other big fish just mentioned, it would have gone over 6 lb. I have nothing more of interest to communicate this week only I might tell the trout-fishers that the Trent and its tributaries is in fine condition, and no likelihood of a change at present.—The Trent Otter.

Trent (Nottingham).

The close time expired on Tuesday, and a rare busy day we had. Scores of anglers of all grades were out and anticipations as to sport run high. In the lower waters the chubbing contingent mustered in great force, but as the sun was very bright, the fish bit very charily indeed. At Colwick six or seven were taken with greaves and pith and brain, and several were caught in the Fiskerton length. None were, however, of extraordinary size. The executive of the Weston fishery very kindly threw open the water to the members of the Wellington Association from Saturday to Tuesday, but although a large number availed themselves of the proferred liberality, only a few small roach and perch were caught. On Thursday two men, named Savage and Platts were fined £5 each at Bingham Petty Sessions, for being concerned in blowing up fish with dynamite in the Trent, between Radcliffe and Stoke.—The Man at the Clubs.

Usk (Monmouth.)

This fine salmon and trout stream is in splendid order, but the last two or three nights' white frost, which has been very severe, has driven the fly off the water, so there has been but little rise. The cob, or March brown is now on the water; and that, for a leader, and with two blues for droppers, one with pale yellow body and the other dark and starling's wings, is the best cast you can put over the fish just now.—Cob.

Wye and Derwent (Derbyshire).

Yesterday (Wednesday) was the last day for some time to come for fresh-water fish to be allowed to be taken other than trout and char, according to the Freshwater Fisheries Act of 1878; and, taking the season through, I can only say that we in Derbyshire have had a very good season indeed, as there has been a great quantity of grayling, roach, dace and perch killed; also some chub and pike. The pike have not fed well at all in the Derwent during the last winter. No doubt it has been owing to the mildness of the winter we have had. The largest pike that has been taken this season was a male fish of over 9 lb. weight, killed near to Whatstandwell. The weather during the past week has been beautifully fine and warm in the middle of the day, with sharp, frosty nights. In the middle of the day, while the sun is out, we have had very large quantities of natural flies out on both rivers, viz., the long flat-winged browns and duns, and both trout and grayling have risen freely all the week, and some good baskets have been the order of the day off of both rivers with the artificial flies. The killing flies have been the claret bumble, furnace, and February red, one gentleman taking 7½ brace in the Darley water, below Darley Bridge last Tnesday. The heaviest and largest trout have fallen victims to trolling with the natural minnow and the "Derby trout-killer," Several trout of over a pound apiece have been killed, The bottom fishers have done fairly well on many parts of the Derwent during the past week; one gentlemsn angler, fishing off of Darley Bridge killing a well-fed trout of 1½ lb. weight with small worms for bait, besides losing another very large trout after partly killing him, The fish was slightly hooked. Trout are now getting into their feeding places in great quantities, and can be seen at the sides, looking out for the flies coming down, Trout are a month earlier this season; in fact, they are as yellow as a guinea. One old veteran killed a well-fed eel of 3¾ lb. with large worm for bait,—G. J. Eaton,

Starkholmes, Matlock Bath,

ANGLING ON THE TWEED.

In consequence of heavy and irregular floods on the Tweed last week, salmon angling was much interrupted, Tuesday being the only day on which anglers could ply their line. On that day Mr. T. Golmston, Kelso, was successful in landing a nice clean salmon of 15½ lb. From the following Wednesday until Monday last, fishing was quite impracticable, owing to the flooded state of the river. On the Ednam House water on Monday, Mr. Drummond landed one unclean salmon, and caught, with minnow, two very good common trout, one of which scaled fully 2 lb. when weighed. On Tuesday the same gentleman again brought an unclean salmon to bank, and also a clean fish of 7½ lb.; and on Wednesday he captured another fresh river fish of 8 lb. On Tuesday the river and its tributaries were in splendid condition for angling, and very encouraging sport was got. On the upper Hendersyde water Mr. Pringle Elliot killed one fish of 10 lb. On the Hendersyde, under water, the Rev. Hill Scott, Kelso, caught a salmon weighing close upon 8 lb., while on the Sprouston casts Mr. J. J. E. Brown, of Rosebank, had also one fish to his rod. On the Henderside upper water, Sir George Waldie Griffith, Bart., caught a clean fish of between 9 and 10 lb. On Wednesday, Mr. Pringle Elliott and Mr. A Steel, Kelso, fished the coasts on the Makerstown water, but only an unclean fiah was landed. On the lower water at Hendersyde, J. Usher, Esq., jun., Gatehouse-cote, killed one very nice salmon; and Mr. Brown, of Rosebank, on the Sprouston water, killed one beautiful salmon of fully 14 lb. weight. Trout angling during the past few days has been excellent. In the Teviot on Wednesday, Mr. J. Michie, sen., killed 8 lb. weight, fishing from the bank in the stretch between Herton Mill and the Castle Pool. Mr. Cummings, angling below Kelso Bridge, killed a grayling of 1½ lb., and at the back of the cauld above the canal of Kelso 9 lb. of trout were secured by another angler. Last week the net fishing in the Colt stream has not been so productive, the flooded state of the river for two or three days having interfered very much with the success, while some stations have had fair returns. Should the weather settle and allow the river to recede, better fishing may be expected this week. More of the disease has been seen wholly on clean salmon that have been for sometime in the upper district of the river and are returning, not with the view of going to the sea, but accompanying the kelts. Rod-fishing is at a complete standstill. Takes of new run salmon are scarce, and trout are exceedingly poor. Prices are higher—salmon 2s., trout 1s. 6d. per lb.—Maxwheel (Kelso).

THE SOUTH OF IRELAND.

Cork, Thursday Morning.

The fishing continues to improve, and with the accession of warm genial weather there will be a lively battle of springers. The weather during the week has been all that could be desired—seasonable and pleasant. There has been a great run of anglers to the bank, and that they were rewarded may be seen from the list which we append. Mr. Geo. Haynes heads the list with a gross result for two days of seven salmon, ranging from 7 lb. to 14 lb. Five were killed in one day. Paddy Sullivan, the bailiff of Sir Augustus Warren, has landed seven on two days, and J. Connolly, who is also fishing in the same preserves, has taken six. These two men killed eight on Saturday out of one stream near Carrigderhed Bridge. Jack Barry, a fisherman of Mr. Trunbear, from Macrom, has just one stream to fish, and out of that he brought two on Saturday and three on Sunday, and several others during the season. Mr. James Lampkin landed two yesterday. Mr. M. F. Barry took three on Saturday, and Mr. Thomas Barry two. Mr. Engler one on the same day, and Dan Rurdan, of Macrom, two. Mr. Henry Dale had one on Monday, and Mr. Pearse one on Tuesday. There were several other baskets during the week. Perhaps it would not be inopportune to reply to the letter which appeared in last week's Fishing Gazette, enquiring for information respecting fishing in Cork. These are no regular pike or perch fishings in the South of Ireland. The former is regarded as the enemy of trout anglers and is destroyed whenever it is possible to get at them. Pike may be caught in the Lee, however, in dark sluggish pools, and in high water. Perch are almost an extinct species in our rivers. Our principal angling consists in trout or salmon fishing. For trout fishing no permission or licence is required, and Cork is the centre of a hundred streams, where trout are numerous. Salmon angling can be had at a mere nominal sum—5s. a day—on one of the best preserves of the river, and lodging accommodation can be obtained at a lesser figure than that mentioned by the enquirer. The weather at present is most genial and seasonable. Owing to the proximity to the Atlantic ocean we have a good deal of rain from time to time, but generally speaking the temperature is mild, and the position of the city makes it highly attractive to tourists and lovers of the picturesque.—Angler.

ANSWERS TO CORRESPONDENTS.

R. C., Donegal.—Your article is suitable, and we hope to get it in soon. We have so much matter waiting, we cannot say for certain when it will appear. Quite agree with your views respecting *Saprolegnia ferax*.

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

THE THAMES RIGHTS DEFENCE ASSOCIATION.

Sir,—The apparent apathy of anglers to protect their own interests when assailed seems to be again illustrated in relation to the above-named association.

Although the association has appealed again and again to the large body of Thames anglers, through the medium of your paper, the *Field*, and other papers, as well as placing notices containing a list of its objects in various fishing-tackle shops, it appears to have met with but cold indifference.

Surely it cannot be that the angling community do not know how strenuously many riparian owners on the banks of the metropolitan river are attempting to hinder, if not entirely to prevent, anglers from enjoying their favourite sport on this, the largest and most public river in England. Should the Thames Rights Defence Association collapse through want of funds, a result for which anglers would alone have themselves to thank, the public right to fish in the Thames wherever and whenever one may wish to do so will be another of those things of the past in a shorter time than may be generally anticipated. I refuse to believe that such a state of things will be allowed to take place simply because that portion of society which is most interested in the matter will not dip their hands into their pockets to enable a body of well-informed and energetic gentlemen to protect their rights.

It cannot be on the score of poverty that anglers do not subscribe, for I know some wealthy anglers who enjoy many a day on old Father Thames, and who, when applied to for a subscription to help preserve the fishing, simply consign the application, if made by letter, to the waste-paper basket; or, if it is asked whether they subscribe to the Thames Angling Preservation Society, the favourable results of whose labours they enjoy, answer with some shallow and shuffling excuse. Let it not be supposed that because one can only send a shilling or two it will be of no assistance; but let each and every one interested send his mite, and Mr. Francis Francis will not labour in vain.

It is fervently to be hoped that anglers will yet combine to vindicate and maintain their undoubted rights.—I am, &c., Henry Greenway.

The Firs, Cricklewood, March 13.

[We need hardly say again, what we have repeatedly said in favour of this association, Anglers *must* support it.—Ed.]

DOTTEREL FEATHERS.

Sir,—I have just obtained, at considerable cost and trouble, five perfect dotterel coats from Germany; and I find that they are as scarce there as in England. Two of them are magnificent birds, the other three younger specimens. I am very doubtful if I can get any more; but I offer the first two to my brother anglers at 15s. each, the other three at 10s. 6d., each. You, Mr. Editor, if you require one, can have the same gratis, in return for many courtesies. I am not at all surprised at my friend Mr. Eaton charging 5s. 6d. per dozen for his dotterel flies, if he he pays as dearly for his feathers as I have for these. I shall make no extra charge this season, as I have sufficient for present requirements.—I am, &c., Thomas Ford.

Caistor, Lincolnshire, March 15, 1882.

EARLIER TRAINS WANTED.

Sir,—For three long months will the rods of the London coarse-fish anglers be laid aside. Judging from the number of anglers who journeyed upon the Great Western Railway line alone on the 11th and 12th instant, the amount of money taken must be something considerable. It would be interesting to know the difference in the takings of the different railway companies, say, on the 19th and 20th (fenced) as compared with the 11th and 12th (open). I think the railway companies will find a considerable falling off. If the railway companies derive as much benefit as experience would show, surely, if put before them, they might take into consideration and study the convenience of such a number of customers by giving them a longer time to pursue their favourite pastime. Now, a working man who wishes to visit Goring, Moulsford, Pangbourne, Henley, or any of the stations Upper Thames, unless he can get away overnight, is compelled to start by the nine o'clock train, which does not arrive at those places till about eleven o'clock; and if the angler wishes to fish some distance from the station he gets out at, it will be nearly twelve o'clock before he makes a start. Then, again, he is compelled to pack up very early to come home by the train which leaves Moulsford at five o'clock, or he will be too late to weigh his fish at the club. We will take Goring as an example. By the privilege tickets the fare is 5s., which is just 1s. per hour to fish, and that in the worst part of the day.—I am, &c., A. Porter.

4, Hampton Street, Walworth, S.E., March 13.

THE FENCE MONTHS.

Sir,—As great interest is now being taken in the preservation of fish in our rivers, may we beg that you will allow us, through the medium of your valuable paper, to call the attention of landed proprietors and owners of riparian rights to the following sub-sections of the Mundella Act of 1878, which enacts that, the period between the 15th of March and the 15th of June, both inclusive, shall be a close season for freshwater fish. "If any person during this close season, fishes for, catches, or attempts to catch or kill any freshwater fish in any river, lake, tributary, stream, or other water, connected or communicating with such river, and if any person during this close season buys, sells or exposes for sale, or has in his possession for sale, any fireshwater fish, he shall, on on summary conviction before two justices, be liable to a fine not exceeding forty shillings. The term 'freshwater fish' includes all kinds of fish other than pollan, trout, and char, which live in freshwater, except those kinds which migrate to and from the sea."

Being strongly convinced of the urgent necessity for increased vigilance in the preservation of fish, and especially in the suppression of all kinds of illegal fishing, we trust that this appeal will meet with the attention it merits.—We are, &c.,

E. F. Atkinson, president,
G. W. Hellewell, hon. sec.,
Leeds Rockingham Angling Society.

March 10, 1882.

ELLIS'S BOOT STUDS.

Sir,—Should your intended notice of Ellis's boot studs not appear so early as next Saturday, I should be obliged if you would kindly state in that day's issue of the Fishing Gazette which size and kind (leather wood rubber) of the studs in question you recommend for brogues and fishing boots.—I am, &c.,

March 15. Inquirer.

[We recommend the smallest size made with leather.—Ed.]

A NEW ANGLING CLUB ON THE SEVERN.

Sir,—I have pleasure in informing you of the formation of a new club, entitled the Shrewsbury (Severn) Angling Society. The club holds its meeting at the house of the secretary, the undersigned, at 59, Mardol. The club has been inaugurated for the purpose of encouraging fair angling. A large number of piscators have enrolled themselves as members, and I am happy to say that the club commences its existence under excellent auspices and with every prospect of a prosperous career.

I shall be glad to receive suggestions from secretaries of similar societies which will tend to promote the welfare of our club, such, for instance, as how to best carry out club competitions. A glass case has been fixed in the club-room for the exhibition of specimens of fishing tackle.—I am, &c.,

F. H. Morgan, hon sec.

TROUT IN IN THE THAMES.

Sir,—In common with L. B., and most of the anglers of London, I cannot help looking on the attempt to propagate trout in the Thames as a great folly, and an utter failure. What preservation societies should aim at, is the employing a police of their own of fully-paid keepers. Night watching of the waters is very essential, and would probably reveal matters that would astonish some of our preservation societies. Should it be discovered that poachers work in gangs, volunteers would no doubt be willing, as occasion might require, to supplement the action of the regular paid watchers. The paid watchers should, in addition to their salary, have a reward on securing convictions.—I am, &c., A. F. Marriott.

FISHING NEAR CORK.

Sir,—In reply to "Herts," as to the best and quickest way of reaching Cork, I would suggest that the steamboat from Liverpool is the most pleasant; and if he gets on board the steamer "Gem," he will truly find her a gem. If he has any friends on the Atlantic steamer Lines, and can get a "pass" down to Queenstown—which, at this season of the year is not a great difficulty—he will have a nice taste of the Atlantic Liners; more especially on his return, when the hungry Yankees will surround him for all the latest news.

Apartments can be easily secured in Cork; but I paid 35s., I think, but they were fine, spacious rooms, and I had two daughters with me. The river Lee is very accessible from Cork; so is the Blackwater—two grand salmon rivers. Then there are plenty of smaller streams for trout, but pike have ever been beneath my notice. There are some "big 'uns" in the Lee, though. I have been through the best parts of Erin, and should prefer Cork for my head-quarters to most places. The famous rodsters and tackle makers, Haines Brothers, will give all you want in rods, tackle, or information. It is only an hour's ride to the Laune, near Killarney—a capital river. Of all countries I have fished, I never enjoyed one so much as Ireland; and when you are amongst the people, and find them so "aisy," courteous, and kind, it will be a mystery to you where they keep all the traitors we read so much of. The climate of Cork is most salubrious and health-giving.—I am, &c., W. J. Bullock.

Wigton, March 3.

ON THE GIMP QUESTION.

Sir,—Perhaps the following may call attention to one cause of weakness in gimp, hitherto, I believe, unnoticed.

Some years ago I had the pleasure of being present with and assisting a friend, a manufacturer, now, I believe, in America, in a series of experiments with various samples of silk. In all, except very old specimens, cotton was present. Much of the silk showed no fibre worth mentioning, being a kind of silk shoddy containing much cotton. A burst of a preparation of iron over a bundle of hank cotton furnished a plentiful and good sample of iron mould. Now what I would call special attention to is, that so long as this cotton was quite dry not much diminution of strength was discernible, but when soaked in water it turned through mush.

Gimp being a composition of silk and wire, my point is, that if any of the solutions used in colouring the wire will produce iron mould, and any of the silk used contains cotton, so soon as the gimp is soaked in water, here are the very elements of the rotten state so much complained of in the gimp as now manufactured.—I am, &c., W. S. L.

[This is useful information. The other matter will be used.—Ed.]

FIDDLESTRING *v.* GIMP.

Sir,—I noticed on page 119 of last week's Fishing Gazette, some very sensible observations about gimp. The discussion about the same matter in the *Field* I have not read.

I venture to give the experience of twelve years' trial of a material of similar appearance to gimp, but of vastly superior qualities, viz., fiddlestring. The strings I am speaking of are, in fact, made of catgut, and covered with fine wire, and are sold in various thicknesses, and employed in various musical instruments.

They are much stronger than gimp of the same thickness, with the additional recommendation that they do not seem to be injured by constant immersion in water.

About ten years ago I was one day indulging in my favourite sport—spinning for pike—in the river Ouse, at Castle Mills, near Bedford, when my flight of hooks caught an old sunken post in the centre of the river, with the result that, after a "strong pull and a long pull," my eight-plait silk line parted company about two yards above the "fiddlestring" trace.

Some nine months afterwards, I met an old friend, a well-known Bedford angler, who said, "I found yesterday a flight of hooks and a trace on an old sunken stump in the river." I looked at the tackle which my friend had recovered, and was surprised to identify it as the same I had lost. The trace was apparently as strong ever, in spite of its long immersion.

I have for many years used these "strings" for my tackles, with the result of but few breakages.

As to the trace, I have found double salmon gut (knotted) to be strong and durable, and better adapted for clear water than either gimp or fiddlestring.

The useful hints on page 119 I fully agree with.—I am, &c., A. R. H.

I enclose a piece of a "fiddlestring" from a tackle which has been in use for ten years.

[This fiddlestring seems in every way preferable to gimp made with silk.—Ed.]

STAINED GIMP.

Sir,—Herewith I send you a sample of gimp that is made in a different way. The wire is stained or tarnished before it is made, and the objectionable bichloride of platinum dispensed with, the wire being discoloured by a gas. You will see that the gimp is by this means quite as strong as by the ordinary way, and is made of pure silk it is the same price as the silver or gold colour, namely, 1½d., 2d., 3d., up to 10d. or 1s., according to size, the sample sent being 1½d. per yard. I should like your candid opinion on it, for I have found it invaluable for fine sea fishing.—I am, &c., William Hearder.

195, Union Street, Plymouth.

[This is the best gimp we have yet seen, and we can advise our readers to use it. It is fine and yet will bear a dead weight of thirty pounds. When we last week advised colouring the wire before it is put on the line we did no know Mr. Hearder had already adopted this simple plan.—Ed.]

SPECIMEN FISH *v.* GROSS WEIGHTS.

Sir,—I should very much like to know what the great difficulty is that J. M. D. can see in the way of the abolition of gross-weight competitions in clubs.

It is also a question that I should like to see discussed in the pages of the Fishing Gazette, being convinced that it will be to the interest of every angler to give the question his most serious consideration.

In my humble opinion, gross-weight matches and prizes for gross weights are nothing more than a specious form of gambling, a temptation to commit fraud, and a wholesale destruction of what might be "good fish," if it were not for the (to me) reprehensible practice of taking the gross weight in preference to the "specimen fish."

Again, is it reasonable to expect that one portion of the angling world will subscribe their money, time, and knowledge for the purpose of increasing the supply of fish in our rivers, if the other portion are permitted to take the fish before they arrive at anything like mature size?

What would J. M. D. think if he saw on his club trays a dozen chub—well, say from the Thames—and, perhaps, not one of them would weigh ¾ lb.; pounds of perch that were any size under the "standard"; bream, that were said to be like "bits of tin," and gudgeon more like minnows—and this one of the results of a gross-weight competition?

In my humble opinion the boy who angles for minnows with a bent pin for a hook and cotton for a line is a better angler than the man who, with his fine tackle and coarse cunning would take all the fish he can hook—the "typical sticker," who, fortunately for some, does not often get the opportunity to "stick" long at the waterside; for I venture to think, if it were otherwise, we should very soon have no fish to select our specimens from.

In conclusion, perhaps J. M. D. will allow me to thank him for his admiration of the "Kingfishers'" avowed objects and his courtesy in replying; also, to inform him that, so far as I know, the "Kingfishers" are working men who may have peculiar ideas of providing future sport for their brother anglers or not, as the case may be. Of this I am certain, they have long since passed the time when they might have felt annoyed at the well-known and often repeated words of—"What! no fish again?" on their return after another blank day; and they are also quite aware of the fact that there is but one economical place on the banks of the Thames, where, with any degree of certainty, fish may be obtained to gratify their friends' sight—or, taste.—I am, &c., Kingfisher.

CLUB REPORTS.

ALEXANDRA SOCIETY OF ANGLING.

On the 12th, sixteen members fished for eleven prizes at St. Margaret's with little success, five prizes only being taken:—Mr. T. Gripton taking 1st; Mr. T. W. Thompson, 2nd; Mr. Castle, 3rd; Mr. Chipchase, 4th; Mr. Miles, 5th. The remaining prizes will be fished for the first Sunday after the forthcoming fence months, when other valuable prizes will be added.—F. Wagner.

March 15.

AMICABLE BROTHERS ANGLING SOCIETY.

Being the last Sunday before the fence months the members went out in full force, and were amply repaid for their trouble by a great display of fish of all kinds, embracing jack, chub, tench, roach, dace, gudgeon, perch, and bleak, Mr. F. Arnold weighing in 1 lb. 1½ oz. of the latter, as well as 8 lb. 2 oz. of roach and dace; Mr. F. Harding, 20 lb. 14 oz.; Mr. S. Patrick, 16 lb. 3 oz.; Mr. G. Howlett, 7 lb. 3 oz.; Mr. Shury, 1 lb. 10½ oz.; Mr. Squire, 1 lb. 8 oz.; Mr. Farebrother, 1 lb. 15½ oz., perch; Mr. Hunt, 10½ oz., perch; Mr. Moir, 14 oz.; Mr. G. Carrington, 4 lb. 14 oz.; Mr. T. Lake, one jack, 3 lb. 15 oz., and roach. Mr. F. Harding won Mr. Mees', host of the Baker and Basket, prize for the gross weight of roach on the two Sundays; Mr. Farebrother winning Mr. W. Brearley's prize for the gross weight of perch on the last two Sundays; Mr. F. Harding won Mr. Farebrother's silver watch for the first heaviest weight of roach from the first Sunday in January; Mr. Partrick won Mr. Clarke's prize for the second heaviest; and Mr. Arnold won Mr. Howlett's prize for the third heaviest weight of roach.—T. Worledge.

ANCHOR AND HOPE ANGLING SOCIETY.

Several of our members were out on Sunday, the 12th inst., and succeeded in filling our trays with some capital fish. Mr. A. Glass 4 lb. ¾ oz. roach; Mr. A. Shakel roach and dace, from the Lea; Mr. Simpkins perch; Mr. T. Bowling roach and one bleak, 2½ oz., from Pulborough; Mr. D. Davis bream, from Amberley. The pike taken by Mr. Glass on January 22 and preserved by Mr. Miller, of 257, East Street, Walworth, has been returned and looks first-class. The bleak, 2½ oz., and the perch have been sent to Mr. Miller to be preserved. —D. Davis, sec.

March 14.

ANGLERS' PRIDE ANGLING SOCIETY.

We had a very fair show of fish for the wind-up of the season. Mr. Haines, 5 lb. 8 oz. of roach; Mr. Dawe, 4 lb. jack and 4 lb. bream; Mr. Deeley, 3 lb. roach; Mr. Wall, 2 lb. roach; Mr. T. Fiddes, 1½ lb. roach; Mr. Mallett, 1 lb. roach. Also the following members weighed-in:—Mr. Nash. Mr. Jones, Mr. H. Scutt, and Mr. T. Marshall won the consolation prize.—F. Marshall, sec.

March. 14.

BERMONDSEY BROTHERS.

The Bermondsey Brothers fished for a series of prizes on Sunday last at Pangbourne. Mr. Allen, 1st; Conn, 2nd; Gaffney, 3rd; Frost, 4th. The club had a fine show of fish to close the season with: jack, perch, roach, and dace adorning the trays.—Wm. Allen, sec.

March 14.

BOSTONIAN ANGLING SOCIETY.

Our members have managed to get among a few fish this last week, Mr. H. Bastain, on the 8th inst., securing 13 lb. of dace. On Sunday last Mr. Adams, a new member of ours, weighed in 4 lb. of roach; Mr. Jennings, 6 lb. 14 oz. roach; Mr. Gratton and Mr. Seymour some handsome bream from Walton; on the 14th inst. Mr. Hart a pretty jack of 3 lb., and Messrs. Constable, Collier, and H. Bastain roach, dace, &c.—H. Taylor,

BRIGHTON ANGLERS' ASSOCIATION.

The sport in these waters has improved lately. Several good fish have been taken, although the rivers are somewhat cloudy. The members were determined to fish as long as the Act will allow them. Mr. Anscombe one carp, 7 lb., from the Adur; Mr. G. Saunders, carp, 6 lb. 6¾ oz., from Berwick; Mr. Anscombe some good bream from the same water, and the latter gentleman one perch, 1 lb. 6 oz., from the Ouse. The last competition took place on Tuesday 14th, and a good show of members showed up on the morning. Mr. Omerod, one jack 8 lb. ¾ oz.; Mr. G. Saunders and Mr. A Tomkins a good show of perch; Mr. Prangley and Mr. James Saunders also had perch; Mr. A. Cardy one jack. On Saturday evening Mr. Swaysland, naturalist, of Brighton, gave a lecture on "British Wild Birds," which was loudly applauded at intervals, and during fence month have promised another. A robin's nest has been seen by a member with five young ones, and a thrush's nest with four eggs.

Groundbait.

BRISTOL GOLDEN CARP ANGLING ASSOCIATION.

One of our members (Mr. James White) was out on Thursday last, and succeeded in bringing home a creditable catch of fish in splendid condition, which comprised the following:—Twenty-four large roach and dace, sixteen trout and one large eel, weighing altogether 29¾ lb., all of which were caught with red worms.—Lewis Wride, sec.

P.S.—Monday evening. Mr. Withers has just returned after a hard day's work with five nice jack, scaling 28¼ lb. Water very clear.

BURDETT ANGLING SOCIETY.

The members of the above went out on Sunday last for the last batch of prizes previous to the close season. The first five of the following were successful; Mr. Eaton, roach; Mr. Whitmore, roach; Mr. Taylor, roach; Mr. Weeks, roach; Mr. Whitmore, jun, roach; Mr. Hastings, dace and roach; Mr. Creffield, rudd. The match was fished at Ware.—T. G. Walker.

BURTON-ON-TRENT ANGLING ASSOCIATION.

Very little has been done by members of this association during the last week in consequence of the thick state of the Trent. Of those who have been out, one member took a pike 6 lb. live-baiting, and another two pike, 5½ lb. and 6½ lb., spinning. A small party is being arranged to have a day on the association water at Rugeley before the close time commences. The water at Newton is now protected by a keeper, who has well staked all likely places to be netted. The annual meeting takes places in May, when a report shall be forwarded to the Gazette.

March 11.

CLAPHAM JUNCTION ANGLING SOCIETY.

Several of our members have been out and met with some good sport to finish up the season. Mr. J. Innes, landed 10 lb. of barbel and one chub nearly

3 lb.; Mr. W. Maslin, a good show of perch; and Mr. R. Wellman, roach; Messrs. E. Wilson, E. Wakeford, J. Walkley, J. Speed, E. Brewer, T. Smith, Bright and Bousine, roach, perch and jack. The prizes were not all taken on account of the bad state of the water, and will have to be kept till openibg of season. Members are requested to attend on Thursday next for important business and clear the books.—E. Wilson, sec.

March 14.

CITY OF LONDON ANGLING SOCIETY.

On the 5th, two members only weighed in, Mr. Mortimer, roach, and Mr. Payne, perch, both from the Lea, the former winning Mr. Marks prize. On the 12th, Mr. Mortimer, 2 lb. 6 oz. roach and dace from St. Margaret's, winning Mr. Chambers' prize, one dace weighing 10 oz., which has been sent to Cooper for preservation. Mr. Payne, roach, dace, and bream, 2 lbs., from Amberley, one dace weighing 7½ oz. Mr. Castell, 1 lb. 14 oz. roach and chub from the Roding, and Mr. Di'z 1 lb. 2 oz. roach and dace from St. Margaret's. —Cas.

DUKE OF NORFOLK ANGLING SOCIETY.

Fifteen members of the above society fished a match for a sweepstake between bridges on Sunday last at Uxbridge, only two members taking fish, Messrs. Darby and Godfrey who divided, Mr. Stone showing two pretty jack caught out of limits.—J. Avon, sec.

March 15.

GALA ANGLING ASSOCIATION.

The annual meeting was held in the Public Hall, Galashiels, on the 9th inst., ex-Bailie Main in the chair. The treasurer's report showed a balance in hand of £15 14s. 4d. The income for the year had been £32 2s. 11d. of which £13 had been spent in prosecuting trout-netters. The secretary read a letter from Mr. James Pringle, of Torwoodlee, intimating that for the time coming he had withdrawn his permission for any fishing on the Torwoodlee Estate. A communication was also read from Major-General Henry, of Pavilion, that the members of Gala Angling Club may commence fishing for trout on the Pavilion waters on March 1 instead of the 15th as formerly. The secretary was instucted to apply for the entrance of Gala Angling Association into the Scotch Fisheries Improvement Association. A vote of thanks to the chairman closed the proceedings.

GREAT NORTHERN BROTHERS ANGLING SOCIETY.

We had a fair show of fish on Sunday, Mr. W. Parkin 5 lb. 14 oz. roach, Messrs. Theobald and J. A. Fitch 5 lb. 12 oz., one fish 1 lb. 5 oz, J. K Fitch 6 lb. 8 oz., two roach weighing respectively 1 lb. 3 oz., and 1 lb. 1½ oz., Mr Page 14 oz. From the Thames, Messrs. Painter 1 lb. 5 oz., Newman 15 oz,, Hutchings 1 lb. 6 oz., C. Warren 1 lb. 4 oz., J. Watling 4 lb. 5 oz., Young 2 lb., Baker 1 lb. 1 oz., Warne 4 lb 11 oz., Armstrong 1 lb. 15 oz. Messrs. Burston, Kirk, Parrett, and G. Parkin also weighed roach, dace and perch, Mr. Mayes one jack from Welsh Harp We had a small show of fish on Monday and Tuesday evenings, Mr. C. Watling having a roach 1 lb. 7 oz. Our concerts during the close season will commence on Wednesday next; Mr. C. Watling, jun., will conduct the room as usual. We shall be pleased to meet brother anglers and friends on any Wednesday evening.—J. A. Fitch, jun., sec.

March 15.

GRESHAM ANGLING SOCIETY.

The meeting of this society on Thursday evening was numerously attended. Mr. Crumplen (hon. secretary) stated that he had great pleasure in announcing that all the tickets for the dinner had beer taken, and a distinguished company would certainly assemble. Mr. Spencer Walpole, M.A., Mr. W. Senior ("Red Spinner"), and other celebrities of the angling world, in addition to those previously named, had announced their intention of being present, and Mr. Harker, the City Toastmaster, who was also a fisherman, would officiate on this occasion. Mr. Holroyd, the artist, who is a member of the society, has presented a pair of very fine, life size, oil paintings (half length), of Sir Thomas Gresham and Izaac Walton, perfect studies, and fine examples of portrait painting, which will be on view for the first time on the evening of the banquet. The society's list for the general and prize fund of the International Fisheries Exhibition, 1883, received several substantial additions, and, after a very successful and pleasant evening, the proceedings closed with a hearty vote of thanks to Mr. Darling, who occupied the chair. Seven new members stand for election at the next meeting.

Art and Angling.

The members of this great and rapidly growing society may well be congratulated on the interest they one and all take in furthering its interests, and the united way in which all work. The society has just received a very handsome present from one of its members, Mr. Holroyd, in the shape of two very handsome, life size, half-length portraits in oil of Izaac Walton and Sir Thomas Gresham, which will be uncovered at their annual banquet on Wednesday next. We have not yet had an opportunity of personally inspecting these works, but from what we hear they are exceptionally fine productions, and the portraits are the result of much study on the part of Mr. Holroyd, from whose easel they emerge. The serene and contemplative features of old Izaac, the more stern, yet expressive face of Gresham, are both very cleverly depicted, and are as sure to bring fame to the artist as they are credit to the society in which he is enrolled.

HAMMERSMITH UNITED.

On the 12th Mr. Hitchcock caught a few dace at Surley Hall, and Messrs. Pitts, Peachey and Reynolds had a good take of roach from Henley. Messrs. Walters, Penney, Lewis and Burbidge also had fish. On the closing day Mr. Johnson showed roach from Harefield, Mr. Hobden, roach, dace, and jack from Eynsham, and Messrs. Walters and Aldridge roach, dace, perch and chub from private water.—Vortex,

HIGHBURY ANGLING SOCIETY.

Several of the members of this society contributed a very nice show of chub, roach and dace on the 12th inst., the most prominent being Messrs. Oakes, Higley, Payne, Cartwright, C. Rose, Hesse and Devonshire, the first four named taking respectively the prizes given for the heaviest weights of all fish from the Lea and other waters.—Jas. Ed. Wheatley, sec.

March 13.

IZAAK WALTON ANGLING SOCIETY.

Three special prizes were fished for on Sunday last, the 12th inst. Mr. G. Wood was first; Mr. T. Dennison, jun., was second (with some remarkably fine dace); Mr. G. Manning was third. As the fence season has commenced, the members will meet on Wednesdays, which evenings will be devoted to harmony only. Friends will also be heartily welcome.

March 16.

LARKHALL ANGLING SOCIETY.

There have been some fine trays of fish shown during the past week. Mr. Caplin had some good chub from the Loddor, largest going 4 lb., total 25 lb. 5 oz. Mr. G. F. Spencer, had roach from Twickenham, 18 lb, and from Guildford on the 14th, roach, dace, perch, tench, bream, barbel, chub and jack, one barbel going 6 lb. 4 oz., the gross weight of this very miscellaneous catch being 28 lb. 8 oz.; Mr. Boyce, from Richmond, perch, 5 lb. 9 oz., and roach 2 lb. 9 oz.; Mr. Deane, roach from Marlow, and Mr. King chub; Mr. G Watkins, had a nice perch from Egham, weighing 1 lb. 12 oz., a very good customer, being blind in both eyes and having a large hump on his back.—E. M. Macled.

LITTLE INDEPENDENT ANGLING SOCIETY.

Most of our members ended the season on Sunday by fishing a peg-down match at Rickmansworth for six prizes. Mr. Humphreys was again lucky enough to obtain 1st prize, having done the same on several occasions; Mr. Gray, 2nd; Mr. Mead, 3rd; Mr. W. Evans, 4th; and Mr. Scott, 5th; the 6th was not taken. Mr. Heelas had one jack, Mr. Banfield gudgeon, and H. Moore three jack from other places. Our members are pleased to find that this has been a most successful season both to themselves and the society, and also to see that everything looks very promising for the next season. Our general visit from the eastern district takes place on Tuesday, March 21, when we hope all brother anglers will rally round and give a bumper on this occasion.—H. Moore, sec.

March 16.

METROPOLITAN ANGLING SOCIETY.

On the 12th inst. Mr. Rowsell 6 lb. 2 oz. jack, 6 lb. 10 oz. roach, 2 lb. 4½ oz. perch, 13 oz. dace; Mr. Duckworth 3 lb. 8 oz. roach, 15 oz. chub, 7 oz. perch; Mr. Gowan 2 lb. jack.

NORTH-WESTERN ANGLING CLUB.

Sunday, the 12th inst., being the last in the past season, I should think a great number of our members were determined there should be a good show of fish in the evening, and there certainly was. Mr. Stead had four chub weighing 11 lb., two perch about 2 lb., and one jack 4 lb. 8 oz.; Mr. Mayman, hon. mem., one chub 3 lb 2 oz.; Mr. Isaac, fishing with Haslett at Chertsey, 8 lb. 8 oz. of barbel (not bad considering the time of the year), and 2 lb. roach; Messrs. Shackell, Plumpton and Foreman had jack from the Welsh Harp, all clean spawned, and the water is well up, so we can depend upon a good hatching of same this year, and, let us hope, plenty of fish in the future. Besides the foregoing about fourteen members started on the Saturday evening for Pangbourne to fish for a series of prizes on the Sunday. Mr. Marshall taking first prize, Mr. Pearse second, Mr, Holmes third, Mr. Weaver fourth, Mr. Greenwood fifth, Messrs. Harris, Spence, Harding, Patching and Grindley also had fish.—F. Hill, sec.

March 15.

THE ORIGINAL ALEXANDRA SOCIETY OF ANGLERS.

Nearly the whole of our members were out on Sunday last for nine prizes, go where they liked, and I must say we had a fine show of fish from different waters, Mr. C. Newton taking first honours with two handsome chub, their united weight drawing the beam of 7 lb. from the Lea, and were sent to Mr. Brock, of the Stepney Anglers, to be put up; Mr. Brockett taking the second with 4 lb. 2 oz. of fine roach from the Lea; Mr. W. High the third, with roach from the Chelmer; and the old one, Mr. Brockett senior, better known as the "Dagenham whip," fourth, with roach from the Lea; Mr. Blackledge the fifth, with roach from the Stort; Mr. C. Hewitt the sixth, with dace from the Stort; the other prizes not won. Mr. C. Fardell, of the City of Paris, Old Ford Road, and Mr. J. Cammack, the cigar merchant, had a fine show of roach and dace from Twickenham. As our fence month concerts proved a great success last year in aid of the Anglers' Benevolent Society, we intend having a second series. I will let you know more about it next week.—E. Dymond.

ORIGINAL CLERKENWELL PISCATORIAL SOCIETY.

The major portion of the members of the above society fished a pegged-down match at St. Margaret's on Sunday last, and proved a very tame affair, only one prize being won, the fortunate individual being Mr. Laundy, the others not catching sufficient fish to entitle them to win. Mr. Neagus had roach, perch, and chub from the Stort.—Thos. Wm. Lucy, sec.

PISCATORIAL SOCIETY.

At the meeting on Monday, 13th inst., Mr. Sachs, chairman, there were between twenty and thirty persons, including Mr. Towse, sec., London International Exhibition, and Mr. Crumplen (Gresham). It was moved by Mr. Bates, and unanimously carried, that a subscription list should be opened to provide a fund as a special prize from the members of the Piscatorial Society towards the prize fund of the Great International Fishery Exhibition, 1883, for prizes for freshwater fish and fishing exhibits. £9 15s. was promised. and the list will remain open for some time. Mr. Towse thanked the members, and said his committee would have much pleasure in carrying out the wishes of the society. The toast of the visitors was also given, to which Mr. Crumplen replied. Mr. Lemann weighed some chub from Maidenhead; Mr. Faulkener also some chub from Hampton. Mr. Pearce is improving in health, though slowly. The usual vote of thanks concluded the proceedings.

QUEEN'S ANGLING SOCIETY.

Our members fished for two prizes. Mr. Walford won one with 4 lb. of roach, at Harefield; Mr. Smith, the other, with 1½ lb. roach; Mr. Morgan, 2 lb. Mr. Smith's prize was for members that had not weighed-in 6 lb. of fish during the season.—L. Walford, sec.

ST. JOHN'S.

The members of this society fished for seven prizes on Sunday the 12th, but only nine members weighed-in fish; but the weight and sample was grand, for our trays were filled to the tune of 63 lb. 13 oz. of roach, dace, jack and perch, all from the Thames, Colne and Lea. On the 14th we shall have another good show, as there are a lot of members going out, but it will be too late to send report; but the fish will be on view at H. Gill's, the Three Compasses, Cow Cross Street, Farringdon Street.—F. Thorling.

March 13.

ST. JOHN'S WOOD PISCATORIAL SOCIETY.

Our members went out last Sunday for three prizes—1st prize, a splendid punt rod, given by Mr. Barnet, fishing-tackle maker, Church Street; 2nd, a jack line, given by H. Salmon; 3rd, two bottles of spirits, given by Salmon, senior—and were taken by the following members:—1st, by F. Bollington, with a brace of tench; 2nd, by R. Blackmore, with roach and chub; 3rd, by J. Manley, with roach.—J. Edwards, hon. sec.

TUNBRIDGE ANGLING CLUB.

The annual dinner of this club was held on Monday evening last at the Bull Hotel, High Street, Tunbridge, when there was a large attendance. Mr. T. Elliott, of Tunbridge Wells, one of the vice-presidents of the club, presided. The room was prettily adorned with stripped fish, including a pike of 28 lb., a 10 lb. Thames trout, and a brace of fine perch, lent by Mr. Greenwood; a 4 lb. Medway perch, a tench and chub from the same river, barbel from the Thames, a case of Medway brook trout, Loch Severn trout, and a fine trout from the Kennett, by Mr. T. Elliott; the skeleton of a pike, which must have weighed 30 lb., found on the banks of the river close to the town, after a flood, by Mr. Dove, and a Medway otter and fine perch by the secretary. At the conclusion of a first-rate repast, letters of apology for non-attendence were read from several gentlemen unable to be present. The chairman, in responding to the toast of the evening, "Success to the Tunbridge Angling Club," said that the main objects for which the club was started had been realised. The net of the poacher, and the sack into which everything went which had scales, were nearly extinct. The effect of strict preservation combined with the efforts in the way of stocking, had been to obtain for anglers good sport during the present season. Not only had there been good specimens and plenty of them, of the ordinary river fish, taken, but also fine carp which could hardly be called a river fish. Their water, like many, was not confined to local anglers, but they gladly welcomed any angler who could pay his subscription to the waters, and have good sport. He asked all members even to redouble their efforts in the cause of the society. The hon. secretary proposed, "The riparian owners," and alluded to the great kindness and the support they had received from the gentlemen and the contributions which had enabled them to put in no less than 12,060 fish in the river to improve the stock during the present year. Other toasts followed. There was some capital singing, and a very enjoyable evening was the result.

WALTONIANS.

A long list to close the season. Mr. Phillips, a mixed take, 10 lb.; Mr. Brady, roach, 9 lb. 2 oz.; Mr. Morris, roach, 8 lb. $2\frac{3}{4}$ oz.; Mr. Clarkson, roach, 8 lb. 9 oz.; Mr. Skeats, roach, 7 lb. 12 oz.: Mr. Waltham, roach, 6 lb. $4\frac{1}{2}$ oz.; Mr. Grace, roach, 6 lb.; Mr. Rowland, roach, 4 lb. 2 oz.; Mr. Togwell, chub, 3 lb. $12\frac{1}{2}$ oz.; Mr. Giles, jack, 3 lb. $8\frac{1}{2}$ oz., roach, $6\frac{1}{2}$ oz.; Mr. Little, a jack, 9 lb. $6\frac{1}{2}$ oz.; Messrs. Horsford, W. Putnam, Good, jun., W. Dodge and A. J. Marriott also weighed-in fish.—A. J. Marriott.

March 14.

WALWORTH WALTONIANS.

On the 9th Mr. Weatherhead returned from Blunham, he succeeded in getting among some nice roach while he was there, five of them weighing each respectively 1 lb. $5\frac{1}{2}$ oz., 1 lb. $5\frac{1}{4}$ oz., 1 lb. $4\frac{1}{2}$ oz., 1 lb. 4 oz., 1 lb. $2\frac{3}{4}$ oz.; he also had some perch and roach. Mr. Delehaye, jun., visited Saw bridgeworth, where he headed some of "the southerners" with 3 lb. 14 oz. of roach. On the 12th about twenty of the members visited Bourne End to compete for the diamond ring given by Mr. Renault, and several other prizes given by different gentlemen. Messrs. Bayley and W. Brown acted as the advance on the 11th, and by this means were enabled to peg-out some good swims. Reaching Bourne End, most of the members adjourned to the Red Lion, and partook of some of mine host's "Harvey's sauce," the influence of which they enjoyed. What do you think, Mr. J. Searle? It was a glorious day, the water a nice colour, and like a sheet of glass; in fact if the last Sunday of the 1881 season had been made expressly for the purpose, it could not have been a better day. The final result of the competition was as follows:—Mr. C. Beale, 1st, with roach; Mr. J. Bedford, 2nd; and Mr. Renault, 3rd, both with roach. The two first named ran very close with their fish, but Mr. Bedford lost the first prize by a little over 1-16th of an inch in one fish which was barred from being weighed. On the 14th a competition took place for a gold pin, given by Mr. Feuillade, two pictures of the birds of Great Britain, given by Mr. W. Hart, and a copy of that late piscatorial artist Mr. Rolfe's work of a salmon, trout and perch, given by "Pixie." I must not omit to mention that London societies mustered pretty strongly at Bourne End on this day; I recognised some of the members of the Golden Barbel, Marylebone, Eustonians, Waltonians, Silver Trout, and several others, most of whom were competing for two silver cups given by Mr. Kemp, of Cleveland Street, Portland Road. Messrs. Harrison and Lumby visited Hurley, the former succeeded in a nice jack, and the latter had a good time of it among the roach. I met the Brothers Raymond, of the Kenningtonians, one of them, while jacking, managed to hook, land and weigh a fine trout of 6 lb. After having admired it a short time, they, in real sportsman-like manner, returned it to Father Thames. Oh! Pixie, "he was a beauty."—Pixie.

Messrs. Hughes and Hockley had 200 lb. of jack during the last three days of last week, the whole of which Mr. Hockley exhibited. Mr. Hughes and a friend visited another water on Monday, and on Wednesday evening they exhibited and weighed 150 lb. of jack at the headquarters. The Second Surrey on the 12th were well among the bream at Hampton, one among the lot going over 5 lb. The winners of the Tuesday's competition for the Walworth Waltonians were Mr. Collins first, Mr. Bansback second, and Mr. Boalch third. Mr. J. Weatherhead will take the chair at the supper on the 21st. between the Walworth Waltonians and the South London.—Pixie.

March 16.

WESTBOURNE PARK PISCATORIAL SOCIETY.

The members of the above club fished an open match on the 12th inst. Mr. Butting took the first prize, 27s. 6d., with a handsome show, four bream scaling over 13 lb. and two chub 3 lb. $5\frac{1}{4}$ oz. and 3 lb. 1 oz., total, 19 lb. 8 oz., from the Ouse. Mr. J. Bayford took second prize, 10s., with one jack 3 lb. 3 oz., from Godfrey's Water West Drayton. Mr. W. Adeane took third prize, 7s. 6d., with 3 lb. of fish, also Godfrey's Water. The majority put their faith in the Thames but were not in it. On Friday 10th, Mr. Thomas took a fine chub off Monkey Island weighing 3 lb. $13\frac{1}{4}$ oz. The next few weeks will be devoted to walking round and finding fresh swims. -Henry Adeane.

March 13.

YARE PRESERVATION SOCIETY.

The annual meeting of the above society will be held at the Bell Hotel, on Tuesday evening, March 21, 1882, at 8 o'clock, to adopt the accounts for the past year, elect officers, &c., and other important business.—C. J. Greene, hon. sec.

CLUB AND OTHER JOTTINGS.

By L. B.

In these notes I always give precedence to the capture of really good fish, and am very pleased this, the last week of the general fishing season, to be able to record the clever capture, by Mr. Hewitson—out with Purdue, of Shepperton, on Saturday last, while paternostering with a worm for perch—of a jack, weighing 11 lb. Mr. Hewitson has been very successful among big fish, and succeeded in taking among others from Hurley, a jack, 17 lb, and a perch of 3 lb.

Mr. Gee, the genial fishing-tackle dealer, of St. Andrew Street, Bloomsbury, has been on the war-path, after the roach, in the neighbourhood of St. Margaret's, but was beaten hollow by his friend, Mr. George Lake, who accompanied him, and who succeeded in basketing some 18 lb. of magnificent roach, the heaviest scaling close upon 1 lb. 8 oz.

Mr. Vincent, of the Bostonian Angling Society, now residing at Watford, writes me that a meeting will shortly be held in that town for the purpose of forming an angling society. Mr. Vincent promises to send me a report of same, and to keep me informed of what is being done in the matter. I am sure brother anglers in London will not only wish the promoters every success, but willingly give them any advice or assistance in their power.

I hear that the Hoxton Brothers' Angling Society contemplate removing from their present quarters, the Jane Shore, Shoreditch, and that tenders from those having rooms suitable for the locating of this numerous club are invited.

This (Friday) evening the monthly meeting of the West Central Association will be held at the Portman Arms, Great Quebec Street, Baker Street. As matters of great importance, including the paying of rewards for convictions obtained, the preservation of the Thames, etc., will be discussed, it is hoped every club will be represented.

The committee of the Thames Rights Defence Association met on Thursday, March 9, at Simpson's Tavern, in the Strand, Mr. Francis Francis presiding. Among the members present were Messrs. J. M. R. Francis, hon. sec.; Crump, treasurer; Ledger, Lemann, Morgan, Clench, L. Bonvoisin, and While; the last-named gentleman, who has been seriously ill, being heartily welcomed upon once more taking his place on the committee. Some business of importance was transacted, the balance sheet read and auditors appointed, the association's line of conduct in the immediate future being also unanimously agreed upon.

Another angling society has been started at the Black Horse, Whitechapel. There are now 158 societies in London and the suburbs, and I am open to bet any sceptic a new barbel rod to a split shot that by this time next year there will be over 200.

Concerning the society formed from the three London associations for the purpose of renting, stocking, and preserving waters, a meeting of the sub-committee appointed to draw up a code of rules for the society's guidance, took place at the Star and Garter, St. Martin's Lane, W.C., on Wednesday evening, March 15, and a meeting of the main committee of thirty-six will shortly be summoned that the said rules may be submitted to them.

An old member of one of the leading suburban angling societies brought into the club-room, some few days ago, a Thames trout weighing close upon 6 lb. The fish was taken, I am told, ledgering with a lob worm. The open manner in which it was done seems to point to the explanation given by the unfortunate captor being the right one—viz., that he did not know the fish was fenced and the retaining of it before the 1st of April was an offence against the bye-laws. But no such excuse can be pleaded by the professional fisherman whose name I have, and who has already been fined for illegal practices, and that recently. By lending themselves to such things, these men not only rob the river but rob themselves; for I do not hesitate to say that many gentlemen would utterly refuse to employ a professional who could be guilty of such actions. Well might a contemporary say that, when the president of the said society saw the fish brought in, "his hair fairly stood on end." I remember my own feelings on entering my society's room this trout fence season, and seeing a brace of "spotted beauties" lying on the trays immediately in front of the chairman. Nor shall I forget my own mortification when, after having worked myself into a great state of indignation, and wanting "to know who had done this," I was quietly informed, amidst some good-natured laughter, that the fish had not been taken with rod and line, but were a brace from High Wycombe which, together with some hundreds of others, had, unfortunately, been poisoned, through the bursting of a tank of bleach. Each fresh arrival was hoaxed in the same manner as I had been. At the close of the evening the fish were quietly slipped unobserved into Mr. X.'s bag by that incorrigible wag, Julius H., and were unknowingly carried home by poor X. in company with a few coarse fish, the result of his day's angling.

From Haslett, of Chertsey, I get the following:—"One day, two barbel. On Sunday, with Mr. Stanley Isaac, five barbel, two roach about 1 lb. each, and one chub. On Monday, with Mr. Allen, three jack (heaviest 6 lb.) and one barbel. I hope my next report will be the capture of a good trout. The time will soon be here, and I have two good fish already spotted.

This (Friday) evening there will be a meeting of the London committee of the International Edinburgh Fisheries Exhibition.

George James Eaton, of Starkholmes Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[Advt.]

SATURDAY, MARCH 25, 1882.

THE GRESHAM ANGLING SOCIETY'S ANNUAL DINNER.

THE first annual dinner of the Gresham Angling Society was held in the Prince's Saloon, at the Holborn Restaurant, Holborn, E.C., on Wednesday evening last. The chair was taken by Lord George Hamilton, M.P., the first president of the society. The dinner was a most *recherché* affair, served in the style for which the Holborn Restaurant is so famous, and amongst the numerous guests and members present were the following :—

Major the Hon. E. R. Bourke; Alderman Cotton, M.P.; Rev. J. J. Manley, M.A.; Rev. H. Cummings, M.A.; Spencer Walpole, M.A.; T. Spreckley (T. A. P. S.); Dr. Brunton; Dr. Lloyd; Dr. Theodore Cash; Dr. Oswald; Dr. Defreiz; Dr. A. C. Tucker; Dr. J. Tucker; W. Senior ("Red Spinner"); W. Wheatstone; J. P. Wheeldon (*Bell's Life*); W. H. Brougham; R. B. Marston (*Fishing Gazette*); J. C. Fryer; W. B. Adlington; J. Ross Faulkner; Captain Alfred; C. C. Capel; J. Andrews; W. A. Crump; J; Callaghan; Graham Bennett; George Austin; F. W. Backhouse; J. Christie; J. F. Clarke; J. Massingham; J. Deller; D. Cartwright; J. Beckett; C. Hatfield; W. O. Woods; T. Crumplen; C. Bates; A. Jardine; J. Knechtli; C. S. Bentley, F.R.M.S., &c.; S. C. Harding; A. Nuthall; A. Paterson; E. Frost; J. W. Haye; Henri Brett; J. E. Harding; Howard Taylor; G. H. Young; R. Bryant; T. P. Cooper; C. E. Aveling; J. G. Thompson; H. Godwin; C. J. Darling; J. Elliot; R. A. Holroyd; J. Collingridge; R. Murphy; J. Morgan; C. Winterbottom; W. Cotton; F. Norman; and many others.

A liberal and excellently served *menu* having been discussed, the toastmaster, Mr. Harker, called for order for the first toast, "The Queen and the Royal Family," which was proposed by

The Chairman, who said: The first toast that we always drink on these occasions is the health of Her Most Gracious Majesty the Queen. She has ruled over us for a period which exceeds, with the exception of a very few of her predecessors, the reign of any sovereign who has occupied the throne of this country. But it is not merely for the length of her reign that it is most remarkable. During the time that she has been the constitutional monarch of these islands we have increased in material, in moral, and in social prosperity to an extent far exceeding any preceding cycle of our history. Of course it would be absurd to credit Her Majesty with all the prosperity which we have enjoyed during the time that she has occupied the throne; but this much I think we can fairly say, that there has been no great national or social movement which has taken place while she has been upon the throne that she has not helped with her enormous influence and brought it more quickly to a successful conclusion. (Cheers). But gentlemen it is not merely as a constitutional Sovereign that we are proud of Queen Victoria. In this country we pride ourselves upon the fact that domestic and family ties are perhaps stronger than in any other country of the world. (Cheers). Her most gracious Majesty as a wife and as a mother has set us an example which we would do well to emulate. Therefore it is as a woman that we honour and revere our present illustrious Sovereign. (Loud applause). And gentlemen it is therefore difficult to find language in which to describe our indignation at the recent atrocious outrage. (Great cheering). There was a comfortable theory that when any Sovereign or governor was popular with all classes, and did his duty well, he ran no personal risk from freely moving amongst those whom he might happen to govern; but unfortunately the successful assasination of President Garfield and the attempted outrage upon Her Majesty at Windsor have shown us that no matter how deservedly popular a Sovereign or governor may be their persons are not safe from notoriety-seeking rascals. We are very proud of the high state of civilization to which we have arrived, but unfortunately, notwithstanding the development, we sometimes find men like Guiteau and Maclean, and the best method by which outrages of this kind can be stopped, would be for the police to let go their prisoners for a few moments, and leave them to the tender mercies of the mob. If Maclean had been handed over to be kicked and cuffed for a few minutes by Eton boys, he would not be so anxious for the notoriety he craved. (Laughter and cheers.) Well, Her Majesty has gone to seek health in a foreign clime, and I cannot myself help thinking that that which will help to restore her as quickly to health as the breezes of the coast to which she has gone, will be the reports which must reach her there of the heartfelt thanks sent up to Providence that her precious life has been spared to us (cheers), and long distant may the day be before the historian is called upon to chronicle the full length of her glorious reign. (Loud cheering.)

The National Anthem was then sung by the assembled company.

The Chairman, in proposing the next toast, "The Gresham Angling Society," said: I have now to request you to drink the toast of the evening, namely, "Prosperity to the Gresham Club," and, in asking you to drink that toast, you perhaps will allow me to state to you the reasons why I think it has a claim upon your consideration. We are all of us very apt to generalise from our own experience, and I don't mind telling you what my own individual experience was some few years back. I happened to be somewhat unexpectedly elected at an early age to a seat in Parliament, when I was very fond of field sports; and, in consequence, I was compelled to be in London very much more than I ever expected to be. I was fortunate to be connected with many relations who happened to have places in the country where, if I could get away for a few days, I had opportunities for indulging in the various sports to which I had been accustomed. But it seemed to me if anyone had been in my place and had not those opportunities he would have found London very dull indeed. I have always attached the greatest importance to outdoor amusements, and the more we can cultivate them the longer we shall remain a great nation. It is a very remarkable fact that England is supposed to be the richest country in the world for her size, and yet Englishmen are notorious in all parts of the world for their pre-eminence in all athletic amusements, and long may the pre-eminence continue. (Cheers). At the very moment we are beaten in all outdoor exercises, and a general taste for them languishes amongst young men, from that moment you may date the decline of the English nation. (Hear, hear). Of all the sports of which England stands pre-eminent, hunting, fishing, and shooting stand first. Hunting and fishing are not always within every one's means, but fishing does not come within that catalogue; but it would not be possible for many an individual unless he had a friend who had water to fish, or belonged to a club like this, to indulge in his favourite amusement. Therefore, when I was asked to become the president of this society I reflected as to what were the advantages it offered. This year I have the honour to be the president of the Marylebone Cricket Club, and it appeared to me that my experience in that club was of advantage to me. Cricket is a great national sport. There are county clubs and local clubs in every part of the Kingdom. Still large London clubs are of immense advantage to cricket. (Hear, hear.) Apart from the social advantages which they offer to their members, they unquestionably confer great practical benefit upon the cricketers of the world. It seemed to me therefore that if any new club were started, that club might perform for fishing much the same functions as the Marylebone and other clubs do as regards cricket. (Hear, hear.) Therefore I accepted the honour that was offered me. (Cheers.) But I never thought it would prove such a great success as it has proved to be. (Cheers.) It is scarcely a year since the first meeting was held, and I believe the members already number 225. (Cheers.) There were several objects to promote which this club was started. With the toast which I am now about to propose to you I shall associate the name of Mr. Crumplen (hear, hear, and applause); for I am bound to admit that he is the most indefatigable secretary, and if you do write for information he replies by the next post, and in a hand so legible that I am bound to say I envy it, and wish most of my correspondents were forced to copy it. (Great laughter.) He will read you a report of the main features of interest concerning the past year, and therefore I feel that it would be hardly fair upon him if I were to trench upon his legitimate ground because he has been kind enough to furnish me with a copy of his report. Now, I believe one of the objects with which this club was started was one that it should form a library, that it should read and discuss papers, and promote and advance various experiments in reference both to the catching as well as the preservation of fish. Well, I believe it has been most successful in that respect, and the secretary will read to you a detailed account of its action in this direction. But there is one feature which I think is very satisfying concerning the position of the club. I mentioned that there are 225 members. I am glad to hear that most of those who have joined are themselves fishermen—practical anglers, and the success which has attended them in the past year will rank with any other club. In reference to the practice of noting the "takes" by members, I very much regret the tendency of modern times for men not to be satisfied with a good days sport, but to be dissatisfied unless they can beat every one else—(hear, hear)—and especially in cover shooting, so much so that men choose to shove into one day three or four days' shooting; to fire a lot of long shots without killing the animals they fire at, simply because they wish to beat some one who resides in the neighbourhood. Such sport is not sportsmanlike. (Hear, hear.) I hope that the club will in any regulations it may put forward lay down such reasonable precautions that men should not be able to fish with half a dozen rods at once. (Hear, hear.) I think I have kept you long enough in proposing this particular toast. (No, no.) I have very much pleasure in coupling with it the name of the secretary, to whose diligence and tact a very considerable portion of the success of the club is unquestionably due. (Cheers.)

Mr. Crumplen, who was received with rounds of cheers, said: I thank you for the way in which my name has been associated with this toast, and for the credit you have given me for what I have done. I could not have done what I have done without the cordial assistance of the committee and of the members of the society. We have all done our best. (Cheers). I promised when I undertook the office of secretary that I would be a working secretary (cheers); and I think I have worked. (Hear, hear.) But, as I have said before, every member of the committee and of the society has helped me so far as possible. Well that being the case I think I had better at once read the report which has been prepared by myself with the sanction and assistance of the committee. It details what we have done in the past year and embodies everything in much better words than I could put it in a speech.

The following report was then read, the reading being frequently interrupted by enthusiastic marks of approval:—

"Report.

"The committee are glad to be able to congratulate the members of the society upon the great work it has accomplished and the solid status it has attained in this, the first year of its existence. The objects for which it was founded were to promote congenial, social intercourse, to disseminate information, to obtain travelling privileges, to rent water, to abolish gross weight competitions, to form a museum of specimen fish, and, as far as possible, to aid all movements in furtherance of the interests of the angling community. It was felt that the time had arrived when a leading angling society, of a more literary and scientific character than usual, might be successfully launched in the City of London, and the correctness of this opinion is attested by the fact that within less than a year from our first public meeting some 225 members have been enrolled on the register of the Gresham.

"The earliest efforts of the committee were directed to the formation of a library of standard angling works which, they are happy to state, has already reached about eighty volumes. Many (and the first of these) were presented by Mr. Bentley. The hon. secretary, Mr. Jardine, Mr. Adlington, Dr. Brunton, Mr. Cooper, Mr. King, Mr. C. C. Capel, and others, have also contributed, Mr. Bryant undertaking the duties of librarian.

"The work of the society has been largely aided by the valuable essays read and discussed at its meetings. These have included papers from Mr. Crumplen, Mr. Bentley, Captain Alfred, Mr. Wheeldon, the Rev. Hayman Cummings, and Mr. George Austin; several others being promised for future evenings. The committee are pleased to notice that the practice of reading papers at angling meetings is now being largely adopted by other societies, and that their efforts to disseminate useful information by the publication of Gresham essays has been very widely appreciated.

"The society has also had several special musical evenings, in which some of the old Waltonian and other angling ditties have been revived; Messrs. J. E. Harding, Aveling, Winterbottom, Woods, and the members generally, rendering very valuable aid.

"Pending the acquisition of suitable water, the society acquired for its members temporarily the right to fish at Thorney Broad, and also at Ford's, and they now exclusively rent the smaller Lea at Waltham, which they purpose to preserve and stock. During the few months of the society's existence, some fine specimen fish have been presented or collected, and the nucleus of a museum, of which Captain Alfred is honorary curator, has already been formed.

"The society desire to thank many gentlemen for the loan of specimens, especially Captain Alfred, Messrs. Eaton and Deller, Mr. Hunt, Mr. Cartwright, and others. The society will shortly possess cases of pike, perch, and bleak, which will equal, if they do not surpass, any at present belonging to angling societies. The society is also able to compare favourably with any other in regard to the total quantity of fish taken by its members, but more especially so in regard to the size of the fish weighed-in; the society's prizes being given exclusively for specimen fish.

"The first fish weighed-in was a tench of 2 lb. 12 oz., by Mr. G. Chambers, on the 21st July last, which has been preserved by the society to commemorate the occasion. The most important takes have been:—Mr. Hunt, roach, 122 lb. 4 oz. (all large, some of nearly 2 lb.); Mr. Cartwright, bream; Mr. Edward Bennett, roach (several going 1½ lb. each); Mr. Graham Bennett, several fine trays of roach, exceptionally large; some fine dace and a carp of 3¾ lb. from Mr. White; chub have been weighed-in by Messrs. King, White, and Frost; grayling by Mr. Jardine and Dr. Brunton. In these instances the takes have all been of importance, and the fish in most cases above the society's standard, which is in itself exceptionally high. The takes of pike have been remarkable, no less than 654 lb. 4 oz., having been weighed-in during the season.

"These were from Messrs. Barrett, Barnard, Brett, Bryant, Cooper, Defreiz, Ellis, Jardine, Knechtli, McDowell, Nuthall, and White; by far the larger quantity having been taken by Messrs. Jardine, Knechtli, Nuthall, and Brett. Mr. Jardine has taken not only the greatest quantity, but the largest fish, one recently weighed-in turning 27½ lb. The great exploit of Messrs. Jardine and Knechtli at the commencement of the year is still fresh in the recollection of the society; those gentlemen placing ten fish before the members which, when taken, weighed over 150 lb., a circumstance not previously recorded by any angling society. Three of these weighing 60 lb., were presented to the society by Messrs. Jardine and Knechtli for the museum. Mr. Jardine has also presented two perch lately taken, which with one of 3 lb. 4 oz. weighed-in and given by Mr. Brett, will make one of the finest cases of perch existing.

"Such is a brief statement of that portion of the society's work, details of which will be brought forward at the annual meeting in June next. To all these successful anglers the thanks of the society are very justly due. A considerable amount has been offered to the prize fund by various members, and Mr. Jardine has presented a valuable painting by (and in memory of) his old friend Mr. H. L. Rolfe, who was also a member of this society: which forms the first prize.

"The presents to the society, in addition to the books mentioned (and apart from the prize fund) include the society's die (the grasshopper) from Mr. S. C. Harding; a similar stamp for its books from Dr. Defriez and Mr. Massingham; a presidential hammer; a case of exceptionally large bleak; and a beautiful painting, entitled "A Leap for Liberty," by Captain Alfred; a water-colour drawing of roach from Dr. Brunton; a case of goosanders from Norway, by a member of the committee and last, but not least, the magnificent portraits of Sir Izaak Walton and Sir Thomas Gresham, painted and preserved by Mr. Holroyd, which have been uncovered for the first time to-night. The society has taken considerable interest in piscicultural questions, and hopes soon to discuss Mr. Marston's scheme for the propagation of coarse fish. The praiseworthy objects of the Thames Rights Defence Association will also be shortly considered. It has done its best to aid all good angling movements, having been represented at every meeting of importance, whether those of the West Central Association, deputations to railway companies, or in reference to parliamentary bills; and has contributed from its funds, as well as by private subscriptions, to many worthy objects. Amongst these have been the Frank Buckland memorial, £3 3s.; the Anglers' Benevolent Society, £5 5s.; and the Thames Angling Preservation Society, £3 3s. About £15 cash has been collected from the members for the General and Prize Fund of the International Fisheries Exhibition of 1883, in addition to a guarantee of about £120, if funds are required.

"In presenting this brief epitome of the year's work, the committee desire to acknowledge the ready help received from all the members, and the kindly feeling displayed toward the Gresham by the members of other societies. They take this opportunity also of thanking the Press for their very frequent reports, there being scarcely any London paper, daily or otherwise, in which some notice of the proceedings of

The society has not appeared. They would especially mention *Bell's Life*, the FISHING GAZETTE, and *City Press*. They have also to thank Mr. Wood, of The Anglers, Walton; Mr. King, of the Royal Oak, Windsor; and several Thames fishermen for the reports of the state of the river received regularly from them. In conclusion, they would express their belief that by working in harmony with other societies, coupled with continued energy and unity of purpose, the progress and prosperity of the Gresham Angling Society is fully assured."

After a song, "Man's Life is but Vain," by Mr. J. E. Harding,

The Chairman said I have now to ask your acceptance of the toast, "The International Fisheries Exhibition of London and Edinburgh.'' The importance of these proposed exhibitions I think we can best estimate when we take into consideration the very large number of persons who obtain their livelihood by fishing in this kingdom; and anyone who has lived during rough weather in one of the seaside towns of England must have been struck with the audacity with which the fishermen manage their boats. I think it is very much in the national interest that men such as these should have their interests well looked after, because you may depend upon it among the British fishermen we find our best sailors. In mentioning the International Fisheries Exhibition one cannot help casting one's thoughts back to those who were the prime movers, and amongst those one name stands pre-eminent, and that is the Prince of Wales. (Applause and cheers). I always make a point of reading the literature in political life of those who differ from me, and I see in some very extreme journals that the life of members of the royal family is said to be practically one of luxury. (No, no). I should like those critics to have to go through one day's work such as the Prince of Wales has to go through, to attend the number of meetings and make the number of speeches he has to make—and in all his speeches he shows that he thoroughly understands his subjects. If some of those self-appointed critics were to perform their duties in life as well as the royal family do, we should hear less of their criticism. This International Exhibition will be a great success. The secretary of the exhibition is here to-night, and he informs me that they wanted seven acres for their exhibition. That shows the magnitude of the scheme. It relates to saltwater as well as freshwater fish, and there is nothing connected with fishing which will not form part of that exhibition. With this toast I have the honour of coupling the name of Mr. Spencer Walpole. (Cheers.) It is one of the great charms of angling that just in proportion as civilisation increases—provided rivers are not polluted—the fish become accustomed to the sight of men and are more difficult to catch. (Hear, hear.) Fish somehow or other seem to acquire additional cunning in coming into contact with human beings. Well, now, some few years ago attention was called to the decay of our salmon fisheries. I don't know if many gentlemen here are aware of the fact that not so very many years back salmon were so common that apprentices used to make it a part of their contract that they were not to be forced to eat salmon more than three times a week. (Laughter.) Of the enormous impetus given to salmon fishing, and of the result of recent legislation, and proper preservation of fish, my friend can speak better than I can, but anyhow we know that where you have a large population who like catching fish and eating it, it is necessary that there should be certain regulations enforced, and provided they are judicious the more they are enforced, the better for the angler and those who wish to eat fish. I believe we shall all go to the exhibition, and learn a great deal that we did not know before; and my friend, whose name I am about to associate with this toast will acknowledge that after he has mastered the exhibition, he will be a more stringent inspector even than he has been hitherto. I have associated with this toast, up to this time, the name of Mr. Spencer Walpole, but there are other gentleman who are well known to you as distinguished members of the club, and by their success as fishermen, and these two gentlemen are Captain Alfred and Mr. Jardine.

Mr. Spencer Walpole, in responding, said, I thank you all very sincerely for the manner in which you have received this toast. I must thank our chairman, too, for the very kind terms in which he referred to me. I am a very humble member of the Committees of the London and Edinburgh International Exhibitions; but I think, from what I have heard from the more laborious workers, I can predict that the exhibition which will open next month in Edinburgh will be a great success, and that the greater exhibition, which I hope her Majesty will consent to open in London, will be a still greater success. It has been my great fortune to visit two exhibitions of this kind, one at Berlin and one at Norwich, and I am quite sure that I came away from both of those exhibitions convinced that I, as well as most of us, had much to learn, and I have no doubt that our chairman is quite right in saying I shall learn much at our own exhibitions. The assurance which they give of the greater attention which is being paid to the whole question of fish and fisheries is important. When I recollect that at the meeting at Willis's Rooms, the Prince of Wales presided, that the Duke of Edinburgh was present, and that half of the members of the Liberal and Conservative Cabinets were also present (hear, hear), I think it is a fair assumption that the illustrious and eminent persons in this country have recognised the importance of the great fisheries of the United Kingdom. I don't know whether any of you recollect a delightful passage in a delightful book—I mean "Coningsby," familiar to our chairman at any rate (laughter)—in which Lord Beaconsfield propounds the question of the position and prospects of the Conservative party, and he makes one of his heroes say, "the question is, what are you going to conserve?" I have read through "Coningsby" more than once, and I do not recollect that he ever answered the question. But it has been left for our chairman to answer the question. (Laughter.) The Conservative party were going to preserve fish and fisheries—(great laughter and applause)—and they have sent down one of the most distinguished members of the late Conservative Administration to announce to you gentlemen this evening the policy of the party. (Renewed laughter). Speaking as a non-politician, for I have no politics, I think the Conservative party could not address themselves to a more useful function. (Laughter). In fact, I am sure that when our chairman looks round upon this company, he will consider that in taking up this question he will even add to the well-earned popularity that he has already acquired in this country. (Cheers).

Mr. Jardine, responding, said he felt, after Mr. Walpole, he had very little to say. There were, however, one or two topics not touched upon with regard to the International Fisheries Exhibition. There was no doubt that a very great deal of the success of the inauguration of the movement sprung from the very successful exhibition at Norwich, of which Mr. Birkbeck was the prime mover—certainly next to the Prince of Wales. Next to the Prince of Wales, he was the mainspring of the great exhibition which would take place in 1883. The exhibition was, socially, such an assured success that he thought it would not be smaller than the Great Exhibition of 1851. The executive had worked hard and well, and the work had been going on silently for six months, and they had put themselves in communication with the most distant countries—with China and Japan, and had sent out prospectuses and circulars to Cappadocia and the uttermost parts of Mesopotamia—(great laughter), and had received specimens which would link the fishes of the past with those of the present. (Renewed laughter). They had, amongst others, obtained specimens of the fishes caught by the apostles, upon the sea of Tiberias. (Roars of laughter). With regard to the locality that was not quite decided. They had hoped to have had Hyde Park. If they could not get Hyde Park they would get some other park. The exhibition would be kept open for a matter of about six months, and he believed it would be the greatest success in the world in regard to pisciculture. (Cheers).

Captain Alfred also responded, and explained what the London Committee of the Edinburgh Exhibition had been doing. With the short notice they had received they had sent on some very good specimens.

Mr. J. Elwin next sang "Tom Hardy,'' after which

Mr. Jardine proposed the toast of the "Thames Angling Preservation Society and Kindred Institutions." He said he was one of the committee-men, and felt it was rather a mistake for him to have to propose this toast, and he had canvassed about the room for some one to take the task out of his hands, but had not been successful. The Thames Angling Preservation Society had been established about six and forty years. It sprang out of a very small nucleus of fishermen who met at a small inn beside the Thames, and they now numbered in the society some five hundred members, and preserved the river for a considerable distance. Sometimes they had been bothered by poachers, a great many times by the elements, but more particularly lately by steam launches. (Hear, hear.) The Thames had for a number of years been very much denuded of one of the best of its fishes—the perch. But there were promises of better times. The poachers were suppressed and their nets collared; and they, with their own nets, had dragged the ditches after an overflow and turned back a great many fishes; but the greatest success they had achieved had been the dragging of many of the reservoirs belonging to the water companies. Their gratings had taken in a very great influx of fish, which, having grown fat, had been unable to return through the gratings to the river. Therefore, the reservoirs had been dragged, and the fish reconveyed to the river. Lately, seven thousand pounds' weight of fish had been conveyed to the river. The great bulk of these were perch, and the chances are that next year there will be a very great accession of that beautiful fish, and it will be a great inducement for anglers to go fishing and for anglers who do not belong to the Thames Angling Society to send in their guineas and so assist in preserving the river and handing it down to our children with a store of fish such as their fathers or grandfathers never had the privilege and pleasure of fishing for. With the toast he coupled the name of Mr. T. Spreckley, who, he said, had done more for the society than any other man connected with it.

Mr. Spreckley, responding, said he did not intend to say anything on that occasion for the Thames Angling Society, his friend, Mr. Jardine, having said all that was necessary. He had spent on the Thames Angling Society something like three days a week, and written some hundreds of letters, and he did not hesitate to say that the Thames was now in a better condition for fish than it had ever been before. He appealed through the chairman to those who had fishing waters to allow them to be properly preserved for the enjoyment of poorer anglers, and not allow the fish to be wasted and destroyed in the manner they too frequently were by keepers ignorant of the preservation of fish. He confirmed Mr. Jardine's remarks as to the results obtained in the dragging of the reservoirs.

Mr. Brougham also responded, and bore witness to the fact that the Thames Angling Society had never been better worked than under the rule of Mr. Spreckley.

Mr. Spreckley then proposed the toast of the Chairman's health.

The Chairman, replying, said, "I am sure I am very much obliged to you for the kind manner in which you are pleased to receive my name, especially as I feel I have done very little to deserve it. But Mr. Spreckley has, in the appeal he has addressed to me, very accurately interpreted my own feelings. One of the reasons which induced me to accept so readily the offer of becoming the president of this club was that I felt pretty confident that the objects of this club would not be in any sense mere pleasure; *i.e.*, that the committee would bear in mind that there are many clubs and many anglers who are only working men and whose amusement is derived from catching the coarser fish which many of us do not care to catch, and I hope that this will be kept in view by the society. It no doubt is to be lamented that gentlemen who have a multiplicity of sporting amenities do not make the most of them, and that they delegate their authority to keepers who know nothing about fish or fishing and do not make the most of the ponds over which they have control. And it is to be lamented that there have been cases known where gentlemen have bought land which bordered upon rivers, and have in consequence set up rights which their predecessors never thought of, and have by that means interfered with the rights of anglers. Such a society as this is perfectly justified in going to law to learn what are the rights. I speak as an angler myself, and I think anglers are a law-abiding people, but they know that unless the law be enforced their enjoyment will be diminished. Mr. Spencer Walpole was good enough to say that I am come here to propound a great Conservative policy. (Laughter). Well, I am bound to say I am always in favour of preserving and conserving anything that is good. But that which I am now absorbed in conserving is the right to open my mouth in the House of Commons. (Laughter and loud cheers). Even if we fail in maintaining that right, the restriction which is to be imposed upon us will never, I hope, be applied to fishing. I have watched this evening with some little anxiety as to what was to be the success of this society. We must all admit that so far we have passed a very pleasant and a very sociable evening. Therefore, I augur well for future of this society, and I trust that this meeting will form the first of many such successful gatherings in the future. (Loud cheers).

Two songs followed, "The Stirrup Cup," sung by Mr. Towse," and "The Children's Queen," by Mr. Bokenham.

Mr. G. Austin next proposed the toast of the "Visitors," which was responded to by Mr. Beckett, who accepted the request to respond as a compliment intended for the poorer class of anglers, whom he claimed to represent.

Mr. Odell gave very cleverly a recitation of a "Legend of Furnival's Inn," the acting of which was at once recognised as a burlesque of a certain popular actor, who is also an angler.

Mr. C. Bates proposed the toast of the "Press," acknowledging the many advantages derived by anglers from its assistance in supporting them in the endeavour to legalise the more stringent preservation of fish.

Mr. Wheeldon, of *Bell's Life*, responded. He was glad to note that the Gresham Club had inaugurated a better feeling amongst anglers in regard to their poorer brethren, and hoped to see them co-operate also in the better and more substantial support of the Anglers' Benevolent Institution, which deserved to stand more securely than it did in the matter of funds.

Mr. Marston, of the FISHING GAZETTE, also returned thanks for the kind way in which the FISHING GAZETTE had been received. When he first took up the FISHING GAZETTE it was the only paper in the world entirely devoted to angling, but this was no longer the case, for last year a paper called the *American Angler* had been started in New York, avowedly on the lines of the FISHING GAZETTE. It was a very capital paper, and it was only last week he read in it a description of an American dodge for catching pike, which he would briefly recount to them, because the Gresham Society could boast the most successful pike-angler living, and perhaps it would elucidate the mystery of his great success. It appeared that the American story described a lake containing plenty of pike, but they were so scattered about that only one angler ever had much sport. It was discovered that this angler, who was a professional fisherman, always took out his livebait in a large glass bowl; and on being questioned about this glass bowl, the veteran, having first exacted a promise of secrecy from his questioner, explained that he tied a piece of mosquito netting over the top, and then let the glass bowl and its living contents down into mid-water, and left them suspended there by a line all night. The live-bait in the bowl soon attracted a pike or two, and their exertions in trying to get at the fish made such a commotion that before morning every pike in the neighbourhood was waiting outside that bowl with a sore nose, and feeling just as mad as could be. The old fisherman came up quietly in his skiff, dropped over his live baits, and caught the exasperated pike as fast as he could haul them in. (Laughter). Now he (Mr. Marston) did not know if this American dodge would help to explain Mr. Jardine's great success or not, but he would leave them to draw their own conclusions—(laughter)—especially if they ever came across Mr. J. with anything of the nature of a glass bowl amongst his tackle. (Much laughter). Mr. Marston then congratulated the society on their wonderful success, and particularly on the thoroughly sportsmanlike way in which it was carried on. They had adopted Mr. W. H. Brougham's suggestion that gross weight competitions should be done away with it; was only fair to Mr. Brougham to credit him with being the first to urge the necessity for this step. (Hear, hear.) Mr. Marston then referred to the fact that Izaak Walton had been one of the first occupants of the shop which had been erected by Sir Thomas Gresham, and he read an extract from an old edition of Walton, describing this interesting incident. He had to thank the club personally for the kind support they had given his proposed scheme for the cultivation of coarse fish; they had invited him to come and explain the scheme to them, and, as he had told them at the time, he would have been delighted to do so, but that he had already arranged with the three great London angling associations, that a meeting should be held at the Society of Arts, to discuss the question, as soon as possible, and Mr. G. Birkbeck, M.P., had kindly promised to take the chair. (Hear, hear.) As regards what was being done, he might tell them he was in communication with the Fisheries Inspectors of Norway and Sweden, who were giving him every assistance. In concluding, Mr. Marston thanked them very heartily for the very kind manner in which they had received him.

Mr. Jardine sang "The Fine Old Jolly Angler," and Mr. J. P. Wheeldon "The Friar of Orders Grey," by request, both in capital style.

A call of "Three cheers for the Chairman," made by Mr. Marston, and enthusiastically responded to with "three times three," terminated a very pleasant and a most successful first annual dinner of the Gresham Angling Society, and the majority then left.

A few gentlemen remained for a pleasant half hour longer, and after voting Mr. Crumplen to the chair, gave another example of the wonderful knack humanity has of "leaving its music at home."

MANCHESTER MEMORIES.

By Red Spinner.

THERE were no "Anglers' Evenings" when it was my good fortune, now over sixteen years ago, to live in Manchester, and you may therefore guess my delight in perusing the two volumes of papers published by Abel Heywood and Son for the Manchester Anglers' Association. Indeed, anglers' clubs, even in London, were at that time little in fashion, and Manchester was probably the last place in the world where you would have expected such a society to flourish. But angling literature has, meanwhile, assisted the movement into the actual power it has now become, as would be shown if an angler's *fête* at some such place as one of our suburban palaces was carried into effect. A glance at the contents of the works to which I have referred will show that, although there are many worthy brethren of the angle in Manchester, they have to go some distance afield to obtain materials for their papers. Norway, the Isle of Man, Derbyshire, the Yorkshire dales, Wales, Ireland and Scotland are laid under tribute; but the references to Lancashire, to say nothing of Manchester itself, are, in proportion to the bulk of the chapters, in about the same ratio as Falstaff's meal was to his sack. There is an interesting chapter upon angling in the Irwell, but that refers to another generation; and in the second series there is a scientific paper by Mr. Charles Estcourt, the borough analyst, upon the waters of the Ribble and Bollin. The Ribble, however, is a long distance from Manchester; and the Bollin, which runs near the Cheshire border, used to be noted for a peculiar fish called, if I remember rightly, the Bollin trout. A short chapter on angling in Manchester waters may be interesting, therefore, not only to the Manchester subscribers to the FISHING GAZETTE, but to its readers at large.

Fresh from Hampshire, with its grand fishing capabilities—its rivers rich in trout, grayling, salmon, and the coarser fish; its park lakes, in which big pike have plunged and foraged for centuries—imagine the horror with which a young man who loved angling above any other sport known to mankind, would look out of the railway carriage window upon the polluted rivers and dismal reservoirs which greet the eye after Stockport is passed. There were weirs, it is true, in which trout might have gambolled had the water been less like coal-tar, and there were eddies and ponds where pike might have lurked had they been born poison-proof. My heart sank within me as these prospects passed in review, and I fancied the very porters smiled at the fishing-rods and basket amongst my luggage. At that time, however, the angling spirit was so strong upon me that, failing better game, I believe I should have devoted myself to crooked pins and sticklebacks, or even to globes and goldfish, rather than be altogether deprived of my favourite amusement. But, happily, I was never reduced to that ignominy. On all my journalistic expeditions, I made enquiries respecting every bit of water that came in my way, and by and by I had a decent catalogue of places worth trying.

The public parks I abandoned after a few trials. Once, at Phillip's Park, I took half a dozen dingy roach, but the noisy crowd that gathered to see the unwonted sight, effectually stopped me from paying a second visit. In Queen's Park, odds and ends used to take a housefly whipped over them; but they were so infinitesimal in size that for very shame I left them alone. In the suburbs of Manchester, at Gorton, there is a fine reservoir that supplies the city with water, and this I found to contain sundry fish not to be despised. Such gudgeon, for quantity and quality, I have never seen elsewhere; at spawning time they came into the shallow water as thick as swarmed bees, and I caught one that measured a good eight inches in length. Roach also were plentiful, but there was no boat; and as the banks were formed of great blocks of stone which sloped away far beyond the limits of a rod and line, the fish somehow always had the best of it. By this time there ought to be some heavy fish in Gorton Reservoir. The people used to talk of carp and tench being there, but I never saw them. I know of no more suitable water for introducing the black bass, of which Dr. Henshall's book (published by R. Clarke and Co., of Cincinnati) gives such exhaustive and appetising particulars.

In the meres and dams within a radius of twenty miles, there was excellent bottom-fishing, the waters being as a rule strictly preserved. The tench in particular seemed to run very large. Opposite Smithy Door in Manchester, there were several fishmongers' stalls, which have since disappeared, and I often saw there stores of live tench in small tanks under the counter—fish of two, three and four pounds—which I strongly suspected had been netted from these preserves. Bait for pike was difficult to obtain, and the jack-fishing was accordingly very unsatisfactory, for the fish could seldom be taken with anything artificial. Permission was also hard to obtain, thanks sometimes to the indiscretion of anglers. A Macclesfield man, I remember, once received an order for a day's pike-fishing at a mere belonging to Lord de Tabley, and caught nearly a hundredweight of fish. He must needs chronicle this exploit, with all details, in the local papers, and for weeks the noble owner was pestered with hundreds of applications, In sheer defence, therefore, he was driven to answer every applicant with a decisive refusal. The shifts to which you were put to secure a few hours' fishing, the expedients necessary for getting bait and transit, and the difficulties of the operations when once you reached the waterside, were very amusing; but they gave zest to the sport, and the trips out of the smoky city into rural Lancashire—which, if destitute of the softer features of southern England, has a loveliness all its own—are amongst the brightest of these Manchester memories.

In course of time I had a tolerably long list of private waters, whose owners had kindly made me free of such fishing as was to be had in them. But they were waters of a peculiar kind; being, in short, the small artificial reservoirs, locally termed "lodges," attached to the cotton mills. They were never of great area, and often were ridiculously small. The still water was generally confined within mason-built embankments; and was of no depth to speak of. At times, a portion of the water in some of these lodges, into which hot water would run from the works, would be considerably more than lukewarm; and in the vicinity of the in-pouring stream you might often pick out any quantity of tench, averaging three to the pound. What other fish there might be I should not like to say; but the owners generally turned in a few gold and silver fish, and some English and Prussian carp. The latter throve amazingly in bulk, and became disgracefully fat. But that many of these lodges were overstocked, it would have been too bad to catch these domestic breeds; and I am free to confess that I never landed a goldfish without serious qualms of conscience. The carp generally took good care of themselves, and were as wide awake as fish could be, Sometimes you caught them, but oftener not. And the fish, when taken home, were not fit for the table; nor, under their peculiar conditions of life, could they be expected to be. How they manged to survive those streams of hot water always puzzled me; but I have since seen the same phenomenon in the hot lakes of New Zealand. I once saw a Lancashire lad fishing with a porcupine float, off which the varnish had been melted in its frequent swims from the mouth of the pipe into cool water. On another occasion a brook, running from a bleaching factory, was emptied, and I happened to pass by as the last water was rippling away. It was very turbid, and the mud at the bottom was black as ink, and fœtid with slime. In a pool left by the retreating stream, I noticed something floundering heavily, and after much trouble I managed to get that something into the landing net. It turned out to be a large tench, which was uncommonly vigorous, but as black as the mud.

During the cotton famine, when the works were stopped, many of the lodges were, by fair means and foul, cleared of their fish. One instance I can recount. There were 150 feet long by 50 feet wide, and of a uniform depth of six feet. There were fish there, but what they were nobody seemed to know. A young brewer obtained permission for an afternoon's angling; and he caught a dozen fish, which probably were carp, though they had become, through residence in the water, rather like a coarse kind of rudd. The young man came again, and, by a liberal use of ground bait, got a tremendous haul. The fish averaged a third of a pound, and half filled a sack. The stoppage of the mills and non-disturbance of the water must have had something to do with this excess of sport, for such success had not been previously known. One of the proprietors, knowing my weakness, informed me of what had happened, and drove me over in his dog-cart to see what I could do. We sat smoking together under the wall, and after half an hour's angling I landed a three-quarter pound roach, the gauntest, palest roach mortal ever saw. Next came a half-pound tench, dusky, but lively; then a brace of the rudd-like carp. Then a long blank. My friend, after an hour of conversation, drew my attention to a movement of the quill, which had assumed a slanting position. Before I had taken up the rod, the float sailed off obliquely under the water, and I struck what felt like a bale of cotton, only that a bale of cotton would not have tacked about the lodge. There could be no question that it was a heavy fish; but it was quite a quarter of an hour before we could see it. It moved about leisurely, but steadily, and kept heavily to the bottom. At last I brought him to the top, with a ponderous wallop of protest. It was a carp. There it floundered, as if perfectly indifferent what fate might befall. My friend produced the bucket, upon which he had been sitting, and we at length got our lethargic friend out, and bore him to the cook's steelyards, where he did us the honour to register eight pounds honest avoirdupois. The fame of this monster was at once noised abroad; and when, next day, brimful of hope, I returned to the lodge with a supply of wasp grubs, I was informed that, during the night, Messrs. Nobody Brothers had effectually netted both lodges. No fuss was made about the theft and trespass, for the poor people around were living upon very short commons in those times. So we drew off the water, and found only a few eels and a large number of medium sized tench.

My Manchester angling introduced me to three fish of which I had previously but a theoretical acquaintance. 1st, the loach. I found him in a brooklet, carrying of the overflow of a mill-tail; and though he did not attain the size we read of in "Lorna Doone," he made a serviceable bait, and gave me a two-pound trout, muddy and shabby, as pond trout generally are. 2nd, the pope, or ruffe. This fellow was a nuisance. There was an election at Newton-le-Willows, midway between Manchester and Liverpool, and I seized the opportunity, travelling down by a midnight train, to snatch six hours' fishing, by way of fitting me to report the speeches of two windbag Parliamentary candidates. A bushel of grains, a bag of scoured lob-worms, and a couple of rods, not forgetting myself, were deposited by the side of a large lake, with a fine sandy bottom, an hour before the midsummer sun rose. At the first dappling of dawn the lines were out, and for awhile one rod seemed to attract nothing but pope. They could not take the big mouthful, and I could not take them until I had affixed roach tackle, and then the little beggars came out fast enough. It was a terrible waste of time. With the other rod, however, I did execution amongst the bream (No. 3); and when the pope ceased from troubling, and the heavier tackle was replaced, both floats were perpetually coming flat and going down, as they will do when the bream are biting. At nine o'clock I left off, with three-and-thirty bream, between one and two pounds' weight. It was my first venture with bream, and a capital show they made.

IMPORTANT NOTICE.

We beg most particularly to call the attention of our readers to the letter of Mr. Fred. Clench, chairman of the Richmond Piscatorial Society, and hon. secretary of the London Committee of the Edinburgh International Fisheries Exhibition. We are glad to see that, thanks to the exertions of the London Committee, there will be a fine show of London club and private specimen fish at Edinburgh; and the clubs and private individuals who are sending them deserve the hearty thanks of the angling community.

We English have never been afraid of meeting our Scotch neighbours, either on the battlefield or in friendly rivalry in those national sports which, as Lord George Hamilton said at the Gresham Dinner the other night, are the best security for the healthy vigour of the nation. We feel sure that the English specimens at Edinburgh will beat anything our Scotch friends can show as a result of their skill in angling.

THE HELGRAMITE OR DOBSON.

Some one asked about this the other day. We find from that most valuable book, Halleck's "Sportsman's Gazetteer," that "the helgramite is the larva of *sialis lutarius* found under stones near rivers. It looks like a modified centipede, and is a good bait for black bass." In another place he says: "What are known as helgramites in the southern States and dobsons in the north are the fully grown larvæ and pupæ of several aquatic species in the *sialina* family of insects. Their feeding ground is chiefly in sluggish rivers. They are rare in mountain streams or head springs. They will be found in the shallow parts of the stream, under stones or submerged driftwood, or buried in the soft mud along its banks."

To Keep dead Minnows Fresh.—Pack in wet sawdust and salt or brine, adding a little saltpetre. Coarse straw dampened is also a good packing.—*Halleck.*

George James Eaton, of Starkholmes Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[Advt.]

RIVER REPORTS.

MID-THAMES.

The extraordinary fine weather of last week has induced trout to show themselves at most of the weirs, and in many other likely feeding grounds of the upper and mid Thames. I hear of some prime fish having been spotted at Sonning, Hambleden, and Great Marlow; but the cold weather of the past few days has given them the sulks and rendered this class of stock of a less buoyant character, indeed they have sunk rapidly, but, with the sunshine, will rise again. Anglers should be on the *qui vive*, and carefully mark down the feeding grounds, so as, on the 1st of April, to be comfortably sure they are not flogging and combing untenanted water. The *Daily Telegraph* does not often indulge its gentle readers with angling information, but on Saturday last it broke out with a violent irruption of scaly news as follows:—"Maidenhead, Friday.—River in beautiful condition. Trout angling can hardly be said to have commenced yet, though they are well on the feed. Sunday should see some of the most experienced of anglers down here." I have not as yet heard of any too confiding reader of this startling information being summoned for illegal fishing.—MARLOW BUZZ.

Ballynahinch (Ireland).

For this last fortnight we have had real "March" weather, never two days alike; still, on the 14th, 3 salmon were caught on Ballynahinch lake and river, 10, 11, and 14½ lb. The waters were not again tried until Monday 20th, when Mr. R. Mecredy, sen., got three on Lough Inagh, weighing 10½, 12 and 13 lb. respectively. We have quite a change to-day, north-west wind with strong sunshine.—WALTER BLACKADDER.

Coquet (Weldon Bridge).

On March 20, the Rev. Mr. Oliver, curate, Longhorsley, killed two dozen trout; on the 21st, Mr. Dixon, Newcastle, one dozen trout; Mr. Sharp, Newcastle, caught five trout; Mr. Thatcher, Sunderland, seventeen trout; Mr. Thompson, fifteen trout. On the 22nd, at daybreak, the ground was covered with snow, a bitter cold wind blew from the north, and showers of snow continued throughout the day. This made the anglers late of starting. Mr. Dixon killed thirteen trout; Messrs. Thatcher and Thompson from three to five each.—A. GLASS, the Angler's Inn.

Dove.

Salmon angler will rejoice to hear that there are great numbers of the royal fish this season in the Trent and Dove. There can be no doubt that many salmon enter the Dove from the Trent rather than remain in the latter river to be poisoned by the masses of filth which emanate from the Burton Breweries. We have a large and increasing number of salmon and trout rods on the Dove every year, and I am glad that sport this season promises so well. Since my last communication "rude Boreas" has been raging with truly March-like violence. We have had snow, too, and sleet, and altogether, since Monday particularly, fishing has not been pursued under the most favourable conditions. In fact, the cold winds have settled a good deal of the early fly on the river, and trout have not been rising with an unwonted degree of freedom. I can hear of seven and six trout falling to two rods, but no heavier take has come to my knowledge. The cockwing dun, the bumble and the March Brown are killing best. The Derby killer has again been used with good effect on the brooks, the biggest fish almost invariably falling to its attractions.—THE SPLODGER.

Exe (Tiverton).

The river is fast pitching and will soon get low. Should this weather continue (a cutting north-east wind), very little will be done. During the past week, the fish have taken rather small flies, viz., iron blue, blue upright, hare's flax upright, and halfstone.—WM. MUDFORD.

Findhorn.

Rod-fishing in this river has been prosecuted intermittently within the past week, owing to a variable, and at intervals, strong wind. Average baskets were, however, made when the weather was favourable, and with a change of temperature it is anticipated that good sport will be obtained. Fishermen report the pools well stocked with strong, healthy fish. Salmon fishing has proved particularly successful since the opening of the season. Some 500 have been already netted by the several crews on the river. The fish are all clean, well-developed, and unusually fine specimens. Last year's total catch fell considerably short of the yield during the six weeks just gone. The late severe storms have sent the fish into the beds of the river, and with better weather the results, it is believed, would be eminently satisfactory.—J. B.

Nairn

So far as the season has yet gone it may be almost pronounced a blank on this river, the total catch being a few odd baskets of indifferent weight. To the recent unsettled state of both the wind and weather this must be entirely attributed, as it is believed that abundance both of salmon and trout are in the pools, where they have been driven from the sea for shelter. The fish are also believed to be strong and healthy, although it was at one time generally reported that salmon disease was prevalent in the river. A return of fine weather would do much towards good sport, but to-day is more stormy than any day during the past winter, several inches of snow being on the ground. J, B.

North Lincolnshire.

I had a day on Saturday last on one of the North Lincolnshire trout streams, and caught sixteen, four of which I returned to the water as under size. The others were fair-sized fish. The day was brilliantly fine, more like June than March, and the water clear as Old Tom, and moreover very low in temperature, so that very few aquatic flies were hatching; but the land flies were very numerous, and I might perhaps have done somewhat better with imitations of them, but I almost discard these casual palmers, &c., and stick to the water born specimens. The best fly was the March brown, next the willow fly, and thirdly, the early brown (woodcock and yellow). By the way, Laceby Beck has been taken up by a party of influential gentlemen and landowners, who are determined to put a stop to the wholesale poaching which has of late prevailed. I would give their names, were it not that such a course invariably sends applications for tickets. The fishing in this beck is almost the only really open piece of water in the immediate neighbourhood on which one can comfortably throw the fly, and with proper cultivation would make a good stream. The upper parts are nice and rocky, and form good spawning beds, but the lower reaches are infected with eels, which run up from the sea and help themselves to the trout *ad lib.* On one occasion I took out a monster of above 2 lb., which had just choked itself by swallowing a lamprey 15 inches long. It had it tail first, and gorged it all but the head and shoulders. Yesterday we had heavy snowstorms accompanied with thunder, so fly-fishing is at end for a time.—THOMAS FORD.

Severn (Shrewsbury).

There have been very few fish taken this week, there having been snow above, otherwise the water would have been in grand condition for trout-fishing. One angler took three last Saturday in the Verniew, and I have heard of one or two being taken round Shrewsbury; I also heard of a party of netters taking two salmon on Thursday, and the same number on Saturday, in the upper water.—F. H. M.

Suir (Clonmel).

The cotmen here got only fourteen salmon last week. There was excellent rod-fishing up the river. On Lord Donoughmore's preserves, Thomas Phelan killed four fish, weighing 23 lb., 10 lb., 10 lb , and 14 lb.; Mr. R. F. Hutchings, two salmon, heaviest weighing 25 lb.; Dr. Campbell, two salmon, largest weighing 24 lb.; Mr. Smith, three salmon, at Kilcommon demesne; Mr. Quinlan, at Suirmount, four salmon, largest weighing 15½ lb.; Miss Wise, one salmon, at Rochestown; Mrs. Grubb, one salmon, at Ballybrads. Price of salmon last week, 1s. 3d. per lb.; this week, 2s. 3d. per lb. Not much trout-fishing likely, owing to a little snow-water in the streams.—DORA.

Swale.

Mr. Barker, of Reeth, and a few other local anglers, were out before the adverse change in the weather, and were successful in catching fair dishes with the fly, the chief killer being the March brown.—THOMAS FORD.

Taw, &c. (N. Devon).

High wind, north, with hail and snow, not much use for fishing for the next few days if wind does not shift to a warmer quarter. I fear, if the moon rules the weather, that no hopes can be had for the next week, as likely enough there is snow out north, and the water will be full of snow broth. It is to be hoped we may get some floods, that the water may be right for Easter, which is looked upon as a fishing week. I heard of a basket in the Muddiford water, two or three dishes in the Yeo. Two or three gentlemen caught some fish in the Bray, but fish were small. I heard of some sport in the Taw and Torridge, but the old kelts were taking the fly and causing many breaks. The salmon rise to the March brown, and rusty blues with silver twist. A gentleman told me he took up a salmon killed by an otter, 40 lb. in the scales, an old kelt. What would he have weighed four months ago? The kelts are moved down to the lower water. I hear a portion of the Taw, shut up and netted for some years, is to be opened by £2 2s. tickets; and it is not unlikely great demands will be made for them, as it is on the lower water and no nets are to be suffered, and well watched.—RUSTY GAME.

Thames (Walton).

Nothing to report, except that in the early part of the week George Hone saw some very fine trout on the feed, and anticipates a good time of it after April 1. Weather very cold, with snow and sleet.—HENRY E. WOOD.

Thames (Windsor).

Before this rough and cold weather came down on us, trout were moving about in all directions, and I was daily receiving news as to the whereabouts of the beauties; and as I am aware a great many London men who visit Windsor will like to know where they stand a chance when trying them on the first, in order to escape being made a fool of, I will endeavour to point out where some of the sturdier sorts reside—not Wycombe trout, but good old-fashioned Thames trout. To begin with, the pool at Surly has a rare old fish which, I am sorry to say, has been pricked more than once, but by this time he will have forgotten his sores. Just below Boveney Chapel, a few yards in front of the danger-board, another good fish may be seen when it is a little more balmy than at present—he is put down at 8 lb. In the weir at Boveney several have shown themselves, and although no very big ones have been seen, still it is an excellent shop for good fish. Below this, on the shallows, a nice fish has been seen, and in the Athens Reach two or three have been playing about. Lower down, at Clewer Point, several decent fish have been seen by old Joe Butler, one of the most reliable men about; but should that shark of a 20 lb. jack close over the fine trout tackle, there will be something like sport for someone, but please do not pocket him. Just opposite the Clumps that rare old stager has been seen rolling about. I have seen him several times, and whoever does get a good hold of him I promise them some sport. At Fireworks Eyot another nice fish has been seen, and round Windsor Bridge we have a brace, one, I dare say, will go 5 lb. In the Windsor Weir stream several small fish have been seen, but at the back of the lock keeper's garden is a good fish, and lower down, at Newark's Hole, is a perfect snorter, which one of our local anglers has promised himself. Next week I hope to give the whereabouts of a few in the Datchet waters. Have not been that way for some time.—B. R. BAMBRIDGE.

Test (Hampshire).

River in first-rate order, and wind changed round to the south-west to-day. Fish rose from twelve to three at dark olive dun. Fishing commences on most of the rivers on the 25th. Some very fine fish were taken on the Chilbolton water on Sunday last by three gentlemen from London. A worthy parson was looking on, and, much to his disgust, saw two fish pulled out from almost under his feet. Has the lord of the manor power to prevent persons from fishing on Sundays?

Tweed.

Since our last paragraph on the angling in the river Tweed and its tributaries, the takes in this neighbourhood have been very fair. On Friday last Mr. Pringle Elliott, angling in the Hendersyde water, caught one salmon, but the other casts were fished blank. During the end of last week no captures were effected on the Ednam House water, and not a fin has been recorded up to date. During the last week the casts on the Floors Castle waters have yielded most satisfactorily. His Grace the Duke of Roxburgh, angling on Tuesday last week, killed two salmon of 7 lb. each. On Wednesday no sport was had, but on Thursday his grace had three nice fish to his rod, weighing 12 lb., 10 lb. and 8 lb. respectively. On Friday his grace had the luck to kill three other excellent salmon, one of which scaled 17 lb., another 15 lb., and the third 8 lb.; and on Saturday his basket again consisted of a trio of handsome fish, whose weights were 16 lb., 13 lb. and 7 lb. On the Hendersyde water, on Saturday, Mr. Pringle Elliott caught one clean salmon. On Thursday, Colonel the Hon. William Home, caught a couple of clean salmon. Salmon have been observed in considerable numbers in the Melrose district. On the Pavilion water on Friday Mr. Bain, Galashiels, killed a clean fish weighing 6 lb. In consequence of a slight rise in the rivers on Monday last no angling could be prosecuted, and the weather since has not been favourable. Last week trout anglers in the Kelso district obtained some good takes. At the netting stations in the Coldstream district of the river some good takes were got in exceptional cases last week. At Lennel Haugh and Tweedmill 39 salmon were brought to bank. More than the half of the salmon got with the net are those returning to the sea, being unable to baffle against the stream, in consequence of their weakened condition through disease, and all are fish of a large size, from 16 lb. to 20 lb. Sea trout are almost blank. During the spring months and up to the end of May, salmon usually take kindly to the waters of the historic Till, a tributary of the Tweed, and recently some very good takes have been got from that river with the net. —Maxwheel.

Wye and Derwent.

The first day of spring, viz., the 21st inst., came in with a vengeance; for all our Derbyshire hills were covered with snow on the morning of that date; in fact, snow has fallen at intervals ever since, up to this afternoon, when the wind changed, and we are now having a little rain falling. Sport both on last Saturday and Monday were first-class, and some good baskets of fish have been killed on the Wye and Derwent, both with artificial flies; also off the Derwent with fly and trolling. This day (Thursday) I have just seen six brace of good trout that have been killed with the Derby trout killer, between Derby and Matlock Bath, not a fish under ½ lb. each, and the largest 1 lb. The fish were in splendid condition. The bottom fishers on various parts of the Derwent have killed a nice sample of trout during the week, with small red worms for bait. I hear that Mr. T. Walters killed a very nice eel of over 4 lb. on one of his night lines, at Oaker. Trout have been rising freely on the ponds the beginning of the week, and several nice baskets have already been taken. Bumble, February red, and furnace flies are killers for any of our Derbyshire rivers. Both rivers are now in splendid condition for fly fishing.—George James Eaton.

Yore (Yorkshire).

The commencement of the trout season in this district has not been remarkable for its great success, but rather to the contrary; the first few days were brilliantly fine, weather which every one enjoyed in a general sense, but not that soft warm spring weather, half sunshine and half clouds, that is so dear to the heart of the fly fisher. Very little good was done by those who did turn out; and since the 21st, on which day we were treated to an alternation of snow, hail, and rain, culminating in thunder and lightning, I have not heard of a single trout being captured. A nasty cold N.E. wind has been blowing for the last two days, accompanied by keen frosts at night, so that a change will have to take place before any good can be done. The flies that I recommend to begin the season with on the Yore are the woodcock hackle, with orange body, dark snipe and yellow body, black spider, Mr. Stewart's pattern or water cricket, Ronald's pattern, not forgetting the March brown as soon as the natural fly is seen on the water. I have received to-day the latest issue of Mr. Cummins' (of Bishop Auckland), price list. It is got up in his usual style, and reflects credit on both compiler and publisher. Should any of your readers meditate a visit to any of our northern trout streams, they cannot do better than write for a copy; and should they favour Mr. Cummins with an order, I feel certain they will not find reason to regret it, as he is most obliging and prompt in the execution of orders, and everything that he supplies is of the very best quality and moderate in price.—Francis M. Walbran.

DEATH OF MR. JAMES LAMING.

It is with deep regret we record the death, in the prime of life, of one of our most valued contributors and respected personal friends, Mr. James Laming, of Berwick House, East Finchley. Mr. Laming has at last succumbed in the brave fight he for many years made against a cruel bodily infirmity. Young, talented, beloved by all who had the pleasure of knowing him, his loss will long be felt by many outside his family—with whom we deeply sympathise.

The Growth of Trout Fry.—Mr. Thomas Ford, of Caistor, Lincolnshire, caught a magnificent Wickham trout of 20 inches long and weighing 3 lb., in a beck close to the town, on Saturday last. Before, in 1878, there was not a trout in this stream; but through the efforts of Mr. Ford, by stocking the water, the promise is that it will presently vie with most trout preserves in the kingdom, as the soil and food agree well with these fish. A second trout of 1¼ lb. fell to his rod on the same occasion, and others of smaller size, doubtless the produce of fry subsequently introduced. Great praise and warm thanks are due to Mr. Ford for setting so laudable an example in a county which hitherto has taken a very poor estimate as a trout-breeding part of England.—Creel.

THE RIVERS OF ENGLAND.

By "Creel."

We earnestly request our friends, should they be able to question, or supplement the facts contained in the description and capabilities of these rivers with any information of value to the angler, to forward such to the Editor, Fishing Gazette, 12, FetterLane, Fleet Street, E.C., as it is his intention to publish the whole, when of sufficient bulk for a volume, at as cheap a rate as will meet the wants and pockets of our many readers.

One hundred copies will be issued upon large paper, and will be delivered in due rotation as subscribed for.

To show that our undertaking is not one of such apparent ease as may be generally considered, we may mention that in collating the material for the river Aire, which appeared in our last issue, we made reference to the works of D. Whitaker, White's, "Yorkshire," Cook's "Yorkshire," Daye's "Picturesque Tour," Armstrong's "Scenes in Craven," Lortwell's "Geology of Yorkshire," and the "Wonders of Nature and Art." Yet, a resident well acquainted with the Aire, writes to say that Malham Tarn is not embosomed in cloud-capped mountains, hills would be more appropriate; yet Lewis's "English Rivers," a comparatively modern work, but long out of print, is responsible for this. The series of waterfalls of Malham Cove only occurs after very heavy and long-continued rains: in dry weather the river issues from the base only. As to the "one-eyed perch," which is found with such seriousness in the "Wonders of Nature and Art," the monkish legend which gave rise to it appears to be no longer traditional in Yorkshire. Perhaps the good conduct of this fish in more modern times has induced some other pious Elfrida to give them absolution for their sins, and restore their truant pupil at the same time, as those caught in the present century have been complete in their visual features,

The following errata also occurred in the same article. For "Bell Buck" read Bell Busk; for "Isholt" read Esholt; for "Horseforth" read Horsforth; for "Kirkley Malham" read Kirkby Malham; for "Kildruk and Streton" read Kildwick and Steeton.

TROUT ANGLER'S SONG.

I.

Stern winter is over—ablaze is the vale
  With the golden Lent lilies we anglers all love;
The violet's fragrance is scenting the gale,
  And soft fleecy cloudlets are sailing above!
Then, brothers, away! We can promise you fun
With the merry March Brown and the bonny blue Dun!

II.

The fishing boots staunch from the toe to the heel,
  Invite us, my brothers, to don them again.
Pull down yonder weather-stained wonderful creel,
  And look up the flies that so often have slain!
Then, brothers, away! We can promise you fun
With the merry March Brown and the bonny blue Dun!

III.

Now on with your hat which the collars entwine,
  And draw from its covert your favourite rod!
Next pocket your winch with its waterproof line,
  And step gaily riverwards over the sod.
Yes, brothers, away! We can promise you fun
With the merry March Brown and the bonny blue Dun!

IV.

Hurrah! for the swirl of the streamlet once more!
  'Tis just the right tint, and the wind's in the west.
A pounder—"first blood!"—drag him slowly to shore!
  A tap on the head, and your beauty's at rest!
Then, brothers, away! We can promise you fun
With the merry March Brown and the bonny blue Dun!

V.

Then on by the stream, casting hither and there,
  Your ears charmed with song, and your cheeks all aglow!
Till your creel is a burden right heavy to bear,
  And wearily, cheerily, homewards you go!
Then, brothers, away! We can promise you fun
With the merry March Brown and the bonny blue Dun!

Bradridge House, F. B. Doveton.
near Ivybridge, Devon.

Captain Etheridge has secured twelve Thames Conservancy warrants or deputations for as many of the police force of Oxford, empowering the holders to seize illegal nets and enter boats, &c., when suspected. The captain has distributed these, with the sanction and request of the Oxford magnates, to two inspectors, four sergeants, and six police constables. The anglers certainly have no better friend than this sterling old salt!

ANSWERS TO CORRESPONDENTS.

J. W. M., Knaresborough.—If the water you refer to is a private water (and there seems no doubt about it), you can angle during the fence months; the Act only applies to public waters.—Ed.

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

EDINBURGH AND THE LONDON CLUBS.

Sir,—The Edinburgh Fisheries Exhibition opens on the 12th of April, and the London committee will send away their exhibits *on* or about the 8th of April. Up to the present time the clubs have not responded quite so generously as my committee would wish, but there is time even now for any hesitating club to send me full particulars of what they would desire to send. My committee would particularly call the attention of clubs to the fact that all possible care will be taken of their cases of fish. We will call for them at the club house, pack and carry them to Edinburgh, and return free of any expense; and prizes in the shape of gold and silver medals and diplomas of honour will be offered for competition. It may be interesting to know that the exhibitors up to the present will be the Piscatorial Society, the Richmond Piscatorial Society, the Silver Trout Angling Society, Reform Angling Society, Good Intent Angling Society, and others. The private exhibitors will be Mr. Brookewell, Mr. Sanders, Mr. Winton, Mr. Wright, Mr. Starkey, Mr. Cooper, Mr. Geen, Captain Alfred, Mr. Wheeldon, &c., &c. We hope that our exhibit will be a source of pleasure to our brother anglers across the Tweed, and give them some idea of what our rivers hold in the shape of sporting fish. The committee, therefore, desire me to make a last appeal to the clubs to send their specimen fish, and to thank you, sir, for allowing me to make this appeal.—I am, &c., Fred. C. Clench, hon. sec.

March 22.

TROUT IN THE THAMES.

Sir,—I do not think the remark of Mr. Marriott in last week's Fishing Gazette, in reference to "the attempt to propagate trout in the Thames as a great folly and an utter failure," is at all courteous to Mr. James Forbes, of Chertsey Bridge, who is at his own cost doing the work, as he hopes for the benefit of anglers. The charge of being "an utter failure" is negatived from the fact that last year, when the rearing pond at Sunbury was emptied, 278 beautiful trout up to six inches in length were found there and placed into the river. In addition to this Mr. Forbes at the present time has some beautiful and healthy fry of the famous Thames trout in his fish-house at Chertsey Bridge. Mr. Forbes rejoices, and will continue to rejoice in this "great folly" and that without taking one penny out of the funds of the Thames Angling Preservation Society. The rearing pond at Sunbury is now full of young fry of trout, as I have previously said the liberal gift of Mr. Byram Littlewood, of Huddersfield, and who is ready again to assist the society by a gratuitous supply of 10,000 more; and he tells me this year his success in fish and oyster culture is of the most perfect and satisfactory character.—I am, &c., B.

THAMES TROUT *v.* BROOK TROUT FOR THE THAMES.

Sir,—I agree with your correspondents, L. B. and A. H. Marriott, that the attempt to propagate trout in the Thames has hitherto been an utter failure, but it must be clearly understood that this failure has been with brook trout. The trial has extended over a space of twenty years, and has been pursued against the protest of many experienced anglers and persons well acquainted with the kind of fish most suitable for the river. The cultivation of the real Thames trout has never been properly attempted, and, if carried out, would, as I have before stated in your paper, make this fishery one of the best trout rivers in the kingdom, as no other river in England can produce trout of such great weight and beauty. The purity of the stream above the tide-way is capable of maintaining the best species of our freshwater fish. There are plenty of anglers who keep down the jack and perch, and the Thames trout would, to a great extent, if given a little artificial encouragement, take care of themselves, as those persons who have angled for them are well aware. An organised appeal to the angling public for the purpose of establishing a society for the breeding of Thames trout has never been made. The proposed Great International Fishery Exhibition of 1883 will, no doubt, draw the attention of those who are interested in the fish produce of public and private waters to the neglect hitherto shown in this country; also how far we are in arrear of other countries in the very simple and economical pursuit of fish culture. We shall then, probably, have placed before us, by practical demonstration, that an acre of water, properly cultivated, is more profitable than an acre of land, and that in all streams, ponds, lakes, and rivers, where there is a constant supply of unpolluted water, trout, and other valuable species of fish, may be successfully and profitably cultivated.—I am, &c, R. D. E.

[We agree with R. D. E. that the Thames trout proper is the one to cultivate.—Ed.]

NETTING THE RESERVOIRS.

Sir,—Referring to your report of the netting of the East London Waterworks reservoir, I would observe that the capture of fish was something over 5 cwt., that is to say, taking them at an average of 2 oz. apiece all round.

Of the 5000 taken, I should think that 3500 were roach from 1½ oz. to 4 oz. and some even 6 oz. each; about 1000 were perch from 1½ to 2½ oz. (these, I was told by the netsman, were full of spawn); the remaining 500 consisted of dace, chub, and a sprinkling of bleak and pope, and one large bream.

The strangest thing of all was the entire absence of jack, not the smallest specimen being found in the catch.

All these fish having the fence months before them will soon grow to a fair size, and gladden the heart of many an adept in the punts and small boys on the banks of our beautiful river.—I am, &c. R. S. F.

NETTING OF RESERVOIRS.

Sir,—There can be no estimate formed from the netting of the East London Water Company's reservoir last week what the notable contents of the other reservoirs will be, inasmuch as it was dragged about nine months ago to get out all the large fish, and it was known to contain nothing but small perch and other smaller species of fish. In the reservoirs of one of the other companies to be netted next, the manager has stated there will not be less than four tons weight of good fish, and the water will be so reduced that not a single fish can escape. It is well known from those who have angled in them there are any quantity of perch up to 2 lb. each, plenty of fine jack and bream, and of barbel there were one thousand placed in the water, and there they remain. The opinion of those who know something of these reservoirs is that four tons weight of fish will be found under the estimate. One of the reservoirs of another company, which is going to be thoroughly emptied, is said to hold an equal quantity of good fish, and the whole are to go in the Thames, and, in addition to this, they have another reservoir that will next year share a similar fate. There can, therefore be no exaggeration in the statement that the reservoirs will produce tons upon tons of fish for the Thames. Other waters and other reservoirs are being placed at the disposal of the Thames Angling Preservation Society, therefore the work which the committee have in hand for increasing the stock of fish in the river is immense, and the necessary expenses attending the same will require some additional funds. It may also be mentioned that in the first reservoirs to which I have referred as coming on next, the mesh of the gratings has been so reduced that it will be impossible for any fry to get through; but the idea which emanated at the Gresham Angling Society three weeks ago was somewhat opposed to a reduction of the gratings, provided the water companies would allow the society to net the reservoirs from time to time, and so make first-rate nurseries for the rearing of coarse fish. B.

[We must wait until the netting is done, and we know exactly what it has produced and what it has cost, before we endorse B,'s views entirely. Every fish put in the river adds to its value, and we sincerely hope B.'s "tons upon tons" may be realised; this is far more useful work than putting char or brook-trout into the Thames, except as food for the other fish. We sincerely hope Mr. Forbes will succeed in his experiments with Thames trout; there is good ground for increasing this fish, and no reason why it should not be as plentiful as salmon used to be.—Ed.]

PIKE AND HOOKS.

Sir,—Fishing in private water on February 9th of this year I hooked and lost a good pike owing to the fraying of the line at the float. Fishing with a friend in the same water on March 15 he caught the same fish with my line hanging out of its mouth, and the hook fast in its gullet—weight 17½ lb. This shows what little trouble it must have caused the fish.—I am, &c., Hook.

Norfolk.

EYED HOOKS.

Sir,—In answer to a query about eyed hooks and flies tied on them, I hope to give the readers of the Fishing Gazette full particulars next week.—I am, &c., H. S. Hall.

HALL'S EYED HOOKS.

Sir,—In answer to a question in the Gazette respecting Hall's eyed hooks, we are now dressing a large quantity of May flies on these hooks, to order, at the present time. Our charge is the same as the hooks to gut in May flies. I am, &c., James Ogden.

28, Winchcomb Street, Cheltenham.

ANGLING MATCHES.

Sir,—Every angler who has the welfare of the gentle craft at heart must feel greatly indebted to "Kingfisher" for his very sensible letter in your last issue.

Only last week I was talking to Captain Seppings, a gentleman I sometimes meet when pike-fishing, and he told me two years ago he was fishing in the Thames, when an angler accosted him, and, after making himself very agreeable, succeeded in begging a capital dish of dace the captain had caught. The angler had scarcely been gone ten minutes when another gentleman appeared on the scene, who asked the captain if he had given away any dace; and, on replying in the affirmative, the upshot of the affair was, the captain accompanied Mr. D. to town, and just as the agreeable gent. was about to weigh-in some "splendid" dace and receive the congratulations of his friends, the captain stepped into the room and the "agreeable" gentleman, much to the surprise of all present, stepped out, and is not likely to step in again in a hurry.

So much for the honesty of these competitions. The practice is as stupid as it is selfish. It destroys all future prospects of the angler; to wit, on one portion of the Trent, where these matches, competitions, &c., have been taking place some four or five years, twelve or fifteen years ago I could go and catch from 25 lb. to 35 lb. of splendid roach with either creed wheat or malt, and at the present time I could not catch 25 oz., the result of private and club matches and public competitions. It is unsportsmanlike; the greatest pleasure an angler can experience is in catching a fine specimen of any particular species, but this horrid system of wholesale slaughter is simply detestable.—I am, &c., Mark Antony.

[We *quite agree* with Mark Antony.—Ed.]

DACE, GRAINING, OR WHAT? AND A NOTE ON THE BREAM.

Sir,—I am very much obliged to "Mark Antony" and E. Gosling for their very interesting notes on the above question. I have received a reply from Mr. Keene in answer to my query about this fish, and he says that he is distinctly of the opinion that the fish is a graining, from my description of it. I suggested to Mr. Keene that it might be a Pomeranian bream, but after carefully looking up the evidence, and examining the plates in the possession of Mr. David Slater, I am still inclined to think the fish a graining. Mr. Gosling says it certainly is not a graining, but does not say why. According to my opinion the graining is a species of dace, for it has several characteristics of the dace, in both its external and internal formation. I have had the true dace from the Witham, and they had 52 scales on the lateral line, and were both longer and thinner than the odd, peculiar specimen that I believe to be a graining. These peculiar fish differ from the dace by having a larger and bolder eye, and the back fin is situated nearer the head of that fish I examined than it is in the true dace; while the most distinguishing feature, in my opinion, was the fact that that fish had about six scales less on its lateral line than a true dace. In fact, according to the scanty evidence in my possession, and the plate of the fish we had when it was examined, I shall still say it was a graining until convinced otherwise. I believe the fish to be a hybrid—a cross between a dace and a white or silver bream, and not, as suggested by "Mark Antony," a cross between a white bream and a roach. The true dace of the Witham have fins tinged an orange red, a peculiarity that the dace of the Trent lacks. The next time I drop across one of these peculiar fish I shall have pleasure in sending it up to Mr. Keene in company with a true dace from the Witham. I should very much like to hear further on this subject.

With regard to the white or silver bream (*Abramis blicca*), and the relation it bears to the carp bream (*Abramis brama*), I shall not just now attempt to hold a discussion with that great triumvirate of modern science, Messrs. Darwin, Tyndall and Huxley, as to whether these fish existed in streams that have been wiped from the face of the earth a few thousands of years before the Bible account of the Creation; or whether they came out of the depths of the Euphrates to be named by Adam; but my private opinion is this: I believe the silver, or white bream, is the true species, and the carp bream is a cross between the common carp and the white bream. My study of natural history, and my knowledge of the nature and habits of these fish, seem to point me to this conclusion. The largest white bream I ever saw weighed 1 lb. 6 oz.—I am, &c.,

March 14. **The Trent Otter.**

A DIFFICULT QUESTION.

Sir,—Our members would feel obliged if you would let them know whether they can fish our water in the close time. Our fishery is at Binton, near Stratford-on-Avon, our side being in Warwickshire; the opposide side being, part of it, in Gloucestershire, and another part in Warwickshire. If you could put us right we should feel greatly obliged.—I am, &c., **T. Dear,**

Secretary Bordesley Waltonian Society.

44, Kelynge Street, Cattell Road, Small Heath, Birmingham.

March 22.

[The case you refer to is somewhat complicated. (1) So far as the Avon in Worcestershire and Gloucestershire is concerned, the Severn Board of Conservators has exempted the pike from the operation of the close time clause of the Freshwater Fishery Act, and it is legal to fish for pike there all the year round. (2) The Severn Board has also exempted other parts of the district from the operation of this clause, so far as regards all fish except grayling, but this exemption does not apply to the Avon in Worcestershire and Gloucestershire. (3) No fish, therefore, except pike, can be fished for in close time in the Avon in Worcestershire and Gloucestershire, except with the leave of the owner of the fishery, which, we presume, is a private fishery. If it is a public fishery, the Board alone has power to give leave. (4) The Avon in Warwickshire is not under the jurisdiction of the Severn Board, and no freshwater fish can be caught in close time, except with the leave of the owner. (5) In any case the close time does not apply to the owner of a private fishery where trout, char, or grayling are specially preserved; killing freshwater fish other than grayling; nor to persons taking fish for scientific purposes, or for use as bait. We imagine our friends do not intend to catch fish out of season.—Ed.]

DO FISH GET NEW TAILS.

Sir,—Will you kindly settle for me a vexed question? Does the tail of a fish grow again after having been cut? For instance, suppose a jack of 1 lb. was caught, his tail cut, and the fish put back into the water; if left in the water until it attained the weight of 15 lb. would his tail grow? Because a pike weighing 13 lb., which was taken by one of our party on the 24th ult., had a piece off his tail, clearly showing that it had been caught when a youngster, its tail cut, and put back into the water.—I am, &c.,

Keppel H. Gifford.

["The power of reproduction of lost parts is limited to the delicate terminations of their fin rays, and the various tegumentary filaments with which some are provided. These filaments are sometimes developed in an extraordinary degree. Both the ends of the fin rays and the filaments are frequently lost, not only by accident, but merely by wear and tear; and as these organs are essential to the preservation of the fish, their reproduction is necessary." So says Dr. Günther in his most admirable and charming "Study of Fishes," which we reviewed so favourably last year. It is evident that serious injury to the fin rays is only partially repaired by these filamentary growths.—Ed.]

FISHING AT CHRISTCHURCH (HANTS.)

Sir,—Can any of your readers give me particulars of the fishing near Christchurch, Hants? How far from the town is there free fishing on the Avon and Stour? Can any of the preserves be fished on payment, day, week or month? If so, where; and what are the terms? Is the sea-fishing good?—I am, &c.,

G. N. R.

[Mr. Newlyn, of the King's Arms Hotel, Christchurch, has the right of fishing, but not for trout or salmon. Indeed, there are no trout at Christchurch. There is good sea-fishing in the summer. The "Angler's Diary" gives full particulars about the rivers in neighbourhood, but is wrong about the trout.—Ed.]

THE NEW (SEVERN) SHREWSBURY FISHING ASSOCIATION.

Sir,—I was pleased to read in the Gazette of last week that an association had been started at Shrewsbury. It is an old saying that this town is twenty years behind the rest of the world, and this in the case of the Severn and its fisheries is truly applicable. We are possessed of the finest water in England, and were it not for the netting, which is carried on to a most damaging extent, the trout and grayling fishing would be second to none; chub, roach, perch, dace and pike would be in abundance and of the finest description. At present, fishing in the neighbourhood is a very poor business, and one seldom comes home after a hard day's fishing with anything approaching a respectable basket. Consequently fishermen turn their attention to other streams, where the prospects of sport are far better than on the Severn. This should not be so.

I trust the new association will be well supported, and that eventually the river between Montford Bridge and Atcham Bridge (about 20 miles of water) will come under their control. This, properly preserved, would prevent the necessity of the Salopians seeking other fishing-grounds.—I am, &c. **Peck.**

[We heartily agree with 'Peck,' If the Severn, near Shrewsbury, were well looked after, it would soon yield the finest all-round fishing in England.—Ed.]

DEATH OF MR. GEORGE ORAM.

Sir,—It is with deep regret that I have to announce the death of our much respected friend George Oram, hon. fishery bailiff of the river Lea, after a very distressing illness; he was one of those anglers who has always worked hard to protect the interests of the anglers of London; he was also one of the committee of the Anglers' Benevolent Society from its formation. He leaves a widow and four young children. The funeral will take place on Sunday next, March 26th at Manor Park Cemetery, Ilford, at 2.30 p.m. **R. Ghurney.**

March 22, 1882.

EAST LYN FISHERY, LYNMOUTH.

Sir,—Doubtless many of the readers of the readers of the Fishing Gazette will be glad to hear that under the above title we have formed a fishery committee at Lynmouth, where some sort of organisation has for so long been needed.

I enclose you a copy of our rules.

Through the kindness of Mr. W. H. Halliday, of Glenthorne, the present high sheriff of Devonshire, and the largest riparian proprietor on the Lyn, and especially through the laudable enterprise of Mr. John Heywood, of the Bath Hotel Lynmouth, who well deserves the patronage of all anglers, we have been able to put under the control of our committee over seven continuous miles of most excellent fishing.

The great desire of our committee is, while endeavouring to give limited free fishing to the local fishermen, at the same time to preserve the river for visitors, and to give them good sport without fear of too much interruption. The splendid scenery of the valley of the Lyn is justly celebrated; but, alas! as generally happens in this world, in the most favoured places contentions most easily arise, and Lynmouth has been no exception to this rule. However, under the present management, the chief objects aimed at will be fair fishing and good fellowship in a river where, without question, very good sport can be obtained.—I am, &c., **C. F. Wade.**

Temple, March 16.

[This is good news. Many a glorious day have we had on the East and West Lyn.—Ed]

THE GIMP QUESTION.

Sir,—I am much obliged to you for your notice of my stained gimp last week. I have paid a deal of attention to the gimp question for some years, and I find if you use *pure* silk, and not the abominable mixture of cotton and silk (sold by some to get more profit) you will have all the firmness and strength; and if you stain your wire by the gas that I use the wire is not injured at all. I agree with your correspondent, A. R. H., that fiddlestring is stronger, but I think he will find it about four or five times the price of the sample I sent you last week. We often have our lines for whipping entirely of gimp, so as to do away with leads. So fiddlestrings would not be practicable, not being long enough. I think a stained gimp at 1½d. per yard, that stands 30 lb. dead pull, is good enough for all ordinary purposes. I send you a sample of an extra strong gimp I make for cod and conger fishing that will lift an enormous weight, and has a flax core. **William Hearder.**

Plymouth.

HYBRIDS.

Sir,—If the peculiar fish caught in the Witham is one of the family of soft-mouthed and soft-finned malacopterygidis fishes of which the cyprinus or carp is the genus, and might have been imported from Pomerania with the carp, what has my good friend, E. Gosling, Esq., to say about the rudd? Let him turn to chapter xvii., and dear old Isaac there says:—"Roaches be accounted much better in the river than in a pond, though ponds usually breed the biggest. But there is a kind of bastard small roach that breeds in ponds with a very forked tail, and of a very small size, which some say (you observe he won't be responsible for it, any more than Mr. Buckland, when he said, referring to the one caught by Mr. Gosling, "it may be a hybrid,") is bred by the bream and right roach (may not the wrong roach be the identical Witham singularity?) and some ponds are stored with these beyond belief, and knowing men that know the difference call them rudds. They differ from the true roach as much as a herring from a pilchard, and these bastard breed of roach are scattered in many rivers, but I think not in the Thames."

Since this account was written they must have considerably improved, as I myself have caught them close on 2 lb. weight, perfect beauties.

For my part I see no reason why such hybrids should not be greatly increased.

If, as we have been told, every variety of pigeon now known sprang originally from the common blue-rock (though this I doubt very strongly), why should not similar experiments be made to obtain as many varieties amongst the finny tribe? All that is required is the necessary breeding grounds and the brains.

The apparatus would cost a mere trifle. In proof of this, I refer you to the trout-breeding establishment in the Wandle, at Mitcham, which I have seen.—I am, &c., **Mark Antony.**

NOTES AND QUERIES.

Sir,—Will some one enlighten me on the following subjects?

How can I produce the necessary hole in the bottom of a clear glass bottle to convert it into a minnow trap?

What are the most favourable conditions under which to use David Foster's red-haired caterpillar, and the "Alexandra"?

I find it extremely difficult to procure gentles at this time of the year; can any one tell me where I can buy some?

I saw some flies beautifully tied on the eyed hooks at Messrs. O'Handlen and Co.'s, Bristol, last year. The bittern fly, noticed by you in Mr. Ogden's notice last week, is by no means new. I have used him for more than ten years, and a rattling good one he is when the rivers are full and coloured. I killed thirty-four fish with it last Good Friday, dressed thus:—Body—yellow mohair or wool-gold, twist ribbed; legs—very light blue hackle; wings—bittern wing feather put on sparingly; hook, No 4.

I should be glad to hear of any one having some bittern feathers to sell.—I am, &c., **Caerdydd.**

[You can get a glass bottle minnow trap at Mr. Alfred's, 20, Moorgate Street, E.C. You would have to use a diamond glass-cutter if you make one yourself. If you write to Mr. D. Foster, fishing-tackle maker, Ashbourne, Derbyshire, for his "Entomological List of Flies," you will find full instructions in the use of his capital caterpillar. Fishing with the "Alexandra" was described last year in the Gazette. Gillett and Co., of 40, Fetter Lane, will send you gentles at any time. Many thanks for address of fly-tyers on the eyed hooks.—Ed.]

LARGE CARP.

Sir,—The taking of a fine carp of 12 lb. is reported in your Walton news of last week as unprecedented.

That is not so. About two years ago, at Maidenhead, I was present at the taking, and assisted in the landing of a carp of 12 lb. 14 oz.; and in the evening I saw it weighed by Mr. Cleare, of the Dumb Bell, Taplow. Clark of Maidenhead was the fisherman engaged.—I am, &c., **H. M. P.**

FISHING AT SELBY (YORKS).

Sir,—I shall be much obliged if you can inform me if there is good trout or salmon fishing at Selby, and if so, whether it is free or preserved? Selby is on the Ouse in Yorkshire. Also if it is necessary to have a license for salmon fishing under any circumstances?—I am, &c. Walter Stead.

136, Woodhouse Lane, Leeds, March 11.

[We are not aware that there is either trout or salmon fishing at Selby. You require a salmon license before you can fish for salmon.—Ed.]

SOUTH OF IRELAND.

Sir,—In your issue of March 4th, headed "South of Ireland," I see reference is made to me and my fishery on the Lee. The letter is very evidently written by a fishing-tackle vendor in Cork, who has been good enough to take upon himself to publicly contradict the letter in the *Field*, which he terms "a pure fiction." I beg to state that it is perfectly true in every detail, and if any further corroboration is wanted, he had better communicate with the police at Carrigadrohid, or with S. Piersee, postmaster, at Macroom. The one-handed Kinnealy, who is mentioned on March 11th as "such a successful fisherman" is simply one of the men who defied me before the Sub-Inspector of Police, and said that he would not only fish my preserves but would throw me into the river, and get twenty men from Kilmurry to help him, if I tried, to prevent him fishing. So the river is now well poached by him and his relatives, who are tenants *on* the property, and therefore have a better chance than those who pay and have to come a long distance for the sport,—I am, &c., Duncan Dunbar Abbott, Capt. R.C.C. Artillery.

[We can assure Captain Abbott that the letter was *not* from a fishing-tackle maker.—Ed.]

BOOK ON GROUND BAITING.

Sir,—Would you be kind enough to tell me which you think would be the best book on angling for me to buy? I want one that refers more particularly to ground baiting in ponds and rivers. Apologising for thus troubling you, and wishing you every success in your paper, I am, &c. G. H. S.

[Perhaps "Otter's Modern Angler," or "Pennell's Bottom or Float-Fishing" would suit.—Ed.]

CLUB REPORTS.

ANGLERS' BENEVOLENT SOCIETY.

Since last report I beg to acknowledge the receipt of the handsome donation of £5 5s. from the Richmond Piscatorials with thanks. I have great pleasure in announcing that the committee of the International Fisheries Exhibition, Edinburgh, have generously granted permission for donation boxes in behalf of the funds of the Anglers' Benevolent Society to be placed in the exhibition. —R. Ghurney, sec.

March 22.

BRENTFORD PISCATORIAL SOCIETY.

Since my last report the following gentlemen weighed-in for the week ending March 14. Mr. W. Turner, nine roach, 4 lb. 3 oz., the heaviest 1 lb. 2 oz.; Mr. J. Allen, perch, 4 lb. 8 oz.; Mr. Mounstephen, pike and perch, 14 lb. 4 oz. Mr. J. Allen took first prize in the pegged-down competition for roach. Mr. T. Taylor the second one.—J. H. White, hon. sec.

March 23.

BRIGHTON ANGLERS' ASSOCIATION.

The competition of the 14th was almost a blank; only two prizes were taken. Mr. G. Saunders first, and Mr. A. Thompkins second, both with perch. Since that date the jack have been well looked after, but to no purpose. We have come to the conclusion that they are now spawning. From the Adur, Mr. Edwin Gates, of Steyning, in two days took 41 pounds of carp, the three largest weighing 8 lb. 9 oz., 7 lb. 12 oz., 7 lb. 5 oz. I am sorry to record the death of William Ingram, an old angler, age 75 years, who had fished up to the last, and succeeded in taking a prize on March 4th. He will be taken to his last resting place on Saturday next, followed by the members of the association.—Groundbait.

BURTON-ON-TRENT ANGLING ASSOCIATION.

March 14th being the last day of the open season for general fishing, a few members spent the day on the waters of the Upper Trent. The weather was beautifully fine and warm, which made the "out" as enjoyable as possibly could be. The temperate March wind blowing lightly across the valley from the sunny uplands of Cannock Chase, and just sufficient to cause a ruffle on the surface of the Trent rendered it such a prospect as makes the angler think there is no other sport or pleasure equal to his own, and I think there is a spice of truth in the remark. The takes were not large—three brace and two brace of trout being the best. A member of the association killed a nice pike, 15 lb., latter end of last week in the Trent, close to Burton.

March 17.

CHICHESTER ANGLING SOCIETY.

The first annual dinner in connection with this society was held on Tuesday evening at head-quarters, the Globe Hotel, when about forty brothers of the angle assembled to discuss the merits of an excellant repast provided by host Purchase. Among the company were Messrs. Bracey (president), Tranter (secretary), A. L. Emmanuel, Hollander, Dyer, Redward, and Warden of the Portsmouth Waltonians, while the Cicesterians composed Messrs. W. W. Baker (president), W. Ferwood (vice-president), W. C. Cooke, jun. (hon. sec.), Captain R. Purchase, Parker, Inkpen, Field, Cover, Salter, Whitehead, G. Young, S. Young, Summers, Robinson, &c. The Chairman (Mr. W. W. Baker) in commencing the after-dinner proceedings gave the toast of the evening, "Success to the Chichester Angling Society," remarking that although started in September last, more than ninety members were already enrolled. The main objects of the society were to compel all anglers to fish in a sportsmanlike manner—(in seasons past there had been unfair fishing, but he hoped that would be stopped)—to prevent the deterioration of fish in the canal by introducing fresh stock from other waters, and clear the canal of weeds and other obstructions, and to hire neighbouring waters for the use of the members. The president concluded by proposing the health of his Grace the Duke of Richmond, patron of the society. The toast being heartily received, Mr. G. Young, in responding for the society, wished members would take more interest in proceedings by attending the meetings where it was intended to invite members to read essays on different kinds of fish and fishing, and hold discussions, it would tend to bring anglers together and increase their knowledge of the gentle art. Mr. Kerwood, vice-president, proposed "The Visitors," coupled with the name of Mr. Redward, to which that gentleman briefly responded. Mr. Dyer proposed "The Chairman and Vice-Chairman," Mr. Baker and Mr. Kerwood responding. In reply to the toast "The Officers and Committee," Mr. Emmanuel, in speaking of Mr. Mundella's Freshwater Fisheries Act, said it was in the power of any one to prosecute a person found angling in the close season; he trusted an Act would soon apply to private as well as public waters. Mr. Kerwood proposed "The Press," coupled with the name of Mr. G. F. Salter, who, in responding remarked it gave him great pleasure to forward the interest of the society and angling generally, to chronicle the takes of members, although, when localities were named, it often gave offence. Anglers were, as a rule, jealous of their swims. He thought a good motto would be, every angler on his own hook, and may his lines lie in pleasant places. Mr. Baker proposed "The Host and Hostess," to which Mr. Purchase responded, and trusted on the next occasion he was favoured with their patronage he would be enabled to provide the members with better accommodation, and if pleased on this, they would be doubly pleased on the next occasion. Mr. G. Young proposed "The Health of Captain R. Purchase," and felt sure all members would join him in a hearty vote of thanks to that gentleman for his great kindness and courtesy to all anglers. The toast was heartily received, Captain Purchase in reply stating he was always pleased to do anything to encourage legitimate sport. Some capital songs were given during the evening by Mr. Fielder, jun., Mr. Read, Mr. Cover and other gentlemen; Mr. S. Young's comic effusions sharing the honours of the evening.

GRESHAM ANGLING SOCIETY.

The members met, as usual, on Thursday evening, but, as might be expected, after the great gathering at their banquet on the previous evening, the attendance was rather limited. Mr. Neville was in the chair. The hon. secretary stated that the society's fishing rights at Thorney Broad were about to expire, and the question of renewal would be brought under consideration next week. A further addition to the International Exhibition Prize Fund was announced. After the routine business had been transacted, the meeting adjourned.

THE HOXTON BROTHERS ANGLING SOCIETY.

In consequence of the club house, the Jane Shore, High Street, Shoreditch, being required for extensive alterations, the above society will remove to the Cherry Tree, Kingsland Road, one minute's walk from North London Railway, Shoreditch. Due notice will be given when the removal is completed.—R. Ghurney, sec.

JUNIOR PISCATORIAL SOCIETY.

We had a very fair show of fish on Tuesday for the wind up of the season. Messrs. Woodman and Palmer, fishing at Sonning, caught three chub 8 lb. 9 oz., heaviest one going 3 lb. 10 oz., roach 5 lb. 1 oz., and perch 1 lb. 3 oz. Mr. Hubbard, fishing at Twickenham, caught eleven roach 6 lb. 6 oz. During the season Messrs. Palmer, Woodman, Mills, Harvey, Hewitt, and Hubbard have weighed into this society 192 lb. 10 oz. of coarse fish.—Alfred H. Bisley, hon. sec.

March 23.

LITTLE INDEPENDENT ANGLING SOCIETY.

Our general return visit on the eastern list took place on Tuesday last, the 21st inst., when a thorough enjoyable evening was spent by every one present. The harmony of the evening was well represented with some capital songs, recitations, and overtures on the concertina and banjo by Messrs. E. Barr and J. Taylor. Messrs. Rooke, Lucy, Neale, Frost, F. Moore, Whiteman, Lancaster, Drew, Fitch, jun., Allard, Norris, Campley, Tanner, Loomes, and G. Bently also took an active part. The number of clubs present was small, but we presume it was owing to the bad state of the weather; but our local visit takes place shortly, when we hope we shall have the pleasure of a good muster on that occasion.—H. Moore, sec.

March 23.

NATIONAL ANGLING CLUB.

National Competition on Lochleven.—The committee appointed for arranging the National Angling Club's competition—viz., James Wilson, of Banlaskine, of the West of Scotland Angling Club; Bailie Hall, of Edinburgh, of the Walton Angling Club; and Provost Bogie, Kinross, of the Kinross-shire Angling Club, have made all the necessary arrangements, and fixed the competition to take place on Lochleven on May 24 next. The entries are limited to thirty-six, and the tickets have been distributed over twelve of the principal clubs in Scotland. There are a limited number set aside for English clubs; and any of those clubs who wish to be represented must make application to Alfred B. Macgregor, the secretary, in Glasgow, not later than April 1. The demand for tickets this season is much greater than on any of the previous occasions on which the competition has been held. This competition is deservedly reckoned the best of its kind that takes place, and excites a great amount of interest among anglers.

ORIGINAL ALEXANDRA SOCIETY OF ANGLERS.

Our Anglers Benevolent concerts have commenced, and Mr. W. High will take the chair, faced by Mr. C. Newton. A host of talent has promised to attend. Anglers are especially invited.—E. Dymond.

PISCATORIAL SOCIETY.

There was a large attendance of members at the weekly meeting at Ashley's Hotel, Henrietta Street, Covent Garden, Mr. R. B. Marston in the chair. Amongst the visitors was Mr. Leo Bonvoisin, of the West Central Association. Mr. Thomas Huggett registered a salmon of 12 lb. 4 oz., and a brace of trout 1 lb. 12 oz., from Ireland. Mr. Lander showed 10 ib. of roach from the Colne, and Mr. Pattison 18 lb. of roach, the largest 1 lb. 7 oz. Dr. Brunton presented to the library "The True Enjoyment of Angling," and Mr. Gray "The Sports and Pastimes of England," and thanks were given to each for the same. Arrangements being now perfected by the London Committee of the Edinburgh Exhibition, it was decided that a large collection of fish specimens from the museum be forwarded in a few days. Mr. Thomas Crumplen, the honorary secretary of the Gresham Angling Society, was proposed as a member by Mr. W. B. Adlington, and seconded by Mr. Bates. Votes of thanks to the successful anglers and the chairman concluded the meeting.

SIR HUGH MYDDELTON ANGLING SOCIETY.

The members of the above society went to Taplow on the 12th inst. for a series of prizes. The weather was all that could be wished, and the water, to all appearance, was in good order for roach-fishing. We all felt sanguine of getting good baskets of fish. Still our hopes were not fulfilled. We found the roach right off feed, consequently our takes were very small, and the prizes were not all won. Mr. E. Smith would have been at the top of the list, but unfortunately lost the train by a few seconds. Mr. John Sanders caught the specimen roach, which took a handsome diamond pin; the same fish also took a money prize and a Notts winch. G. Caborn took a money prize with first gross weight, and a smoker's companion with the greatest number of weighable fish. The above society will distribute their prizes, between forty and fifty in number, to the successful members on the 29th inst, (Wednesday) when we hope to see as many of the lovers of the gentle art as can make it convenient to attend. We are promised some select harmony on this occasion.—J. CABORN, sec.

March 20.

SOCIAL BROTHERS.

The members of this club went to Pangbourn on the 12th inst., to compete for prizes and wind up the season. The four prizes were taken by Messrs. Bromhead, J. Flyn, Freeman, and Underdown, in the order named. I hope all members will strain a point and try to attend on Sunday evening next, as very important business will be discussed. The gross weight of fish taken this season by this club of sixteen working members is 488 lb.—J. GOUBOT.

UNITED BROTHERS.

On the last Sunday before the fence months the members went out in full force, and succeeded in filling our trays with some capital fish. J. Warren, a nice show of roach; W. Tyler, jack; H. Tyler, roach and bream from Pulborough; J. Payne, roach and dace; E. Currants, roach; W. Belton, roach and dace; H. Muggeridge, dace; A. Smith, roach; G. Robinson, roach from the Lea. Saturday the 1st of April is our quarterly meeting night, when all members are requested to attend for important business.—W. T. M.

WINDSOR AND ETON ANGLING CLUB.

The members of this club met at their quarters, the Royal Oak Hotel, Windsor, on the 17th inst., to award prizes to the successful competitors for the season 1881-82. Mr. B. R. Bambridge, of Eton, secured first and second prizes, consisting of cups for the heaviest jack and heaviest barbel. No member being allowed to take more than two prizes, Mr. Parsons came in for the prize for the gross weight of barbel; Mr. Way, of Windsor, came in for the largest roach prize; Mr. Parsons the prize for the gross weight of roach; Mr. King, of the Royal Oak, took the heaviest chub prize; Mr. Way, of Windsor, the heaviest perch prize; and as Mr. Parsons could not take the gross-weight chub prize, it fell to the next best member, who is a London man. Taking it right through, the last season for sport has been very poor. Jack have been small, whilst barbel, perch, chub, and roach have been scarce, compared with a few years back.

EXPENSES AND RECEIPTS OF THE BERLIN AND NORWICH FISHERIES EXHIBITIONS.

NORWICH ought to be proud, for out of the late Fisheries Exhibition held in the Drill-hall has arisen the project of holding an International Fisheries Exhibition in London, under the patronage of H.R.H. the Prince of Wales, with State recognition and the powerful co-operation of the Worshipful Company of Fishmongers. There was no doubt about the movement from the first; it enlisted Royal sympathy at once, and is now on the high road to a brilliant success. The first exhibition of the kind was held in Berlin in 1880, which, being an experiment, although successful in a monetary sense, was not satisfactory as a practical display. An able article in the *Standard* on Monday deals with this exhibition, and shows that the Americans were well represented, and are far ahead of England in all that relates to fish-culture especially. The writer takes a deep interest in all that concerns fish, either for sport or as a food supply. The total receipts at the Berlin Exhibition were £19,116, and the expenses £17,304, leaving a clear surplus of £1812. It was open ten weeks, and was visited by no fewer than 483,000 persons. The Norwich Exhibition was a less ambitious effort; it was especially tentative, and therefore the results were more encouraging. It was open for three weeks only, and during that time 70,000 people visited it. When the facts are considered, no wonder need be felt at the high praise that has been bestowed upon Mr. E. Birkbeck, M.P., the president, and Mr. Oldham Chambers, the secretary. Donations reached the amount of £1588 12s., and the whole sum received was £5132 4s. 7d. After providing for prizes and paying all expenses, there was the handsome balance left of £983 9s. 6d. What is of no less interest and importance is the mode of disposing of the surplus. This feature of the matter is worthy of all praise, and again proves that the committee and chairman of the late exhibition at Norwich had a just conception of the work they took in hand, and an honest desire to discharge it faithfully. They have awarded £400 to the Norfolk and Suffolk Fish Acclimatisation Society, £200 to the International Exhibition of 1883, and various sums to the local preservation societies. The whole thing was carried out with rare judgment and success, and now the workers are receiving their reward in the applause of their fellow men, and in imitation, which is the sincerest form of flattery.—*Norwich Argus*.

GREGORY'S SPINNING BAITS. "The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[ADVT.]

ALFRED YOUNG
"The GOLDEN PERCH,"
402, OXFORD ST.,
LONDON, W.
FISHING RODS and TACKLE

The Fishing Gazette.

SATURDAY, APRIL 1, 1882.

A WEEK AMONG THE DEVON TROUT.

FEW sensations can compare with that experienced by the enthusiastic angler when he feels the train move off which conveys him to the scene of his favourite sport. This must be mainly due to the force of imagination, for, as to material comfort, the railway traveller is seldom to be envied.

Anglers, however, and especially trout-fishers, are an imaginative, as well as a contemplative race; and can enjoy their sport three times over; once in anticipation, once in reality, and again in retrospect. Some thoughts like these passed through my mind as, in company with a kindred spirit, I started for Devon one evening in June. The night soon wore away, and by four or five in the morning we found ourselves at Teignmouth, watching the sun rise over the glorious expanse of sea.

A plunge in the refreshing waves soon removed the grimy feeling so well known to the traveller by rail; and we felt thoroughly ready for our first day among the trout. A few more minutes by rail brought us to Totnes, at which point we had arranged to commence operations. Descriptions of Devon scenery, and especially of the dale of the Dart, are already exhausted; and so suffice it to say that we were not insensible to the beauties that surrounded us. That we did not delay putting our tackle together does not show us to be Goths, but only proves the sporting instinct to be stronger, for the time, than the æsthetic. As we were favoured by cool breezes, whipping was the order of the day, to our great satisfaction; for what true angler does not prefer to use the artificial fly, when it is at all likely to be of use? And our choice was quickly justified, for, before making many casts, I was fast in a good trout. After a little play his mouth proved too tender to resist his frantic struggles; and, though I gave him line, we had to part company.

By a curious run of ill-luck this performance was repeated several times. Fish after fish, some half-dozen or so, served me in the same way; and, though sport was plentiful, our creels remained empty. After a time we became more used to their playful ways, and struck less quickly; and soon the first trout, a good one for Devon, was safely landed. This was owing, in great part, to my friend's exertions, who waded promptly into the water to secure the fish. Before long he had his turn; and indeed performed the unusual feat of taking two trout in rapid succession out of one pool. This was an exceptional occurrence, because the capture of a good fish, accompanied as it is by wild leaps into the air, and various other antics, generally scares all his neighbours for some time.

All through this summer's day the trout continued to rise, though seldom actually taking the fly; and still more seldom coming to bank. Those we did secure were good fish for Devon, only one being under half a pound. A landing-net would have been of great use. Indeed, for want of it, we were continually in and out of the water, only one of the fish being landed without wading.

Our previous experience having been chiefly with smaller fish, had caused us to deem a net an unnecessary encumbrance, as indeed it is in mountain streams; but now we realised the mistake we had made. Towards evening the trout, contrary to their usual habits, went off the feed; so we hastened on, leaving the further end of our six miles of water scarcely touched, and reached our quarters (to which our luggage had been sent) before nightfall. Such was our first day, and my Scotch friend, who was irreverent enough to scorn the hills around us, as compared with his native mountains, became enthusiastic over the Devon trout, and did not know in which character to admire them most—when accepting our line of invitation sent across the water to them, or when actually giving us the benefit of their company at supper.

The following day was Sunday, and the calm restfulness of our surroundings formed a strong contrast to the bustle we had left so lately. Not only were we fortunate in our position on the bank of this lovely river, but even in a matter in which the country sometimes shows its seamy side. Within a short walk a miniature church had just been completed, built in exquisite taste, and finished in every detail in the most artistic manner. Even the peal of bells had a silvery cadence, such as is seldom heard; and altogether the day was so soothing and delightful that we felt but little impatience for the morrow's sport.

On turning out early next morning, imagine our feelings at finding a steady and hopeless-looking downpour had begun. Indeed, it seemed inclined for a week's rain. However, there is no accounting for Devon weather, and by nine o'clock the prospect had much improved, and we started off up stream to try the "dirty worm." He proved as useless as dirty, and we gladly discarded him, on finding the water was but little discoloured. On this day, though the weather soon cleared, we had but poor sport, the fish being quite determined to show us how sulky they could be. Nothing but troutlings would rise, and even these confined their attention to my friend's fly, perhaps liking his driving better than mine. About mid-day the keeper, coming for our licenses, caught us some flies for "dapping," and accordingly we "dapped," and not without some success, at least as to hooking good fish. It was a mode of fishing to which I was not a stranger, and after losing a large trout, I secured some smaller ones. My companion took to the new style with great perseverance, getting one good fish and losing several others.

As dapping may not be a form of fishing familiar to my readers, a short description may be useful. First, the line is shortened to within two feet of the end of the rod ; then a large fly or other insect must be impaled as gently " as if you loved him " on the hook, In Devon the oak fly—locally called " the up and down fly," from the position it always assumes on the tree trunk—will be found most killing. The green caterpillar, used as a fly, is also good. The next proceeding is to walk along the bank, several yards from the edge, looking carefully for a likely spot, such as a quiet hole or eddy, with trees or bushes over it. On finding such a place, you do not walk forward and look to see whether there are fish there, as that would effectually drive them away ; but lie flat down and crawl carefully till near enough to the edge to drop your fly gently on the surface. If the weather is calm and bright, which is best for this style of fishing, you will probably be able to see the trout sailing about, almost under your nose—that is, provided you have crawled up as quietly as a snake, and hidden yourself behind the stump of a nettle, or some such cover. You will find sometimes great difficulty in getting your fly on the water without scaring the timid trout ; and practice alone will teach you to manœuvre the rod in a sufficiently quiet and gentle manner, and to humour the line between the boughs and over the herbage, growing at the edge, in spite of all obstacles, and without a jerk Even when this feat has been accomplished, the trout is often provokingly deliberate in his movements, and will come and inspect your arrangements time after time without interfering with them ; and if, finding your cramped position no longer tolerable, you alter it ever so slightly, he will make off with a contemptuous wag of his broad tail. If all goes well, however, his suspicions will be allayed after a short survey, and he will startle you by dashing suddenly at the tempting morsel. When once he feels the steel the fun begins. Up into the air among the boughs he jumps, to the jeopardy of your tackle, and if the hook still holds he darts across to the opposite shore, making your winch whistle again. On being checked he will often rush straight back, under the bank at your feet, to find refuge among the roots.

This manœuvre frequently results in his escape, as it is extremely difficult to prevent the line from becoming slack. Even if you keep a tight line, his hold will give way in two cases out of three ; and if it doesn't, it is still a tough job to land a large fish in deep water, and especially as you are generally hampered by overhanging boughs. Often did we lament our absent landing-net on seeing a good fish wear out his hold and float slowly off at the last moment. One trout in particular, which my friend had been playing with skill and care for some time, behaved in a very aggravating manner, lying in apparent exhaustion till within an inch of my hands, and then giving a little jerk which loosed the slender hold, and lost to us the best fish yet hooked. We had generally taken these little mishaps philosophically ; and indeed, being used to such things, I had on a previous occasion rather surprised my companion by my stoicism on seeing a good fish slip from his hands and off my hook. This time I fear we were tried beyond our patience ; and it was time before our equanimity was regained. Owing to bad luck of this sort we brought home but light baskets, and on consulting over the matter, decided to change our tackle a little on the morrow.

Accordingly we took the train to Totnes and paid a visit to the local tackle maker, to get some larger hooks. The cool of the morning being over by this time, we began dapping as soon as we reached the river, and before many minutes had each hooked a good fish. After some half-pounders had been secured, by dint of much crawling, and some patient waiting in cramped attitudes, I heard an unusually thundering yell from my companion ; and, rushing to his assistance, found he had hooked a splendid trout, which was doing its utmost to become a free fish once more. It had already made some mad rushes across the stream, and leaps into the air, but was gradually getting exhausted and allowing its golden sides to be seen near the bank. Knee deep in the stream I waited for the fish to be played within reach, and then quickly but steadily placed both hands round him, and before attempting to lift him tightened my grip, and then threw him out on the bank, to my friend's undisguised triumph. Our elation was not without some cause, for this was the finest fish we had yet taken, and a very handsome one, graceful as a salmon, and even more brilliant, in his livery of gold and scarlet. The delight of the captor was a treat to witness ; even patriotism had to yield to truth, and the Scotch trout were voted small by comparison. One or two more half-pounders rewarded our efforts, to say nothing of those played and lost ; and early in the evening, we turned our backs on the river, bearing on them fairly heavy creels.

After some refreshment near Totnes, we went to pay a promised visit to a friend. A short run by train, and a delightful ride on the box of the coach, brought us to the home of our hospitable host. Here, in pleasant society, enlivened by the presence of the fair sex, we dined : and only retired to rest in the small hours, with the prospect of having to rise before the sun. After three or four hours' rest we all sallied forth, to try our hands at a mild form of sea-fishing. Angling for smelts is not, perhaps, a very noble sport ; but it is amusing enough, and requires no sea legs, or stomachs ; as it can be practised from a bridge over an estuary, in certain states of the tide.

Our trout-tackle answered very well for this sort of sport, all the change required being the removal of the flies from the cast, and the substitution of small hooks, baited with tiny bits of dandelion stalk. These seem queer bait for sea fish, but they proved effective, soon bringing to our basket some of the bleak-like fish which could be seen playing on the surface of the water. As soon as a few were caught, we cut them up, and used little bits of fish instead of our former bait, and then the little cannibals came to bank, or rather to bridge, thick and fast. By breakfast time we had caught over a hundred of these dainty fish ; and, though small, they made together a heavy basket, especially when assisted by some bits of rock, slily slipped in by the wag of the party. We had some of the smelts cooked with the trout, and the show of fish on that breakfast-table would have been worthy of a gastronomic fish exhibition. That is, before breakfast—afterward they had a very different appearance, and would have been chiefly interesting to a student of bones.

Just as we regained the house a timely shower came on, and kept us, willing prisoners, in agreeable company for a few hours. After lunch, the weather cleared, and we went to try our fortune on a tiny trout stream not far off. Here, for a while, we had some lively sport—a good trout coming to my fly at almost the first cast. Four more followed within the space of twenty minutes ; and even after that the sport continued, though more slowly. My friend took some also before long, and soon we had made up a dozen. By this time the inhabitants of the little brook were too much scared to rise, and we returned, well satisfied with our sport ; for the trout, though mostly small, were lively. We reached the town in good time for the evening coach ; and after having taken leave of our hostess, mounted the box once more to return to Totnes. In the train we met an officer who had been trying the Avon for trout, but without success. We reached Totnes in time for a few casts near the salmon weir, but found the fish off the feed ; so took the train to our old quarters ; having spent about thirty-six hours in such a variety of angling as seldom falls to one's lot in that space of time.

On the following morning we *did* sleep late, I must admit ; but there were extenuating circumstances—four or five hours' sleep to make up for, among other things. After breakfasting about nine, we resumed our fishing ; but perhaps we were somewhat lazy, as we took but one (which fell to my companion's rod) that morning. About noon rain came on, and we were thoroughly soaked, and returned to change. After lunch the sun came out again, and we followed his example after a little rest. It was evening by this time, and such an evening ! But no need for a long description —" Sunshine after Rain " will bring it all to the minds of those who have seen such scenes in Devon ; and, to others, words were useless, unless it were to say " go and see."

After some patient fishing, and several disappointments, my friend managed to secure one more shy beauty, but I still remained with an empty creel, and felt somewhat snuffed out by my hopeful pupil. Fish after fish did I lose till night closed in, and I made up my mind for a blank day. There was a lovely moon, and even the daylight seemed to linger at a quarter past nine, so we determined to try a few more casts in a fresh pool before packing up. In rushing, somewhat impatiently down the precipitous bank to reach the shingly beach from which we had to cast the fly, I caught my foot in a root, and went down head foremost, even more quickly than I wished, nearly breaking my neck, and quite my rod.

Now was the time to prove my mettle ; so, instead of sitting down to nurse my bruises, I carefully spliced my rod, to do which it was necessary to use the running line, as the wax-end had been lost.

In five minutes all was ready, and in two more the thrilling sensation of the struggling of a good trout on my fly rewarded my patience. He felt securely hooked, so I gave him no quarter, and, instead of reeling in, ran backwards up the beach and grounded him on the shallows. This plan is not usually advisable, being hazardous and likely to scare other fish ; but in this case time was of more importance than any other consideration. And the end justified the means ; for, after barely allowing myself time to note that he was a half-pound fish, I made another long cast, and immediately hooked his brother, and brought him to bank almost as quickly as the first, and with less risk, as by this time my friend had come up with the landing-net.

Just as I had made another cast, and was straining my eyes to note the course of the fly on the dark water, a shout from my companion made me fling down the rod and rush towards him with the net. But what was our disgust at finding he had been playing a floating bough, which, being in a rapid stream, had almost seemed alive. This warned us 'twas time to cease astonishing the bats and owls, and make ready for a start. So, with a hearty laugh at our mistake, we took our rods to pieces and turned our backs on the moonlit river. But now came an unlooked-for difficulty. The river, which was deep in places, was skirted by a thick wood, and the path, at the extreme edge, practicable enough by daylight, was now really dangerous. Knowing the locality well, I had to lead the way, and by keeping a hold on the trees managed to progress safely, though slowly, for a time; but at last, after various tumbles and narrow escapes from a ducking, we came to a point where the path, such as it was, branched into the woods. The difficulty of finding the way was now much increased, and we were beginning to wonder what "camping out" would be like, when we discerned an opening in the trees, and found ourselves, after an hour's scramble, in the park-like fields near home; and glad we are to see the hospitable lights twinkling before us.

It was after eleven when we sat down to supper, not without that hearty appreciation of the same which is one of the advantages of an angler's life with which even outsiders can sympathise. On comparing our respective creels we found that victory had been snatched from my companion at the last moment; the brace of trout which had fallen to my rod in the last ten minutes being heavier than those he had taken during the day.

On the next day we were on the river in good time, and took some fair fish by dapping, but nothing noteworthy occurred till evening; when, on reaching a smooth rapid we had not before tried, we found it dimpled all over with the rises of trout. Our mouths fairly watered at the prospect, and soon our flies were imitating the antics of the myriads of living insects on the stream. Rise after rise broke the surface close to our flies, but not a fish was touched. We changed our lures again and again, trying everything in our fly-books, but without result; and at last we were forced to conclude that the epicures were feeding on midges, too small to imitate. It was now late, and having had fair sport previously, we decided to start for home, but before doing so it was necessary to cross the river. Boots in hand, I waded in; and, whilst about midway across, noticed a tempting rise up stream, and tried a cast over the spot. Contrary to my expectation the fish came fiercely, and after a good fight was duly netted; and so ended our last full day on the Dart. We now walked along the railway which, on this side, runs close to the river, and found our path much pleasanter, though less romantic, than on the previous evening. Even on this prosaic walk, incident was not wanting, for numbers of glow-worms had chosen the railway as a promenade, and their amatory beacon-lights were sparkling in every direction. We bottled three or them, two of which lived for weeks, in captivity, on lettuce leaves. As we had to return to town on the following afternoon, we took the train to Totnes in the morning, and, booking our luggage, went to pay the trout a farewell visit.

Our fortune did not quite desert us; for, after losing, as usual, some splendid fish, one of which, I think, was a peal, we landed a brace of beautiful trout, scaling about 10 oz. each. These, with two smaller ones, and our previous day's sport, made a capital basketful to take to town. The best fish were caught with the green caterpillar, used as a fly; and only by dint of careful crawling, for the day was bright, and whipping would have been useless. We noticed two or three fish of unusual size in one particular spot, and one of them, of fully two pounds, made us almost wild by darting at the fly, and then contemptuously sheering off again. We did not see any salmon, nor their enemies the otters, though both are common, and on my last visit had been "at home." After weighing our fish, we took tea, and the train for town, much pleased with our varied and never-failing, though moderate, sport; and determined to repeat our visit at the earliest opportunity. Whilst being whirled on our homeward way, our reflections consisted much of pity for those misguided beings, whose education having been neglected in their youth, cannot appreciate the pleasures of angling.

J. PAUL TAYLOR.

P.S.—The River Dart can be fished from the bank next the railway by a moderate payment, in addition to the licence. Full particulars can be had from Mr. Tope, Dart View, Staverton, who will also make anglers most comfortable, at very moderate charges. Wading is not generally necessary. Seven or eight miles of water can conveniently be reached. As a rule, the trout become larger and more wary as you approach Totnes. Fly-fishing, either artificial or natural, according to weather, appears to be most effectual. I never took a trout with worm, and only one with minnow; but a skilful worm or minnow fisher might tell a different tale. The licences are as follows:—Trout, 10s. 6d. the season, or 2s. the day; salmon, 7s. 6d. the week. For a week's fishing, therefore, a salmon licence is the better, as it includes trout, of course. As the other stream alluded to is private, and difficult of access, I will say no more of it, except that I took thirty-two trout there with fly, in one afternoon, a short time since. All fair-sized fish, from two to nine ounces, The Dart will occasionally yield almost as well; twenty-eight trout was my best day, but they were rather small for that river. The months of March, April and May are the best for this neighbourhood; but I believe the season does not end till October.

PRIVATE WATERS.

I HAVE often written about fishing in private waters, and given what I considered good advice to anglers; but I still find it necessary to return to the subject. First of all, there is nothing of greater importance than to conceal where any private waters are situated when giving information as to great captures of fish. One of my friends, the other day, remarked to me not publish where the fish were caught, or everybody would be wanting to go there, and the place in a little time would not be worth fishing. My reply was, "I simply use the words 'private waters,'" and it is of very little consequence, so long as the result is made known. It is at the same time desirable not to give a clue to the whereabouts of any private water, and my request is to friends I take to private waters, when weighing the fish in at the club-room, not to say where they have been caught. All that is needed is to say "caught in private waters." But I can imagine there may be those who would like to know *where*, and any angler satisfying their curiosity is guilty of great wrong to the proprietor of the fishery, for it has often caused a plethora of applications to fish, which has frequently resulted in the fishery being closed altogether. There is another evil which I wish to point out, and that is the greedy desire to retain fish that are caught, irrespective of size or condition, a wise rule being to return to the water all fish under four pounds, and even then, if the sport is unusually good, some very large specimens being taken, the largest only should be retained, as, I believe, was the case in the recent great captures of Messrs. Alfred Jardine, John Knechtli, and Alfred Nuthall. With the exception of the takes of these gentlemen, I have not heard of any great results in fishing private waters this season among pike. In one of Mr. Alfred Jardine's late expeditions I hear he had the misfortune to lose a larger fish than he has lately taken, but his promise that he will capture a big one will, I am confident, be realised this season.* Few anglers possess greater energy, perseverance, and skill than he does, and if there is a 40lb. fish to be got anywhere, I would, if I were a betting man, lay any amount of odds in favour of his getting it. I know many good anglers, but from long experience, I never was out with one who works so hard. There are often great disappointments in fishing private waters by the loss of good fish. Only the other day Mr. Beasley, who is a skilful angler, had the misfortune to lose a pike that would probably have weighed 30lb.; the fish was got partly into the landing-net, but it was too big for it, and it got away. Then again the water often gets suddenly out of condition, or a frost sets in the previous night, and has iced it all over. The fish are sometimes in no humour to feed, and nothing can induce them to take the bait; they will play with it, the float goes down, it soon rises again, and remains stationary; the cry is, "the fish has left it." There are other disappointments, as was the case recently. I took Mr. Arthur Josling and Mr. Beasley to some private waters, and when we got there we found the water was three feet below its usual height, and this was totally adverse to good prospects. I will give these good anglers all the credit they deserve, they did all they possibly could; there they were, working as perseveringly as possible, and it was only by dint of hard work that they succeeded in catching a brace of fish each.

B.

SILK-WORM GUT, HAIR LINES, &c.

THE following letter has been received by me from a Spanish merchant, who largely imports silk-worm gut, is an experienced fisherman, and delights in preparing the materials for and making his own tackle.

"I have known fishing lines made of a variety of materials. In North-West America a particular kind of sea-weed is greatly used by some of the natives. They likewise utilise the wild hemp for this purpose, and the Esquimaux devote narrow strips of hide, and in tropical climates pine-apple fibres are rendered useful to this end. The second or inner coating of trees, the hair of horses and other animals, including that of both men and women, are likewise called into requisition. The very best lines I have ever had, were made by myself. This may be vanity, or arises from that faith and fondness, in which is included scrupulous care for what we ourselves create. But at the time I speak of, anglers almost invariably made their own lines. I have now three tapered fly-lines which consist of hair from an Abyssinian woman, from whom I saw it cut as a punishment for some religious offence, and which, when unshackled, reached to her knees and averaged four feet in length. To make this serviceable, I used quill sticks. The quill sticks are made thus: piece of quill are cut to receive wooden pegs to accurately fit them—three of these will be enough. Divide the number of hairs you intend to use into three, and having knotted the ends of the whole length, cut the other separate ends into unequal lengths. You have now, say four hairs in each quill, secured by the pegs. The knotted end is then fastened to the knee of your trousers or a table cover, with a pin, and the sticks or pegs laid on your left hand in rotation. Now take up the right hand one by the forefinger and thumb and twist it; this being done, place it where the first one was. The second stick is then taken up and the same twirl given to the hair, then comes the third, and keep on repeating this until a single hair is nearly exhausted. Then insert another in its place, seeing that the uneven order of all the strands is preserved. When you have made a sufficient length of line, begin to taper it by dropping a hair occasionally, until the line is strong enough, when the protruding ends are cut off. Many descriptions of fibres can be twisted by the same means.

---

* Since we received the above, Mr. Jardine *has* taken a big fish—one, in fact, of 27½ lb.—ED.

"There are an endless number of vegetable fibres from which very strong and useful lines can be fabricated; by soaking the inner bark of trees, or the stems of plants, and then combing them. Travellers tell us that the Indians often twist their lines under the hand on the thigh. Any undue twist or incipient kink, may be taken out of lines by fastening one end to a tree or other fixed point; and then, taking a turn round a piece of smooth stick, holding the stick by each end and hand, walking backwards until all the line has undergone a moderate strain. Wire, if not too thick, may in this way have all the irregularities removed and rendered as straight as when it came from the wire drawer.

"You ask me what is my knowledge of silk-worm gut? There is little more to be known respecting it than was patent half a century ago or more. You will find that W. B. Lord, in his "Shifts and Expedients of Camp Life," page 599, quoting from previous writers upon the subject, says "Silk-worm gut can also be obtained wherever silk-spinning worms are met with. To make it, a number of caterpillars are to be collected just prior to their time of spinning. They are to be placed in a pot or other convenient vessel, containing a mixture of vinegar and water in equal quantities; they are then to be covered down and allowed to stand about twelve hours. A worm may be then taken out, opened, and tested as to its fitness for drawing. If on pulling the yellowish green coils, which will be found within it, to their full extent and extreme length, they break from softness of texture, the worms must be allowed to remain in the vessel some time longer, temperature having much to do with the condition of the pickled insects. When the coils are found to be tough, and stand stretching fully out, one end of the strand must be placed in a slit at the end of a thin board or sheet of bark prepared for the purpose. The strand is now to be drawn and evenly stretched to the ends of the board, to which corresponding slits have been made, and the extremities of the gut secured in one of them. When all the worms are thus treated, the stretching board is to be placed in the sun, in order that the gut may dry, which it usually will in about twelve hours. It will now be found that a considerable quantity of the yellow substance will remain adhering to the gut. This must be removed, and, in order to do so, dissolve a piece of common soap about the size of a musket ball in a gallon of rain-water. Place this, with the gut in it, in a boiler and boil it for ten minutes, when the gut must be turned out on a cloth to drain. Before cooling, each strand must be lightly and smartly drawn through a pledget of cotton, held between the finger and thumb, which will at once strip off the yellow coating; but great care must be taken not to press the softened strand hard enough to render it flat or curled, which the application of the nail with force will do. As fast as the strands are run through the cotton, they must be replaced on the board and again dried in the sun, after which they can be selected as to size, quality, strength, &c., and packed up in hanks by twisted cotton, or any other kind of thread round them.

"I note what you say about the waste which apparently occurs in the attachments to dry the strands. This used to result from pins, instead of slits in the wood, being used to fasten the ends, the comparative unimportance of the material once only used for stringing religious paternoster beads, &c., and the careless manner of manipulating it by the natives. I have heard nothing whatever of the improvements and suggestions you allude to, but agree with you, that a very little encouragement, by offering rewards for the best samples, would ultimately tend to the getting a very far superior article than any that we have ever had; and I further consider with you that the quality of this animal product is greatly, if not wholly, dependent upon the vegetable food of the silkworm. The mulberry leaf, the best regimen yet known for the creature, is full of fibre; and if we contrast the resulting gut with that of the worm fed upon lettuce-leaf, the difference will be as between good and bad. I recollect that some years ago there was a talk of introducing silk-worms into this country, and the Bombax—a very large species—was to produce not only salmon-gut of an enlarged size, but gut to come into competition with the entrails of the cat for violins and other stringed musical instruments."

I have taken the liberty to reply to this, and tell my friendly correspondent that I consider the application of soap, as an alkali, and boiling, objectionable (from the reasons I have elsewhere given); and suggested that if the strands were passed, instead, over or through indiarubber, so arranged as slightly to pinch the substance, the same result of removing the objectionable film would follow—if not too rapidly effected to engender undue heat—without the removal of the gum, upon which both the strength and coherence of the fibres consist.

I shall be better able to more fully speak upon the matter as I have induced a celebrated analytical chemist to confirm, qualify, or refute, the results of my experiments upon the matter of boiling, which is simply that it has the same effect as it has upon isinglass, Iceland moss and other dissolvent substances, namely, to convert the water into a more or less condition of soap, which slightly congeals and has an adhesive character when cool.

Creel.

CLUB AND OTHER JOTTINGS.

By L. B.

The general angling season has come to an end, if not amid a blaze of piscatory triumph, at least amid, and made pleasant by, genial warm breezes and bright sunshine; while the final efforts of many piscators, previous to putting their rods down for three long months, were, here and there, as testified by the reports, rewarded by some very decent takes. As the legitimate season for luring the scaly ones from their native depths closes, it must not be supposed the angler entirely loses for the time being his interest in the sport he has so ardently followed during the preceding nine months, and among club men at least, some of the causes of this sustained interest are not far to seek. During the close time are almost invariably held the annual meetings of societies, at which officers, committee, &c., are elected for the coming season; then, too, are held all, or nearly all, the societies' annual dinners. And the glories of those dinners! of all kinds and degrees—from those boasting a recherche *menu*, perfect marvels of culinary art, to the plain, wholesome feeds; yet all having certain leading features in common.

There is no doubt that with almost every society, the annual dinner is the event of the season. There sit the chairman and vice-chairman, all smiles, perfect paragons of urbanity, with a courteous greeting for every one, yet keenly alive to the responsibilities of their office. Well they know the representatives of the press are present; that by and by, after the good things have been done full justice to, the cloth removed, the usual loyal toasts duly honoured, will come that of the "Undaunted" Piscators Angling Society; that scarcely has the ringing three-times-three with which it is greeted subsided, before the hardworking secretary, upon whose individual exertions the success of the society in great measure so much depends, will, in response, rise and give a brief resumé history of the past season, increase in number of members, weight of fish taken, specimens added to other trophies already possessed by the club, the balance in hand, &c.; generally winding up with that pardonable little bit of romance that the "Undaunted Piscators," as a club, is second to none. A little bit of romance which, however unorthodox it may seem to say so, I hold to be positively praiseworthy, if it influences, as no doubt it does, those to whom it is applied to act up to it. Then there are all the officers of the society to receive the meed of praise they have so honestly earned, and each in turn rising and beamingly returning thanks. Presently the prizes won during the past year are distributed, consisting in the case of a few societies of cups and money prizes; these last-named most objectionable, and, as a fact, not tolerated among amateurs in any other branch of sport. But in the majority of clubs the prizes are composed of the most miscellaneous articles. Rods and tackle, and other fishing gear, are, of course, well represented; but among the favourites are copper-kettles, teapots, boots, cigars, tobacco, bottles of rum, gin, &c.; watches, rings, clothes, books, beef, a goose, ingredients for a pudding, a ton of coals; the last few generally to be fished for just before Christmas, and be presented at that time. Then when the prize-takers, amid the cheers of approving brother-bobs, have all been up and received their trophies, the secretary will have a busy time of it for half-an-hour—more or less—jotting down the names of prize-givers for the coming season. There will be two or three toasts more, including, in all probability, the host and hostess; the Associations, if a representative is present, the chair, the vice-chair, &c., interspersed with a few songs and recitations; God Save the Queen, and the annual dinner will be over. I fear I have gone a long way round, but what I intended to convey is that there are several other matters of importance which, if I may be allowed to suggest, should not be allowed to pass unnoticed on these occasions, and foremost among them is the "Anglers' Benevolent Society;" next the River Preservation Societies and their work; the Thames Rights Defence Association, and, indeed, any organised movement having for object the relieving of distressed piscators, the maintenance of undoubted rights, or the bettering of angling prospects (as to the amending of laws relating to coarse fish). Rarely do better opportunities offer, than at these well-attended festive gatherings, of impressing upon our brothers of the rod the necessity of every one of them assisting, by his moral and, where needed, pecuniary support in carrying out the above desirable object, not depending entirely upon a few chosen leaders, but working as if the success of them depended solely upon the individual exertion of each one of us.

A report to hand from the "Battersea Friendly" and another from the "Watford Piscators," both of which I subjoin.

No. 3 District Visit to Battersea Friendly Society.

Tuesday 14th March, 1882. Mr. F. Webb, in the chair. Mr. Boisseau, in the vice. No doubt owing to the visit falling upon the last day of the fishing season, there was a very small attendance. Only three clubs represented, viz., Clapham Junction, Anglers' Pride, and Battersea Friendly, nevertheless there was some capital harmony, the following gentlemen contributing:—Mr. Webb, "The Stirrup Cup"; Mr. Boisseau, "I love my Native Country"; Mr. Ford, "Midshipmite," encore, "The Land called England"; Mr. W.

Brice, "The Chinaman"; Mr. G. Webb, "Welcome ever Welcome"; Mr. G. Howell, "I begin to feel much Older"; Mr. Newton, "When Noah hung out in the Ark"; Mr. Gloucester, "Rio Fal Da"; Mr. Sewell, "Golden Slippers"; Mr. Payne, "Gooseberry Wine," &c., &c., after Mr. Hoole had called the roll, he spoke at some length in reference to the renting of waters and propagation of coarse fish, informing his hearers that the "Joint Committee" had determined not to spend any of the funds for trout culture, he also exhorted the members to instruct their delegates to attend all meetings and render assistance in the many schemes the association have in hand for the benefit of anglers and angling. A special vote of thanks was passed to Mr. Hoole for his attendance, every member, rising, drank his health and prosperity to the association. A most pleasant evening was brought to a close by those assembled singing "God Save the Queen."

THE WATFORD PISCATORS.

On Friday, 17th inst., a meeting of anglers was held at the Commercial Inn, better known as the Leathersellers' Arms, High Street, Watford, to consider the advisability of forming an angling society in that town. The chair was taken at half-past eight by Mr. Horn, who in opening the meeting, explained that it had been the intention of a few gentlemen in Watford, to start a society and rent a piece of water for the use of the members, and as now the anglers were thrown out of work for a few months, he thought it a golden opportunity to gather them together. A proposition was made by Mr. Lucas, and seconded by Mr. Vincent, that an angling society be started and that it be called the Watford Piscators. Carried. The difficulty of securing a good club-room was very quickly and satisfactorily got over by the great kindness of the worthy landlord, Mr. Griffiths, who offered the room the meeting was held in, rent free; and as the river Colne runs at the bottom of his garden, he promised to keep bait for the club. I need not add the kind offer met with loud applause. A committee was then elected, Messrs. Horn, Lucas, Allen, Cutchee, and Vincent, who, of course, have power to add to their number. Mr. Vincent was then elected as sec. pro. tem. A vote of thanks was passed to the worthy chairman, for his kindness in calling the meeting and for the able manner in which he had filled the chair that evening.

On Thursday evening, March 23rd, a West Central Association (No. 2 district) visit was paid the Amicable Waltonian Angling Society, Horse and Groom tavern, John Street, Clerkenwell. Their comfortable little club-room being fairly filled with representatives from fourteen societies, eleven in the district and three out of it, viz. Amicable Brothers, Amicable Waltonians, Bloomsbury Brothers, City of London, Metropolitan, Reform, St. John, Sir Hugh Myddleton, West Central, Convivial, and Trafalgar, and the Bridgewater Brothers, North-Western and the Original Clerkenwell Piscatorial. Mr. Vanhagen occupied the chair and was faced in the vice by Mr. Fowler. After some capital songs and recitations from Messrs. Hamilton, Lewis, Scott, Whitehead, Bonvoisin, Gill, Roberts and others, the roll was called shortly after eleven by Mr. L. Bonvoisin, the district visiting officer, who took the opportunity of making a feeling allusion to our brother worker, fearless, zealous George Oram, who has so recently passed away from among us. The next visit in this district will be paid the Bloomsbury Brothers Angling Society, Rose and Crown, Broad Street, Bloomsbury, on Wednesday evening, April 5th, when a good muster of piscators is anticipated.

The Waggon and Horses Tavern, at Ware, Herts, has been taken by Mr. E. Hilliar, who, I am told, is prepared to cater for anglers at a considerably reduced tariff.

The Hoxton Brothers' new address is the Cherry Tree, Kingsland Road. I hope this famous, club and its equally well-known and respected secretary, will find this latest swim to their liking.

A new station is about to be opened on the Great Western Railway, between Pangbourne and Reading, the name of which will be Tylehurst, or Tilehurst. I am not sure of the orthography of the word. There is no doubt it will prove a great boon to anglers, who, at present, to fish the grand stretches about Mapledurham, are compelled to undertake a long tramp there and back, either from Reading or Pangbourne.

Mr. Hoole, the secretary of the West Central Association, some time since, wrote a letter *re* gross weights in angling clubs. I wondered for a long time what meaning the words "gross weights" conveyed to the minds of those readers of the FISHING GAZETTE who were not members of angling societies. From personal enquiry of several such gentlemen, I find it is—or, I should say, was (as I, of course, took care to undeceive them)—believed to mean the retention, showing, and weighing-in of all fish, quite regardless of size or weight. Now, of course, this is altogether wrong. There is no greater respecter of undersized fish than your clubman; the printed rules of his society, which invariably include the scale of takeable fish, strongly impress this upon him, while in many societies any breach is further brought home to the offender by the infliction of a fine. I sincerely wish anglers who are not members of angling societies would follow the good example thus set them. I have over and over again been laughed at by local anglers in many parts of the country for returning the babies to the water.

Now several societies have lately gone in for the abolition of "gross weights," all prizes being given for specimen fish only, yet we are almost every week startled (in my case, I own it, made piscatorially envious) by the record of one or more magnificent takes of roach, jack, &c., shown and weighed at these very societies; 80 or 90 lb. of roach and between 100 and 150 of jack at one weighing, to my mind look marvellously like gross weights in practice. Whether these fish are weighed-in for prizes or not does not matter a jot, nor does it affect the principle at stake; and, indeed, if they are not, only makes the anomaly all the greater and lays the members and framers of the rules open to a charge of inconsistency between their theory and practice. Of course it can be pleaded that the minimum scale of weighable fish in these societies is much higher (it had needs be); however, that is a matter of detail and does not in any way affect the principle at stake. Poor Joe Smith or Bill Brown, whose slender means and life of almost constant toil only allow of his having a few hours' angling once a week, perchance at Tottenham or Richmond, is just as true a sportsman, though he does only weigh-in half-a-dozen roach of four or even five to the pound avoirdupois, as his wealthier brother-bob, who shows half a hundredweight of grand roach from the Avon, averaging from $\frac{1}{2}$ to $\frac{3}{4}$ lb. I sincerely hope we shall have an expression of opinion from our friends who have lately made such a dead set against gross weights, but, first of all, let us have a clear understanding of what they mean by gross weights and by specimen fish only.

Re Thames trout. I sincerely regret Mr. B. has used Mr. Forbes' name in the discussion of this subject. I question the good taste of having done so, as it has nothing to do with what Mr. Marriott and myself referred to, viz., the stocking of the Upper Thames with expensive Wycombe bottlers. An attempt to propagate trout from our real Thames fish is altogether another affair; and, without venturing to offer an opinion as to the probable chances of success or otherwise, would not, if kept within reasonable proportions, I feel sure, meet with the disapproval the expenditure, on little strangers, of comparatively considerable and otherwise sadly-wanted amounts, has done on the upper reaches of the river.

William Wilshire and William Nicholls, on Tuesday 28th, at Ware, before a full bench of magistrates, pleading guilty to netting and illegal possession of fish during close time (jack, roach, chub, gudgeon, &c., about 12 lb.) were convicted, and ordered to pay 10s. fine and 9s. cost in each case, and the net to be forwarded to Mr. Corble on behalf of the Lea Conservancy, prosecuting.

PECKHAM BROTHERS ANGLING SOCIETY.

The annual dinner of this society took place at the club house on the 21st, A. Brodie, Esq., was in the chair, H. T. Reed, the treasurer, in the vice; covers were laid for twenty-six. The dinner was served up in the best style, and after every one had done justice to the good things placed before them, the chairman proposed the toast "The Queen and Royal Family," and in doing so spoke of the interest taken by the Royal Princes in matters piscatorial. A song written and composed by W. G. Weber, "The Jovial Peckham Brothers," was then sung by the author and received with a round of applause, after which the toast of the evening, "Success to the P.B.A.S." was given. Responding to the above, the hon. sec. spoke in glowing terms of the state of the club, and ending by advising all who were not already members, to join at once, and partake of the pleasures of angling. A song by Mr. Deeke, and then the presentation of prizes by Mrs. Reed, who with kindly words greeted each winner as they passed before her. "The prize donors," was replied to by Mr. Fell; "The Prize Winners," by Mr. Garrard; "The Officers," by Mr. Reed; "The Visitors," by Mr. Tickle, and the toast of "The Chairman," drank with three times three brought the list to a close, after which the evening was spent in harmony, the following gentlemen singing:—Mr. Bignall, "Full Inside"; Mr. Reed, jun., "The Powder Monkey"; Mr. Page, "Four Jolly Smiths"; Mr. Gendle, "Home Once More"; Mr. Palmer, "The Vicar of Bray"; Mr. Stidolph, "Saving them all for Mary"; Mr. Jones, "The Death of Nelson"; and so a pleasant night was passed, and at 3 a.m. we parted, with a wish from the chairman that we may shortly meet again.—W. H. PAGE, hon sec.

THE SOCIETY OF CAXTONIAN ANGLERS.

The first annual general meeting and dinner of this influential fishing society took place on Monday, the 27th inst., at the club house, the Falcon Hotel, Gough Square, Fleet Street. Mr. W. Cate, the president, was in the chair, faced by Mr. G. Esson, the vice-president. A most récherché dinner was partaken of by a numerous company, and the evening enlivened by some excellent singing contributed by Messrs. J. H. Stead, W. Cate, jun., Reeves, Esson, Matthews, Little, and others, was most enjoyably spent. On the removal of the cloth the usual loyal toasts were given, as were also "Prosperity to the Society of Caxtonian Anglers," "Health of the President," "Vice Presidents," "Committee," "Secretary," and the chairman said that he could not allow this opportunity to pass without proposing success to the "Great International Fisheries Exhibition, 1883," all of which were received enthusiastically, and responded to in a short but happy manner. The prizes won during the fishing season were distributed by the president to the various winners, Mr. A. Wayman proving himself the most successful competitor by winning no less than seven prizes, including the club prize of a silver cup. This society, although having been only nine months in existence, has proved remarkably successful, the social position of the members, coupled with the indefatigable exertions of the executive, bringing it in the foremost rank of the piscatorial world. The prizes, amounting to nearly £40, were awarded as follows:—Mr. A. Wayman, 7 prizes for the largest trout, barbel, chub, and gudgeon, and the heaviest weight of roach, dace, chub, and gudgeon; Mr. T. Matthews, 3 prizes for largest pike and heaviest gross weight of jack; Mr. W. Cate, 4 prizes for largest roach and bream, and heaviest gross weight of roach; Mr. C. Millbourne, sen., 2 prizes for largest dace and tench; Mr. G. Reeves, sen., 2 prizes for largest perch and heaviest gross weight of perch; Mr. W. Pyne, 1 prize for largest fish taken with a fly; Mr. A Brooks, 1 prize for heaviest gross weight of barbel.

GEORGE JAMES EATON, of Starkholmes Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[ADVT.]

SPECIAL NOTICE.

NEXT Friday being GOOD FRIDAY, the GAZETTE will be published at 3 o'clock on Thursday afternoon.

TO OUR RIVER REPORTERS.

NEXT Friday being GOOD FRIDAY, the GAZETTE will be published on Thursday, and all river reports must reach the office by 9 a.m. on Thursday morning.

RIVER REPORTS.

MID-THAMES.

" And when the timorous trout I wait
To take, and he devours my bait,
How poor a thing, sometimes I find
Will captivate a greedy mind."—WALTON.

To-day (Saturday) trout fishing commences on the Thames, and I sincerely hope many a timorous trout will be greedy minded enough to take the bait offered to them by purely philanthropic piscators. The river this time last year was only just out of flood, but now it is in excellent trim as to colour and temperature, and sport will accrue to the toiler and spinner, especially if beforehand he has marked down his game, or has reliable information of the whereabouts of the spotted beauties. At Streatley, Goring, and Maple Durham I hear of some things of life which may be made fools of on the 1st. Marsh Pool, near Henley, has a tenant or two at will; and Hambledon waters are a sure find to those in the know of the bits to be fished. Newlock, Hurley, generally has a fish or two about its clothes, but is somewhat disturbed now with the making of the new weir. Marlow waters are always good, and the same may be said of Maidenhead and Bray. The wind has been chopping round from north to south but now seems stationary at the latter quarter. So what can a troutist want but good luck, and that one and all may have it is the wish of—MARLOW BUZZ.

Ballynahinch.

The angling on the above has been very good for this last week. On the 23rd, Mr. J. C. Deverell, two salmon, weighing 12 and 14 lb.; same date, Mr. R. Mecredy, sen., two, 9½ and 10 lb. On the 25th, Mr. J. C. Deverell, three salmon, 12, 12, and 16 lb.; same date Mr. R. Mecredy, one, 10 lb. On the 27th, Mr. J. C. Deverell, one salmon, 18½ lb.; same date, Mr. R. Mecredy, senr., one, 10½ lb. On the 28th Mr. J. C. Deverell, one, 10 lb. Total for the week:—two rods killed 11 salmon, weighing 134 lb. Weather still stormy, with occasional hail showers.—WALTER BLACKADDER.

Chichester.

The lowering of the water necessary for the repairing of Birdham Lock will commence on Monday, April 3. The main body will be lowered 18 inches, a dam put in at Donnington Bridge, and the canal between the dam and lock emptied. There will still remain a full reach to the outer lock. Active arrangements are being made on behalf of the United Brighton, Portsmouth and Chichester Clubs to secure and return fish to the upper water, clear away weeds, and watch the canal night and day during the progress of the work. The large pike, whose loss by a Portsmouth angler we chronicled a few weeks since, was found in the lower waters, dead, with the hooks firmly embedded. It is surely high time gorge tackle should be abolished.—GEORGE SALTER.

Coquet.

On the 24th, Mr. Wood, of Lindon, killed a good basket, 5 lb. On the 25th, Mr. Hedley, Felton, a good basket, 4½ lb. On the 27th, Mr. A. Hutchingson, Bukenfield, killed a splendid basket, 8 lb.; Mr. J. Wear, of Felton Mill, a splendid basket, 8 lb.; the Rev. Mr. Oliver, curate, Longhorsley, good basket, 4 lb.; Mr. Row, Moleshaugh, 5 lb. Monday being the first of the red fishing for salmon, Messrs. Morlee, Young, and Rough were fishing for salmon, and had very poor sport. J. Young landed one little over 2 lb. There has been no fishing for the last two days, the wind blowing strong from the west.—A. GLASS, The Angler's Inn

Dove.

There is very little angling news stirring this week. The wind and weather have since my last been dead against trout-fishing, and next to nothing has been done. We are sure to have plenty of good sport when the elements become less boisterous and milder, but not till then. The best killing flies have been the cockwing dun, the cowdung, and the bumble. The artificial minnow has proved the most destructive in the brooks. Salmon have been running up the Dove all the week in abundance, but I don't hear of any being killed with the rod and line. Some of the locals were busy on the open lengths last Saturday, but they might as well have stopped at home for any success they had. Grayling keep rising, but if caught must now be thrown back again into the water.—THE SPLODGER.

Exe (Exeter.)

Up to within the last few days sport has been excellent, both for salmon and trout. The cold winds, accompanied with snow, have backened sport most materially. The fish are lying in threes and fours in numerous parts of the river, and, although the casts have been beautifully made, but very few runs have been the reward, the minnows actually passing in front of their nose, and, with an insignificant look, they turn upon their sides, and allow the line to be drawn over them without taking the slightest notice. Messrs. Lee, Pearson, and Goucher, considering all obstacles, are doing well. The neap tides have been very low, and the spring tides have not been up to the average. Gravelling are most abundant and of good size, 6 inches being the average. Parr-marked fish are not so plentiful, the majority seem to have put on their silver coats, probably; being last year's smolts, and are on their way down. The parr-marked will follow later in May, no doubt. They are looking for mackerel in the estuary, but at present the fishing is confined to flat fish. Lobsters and crabs are plentiful and fine from off the Exeters, which are rocks some few miles off Budleigh Salterton. Some fine ballan wrasse and a few bass have been landed; the former, as a rule, are used for crab and lobster bait, the same as dog-fish. The wind is blowing strong from N.N.W. and every indication of rain.—FRANK GOSDEN.

[How is the bait you send used? There seems nothing new about it.—ED.]

Exe (Tiverton).

The water at present is in very good order for fishing, some very good baskets have been made during the past week; at times fish sported very well. The largest trout that has ever been killed with the artificial fly in the association water fell a prey to Mr. Frank Folland on Tuesday last, in the lower portion of the water about two miles below Tiverton, Mr. Folland, who was fishing with very fine tackle, and who well knows how to handle a good fish, played him about twenty minutes, and followed him about 500 yards, having to take to the river up to his waist to pass trees and bushes, at length succeeded in killing him in grand style; it was a male fish in splendid condition and beautiful in shape, weighing 5 lbs., to use a local phrase "a whacker;" the fly it was taken with was the hare's flax upright. The March browns have now come on in swarms, and fish are taking them very greedily. Flies that have taken best during the past week are the hare's flax upright, blue upright, halfstone, and iron blue.—W. MUDFORD.

North Lincolnshire Trout Streams.

Most of the becks in this neighbourhood pass through private grounds, and the proprietors are exceedingly chary in granting permission to angle. One can hardly be surprised at this, as the fishing, though generally good in quality is deficient in quantity, and it would be no easy matter for some of the smaller streams to be fished out. The Bain is, without doubt, the finest trout stream in the county. But little has been done with the rod during the past week, owing to adverse weather. It is now showing some improvement, and anglers may again take to the March brown, light and dark woodcocks, and olive drake.—THOMAS FORD.

Severn (Shrewsbury).

The river has been very high this week, but has gone down just as quickely and one of our members has weighed a very fine trout of 1½ lb., caught with a minnow. The water will not be right until about Tuesday next for fly-fishing. —F. H. M.

Swale.

Nothing of note has been done on this river during the past week, owing to rough and cold weather. Many local anglers say no fishing ought to be allowed on this river during any month with an "r" in it. Of course, your correspondent is not at one with them.—THOMAS FORD.

Suir and its Tributaries, Clonnel.

The cotmen did badly last week, getting only 11 fish. This week they are doing better. The fish at present are running very small, averaging about 10 lb. We had a thick flood on Sunday, which ran down in two days. On Lord Donoughmore's preserves Thomas Phelan a fine salmon, Mr. Edward Quinlan 2 on Thursday weighing 22½ lb. and 10½ lb. On Saturday he landed one weighing 15 lb. Mr. N. Bagwell got one salmon weighing 6 lb. Mr. J. Leslie Worrall, jun., on Saturday, after ten minutes' play, landed a beauty of 10 lb. The trout fishing is slightly improved since last week.—DORA.

March 30th.

Taw and Tributaries (N. Devon).

Water lately has not been in very good condition, the road washing discoloured it. The high, cold winds keep many gentlemen home. The weather is warmer, and no doubt some good fishing, especially kelt hooking, may be expected next week. I have heard of one dish of good trout, eighteen fish, caught when the sun was up, and I have heard of three or four catches to-day. The river Yeo has been well fished. Thursday being Bank half-holiday, six or seven of the clerks are out somewhere. The lower Taw is to be opened, tickets £2 2s., which will be a great boon, as their was no fishing to be had for paying, and season tickets are only to be issued.—RUSTY GAME.

Thames (Goring).

Water a little thick now, but will be in good order by Sunday, if it keeps fine, for trout. There has been a trout feeding here for the last day or two of about 5 lb. weight. Roach and chub are coming up to Goring Bridge to spawn.—JOHN RUSH.

Tweed and Teviot.

The rivers have for the past week been in fair angling order, and some good takes of trout have been got. Salmon fishing, however, has not been so successful, and on all the casts the reports are to the same effect, *i.e.*, very little doing, and those that are killed have either the disease on them or have recovered from it. Of course there are exceptional cases where really good fish were got, such as have been killed in the Hendersyde water during the past week; but there is not the slightest doubt but that the disease is still in our rivers, although not so rampant as it was some months ago. On the Hendersyde water, Sir George Waldie Griffith, of Hendersyde Park, has killed no fish up to date, although he has angled every available day. On the Junction water Mr. A. Steel lost a nice fish of 8 lb. On Monday, on the lower Hendersyde water Mr. Pringle, fish merchant, Kelso, killed three very handsome salmon, one being 11 lb., the others less; he also lost a fourth fish. The fish killed had all tide lice on them. On the Ednam House water Mr. Pringle Elliott landed a kelt, but all the other waters in the neighbourhood were fished blank. Tuesday was not a good angling day, and little was done, the only fish killed being one on the Sprouston waters, the successful angler being Mr. C. Kerss. On Wednesday, on the Hendersyde water, Mr. Pringle Elliot killed one salmon, and one kelt was landed on the Sprouston fishery. His Grace the Duke of Roxburgh had poor sport on his waters during the end of last week, and none on Monday. Trout-angling has been much prosecuted during the week, and fair good baskets have rewarded the angler. On the Teviot, at the Ninewells, Mr. G. Turnbull killed 9 lb. of trout, one of which was 2¼ lb.; on the Junction water 7 lb. were got by one gentleman, and on the Maxwheel Pool, from the boat, Mr. Horrocks killed 9 lb.; while, on the Junction and down below Kelso Bridge, Mr. P. Elliot had between 8 and 9 lb. On the Sprouston water, J. J. E. Brown, Esq., of Rosebank, killed a good heavy dish, and on the Hendersyde water, Sir George and Mr. Waldie Griffith each have had rare sport with the speckled beauties. On the Teviot Mr. R. Robertson had a capital basket, and on the Tweed, Mr. James Pearson, Coldstream, had 9 lb.; Mr. A. Guthrie, 8 lb. 10 oz.; Mr. G. Guthrie had 6 lb. 12 oz.; Mr. George Pearson, 5 lb. 5 oz., and many other smaller baskets have also been got. On Wednesday Mr. John M'Kie Walker killed a very heavy basket, the fly he got them mostly with being the Digby Cayley. The waters are in good ply, and, as the weather is mild, with a few showers now and again, fair trout angling may be expected for some time to come.—Maxwheel (Kelso),

Wye and Derwent.

Last Saturday, the 25th inst., was the opening day for to commence trout-fishing on the Darley Dale Fishing Club waters, between Rowsley and Matlock, and a fair number of anglers have been out on this part of the Derwent trying their skill with both fly, trolling, and bottom-fishing; and I am pleased to say that there have been some good dishes killed chiefly with the Derby trout killer; one person taking five brace of good trout in about three hours last Monday afternoon, and several other anglers have also killed some nice well-fed trout with both the fly and by trailing the worm in the steams. The killing flies have been the claret body bumble, furnace, and February red flies. Sport on the ponds has been good, and some excellent creels of trout have been killed, chiefly with the fly, and by bottom fishing with worms for bait. Next Saturday, the 1st April, is the opening day for trout to be taken on the Wye and also on the Derwent Chatsworth Fishery. The keepers employed say there is every appearance of a good trout-fishing season, as there is a good stock of fish in both rivers.—George James Eaton, Starkholmes, Matlock Bath.

TO CLUB SECRETARIES.

Next Friday being Good Friday the Gazette will be published on Thursday, and all reports must be sent in by Wednesday, or, at latest, by Thursday morning.

CLUB REPORTS.

GREAT NORTHERN BROTHERS' ANGLING SOCIETY.

We have completed our season for fishing, except trout. The total weight of fish weighed on Sundays, bank fishing, from public waters, is 968 lb. 2 oz. Our concert on Wednesday last was well attended. The chair, as occupied by Mr. G. Bentley; vice, Mr. J. Fitch. The following gentle men contributed to the harmony of the evening:—Messrs. Bentley, J. Fitch, C. Watling, sen. and junr., E. Barr, Jackson, Neale, W. Parkin, Harradine, and H. Hopton. The chair will be occupied on Wednesday by Mr. Hornfeck, faced by Mr. C. Watling, senr.—J. A. Fitch, junr.

March 30.

GRESHAM ANGLING SOCIETY.

The members of this society met in large numbers on Thursday evening; W. B. Adlington, Esq., in the chair. After considerable discussion, it was decided not to continue either of the waters which the society had arranged for a year ago, the feeling being that however good these waters might be in themselves, the society would do better to obtain water for their own exclusive use, which it was thought they might now do. The Waltham water was highly spoken of for future use, as, by the care now bestowed upon it, it was certain to answer expectations. A sub-committee of five was afterwards appointed to arrange for any suitable water that might offer. A number of valuable prizes were offered during the evening, of which we must defer details until next week. After an appeal by Mr. Crumplen, seconded by Mr. Field, the Angler's Benevolent box was handed round, and received a considerable addition. Another new member having been proposed, the proceedings closed with a very hearty vote of thanks to Mr. Adlington, who had occupied the chair during one of the most important meetings yet held by this society.

HAMMERSMITH UNITED ANGLING SOCIETY.

The return of Mr. P. Geen to the neighbourhood of Hammersmith has received a hearty welcome from the members of this club, in which he took so personal an interest at the time he was a resident in Hammersmith. The association of this gentleman's name with that of Mr. Thomas Hoole, who were at one time in official connection with the club and the West Central Association, was always regarded as resulting in success. Mr. H. G. Penney is now the active secretary of the society, and right heartily does he labour for it. The annual dinner of the club is fixed for Thursday, April 27, in the club room at the Builders' Arms, where the members are always well catered for by Mr. and Mrs. Green. The chair is to be occupied by Mr. P. Geen.—B.

JOVIAL ANGLERS.

On Thursday last, 23rd ult., the above club met under the presidency of Mr. T. Lomax, who presented the prizes to the following members:—Mr. Steade won the medal for the greatest weight, from the bank, presented by T. Hoole, Esq.; also a large metal box for keeping fishing implements. Mr. Clarke won the club prize for the largest Thames roach, weight, 1 lb. 13½ oz.; also a fishing rod, presented by a member. Mr. Newell won the club prize for the largest dace, weight, 6½ oz.; and Mr. Kollmann, for the greatest weight taken in punts; both of these prizes were fishing rods. The chairman, after a few appropriate remarks, presented the prizes, and the remainder of the evening was enlivened with harmony, in which Messrs. T. Lomax, Hirold, Keep, Clarke, &c., distinguished themselves, and made the evening pass right merrily. We have now arrived at the end of our first season, and after paying all claims upon us, have still a balance which, would be larger had all the members paid up.—H. W. Platt, sec.

LITTLE INDEPENDENT ANGLING SOCIETY.

Our members wish to inform all brother anglers and friends that our local visit takes place on Tuesday next, April 4th, at the club house, Russell Arms, Bedford Street, N.W., when we hope to have the pleasure of as many as can make it convenient to attend. We also have the room open for harmony on Saturday evenings, when we shall be happy to see all smiling faces who wish to spend a happy evening.—H. Moore, sec.

PISCATORIAL SOCIETY.

There were about thirty members at the weekly meeting at Ashley's Hotel on Monday evening last, Mr. J. G. Andrew being voted into the chair. Mr. Thomas, who is now on a visit to the Irish lakes, registered five salmon from Lough Melvin. Dr. Brunton also registered four trout weighing 8 lb. 11 oz., caught with the fly from private waters. Mr. James Pattisson showed 10 lb. 13 oz. of roach from the Colne.

ST. JOHN'S.

The members of this social club met at their headquarters, the Three Compasses, Cow Cross Street, on the 22nd, to enjoy a leg of mutton supper that had been fished for on the last Sunday of the season. Mr. Woolf, of the winning side, in the chair, Mr. Pledge, of the losing side, in the vice-chair. After the usual loyal and club toasts had been drunk, Mr. Woolf (with the consent of his party), challenged the losing party to fish for another supper, and they accepted with right good will, the return match to be fished on the opening Sunday. Mr. Pledge having secured the services of two friends to play the piano and violin, some first-class music was enjoyed, while Messrs. Giddings, Burges, Woolf, Mathews, Pledge, Stevens, Leach, Heben, and Hunt sang some first-rate songs that brought to a close a most enjoyable night.—F. Thorling.

March 28.

PISCATORIAL SONNETS.

I.

A NEW TROUT STREAM.

"New love: new life!"—so sang a bard of fame;
And tho' the old, familiar face as dear
As ever, and as fair, *should* be, yet here
How newer features show strange power to claim
The homage of the inconstant heart! Thence blame
Comes, and confession sad to casuist's ear,
E'en if *such* lapse no penitential tear
Sees fall in sorrow—shed by erring shame.
And yet how winsomely in all its first
Fairness and freshness flows the new-found stream!
How the hills seem, heaven-kissingly, to rise!
How brightly beams the smile of the sun-burst,
Glinting o'er mount and mead! And how *they* gleam,
Those glancing colours of that glorious prize!

London, A.R.I.E.L.
March 25, 1882.

ANNUAL DINNER OF THE LARKHALL ANGLING SOCIETY.

This prosperous society is one of those clubs that rest their faith on the appointment of a permanent chairman, that is, one presiding genius who occupies the chair each meeting night if nothing in the way of business or serious indisposition prevents his attendance; and, taking this club and the Richmond Piscatorial Society as examples in this respect, there is the most substantial proof of its great value—it ensures a punctual commencement under a recognised head. What Mr. F. Clench has done for the Richmond Piscatorials, Mr. G. F. Spencer has previously achieved for the Larkhall Anglers. There are few clubs that have done more in the promotion of first-class "smoking concerts"—if it was not really the first to introduce them, as "musical evenings"—than the latter society; and altogether, under the rule of Mr. Spencer, no other club can be better conducted, or where success has been more conspicuously and permanently attained. It is one of those societies that holds its annual banquets away from the suburban club house; and although Mr. C. J Morris, the proprietor of the Larkhall, at Clapham, is one of the best of men and a thorough angler, and would do all he could for the members, the London houses, as he well knows, are more adapted for such entertainments; and, besides, in this case Mr. B. Boyce, the energetic host and proprietor of Mouflet's Hotel in Newgate Street, where the dinners have always been held, is an active member of the club and entertains his brother members in the best fashion, and personally superintends, The attendance at the eighth annual dinner on Tuesday evening last at Mouflet's Hotel was larger than usual. Mr. G. F. Spencer, as the ruling spirit, presided on the occasion, with Mr. Nicholson in the vice chair. Amongst the visitors were Messrs. Thomas Spreckley and W. H. Brougham of the Thames Angling Preservation Society, and Mr. P. Geen of the West Central Association. Of the members there were Messrs. E. N. Mallett (hon sec.), C. J. Morris (treasurer), J. C. Caplin, W. Perry, G. Nicholson, C. Davison, E. Nixon, F. Boyce, B. Boyce, J. Duck, James Halle, H. Lovett, A. Glover, J. Edmondson, R. Edmondson, C. Broadlake, W. Creake, F. R. Harding, W. H. Green, J. Kearne, J. W. Green, H. Beverton, R. Bruce, H. Kite, Gordon Laurie, T. Cranch, &c., &c. The cloth having been removed, Mr. G. F. Spencer proposed "The Queen and Royal Family," and said there was no greater loyalty existing in any other club, nor any larger desire for a long reign of Her Majesty. The dinner coming so early after the recent outrage, the large company rose and enthusiastically sang "God save the Queen," the solo parts being taken by Mr. A. Glover. The chairman then gave "Success to the "Larkhall Angling Society," which he regarded as the toast of the evening, The club occupied a most prominent position, and he had used all his influence to promote its success. In this the members had liberally and unitedly assisted him, and the result was that it had grown in strength, usefulness, and energy. He should couple with the toast the name of their indefatigable secretary, Mr. E. N. Mallett, who would be able to speak more in detail of the society's work.—Mr. Mallett on rising was loudly applauded, and thanked those present for their reception of his name. The society during the past year had been one of undoubted success, both numerically and financially. There had been an accession of twenty-three new members, and the balance-sheet exhibited an amount of £34 in the hands of the treasurer. The total quantity of fish weighed-in was 1327 lb. 3¾ oz., being more than double that of last year and the largest total ever weighed-in. The challenge cup for the greatest weight in one day had been won by Mr. G. Watkins with 35 lb. 5 oz. of fish. Prizes of the total value of £84 12s. 6d. had been won by the members. The chairman next proposed "Success to the Thames Angling Preservation Society, and in the association of Mr. Thomas Spreckley with it, whose presence they most heartily welcomed that night, he observed that that gentleman's heart and soul were in the work. Without a Thames Angling Preservation Society the fishing in the Thames would soon become a thing of the past; its success was greatly due to Mr. Spreckley, who spared neither time, money, or influence, let alone zeal and energy, to make the preservation a substantial reality, and as long as he continued president of that society, the anglers would, he was sure, have all their wishes attended to.—Mr. Thomas Spreckley, who was heartily received, expressed the great pleasure he felt in coming amongst them, and heartily thanked them for their kind reception. He believed the society was doing a great work for the river; he was supported by a practical committee, and to show how the meetings were attended, there were no fewer than seventeen present at the last monthly meeting and three hours were occupied in business. As regarded himself, the position he occupied had been forced upon him, and he believed that since his personal attachment to the society the fishing interests had been greatly extended. He had gone amongst the angling clubs and had identified himself with all classes of anglers. There were, he was assured, plenty of fish in the river; the dace had headed up in the largest quantities ever known, and the practice of snatching them has been prevented by the complete protection of Teddington Weir. The roach that were taken out of the back stream at Hampton Court last year were represented by thousands. So that all was done to assist nature in the movements of both dace and roach. He regarded the doing away with night lines as most important, as it was well known many fine Thames trout came to grief in that way. He was, himself, ready to work night and day for the anglers; he had on several occasions been out at night when the anglers were sleeping quietly in their beds. In referring to the reservoirs, he said that a practical calculation had been made of the weight of the 5000 fish taken out of the Sunbury reservoir, and it was within a trifle of half a ton.—Mr. W. H. Brougham gave "Success to the West Central Association," which had, during the last seven years, done so much for the London anglers, and he was quite sure they were, amongst others, very largely indebted to Mr. Geen, whose name he should couple with the toast, and who was always foremost in every good work that would lead to the interests of angling.—Mr. P. Geen was warmly applauded on rising, and said that on the first start of the West Central Association there was no other club that had rendered greater assistance, and paid a graceful tribute of respect to the memory of the late Mr. Beyer, their valued delegate at that time. He then referred in complimentary terms to the energy and perseverance of Mr. Spreckley as a gentleman who acted on broad principles, not working for one class but for all classes of anglers. There was nothing more enjoyable than a day's fishing on the banks of the river. He was bringing all his boys up to it. It would be a training point in fighting the battles of life. There was a Government Bill before the House in reference to the pollution of rivers, and there would shortly be another Freshwater Fisheries Act which would deal more generally with the interests of angling; but he should not rest satisfied until there was the Government appointment of a Freshwater Fisheries Inspector.—"The Committee and other Officers," proposed by Mr. Geen and replied to by Mr. C. Davison; and "The Visitors," responded to by Mr. W. Robinson, were the only remaining toasts on the list. Mr. J. Halle, formerly of the Westminster Aquarium, presided with great skill at the pianoforte. The singing, which is a great item on these occasions, displayed an array of talent amongst the members that could not possibly be excelled by professionals, and being so numerous it would, where all did it so well, be invidious to make a selection of names. The evening was one of perfect enjoyment, and the happy "Larkhall Anglers" did not separate until a late hour.—B.

Death of a Noted Fishing-rod Maker.—We regret to announce the demise, at Edinburgh, of Mr. William Dickson, fishing-rod manufacturer, at the early age of 44 years. Mr. Dickson came to Kelso some fifteen years ago, at which time he was in the employment of Messrs. Forrest and Son, with whom he worked nearly twelve months, when he started business on his own account in Roxburgh Street. While here his merits as a fishing-rod maker were at once recognised, and much admired by well-known authorities in the piscatorial art, none knowing better than he how to put "the pieces" together, and in the selection of the various woods used for manufacturing rods he was a thorough adept. On leaving Kelso he was entrusted with the entire management of the large fishing-rod manufactory in Glasgow owned by the Messrs. Jack, which establishment he remained in until compelled to resign through ill-health. Shortly after this he removed to Edinburgh, where he commenced business as a fishing-rod manufacturer, and so well known had "Billy Dickson's" rods become by that time, that he at once commanded a large and increasing business, which had, under his personal supervision, thriven well up to the time of his decease. As a hand fishing-rod maker he had no superiors, and but few equals, as those who are fortunate enough to possess one of his rods of this description well know. At the Paris Exhibition in 1878, Mr. Dickson's stand of fishing-rods was awarded a silver medal. Mr. Dickson was of a cheery desposition—a real angler's companion—was well known and liked in and around Kelso, and his early death will be greatly regretted by a large circle of friends and acquaintances in this district.

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

THE FENCE MONTHS.

Sir,—It is with much pleasure I read Messrs. Atkinson and Hellewell's letter in last week' Gazette, and sincerely trust it may be read by many landed proprietors, who will instruct their keepers accordingly.

But my object in writing to you is that by publicity an evil that has come under my observation may be rectified. Last Sunday week, being the first Sunday in the fence months, I strolled along the towpath of the Bridgewater Canal, from Patricroft to Monton Bridge, a distance under a mile, and saw no less than seven men fishing; three of these, to whom I spoke, said they did not know that they were breaking the law; and a constable, whose attention I called to the men fishing and explained its illegality, coolly informed me "that he knew nothing about the Mundella Act, nor had he any orders about stopping fishing." Now, sir, should not the police be instructed to see that the law is enforced, especially in public waters, on whose banks they patrol? Then, again, cannot the Manchester Association do something, say, by putting up notices on the banks, &c., as done by the associations on the Thames? If not this, surely they can have some jurisdiction over the members of its clubs, as I am ashamed to say I recognised a late chairman of a local club among those I saw breaking the law.—I am, &c., A. S. W.

Eccles, March 27.

P.S.—Since writing the above, I hear that, through the instrumentality of the district secretary of the Manchester Association, the sale of between 30 lb. and 40 lb. of very small pike has been stopped in the market. This gives hopes of something being done under the other clauses of the Act.

THAMES TROUT—GRAINING—PIKE AND HOOKS.

Sir,—R. D. E. is, in my opinion, eminently in the right. By all means let us have the genuine Thames trout, and not Wick or any other small river fish introduced. For quite a dozen years, in one paper and another, have I been harping on this string. Thames trout are to me the Omega of Thames sport. I have watched, waited for, caught, eaten; I have dissected and skeletonised this fish; I have had him "my vision by the night and my dreaming by the day"; and I would wish for no happier fate than to go over to the majority with a fresh-caught beauty in my sight. Hence my extravagant enthusiasm and perfect accord with R. D. E.

But the Thames trout sometimes, and especially when he is in the proper season, *i.e.*, full of milt or spawn, refuses to be caught. At the same time when the fish is ripe the floods are usually high and netting becomes very difficult and unprofitable work. Mr. Forbes is certainly to be congratulated on his success as chronicled by B., but I could have wished that Mr. F. had preserved his fish for breeding purposes instead of turning them in, on account of the difficulties referred to. Depend upon it there is a peculiarity about this *poisson d'Avril* which accounts for its large size; *Salmo fario* it may be, but most certainly the variety is distinct from the trout of Devonshire and the Welsh pools. Let anybody prove me by comparing a specimen of these latter with the cast of that glorious trout from Reading exhibited in *Land and Water* window, which in the flesh weighed 15 lb. 16 oz. Old Walton's Fordidge trout—whatever it may have been—pales its ineffectual fires before such a beauty, or, as our American cousins would say, such a "daisy."

The can be but little doubt that this trout is decreasing in an alarming degree in the Thames. Captain Alfred has been credited with an enormous catch in days gone by. Where is a recent chronicle such as his, and that referred to by Yarrell, of eleven fish weighing 54 lb.? Echo answers—Where?

* * * * * * *

Re the graining. From the "Trent Otter's" description, as I before assured him, I am convinced that his nondescript fish is a graining. The dace, as he truthfully says, has fifty-two scales in the lateral line invariably, and my examination of the graining—and I had several sent me last year—agrees with what Yarrell says, namely, that the latter fish possesses only forty-eight. Besides, the scales of this fish are larger, and the radiating lines less in number. The fin rays are as follows:—D. 9, P. 17, V. 10, A. 11, C. 19, as against those of the dace as follows:—D. 9, P. 16, V. 9, A. 10, C. 19. Besides this is a true description:—Top of head, back and upper parts of sides, of a pale drab colour tinged with bluish red, separated from the lighter coloured inferior parts by a well-defined boundary; the irides are yellowish white; cheeks and gill covers shining silvery white, tinged with yellow, all the fins pale yellowish white. A Pomeranean bream (*cyprinus buggenhagii*) is an entirely different fish. The scales of its lateral line are fifty-two, and the following are its rays:—D. 12, P. 17, V. 9, A. 19, C. 19, besides the lower fins are more or less ruddy coloured.

In any case, I shall be happy to receive a specimen from the "Trent Otter," when he next obtains one, and I will carefully examine and report.

* * * * * * *

The capture of pike with hooks attached to them is by no means an unusual event. I am convinced that pike really do feel very little constitutional disturbance on being hooked. More than once I have taken the remains of hooks from the stomachs of jack in good condition. On one occasion a gorge-hook, the lead of which had been so oxydised as to crumble between the fingers on removal. This does not argue the cruelty of fishing, certainly. In the *London Museum*, 1822, there is an anecdote given, in which it is stated how the eye of a perch was accidentally torn from its head, and a few minutes afterwards it was brought to bank, having bitten at its own eye, still remaining on the hook. If I remember rightly, Mr. Pennell gives a similar instance of insensibility to pain in perch.—I am, &c., J. Harrington Keene.

EYED HOOKS, FLIES DRESSED ON THEM, &c.

Sir,—In the Fishing Gazette of March 18, mention was made of the eyed hooks for fly-fishing which I brought before the angling public two years ago. Since then several improvements have been made from time to time, and the latest shape has, I think, the chief advantages of the sneck and Limerick bends, with the disadvantages of neither. In default of a better name, my friends and I have christened the present pattern the "Snecky Limerick," and the makers (Messrs. Hutchinson and Son, of Kendal) will understand what is meant if the hooks are ordered by this name. I don't think a pattern has ever been made which will beat some of the hooks I have had recently. If anglers will give them a good trial, I feel sure they won't regret it. I have hardly used anything else for four years, and I find that flies tied on eyed hooks possess so many merits that it is with considerable eluctance that I ever put on a fly of the old sort. Generally I tie all my own flies, but when pressed for time I send my own hooks, and get flies tied for me either at Winchester or Edinburgh. Any one who wants to take your advice, Mr. Editor, on this point, cannot do better than write direct to the makers, and get a supply of hooks (4s. 6d. the gross, or 6d. a dozen), Send a sufficient number to Mrs. G. T. Cox, Parchment Street, Winchester, who will get flies very neatly tied to any pattern at 1s. 9d. per dozen, but not less than one dozen of a pattern. Mrs. Cox has a very large and increasing demand for flies, and anglers cannot expect to have their orders executed by return of post. Strangers should send a remittance (including the postage) when they send their hooks. Any one who is going in for Scotch fishing will get the best of flies from Messrs. Roderick Anderson and Son, Prince's Street, Edinburgh. I forget his terms, but he tied me some beautiful loch flies last summer.

It is not for me to sing the praises of these hooks, but, for the benefit of those who have not tried them, I should like to say that, amongst other advantages I specially draw attention to the following:—

(1) It is almost impossible to whip them off.

(2) Every hook can be tested by the angler (if he follows the plan I have suggested) before he gets his flies tied.

(3) After killing several fish on a choice fly the gut perhaps gets worn, and untrustworthy. If so, cut it off, and put on a new piece of gut. I have used a fly four or five days constantly, and I have some veterans which have done their duty on an occasional day for three or four years, and are still ready and good for use when wanted. This is the sort of fly an angler puts on with confidence.

(4) After a fly has been used as a dropper it can still be used as a point fly by changing the gut.

(5) The same fly can be used with different strands of gut, coarse or fine, according to weather and water.

(6) The economy is very great. Any one can work the sum for himself if he bears in mind that a dozen good flies on eyed hooks will last out any two dozen that were ever made in the old fashion. Of course I am not in the least interested in the sale of the hooks, but I do want other anglers to try what I am convinced many of them will think a very good thing. There is one very obvious reason why tackle makers don't like them. Here's another. Most professional tyers, I believe, put on the wings last, and tie off at the head; though I could mention a few exceptions among the best tyers, I could name thirty or forty who invariably tie every fly alike and finish off at the head. If this plan is adopted it tends to make a clumsy head on an eyed hook, though it need not if care is taken. Still, it gives trouble to avoid this clumsiness, hence one very general condemnation of eyed hooks. I never saw a professional tyer at work, but they mostly have their own stereotyped rules which they won't alter for any one; and if the hooks don't suit their style of tying they blame the hooks. Any one who can tie flies at all ought to be able to tie in four or five different ways, and for a floating fly there is no doubt that to put the hackle on last, and tie off behind the wings, is out and out the best way, and this suits the eyed hooks capitally.

Is the work by Ogden, which you lately reviewed, the little book written by the late veteran James Ogden, who died rather more than a year ago? There surely can't be another of "seventy years' experience" now to the fore. I understand that the business of "old James Ogden" is being carried on by his nephew. I possess a copy of the late J. O.'s book in which he states that he is the inventor of the "Multum in Parvo" trout rod, and also of the seat basket, both of which I have seen in use at Fairford. Is the treatise just out a new work, or the old one dressed up? Honour to whom honour is due.—I am, &c.,

H. S. Hall.

[It is the original work. We did not know the old man was dead, but his nephew is following up the old man's footsteps, and employs his fly tyers and rod makers.—We are heartily obliged to Mr. Hall for this description of his capital hooks. He has kindly sent us a few samples of flies tied on them, made by the two makers he names, and they certainly are first-rate. We should be glad if Mr. Hall will describe the best plan of knotting the fly to the gut. If our fly-fishing readers will only get a few flies dressed on these hooks and give them a fair trial they will speedily bless Mr. Hall for inventing them, and us for drawing attention to them. We have personally proved their killing powers, and could give long accounts of the wonderful catches made with them by Captain Turle, Mr. Hall, and other gentlemen anglers. One supreme advantage is that you can change your gut in a moment—every bit of it, down to the fly's head—when you find it getting worn. Another advantage is that the fly has a tiny head, formed by the eye. Now, every natural fly has a head, and yet how rarely do our fly tyers give the artificial one? Let our readers, then, get a few sample from Mrs. Cox, fishing fly maker, Parchment Street, Winchester, the samples of her make which Mr. Hall sends will suit our south-country waters best, and she knows the exact hook which Mr. Hall recommends. By the way, we ought to mention that one of the flies sent is a light dun, made by Mr. Hall himself. We never saw a fly more neatly tied, or so lifelike in appearance.—Ed.]

[P.S.—Since writing the above we happened to mention these eyed hooks and flies to Captain Alfred, of 20, Moorgate Street, and he said he would get some hooks and have some flies dressed on them.—Ed.]

LARGE PIKE KILLED BY EEL HOOK.

Sir,—Seeing in to-day's issue of the Gazette a few lines under the head of "Pike and Hooks," I thought it might interest "Hook" to know that I had last summer a similar experience to his. Whilst fishing in a large pond in Essex, I observed something very big suddenly rise in the lilies, which I at once knew to be a large pike. After vainly endeavouring to tempt him with a live bait, I came to the conclusion that he was dead, which afterwards turned out to be the case, as he had got a large-sized eel hook working out of his side, with about a yard of water cord attached. On weighing the fish he was found to turn the beam at 21 lb.—I am, &c.,

Essex.

GROSS WEIGHT *v.* SPECIMEN FISH.

Sir,—The difficulty I, and many other anglers, see in the substitution of the "specimen-fish" for the gross-weight system is, as I have endeavoured to show in my previous letters, that out of a number of men assembled at the water-side in a day's competition, the heaviest fish will as often as not be captured by the least skilful angler of the party; who, perhaps, in his eagerness to land that leviathan, or at some other period of the day, commits one or more of those errors which invariably beset the beginner's road to proficiency, and, in consequence, finds himself a long way behind his more experienced brethren of the rod in gross total on weighing-in at night. Let it be understood that these old hands have not so much objection to the beginner taking a prize for his specimen, as to the fact that, were the system to become general, angling skill would, in their opinion, be at a discount so far as competition is concerned, and prizes might just as well be abolished, or raffled for at the club room.

I am aware that in those clubs where specimen fish decide the contests, prizes are more often awarded for the greatest number of fish above a certain high standard; but what, after all, are these but modifications of the much abused gross-weight competition, and why does the addition of a few inches or ounces to the standard render a competition less a "specious form of gambling" or "temptation to commit fraud"? Will "Kingfisher" be good enough to explain this, and also state his reasons for thinking that the "money, time and knowledge" required to increase our common sport will be subscribed by only one class of the angling community. It appears to me that such an opinion could never be entertained by a constant reader of the Fishing Gazette.

With the belief and hope that the whole question will be further discussed in these pages, I am anxious to correct an apparent misrepresentation of my views in "Kingfisher's" last letter, when he asks what I should say in the event of quantities of undersized fish being shown in my own clubroom. Let me assure him and all others whom it may concern that I do not advocate the capture of fish under the present Thames standards, and that such a disgraceful show as he refers to would not be tolerated in my club; in fact, our rules as to sizes of fish in many cases exceed the Thames limit, and are in no case less. If "Kingfisker" knows a club where undersized fish are allowed, let him at once publish its name, in order that it may be deprived of all privileges.

Fortunately the character of my typical "sticker" for honesty and skill has been the theme of abler pens than mine, and is too well known and appreciated to be damaged one jot by "Kingfisher's" ungenerous and, in my opinion, totally inapplicable remarks; and, with regard to the hint respecting a certain and economical means of obtaining fish other than by fair angling, I can only state that as neither myself nor brother members are at all likely to make use of the information, I am willing to take "Kingfisher's" word for its accuracy.

"Mark Antony" is certainly consistent in wishing for the abolition of all angling competitions, but it is surely unjust to condemn a very large class on account of what I am pleased to think is a very exceptional instance of dishonesty. As to the supposed wholesale destruction of fish in competitions, is "Mark Antony" quite sure that the bad sport in the portions of the Trent he refers to is due to the absence of fish? I am acquainted with certain hard fished portions of the Lea, which very seldom yield a good take, except after a flood, and while the water is still coloured, when the employment of those niceties of the craft erroneously designated "coarse cunning" will still give surprising results both in quantity and quality. On another portion of the same river, near London, which was long since supposed to have been "fished out," a gang of poachers was lately caught, red-handed, having in their possession a very large quantity of good fish, including barbel and tench. I consider these facts tend to show that competitions do no more harm than any other form of angling, but that constant efforts to capture fish with rod and line, and the necessarily large quantity of food thrown in by numbers of persons in the shape of ground bait intensifies the natural shyness of the finny tribe, keeps them well fed, and comparatively indifferent to the choicest morsels on the hook, and sharpens their instincts of self-preservation. If what Walton said with regard to the shyness of the bream after a few days' continued fishing, was true in his time, will not the same apply with enormous force to all other fish in the present day, when anglers are numbered by thousands, and angling practically never ceases. I see Lord George Hamilton inclined to this view in his speech at the Gresham Society's dinner last week. Considerations of space, rather than "lack of argument," induce me to conclude for the present with thanks to you Mr. Editor for inserting my very lengthy effusions; the importance of the subject must plead my excuse.—I am, &c.,

J. M. D.

[If J. M. D. gave a prize for, say the three largest fish taken by any one angler, we think his objection that an unskilful angler might often get the prize would no longer hold good. We do not like the system of giving prizes for angling matches at all; but, as long as it is the practice, the best we can do is to try and get the specimen-fish system in vogue, as against the wretched gross-weight system.—Ed.]

DACE, GRAINING, OR WHAT?

Sir,—I did not see "Trent Otter's" enquiry about the strange fish described by him in your issue of 4th inst., or I would have written sooner.

I may at once say that Mr. Gosling was quite correct when he wrote that the fish was not a graining, and I am sorry Mr. Keene did not refer to his notes on the graining before expressing so decided an opinion, or he would have seen that "Trent Otter's" description and his own did not correspond.

For "Trent Otter's" information, the fish he describes is too deep in the body for a "graining," which is slenderer than the dace, its fins are all yellowish white, and the irides are also yellowish white; and, to assist him in arriving at a fair conclusion, I give Yarrell's description from "Couch's British Fishes" and Mr. Keene's from the Fishing Gazette. The last being from fish I had the pleasure of forwarding for his examination and report.

Yarrell says:—"That although similar to the dace in shape, it is distinquished from it by being still more slender in form. The graining has the top of the head, the back, and upper part of the sides of a pale drab colour, with bluish red, which is separated from the lighter coloured and inferior parts by a well-defined boundary line; the irides yellowish white . . . all the fins pale yellowish white. . . . The dorsal fin begins exactly half-way between the nose and the end of the fleshy portion of the tail; the first ray short, second shorter, last double, nine in all. . . . Gill rays, three; ventral fins on a vertical line, but little in advance of the anterior portion of the dorsal fin, with ten rays. The anal fin commences on a vertical line immediately under the termination of the dorsal fin rays when that fin is depressed, and has eleven rays; the first of these rays short, the second longest, the last double. The fleshy portion long and slender, the rays deeply forked, nineteen in number." See vol. 4, page 60.

Mr. Keene writes:—"Colour, a sort of drab in the upper parts; though of course it is possible that the original was, as Yarrell describes, of a reddish drab tinge. Fins, all of a yellowish white. General characters: The great distinguishing characters between the graining and other members of the Leuciscini, is that back fin (dorsal) commences exactly half-way between the end of the nose and end of the fleshy portion of tail; all the fins are longer than those of the dace of the same length, the scales larger and more pronouncedly striated. Yarrell says forty-eight in the lateral line; in the specimens I now refer to, I counted only forty-seven. . . The fleshy part of the tail and its fork are very like a bleak in slenderness and extreme bifurcation. . . . Now these fish could only be mistaken by the angler for dace; if these particulars are borne in mind, however, such an error cannot occur. In graining the fins are longer and yellowish white, the ventral fins of dace are greenish white with a reddish tinge; the dorsal commences in the middle of the graining, whereas in the dace it is further back, the nose is more rounded . . . lower edge of five gill covers less angular, and dorsal profile less convex than in *Leuciscus vulgaris* (dace).' See Gazette of 2nd October, 1880, page 487. Again, on page 383 of 6th August, 1881, "Mr. Keene says, the graining is a beautiful dace-like fish, &c. The fins are larger than those of the dace in proportion, and so are the scales, which are beautifully striated, and in the specimens referred to numbered forty-eight in the lateral line."

The "Trent Otter" will find a coloured plate in Couch's work, also in the Rev. W. Houghton's; the last being the better colour of the two, but still dark on the back. I would like to explain that Mr. Keene's description was given for the purpose of settling the question whether the "graining" was a distinct specie or a variety of the dace.

As I have never seen a specimen of the "Pomeranian bream," I am not in a position to add anything towards settling the question of "What?" but I am satisfied that "Trent Otter's" fish is not a graining.—I am, &c.,

W. R. R.

P.S.—In Mr. Houghton's work the dace and granining are on the same plate, thus giving an opportunity of comparing the two.

Manchester, March 28, 1882.

[We think this matter has been quite sufficiently gone into. We will reopen the subject as soon as the "Trent Otter" can send us a specimen of the fish in question. It must be a queer fish which is both bream-like and dace-like!—Ed.]

HYBRIDS.

Sir,—In the letter sent by the "Trent Otter" (to whom I cannot say how much I feel obliged) we have, according to his opinion, a grand hybrid in the shape of the carp-bream; and, according to the extract I sent you from dear old Isaac, we have another really handsome hybrid in the shape of the rudd; lastly, there is the graining, which is, as the "Trent Otter" observes, neither more nor less than a species of dace, and is, as far as he knows, a cross between a white bream and a dace. Presuming he is correct, we have two splendid hybrids produced from the white bream and two other different species. If it is possible to obtain this result from the white bream crossed with other species (and at present I see no reason to doubt it), what might not be produced from, say:—

The carp and barbel.
,, ,, chub.
,, barbel and carp-bream.
,, ,, ,, chub.
,, tench and dace.

The tench and carp.
,, white bream and barbel.
,, ,, ,, ,, chub.
,, carp-bream and tench.
,, ,, ,, ,, chub.

Before you laugh, do not forget what I said on a former occasion, and let those who love the science, and have the time and money to spare, give it their serious attention, and if the difficulties are great to arrive at the results desired, then greater should be the determination to surmount them.—I am, &c.,

Mark Antony.

[We have forwarded your request to Mr. Brougham.—Ed.]

ORIGINAL CLERKENWELL PISCATORIAL SOCIETY.

Sir,—A paragraph appeared in the *Sportsman* of the 25th, wherein it is stated that several members of the Original Clerkenwell Piscatorials had left that society, and were forming another at the Crown Tavern, Clerkenwell Green. Such a statement is absolutely false, and likely to mislead the angling community. Only one member has resigned, viz., Mr. Long, and two others have been expelled for unfair fishing; and also that Mr. Burwash, jun., never was a member of the above society, but belonged to the Clerkenwell Piscatorial Society, held at the Horse Shoe, Clerkenwell Close, of which Mr. Stebbings is the secretary. By inserting this you will be doing justice to the members of the Original Clerkenwell Piscatorial Society.—I am, &c., Thos. M. Lucy.

CAPTURE OF A LARGE TWAIT SHAD.

(Herring family. *Clupea alosa.*)

Sir,—The other morning I had a magnificent specimen of the above brought to me. It measures 19 inches from tip of nose to tail, and 10½ inches round the girth, and weighed 2½ lb. It is undoubtedly the largest one that has been taken. The friend that gave it to me, I am sorry to say, did not know it was one of rare size, and consequently the cook had been at work and cleaned out the inside and scaled it; but, nevertheless, I have managed to make a cast of it for my fish museum, where it will look nice beside my monster mackerel, which weighed 4 lb. 1 oz., and measured 2 feet 1 inch in length. I certainly now have the casts of the largest shad (which, by the bye, belongs to the herring family) and mackerel that were ever known.—I am, &c.,

Plymouth. William Hearder.

[We have an impression that in Mr. Buckland's museum at South Kensington there is a cast of a larger twait shad than this.—Ed.]

THAT GLASS BOWL.

Sir,—In responding for the Fishing Gazette on Wednesday evening last, you alluded to the "glass bowl" dodge as being a 'cute Yankee invention; let me correct you—it is as old as the hills. I tried it myself twelve years ago. Roach were placed in the bowl, which was covered with wire gauze. We tried it on a lake in a county which is familiar to both of us, and in which most of my spare time is spent.—I am, &c., R. F. Bright.

Conservative Club, Liverpool.

P.S.—I don't approve of this sort of fishing, any more than I do of your London habit of taking the gross weight of fish on "weighing-in," as you call it. I refer you to a previous letter—the only one I addressed before to the Fishing Gazette—in which I cut into Sunday competitions and "gross weights."—R. F. B.

["Nothing new under the sun."—Ed.]

PARASITES IN STURGEON'S GILLS.

Sir,—I have taken a number of these parasites; can any of your numerous correspondents give me local or scientific names of same? I have no books treating upon them, and I have made every enquiry at the Institute and Museum, but fail to find. Frank Gosden, Exeter.

FISHING NEAR LIVERPOOL.

Sir,—Permit me to thank G. P. and H. N. for their information and for the trouble they have been kind enough to take to furnish it. I trust I may before long be able to try some of the waters they are so good as to describe.—I am, &c.,

G. L.

Liverpool, March 25.

FISHING NEAR COLYTON, OR HONITON.

Sir,—Will any gentleman please inform me if I can get any trout-fishing near Colyton or Honiton, Devon—subscription or other. I find the Coly can only be fished by the residents, and to those only a limited number of tickets are issued. I believe the terms for the Axe are almost similar, but am not quite certain. Any information respecting water within 20 miles will be esteemed a favour.—I am, &c.,

H. H.

[Mr. Pulman, fishing-tackle maker, Axminster, or Mr. W. Mudford, Fore Street, Tiverton, can give you particulars. You can get fishing on certain parts of the Axe by day ticket.—Ed.]

THE FERRY-BOAT FISHERY.

Sir,—Could you kindly inferm me whether fly fishing is stopped on Day's water, the Ferry Boat House Fishery, Tottenham, during the fence months. and answer would oblige.—I am, &c.,

A. E. W.

TROUT-FISHING NEAR NOTTINGHAM.

Sir,—Can you or any of your readers kindly inform me where I can get some trout fishing (minnow and worm) within about twenty miles or so of Nottingham, and who I can apply to with price for day or season tickets.—I am, &c.,

A Constant Reader.

TROUT FISHING WANTED.

Sir,—Where can I obtain good trout fishing within twenty miles of London? and please state whether free or by subscription. The Thames, of course, excepted.

W. Bartlett.

47, Duke Street, Manchester Square.

CASSELL'S BOOK OF SPORTS AND PASTIMES.

We have received from Messrs. Cassell, Petter, Galpin & Co. Part I. of a new work under the above title, which is to be completed in fifteen parts (at 6d. each) and contain over 200 illustrations. It thus promises to be an illustrated cyclopædia of the subject; and if it is completed, as doubtless it will be, in the very excellent style of Part I., it cannot fail to be immensely successful. We hope the chapters on angling will be done by some competent angler, so that they may be valuable. In works of this kind, as a rule, angling is dismissed in a page or two consisting of generalities from Walton or some other of the ancients.

Illegal Netting at Ware.—On Tuesday Richard Nicholls and William Wiltshire were charged at the Ware Petty Sessions, before a full bench of magistrates, with illegally netting the river Lea on the 16th of March. Both the defendants pleaded guilty, but said that they did not know that they were doing any wrong. Mr. Corble, who appeared for the Lea Conservancy Board, pointed out the fact that the river was posted right along its course, therefore that excuse could not avail. Police-Sergeant Hammond said that his attention was called to the defendants, and upon he and Police-Constable Day detaining them they found the net all wet and about 12 lb. of freshwater fish, which had apparently only been just caught. This was not denied, and after cautioning them as to their future conduct, the Chairman fined them 10s. each and costs, giving one of them a week's time to pay it in.

Gregory's Spinning Baits. "The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[Advt.]

1st AWARD MELBOURNE EXHIBITION, 1881.

Secretary:
Mr. A. West, Alexandra Road, Norwich.
Chief Office:—14, Chapel-field Gardens, Norwich.

PROSPECTUS.

This Company has been formed for the purpose of providing a Fishing and Boating Station on the River Yare at Brundall, together with Recreation Grounds, as a place of resort for the general public.

The enormous and rapid development of the pursuit of fishing as a popular and remunerative recreation in all parts of the United Kingdom, and the fact that similar schemes have, wherever established, proved successful, are a sufficient justification for the sanguine hopes of the Directors that a Company formed to meet the requirements of the Norfolk and Norwich public must prove a profitable concern.

It is proposed, therefore, to offer only 2500 of the 5000 Shares to Members of the various Angling Societies in Norwich, and others for subscription at par, as it is more than probable that the remainder will command a fair premium, and as the expenses of the Company will not be great, a large capital is not required.

The increasing interest taken in fishing matters by the general public was clearly demonstrated by the enormous success of the National Fisheries Exhibition lately held in Norwich, and is further shown by the existence in our city of more than thirty Angling Societies, numbering some 2000 members.

Brundall as a Fishing Station is unequalled, situate as it is between "two broads"—Rockland and Surlingham—two prolific nurseries for the breeding of fish.

The scenery is most charming, and it is there the real boating and yachting facilities on the magnificent River Yare begin.

Brundall is about seven miles from Norwich, and can be reached by rail in less than fiteen minutes, and by road or river in one hour.

The Great Eastern Railway Company has agreed to extend the platform at Brundall Station, and to build a bridge over the line, thus giving direct and safe access to the grounds of the Company.

The Norfolk and Suffolk rivers being exempt from the working of the Mundella Act, angling may here be indulged in without restrictions throughout the year.

The supply of fish in this river is almost inexhaustible, mainly owing to the successful exertions of the Yare Preservation Society during the past few years.

Every facility for Fishing and Boating will be provided at the proposed Fishing Station—Fishing Tackle, Baits, Angling Suits, a good supply of Boats, Punts, and an hotel for the accommodation of gentleman from a distance.

Pleasure-seekers, who in a city of 100,000 inhabitants are numerous, will also be provided with Recreation and Garden Grounds.

With a view to carrying out the above objects the Company have entered into a contract for the purchase of a suitable piece of land in Brundall and next to the River Yare, which contract bears date the 11th day of March 1882, and is made between George Thirkettle, of White Lion Street, in the City of Norwich, Confectioner, of the one part; Thomas Islay, of the said City, Postal Telegraphic Superintendent; Moses Rogers, of the same City, Provision Merchant, and James Jabez Hosken, also of the same city, Postal Chief Clerk, of the other part.

The Norfolk and Norwich Angling, Boating, and Pleasure Ground Company Limited. First issue of 2500 shares of £1 each.

Form of Application. (To be retained by the Bankers.)

To the Directors of the Norfolk and Norwich Angling, Boating, and Pleasure Ground Co. Limited.

Gentlemen—I beg to enclose herewith the sum of being a deposit of 2s. 6d. per share on Shares of the Norfolk and Norwich Angling, Boating and Pleasure Ground Company, Limited, of £1 each, which I request you to allot me; and I hereby agree to accept the same, or any smaller number that may be alloted to me, and to pay the balance in respect of the same upon the terms of this Prospectus.

DULVERTON, SOMERSET.

FREE TROUT FISHING.

RIVERS BARLE and EXE. Superior Furnished Apartments on Moderate Terms, with or without Board. Can accommodate Large or Small Parties.—Address, Mr. W. BABB, Melton House, Dulverton.

TROUT FISHING

IN THE PRIVATE WATER
OF THE
EARL OF CARNARVON.
Rivers EXE and BARLE.

FREE to Visitors staying at the Carnarvon Arms (and his Hotel being also nearest to Tiverton Association Water), DULVERTON STATION.

The trout fishing has just opened on

THAT FAMOUS TROUT STREAM, THE COQUET.

Visitors at the Angler's Inn, Weldon Bridge, near Morpeth, have the right of fishing some miles of splendid water both for salmon and trout. Mr. A. Glass, the proprietor of the inn, has a horse trap which, by arrangement, will meet visitors at any of these stations:—Morpeth, Brinkburn, or Acklington. Reference as to accommodation and charges is kindly allowed to the Editor of the FISHING GAZETTE. (Fly, Minnow and Worm allowed).

COUNTY GALWAY, IRELAND.

TO BE LET for the Season, or on Lease for a Term of Years, the Salmon and White Trout Fishery of Gowla, which comprises both Lake and River Fishing. Also Lodge and Shooting attached. Is situated about two miles from the sea, where there is splendid Anchorage and Shelter for a Yacht; also some good Sea Shooting in the neighbourhood, Seal being numerous in the season.—Application to be made to GEORGE J. ROBINSON, Esq., Roundstone, co. Galway.

PARTICULARS AND CONDITIONS

Of setting the Angling on

BALLYNAHINCH FISHERY.

The fishing extends from Lough Inagh to the sea, a distance of fifteen miles, and comprises the rivers and lakes of Inagh, Derryclare, Ballynahinch, Ballynafar, Glendalough, Attery and Orrid, The season commences on the 1st February, and closes on the 31st October. The stock of fish, which has been largely increased, is now most abundant.

Tickets will be issued at the following rates by G. J. Robinson, Esq., Roundstone, via Galway. Tickets for the whole season £50, tickets for the lunar month, £8; ticket for the week, £2 10s.; ticket for the day, 10s. Tickets are to be paid for when taken out, and are not transferable. The price of a ticket includes the use of a boat, but not the wages of boatmen, which are not to exceed 2s. per day each.

Applications for tickets will be treated according to priority, but a preference will be to applicants for "season tickets." Boats for angling and stands on the river will be allotted by the head keeper, and no angler will be permitted to use a boat or fish a stand that has not been so allotted. Superior accommodation can be had on application to Mr. T. MULLARKEY, at Glendalough Hotel, Recess, Galway. Anglers are requested to take out their licences in the Ballynahinch district, as by doing so they increase the fund for the preservation of the district.

No men can be employed as boatmen except the Water Bailiffs as arranged by head keeper.

Application to be made to

GEORGE J. ROBINSON, Esq.,
ROUNDSTONE via GALWAY.

FISHING IN THE NORTH AND WEST RIDINGS.—Anglers contemplating a visit to the Aire, Wharfe, Ribble, Greta, Wenning, Yore, Wensley, or other rivers in the North and West Ridings of Yorkshire, and desirous of obtaining information as to Fishing, Lodgings, &c., should make their wants known through the medium of the

Craven Herald
(published at Skipton-in-Craven),

which has the most extensive circulation in the neighbourhood of these rivers.

Views of the Wharfe, Bolton Abbey, &c., may be obtained at the office of this paper.

THE GRAND HOTEL,

HOLBROW AND CO,

111, JERMYN STREET, ST. JAMES'S, S.W.

Every kind of Fishing Rods and Tackle of the best quality, and flies specially dressed for all parts of the world. Speciality in glued-up cane rods. Separate department for Polo.

BY SPECIAL APPOINTMENT.

POLLACK, BASS, MACKEREL:

HEARDER AND SON

Deep Sea, River and Lake Fishing Tackle Makers to H.M. Government, H.R.H. Prince of Wales, H.R.H. the Duke of Edinburgh, and exploring expeditions,
195, UNION STREET, PLYMOUTH.
Established 1770.

Mounted lines for cod, conger, hake, whiting, bass, pollack, mackerel, and all kinds of fish at home and abroad.

Specialities for foreign fishing. Inventors of the celebrated silver spinners, spinning sand eel and sole-skin bait for pollack, mackerel, and bass.

Eleven prize medals, including Berlin Fishery Exhibition 1880. *Illustrated Catalogue gratis.*

(THE DEVONSHIRE RIVERS.)

FISHING TACKLE, &c.

DEVONSHIRE FLIES (GOOD in ANY STREAM), 1s. 6d. per dozen. Flies made to pattern. A large stock of Rods and Tackle of all kinds. Some choice SPLIT CANE RODS by "Copham;" bargains. The Devon and other artificial Baits, Reels, Lines, Gut Casting Lines, Fly Books, Wading Stockings and Trousers, Baskets, and every other requisite. Address, WILLIAM MUDFORD, Fore Street, Tiverton, Devonshire. Ticket depôt for the Tiverton Fishing Association.

THE CHEAPEST ROACH ROD,

Used by all Noted Anglers.
BOOTH'S FIVE-JOINT BAMBOO ROACH ROD,
12 feet stand-up rings. The lightest rod in use.
Winch fitted Brass Bottom and Bag complete, packed in Box.

Price 4s. 8d. 14½ feet, 6s. 6d. Carriage paid for 6d. extra.

H. BOOTH,
Fishing Tackle Maker,
88, PROSPECT STREET, HULL.

WANDLE TROUT FOR SALE.

SOME thousands of the young Fry of these celebrated fish will be ready for removal about the end of April. Price £4 per thousand.

Apply to H. N. G., hon. sec. W. F. A, the Cottage, Mitcham.

NOTICE.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., must be addressed to the Editor of The Fishing Gazette, *No. 12, Fetter Lane, London, E.C* and should reach the office not later than Tuesday morning.

Contributions are solicited, but the Editor will not undertake to return rejected MSS., unless accompanied with a stamped addressed envelope.

Correspondents are requested to write on one side of the paper only and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith Unless this rule be adhered to no notice will be taken of such communications.

The Fishing Gazette is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls, and of the following, amongst other Fishing Tackle Dealers in London and the Provinces :—

Messrs. Alfred and Son, Moorgate-street.
Messrs. Price and Co., 8, Seymour-street, Euston-square, N.W
Messrs. Williams and Co.; Great Queen-street.
Messrs. Gee and Co., St. Andrew's-street, St. Martin's-lane.
Messrs. Gee and Co., Gray's Inn-lane (near Holborn end).
Messrs. Little and Co., Fetter-lane, E.C.
Messrs. C. Kewell and Sons, 197, St. John-street-road, E.C.
Messrs. Kewell and Co., 1A, Conduit-street, Regent-street, W.
Mr. J. Richards, 97, Church-street, Paddington.
Mr. W. Leader, 30, Upper Marylebone-street, Portland-place, W
Mr. — Clark, 35, Wells-street, Camberwell.
Mr. Geo. Read, 91, Goldsmith's-row, Hackney-road, E.
Mr. A. Bulmer, 62, Wandsworth-road.
Mr. F. Oliver, 188, Great College-street, Camden Town.
Mr. J. E. Gold, 284, Waterloo-road.
Mr. D. W. Willoughby, 21, Lombard-market, Battersea, S.W.
Mrs. F. Y. Brocas, 4, Mill-street, Conduit-street, Hanover-square, W
Messrs. Gillett and Co., 40, Fetter-lane, London.

Mr. H. Booth, 88, Prospect Street, Hull.
A. W. Warner, 121, Broad Street, Birmingham.

Newsvendors can obtain the journal through their London Agents.

⁂ The "Fishing Gazette" Spinner (Registered) is sold by all the above firms.

ANNUAL SUBSCRIPTION.

The Annual Subscription, payable in advance, for the United Kingdom is 8s.; or post free, 10s. 6d.

To any part of Europe, the United States, and Canada, the Annual Subscription, including postage, is twelve shillings and sixpence.

ADVERTISEMENTS.

All communications respecting advertisements must be addressed to the Manager of The Fishing Gazette, *No. 12, Fetter Lane, London, E.C.*

N.B.—All Remittances must be sent, and all Cheques and Money Orders must be made payable to Messrs. Sampson Low, Marston and Co., the Proprietors.

The Fishing Gazette.

SATURDAY, APRIL 8, 1882.

A SNOWY DAY ON THE TAMAR.

By Redspinner.

At Bath we suddenly missed the sunshine. It could not be that the weather, which had been so long at set fair, should select this particular day to change? The phenomenally fine spring had been prominently commented upon in all the papers, and every day there was a new paragraph chronicling the arrival of some bird or flower, or butterfly, that had mistaken March for April. Now that I had set forth on a journey of 240 miles, for a bit of trout-fishing, surely the elements were not so cruelly to turn against me! Yet it was so. There could be no mistaking the woolly-looking clouds rolling down from the north-west over the ancient city of Bladud, nor the general overcasting of the sky. A clergyman in the train said it would be a good thing for the country if we had rain, and, remembering my inveterate luck in such matters, I grimly assured him that the mere fact of my starting on a fishing expedition would be enough to open the sluices aloft, and send the wind into an unfriendly quarter. We saw the sun set over the Bristol Channel, somewhere abreast of Burnham, and it was the most gorgeous spectacle I had ever seen in this country. A finer I could not remember, even under the Southern heavens, or in tropical latitudes. Picturesque layers of lake, saffron, orange, primrose, amber, green, blue, and violet, stretched horizontally across the sky, and, between the fantastic clouds, changing colour and form every minute, were tints of indescribable delicacy. Flushes of gold and flakes of silver seemed to follow each other, and, after the sun had gone down, there formed along the horizon a lurid background with a slaty bank of clouds, edged with glowing copper, spreading slowly upwards.

In the night I could hear the decided sharp-shooting of hail upon the window-panes, and the rude howling of the blast. The morning sky was blood-red. Even after I had booked for Tavistock, I half determined to forfeit my ticket, stay at home, and not go through the farce of travelling to the waterside. But between the storms there were glints of watery sunshine, and the wind, after all, was north-west. Had it been north or east I would not have ventured. The Devonshire anglers have great faith in the early spring fishing, yet on this morning not a representative appeared in the train. Marsh Mills is one of their favourite stations, and Bickley is another. But the infant Plym to-day tumbled down from its moorland birthplace untroubled by footstep of angler. It was, in a word, a bad lookout, figuratively speaking. Literally speaking, the lookout is always a striking one along this valley. Desolate and defiant in winter, smiling and tractable in spring, and altogether lovely in summer, this is one of South Devon's best known tourist routes, leading, as it does, to big Dartmoor, looming high away to the north-east. The hills were at intervals hidden by the passing storms, swiftly sweeping to sea, but, between whiles, they stood "dressed in living green." It had hailed and snowed a dozen times by the time I had reached quiet and pleasant Tavistock. While the light four-wheel was being got out, I paid a visit to the tacklemaker's, and selected three sets of flies—a large March brown, with a long tail, a blue upright with silver twist, and a brown palmer, with bushy black body laced round with gold. The Tamar is one of the major rivers of Devon, and the favourite flies are considerably larger than those used on the countless lesser streams and brooks. In another hailstorm off we drove in the teeth of the wind, which, as we mounted up on to the hill country, became downright biting. In these higher latitudes the hedgegrowths were backward. The gorse was in full bloom, but only here and there a primrose rose amongst the half-opened buds. The old trees were grey with lichen, or green with ivy, and along the hedges clumps of last year's brown beech leaves rattled dismally. It was a welcome change when we began to descend into the valley of the Tamar, and be confronted by the Cornish mines on the other side. The landlord of the hotel, the driver of the light four-wheel, the tacklemaker, and now the gentlemen to whom I had introductions, were unanimous in warning me that my chances were *nil*.

Nevertheless, the attempt had to be made; albeit I shivered as I got together my rod, and donned stockings, socks, and brogues, sitting the while in a bed of bright daffodils, and watched by a flock of ragged ewes and sportive lambs, under the lee of the hedge, far from the turnips upon which they had been feeding. Strange, but true, the only warm place that day seemed to be in the water, for while the face was iced, and the finger ends blue and numb, the immersed feet and knees were delightfully warm. Having waded out to the edge of a stream, I had to wait until a roaring blast permitted me to manage my cast, and ultimately to retreat to my daffodil cushion, in the shelter of an alder bush, out of the hail. In the succeeding lull, however, I got my chance, and at the first short cast—the experimental and careless throw with which every angler, I suspect, commences operations—I saw a small trout turn at the March brown. Fortunately the gale was good-natured enough to blow straight up the reach of the river from my chosen standpoint. This was not an unmixed advantage, since the best water lay towards the middle, just beyond the scope of my powers, and the stream ahead was running swiftly.

Still, I basketed a brace of small fish, of the not uncommon Devonshire size of five to the pound, and had the amusement of observing a trout rise at a snowflake. There was no possible mistake about it. The flake was descending slantingly and leisurely, and when it was within a quarter of an inch of the surface, Master Trout popped his snout up and shattered it. Twice during the day I saw this action repeated, and on the second occasion there were plenty of nice little brown flies scudding along the water, without a movement of the fish towards them. If the vision of fish resemble ours, a falling snowflake will, of course, be to them, looking upwards, a dark object, and may present itself to them as a luscious-bodied insect, to be grabbed, if possible. Nor am I aware that there is anything novel in trout rising during snow and hail, provided there be no snowbroth in the water. In Lake Ogwen, North Wales, many years ago, I remembered, the fish rose madly during such a storm, and not one was taken before it came or after it ceased. At the same time, as our usual associations of trout fishing are with balmy summer, hawking swallows, and resplendent dragon flies, there undoubtedly is something comic in the notion of fly-fishing in a snowstorm.

By and by a welcome lull came, and I waded out to a dark brown reef of rock, round which the water swirled, and from which I could cover a dozen eligible streams, here roughly rippling, there regularly flowing, and anon softly gliding. While the sun was out the fish rose short, but on the instant the clouds obscured it, they became business-like. The March brown did all the work, however, save in the case of two silvery smolts, that seemed to be quite ready to go down to sea, and that were returned with no more damage than the rubbing off of a few of their delicate scales. These were tempted by the silver twist of the second fly. During the first hour the larger trout were resting in fishy meditation, March-brown free. The small fellows—"six-inchers" if a name may be coined—seemed to be aware of this, and I had to return several, though the Devonshire anglers are in the habit of taking them from most of the streams much below that size, On Dartmoor, for example, I have seen a dish of trout, not one of which was six inches long, and have learned from experience that the more diminutive they run, the more delicious they are, fried with egg and bread crumb, and served up on artistically scolloped paper. But at last a timely turn of the wrist revealed something better. I saw him go down like a curved bar of refined gold, and he leaped thrice out of the water, brilliantly beautiful, and bold as a lion. Not more than a third of a pound was he, but for all that a good trout even for the Tamar, and more gamesome than many treble his size. For some time all the fish were on this pattern, running as like as peas in weight, and every one of them in the pink of condition. In administering to one of them my customary *coup-de-grace* with a short stick, carried for the purpose, the blow caused him to shoot out a freshly gorged stone loach of two inches in length. Had I been a little sooner, I verily believe I might have been able to rank that humble member of the carp family with the prophet Jonah himself, who lodged in the stomach of a fish and yet came forth alive. After taking some three brace of these handsome trout, the next contingent were quite as uniformly a size smaller.

I tried the river higher up and lower down, but was always glad to return to my friendly reef of rocks, and fish over the same ground again. It was eleven o'clock when I first waded in, and at half-past two the sky had grown very dark, and a new gale, with a fresh supply of snow, seemed to have made an end of all sunshine for the rest of the afternoon. Wherefore I gave up, and floundered ashore to find that, snow or not, I had, considering the turbulence of the wind, had, after all, a very successful time of it on the Tamar on that March day. Lighting a carefully-filled pipe, so that I might gloat becomingly on the sight, upon that before-mentioned bed of daffodils did I outpour the spoil, making them eight brace and a half by the generally received rules of computation. Yet I was not happy. Nothing but an even nine brace would serve my turn, and so back again for that, too often, most tiresome thing, "one fish more." Which fish I soon caught by a fluke; for being utterly unable to keep my cast upon the water, I winched in, the flies dabbling at their will, and close at hand a fierce fish seized the fly, and accommodatingly hooked himself, before I was exactly aware of my good fortune. This made up the full tale of a dozen and a half, just turning the scales at five pounds and a quarter. In the return train I encountered a local angler, who had been trying a Dartmoor stream, and he had in his basket a score of trout that could not, all told, have weighed two pounds. Some of them were like the smaller fish I had returned, rather dingy coloured. And I noticed that during the day, the brawny shoulders of lonely Dartmoor had been draped in a robe of pure white.

So far as I am aware, there is little, if any, open fishing on the Tamar. The river, during the greater part of its course, of some 60 miles, divides Devon from Cornwall, rising on the moors not far from the sea in the north-eastern corner of the former county; and not far from the source of the Torridge. Both are good trout streams, but while the Tamar takes a dignified south-westerly direction to Plymouth Sound, the Torridge, after pretending to follow suit, doubles round and makes for Bideford on the northern shore of the county. Fortunately for the angler, the Tamar, except at one or two points, is not tapped by the railway; and to the few miles of cross country between it and the line below Launceston, it owes more immunity from over-fishing than many of the Devon streams. Some of the landowners will generally give a day's fishing to gentlemen making proper application; but it is a good thing for the water, perhaps, that permission is not indiscriminately granted. Since the Tavy, which runs through Tavistock, has been so well cared for by the local association, the trouting has much improved, and the peal-fishing, late in the season, is sometimes remarkably good.

THE BLACK BASS.

IN a recent article in the *Daily News*, Mr. William Senior—whose charming writings, under the *nom de plume* of "Red Spinner," are so well known—advocates strongly the desirability of introducing the American black bass. We quite agree with him; in fact, more than three years ago we did so, as the following extracts from our account in the GAZETTE of a visit to Mr. Buckland's museum at South Kensington in January 1879 will show.

"Mr. Buckland then drew the attention of the company to the small specimens of American black bass, which he has in good health in one of the glass tanks, and said he hoped to introduce them to some of our English rivers. The black bass is a very handsome well-made fish, a bold biter, a plucky fish when hooked, and very good eating; with such a character as this we are sure English anglers will welcome the stranger; and, now we are about it, we may as well give Mr. Charles Hallock's description of the fish, which we take from his invaluable "American Sportsman's Gazetteer," a work which is in itself a perfect cyclopædia of information respecting American sport of every description. Mr. Hallock says, p. 273:—

> BLACK BASS (GRYSTES NIGRICANS; MICROPTERUS NIGRICANS).—*Gill.*
>
> Among the various candidates for popular favour, for introduction into new waters, the black bass has always deservedly occupied a very high place. The excellence of its flesh, its rapid growth, its endurance, and its game qualities, all contribute towards this appreciation. Little by little, this fish has been carried from one part of the country to another, until now there is no part of the United States; east of the Rocky Mountains, where it may not be found in greater or less abundance. *Its great merit in this connection lies in the fact that it requires no care in the way of culture*, since a few pairs transferred bodily will, in time, furnish a numerous progeny. In consequence of its habit of making a nest and guarding it against intruders, the fish is enabled to secure the perpetuation of its race.
>
> Much uncertainty has existed until recently as to the number of species really entitled to be called black bass, many having been described and supposed to be peculiar to particular waters. Professor Gill, of the Smithsonian Institution, has made a critical and exhaustive investigation of this subject, and with the aid of the large amount of material belonging to the institution and that of the Museum of Comparative Zoology at Cambridge, he has come to the conclusion that there are really but two distinguishable forms; the one, the *micropterus salmoides*, or the small-mouthed bass; and the other, the *M. nigricans*, or the large-mouthed variety."

"After referring to the various local names given to the fish and the districts in which it is caught, Mr. Hallock describes its action when hooked.

> When hooked, the first move is into the air, and it is continued, more or less, principally more, until the struggle ends in the death or escape of the fish.

"Most of Mr. Buckland's visitors noticed the curious way in which the little three-inch specimens were huddled together in the corners and along the sides of the glass tank, and that in doing this they are only carrying out their natural instinct is proved by the fact that bass 'undoubtedly hybernate and are not seen or caught in winter.'

> The fish begin to spawn about the middle of May. In two or three days after hatching the young fry scatter mostly into deep water, and are not seen again until September, when they come in shore, having grown about two inches in length. If well supplied with food they grow about four inches the first season. When two years old they reach a pound in weight, and after that grow about a pound each year, until they weigh six or eight pounds.

"Black bass rise to the fly well, and are also taken with minnow, spoon, and a great variety of baits. Live bait is probably the best method; but some of the finest specimens have been taken with worm in fifty feet of water, and of his merits from a gastronomic point of view, Mr. Hallock says:—

> Few better pan-fish are known to epicures. He is thick, solid, and heavy, has little waste and few bones about him, is sweet, tender, and juicy, and, when well cooked, makes a dish fit for a king.

"In concluding this very interesting article on this fish, of which we have only been able to give a very small portion, Mr. Hallock says:—

> Valued as the brook trout is for its game qualities; widely distributed as it is; and much extolled in song as it has been; the black bass has now a wider range, at least, of latitude, and being common to both cold and warm waters, and to northern and southern climes, seems destined to become the leading game fish of America, and to take the place of the wild brook trout which vanishes, like the red man, before civilisation and settlements.

"From the above description it will be seen that Mr. Buckland will be doing English anglers a good turn if he can introduce the black bass into this country as he proposes. The only possible objection that occurs to us is, how will our English trout and grayling like him? He is not particular as to what he eats, but prefers, we are told, one of his own relations to anything else. Two or three six-pound bass would, we fancy, make sad havoc in a grayling colony, and even trout would live in fear and trembling. There is something so gentlemanly about a trout, something so ladylike in a grayling, that whatever the merits of the black bass may be—and we have shown they are not few—we had rather his room than his company if our trout and grayling are to disappear before him. Shade of Isaac Walton! the very thought is almost enough to make us hang our rods on the willows—instead of our flies, as we do sometimes. But Mr. Buckland is too great a friend of our trout and grayling to think of introducing any fish that could prove such a Vandal! Nevertheless, this fish would be invaluable in lakes and ponds, and at this time some twenty or thirty of them are thriving in an ornamental pond in Lord Exeter's park at Burghley, Stamford."

Our views respecting the black bass have not altered since the above was written; on the contrary, the more we learn about this fine fish the more we hope to see it introduced into suitable rivers, lakes, and ponds in England. The only reasons that it is not already introduced are, first, and most important, the expense attached to importing it, and, secondly, the fear of its voracity. We regret very much to see from a recent number of the *Field* that Mr. Francis Francis seems to share this fear; he says great things were expected when *salmo fontinalis* came over, but it has never done well here, and he appears to infer the same fate may await the black bass. Even supposing it a desirable fish to introduce, we do not think the inference is well founded, because the *salmo fontinalis*, or American "brook trout," is a true char, and we know how very few of our waters suit even our own native char. Even in the States the range of the *salmo fontinalis* is strictly between the parallels of latitude 50 degrees north and 36 degrees south. Now, the black bass is a summer-spawning fish of the perch family, and, as we have shown above, thrives in all parts of America east of the Rocky Mountains, it is found in abundance from Canada in the north to Florida in the south.

Black Bass in England.

We take the following from "Little's Angler's Annual:—"The Marquis of Exeter has introduced black bass into England, and is the first and only person who has been successful in the venture. There is a large lake, called Whitewater, about a mile southwards of Burghley House, in which specimens of this fish are now located. This lake is over half a mile long, and from three to four hundred yards wide. It is admirably suited for the purpose, and from present report the fish have now become acclimatised. Mr. Silk undertook the transmission of specimens across the Atlantic. The first attempt failed, but so much experience was gained in this venture, that the next time, out of about three hundred fish which started from Montreal, all but forty or fifty were safely deposited in Whitewater. When it is remembered that the water in the tanks in which the bass were deposited had to be kept at an even temperature day after day for over a fortnight in changing climates, the immense amount of trouble taken by Mr. Silk can safely be imagined. Happily, he proved successful, and it is pleasing to know that so great a venture has turned out so fortunate. As black bass usually grow to above twenty pounds,* and when hooked are most game and resolute, their value as

All honour is due to the Marquis of Exeter for introducing the black bass. In a conversation we had with his lordship recently about his experiment, he informed us that it had cost him some hundreds of pounds. His attempt to import ova had signally failed in consequence of the rotting of the water-weeds to which the eggs were attached. We suggested to his lordship that it might be possible to substitute fir-boughs for weeds (as they would not rot), and it would be no difficult matter to do this we feel certain. We hope Mr. Silk will consider this suggestion.

In order to give our readers the fullest particulars respecting the black bass, with the hope that they will thus be led to recognise its value, we will now give some extracts from the recently-published

Book of the Black Bass.†

By Dr. James A. Henshall, of Cincinnati, a copy of which has been sent to us for notice by the American publishers. All the American sporting papers speak in the highest terms of the book, and we can heartily endorse their praise. The fact that such a large volume as this, entirely confined to the black bass, has been published in America proves the great esteem in which the fish is held there. Dr. Henshall even claims that, as a game fish, it is superior to the trout and salmon.

Appearance of the Fish.

We have written to America for an engraving of the black bass, but it is not to hand yet. In appearance it may be said to resemble our English perch, only the body is longer and not so deep, and is not hog-backed. The anterior spinous portion of the dorsal fin is much smaller than in the perch, the posterior portion being, on the other hand, larger. It is an extremely handsome fish, and its immense fin-power shows at a glance that it is a fish of prey. In colour it is generally a dark olive green on the back, with a "gradual shading or paling towards the belly or abdomen, which is always white or whitish."

Spawning and Hatching.

Dr. Henshall says:—"Black bass are very prolific, the female yielding fully one-fourth of their weight in spawn. The period of spawning extends from spring to midsummer, according to the temperature. . . . They select suitable spots for their nests, usually upon a gravelly or sandy bottom, or on rocky ledges, in water from eighteen inches to three feet deep in lakes and ponds; and, if possible, adjacent to deep water, or patches of aquatic plants, to which the parents retire if disturbed.

"The nests are circular, saucer-like depressions, varying from one to three feet (usually about twice the length of the fish) in diameter, which are formed by the bass by fanning and scouring from the pebbles all sand, silt, and vegetable débris by means of their tails and fins, and by removing larger obstacles with their mouths. This gives to the beds a bright, clean, and white appearance, which in clear water can be seen at a distance of several score yards. I have seen hundreds of such nests, in groups, almost touching each other, in the clear water lakes of Wisconsin, Michigan, and Minnesota.

"Sometimes the nests are formed upon a muddy bottom, with a pavement or foundation of small sticks and leaves, from which the mud and slime have been washed and scoured. The females deposit their eggs on the bottom of the nests, usually in rows, which are fecundated by the male, and become glued to the pebbles or sticks contained therein. The eggs are hatched in from one to two weeks, depending in the temperature of the water, but usually in from eight to ten days.

"When hatched the young bass are almost perfectly formed, from one fourth to one half an inch in length, and cover the entire bed, where they can be easily detected by their constant motion. After hatching, the young fry remain over the bed from two to seven days, usually three or four, when they retire into deep water, or take refuge in the weeds, or under stones, logs, and other hiding places.

"During the period of incubation the nests are carefully guarded by the parent fish, who remain over them, and by a constant motion of the fins create a current which keeps the eggs free from all sediment and débris. After the eggs are hatched, and while the young remain on the nests, the vigilance of the parent fish becomes increased and unceasing, and all predatory intruders are driven away."

We shall next conclude our account of the black bass by giving further extracts from Dr. Henshall's valuable work, and we shall then have presented our readers with the most complete description of this magnificent game fish which has ever been published in any English paper. We do not advocate placing the black bass in salmon; trout, or grayling rivers, but we are convinced it would prove a splendid addition to our sport-giving coarse fish. **It can be taken with any kind of bait—fly, worm, minnow, gentle spoon; in fact, it will dash at anything in the shape of food.** It would be a splendid addition the Norfolk Broads and rivers, as it would thin out the too-numerous small fry which now threaten to spoil the fishing.

A DAY ON LOCH AWE.

"PUT a little more whiskey into my glass, and fill my pipe again, boy," were the words which roused me from a pleasant day-dream one very sultry evening in July, 1880. The speaker was my father, a hale, well-preserved old gentleman of sixty or thereabouts, with a keen appreciation of all creature comforts, and an old-fashioned devotion to the "churchwarden" which nothing could shake. We were sitting in the garden, with a table before us, well supplied with the necessary ingredients for the production of cooling drinks; we were grumbling and growling at the heat, abusing the climate, suggesting the universal use of boating costumes, &c., when all at once the senior started up with unusual energy, and said: "David, my boy, what do you say to a month in Scotland?"

What could I say? I jumped at the offer, made all my arrangements in one day, packed up the next, and, on the third we started by the evening train from St. Pancras.

Blessings on the head of Mr. Pullman, who has changed the dreary night journey into a positive pleasure; even the most obstinately wide awake cannot resist the drowsy influence of that gentle, undulating movement of the sleeping car.

Morning found us in Edinburgh, and after a sojourn of some few days in the beautiful city, we set off once more on our travels, and eventually arrived at the little village of Dalmally, situated upon the shores of Loch Awe. We arrived at the hotel in the afternoon, wet, tired and hungry; but in spite of the adverse aspect of the heavens, I persuaded the Senior (after a plain but substantial luncheon), to accompany me to the river. Our guide informed us that the best pools were about three miles beyond the village, and when we looked very dismal at the prospect, he told us that the rain was nothing but just a "Scotch mist." Heavens, what a mist! We were drenched to the skin in less than a quarter of an hour, and then the Senior grimly said: "Well, we may as well get on, for it is impossible we can be wetter than we are, and perhaps we may stumble across a whiskey shop presently." With this extra inducement, we rallied our energies, and after an hour's walk over the most swampy and forlorn-looking country, we came to our fishing ground. I produced my fly-book, and put up two likely-looking flies selected by our guide, and commenced operations. "Fine and far off" is my motto, and I carefully fished every inch of fishable water for a good hour without the slightest result. Vainly I tried all that art could suggest, vainly I changed and changed my flies until the patience of the Senior was fairly exhausted. At last he growled out, 'You might as well throw your hat in; this is another specimen of Scotch fishing. I'm off; are you coming, or not?"

---

* This is an exceptional weight. The average is about five pounds, but two and three pounds are considered good weights by American bass anglers.—Ed.

a sporting fish is proved, and I sincerely hope the present Lord of Burghley will live long to enjoy the pleasure of their capture."

† The "Book of the Black Bass," comprising its complete scientific and life histories, together with a practical treatise on angling and fly-fishing for it, and a full account of the necessary tackle. By J. A. Henshall, M.D. Crown 8vo., 460 pages, fully illustrated, price 12s. 6d. R. Clarke and Co., Cincinnati. London: Crosby Lockwood and Co., 7, Stationers' Hall Court.

Sorrowfully I reeled up, and turned with a reproachful air to our guide and demanded an explanation; the invariable reply, common to all Scotch fishermen, came forth, "Ah, sir, you should have been here last week, everybody had sport then." There was no whiskey shop within miles, we had not brought a flask, and we turned our weary steps homeward without a word, and the silence remained unbroken until we saw the welcome porch of our hostelry. Then did the Senior's pace sensibly increase, and a gleam of joy illumined his dripping face as he strode into the little bar and ordered, in a loud voice, two steaming glasses of toddy—and how they disappeared! We dined, and retired to the smoking-room, and there meet one of the most extraordinary characters it is possible to imagine.

He was a tall man of sixty or seventy, hard-looking, and with a a very strong Scotch accent; his special peculiarity will appear presently.

We all entered into conversation, and our friend informed us that the river was never much good for trouting, but there was good all-round fishing in the loch, and when he mentioned that pike and perch were plentiful, the Senior became quite enthusiastic, and said, "Ah! that is more my form; I like something to pull at. Give me a good strong line and a stiff rod, and then when Mr. Pike comes along it is 'pull devil, pull baker,' till my gentleman is landed or the line breaks."

Our friend was a most sociable fellow, and beguiled the time with some of the most racy anecdotes ever related, and we were quite oblivious of the clock; but the most remarkable part of it all was this: *twenty-six* glasses of whisky toddy were consumed by the Scotchman between the hours of eight and twelve (this we learned afterwards of the waiter), and when we rose to seek our respective chambers, the old fellow walked out of the room with a step as firm as that of the Senior. We were up betimes in the morning, and after a hearty breakfast, and taking care of the flask this time, we set off for the loch.

Three miles walk, and we were at our point of embarkation. The morning was all that could be desired; the sun was shining occasionally as the fleecy clouds drifted across the sky, a beautiful warm summer breeze was just wrinkling the placid surface of the lake, and, as we stepped into our boat, the Senior said:—"This is better than the office, my boy," and I heartily concurred with him.

The old boatman was not a hard-working man, but we did not mind that; and merely telling him to paddle away from the shore, we prepared for action. I gave the Senior a short stiff rod, with one hundred yards of stout line, at the end of which I fixed an American devil, and set him to work forthwith. Lazily he placed his rod in the stern of the boat, and betook himself to tobacco and meditation. I fixed myself up with an artificial minnow, and likewise partook of the fragrant weed. The old boatman pulled steadily round a pretty little bay, the shores of which were fringed with tall waving rushes—a very pikey place indeed.

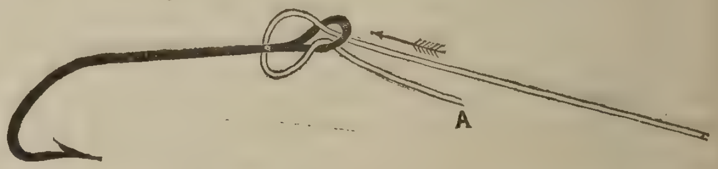
I was just remarking that we were having our usual luck, when whirr! went the Senior's reel, and the convulsive twitches of his rod gave evidence of the proximity of a big 'un. The Senior was equal to the occasion; he relinquished his pipe, seized the rod, and struck with all his might. Praise to Allah! the line stood the shock, and thereupon ensued the most amusing struggle I have ever witnessed. Not an inch of line would the Senior yield to the struggling fish, notwithstanding the excited utterances of the boatman, who shouted, "Give him leene, surr, give him leene; ye'll lose him sairtainly!" Thanks to the enormous strength of the well-made line, the fish eventually was gaffed, and the Senior, with a face as red as a turkey-cock, said, gaspingly, "There, that is the way we fish down south. The more a fish pulls at you, the harder you hold on." With this piece of philosophy, he showed his appreciation of the contents of the flask, and the fish, having been duly weighed (11 lb.), we again went to work. Twice more while we were in the little bay the Senior was lucky, and secured a brace of pike, 4 lb. and 3 lb. respectively. I began to think that the Fates were against me, when I felt the welcome tug at my rod. I struck gently, and, after some play on my fine tackle, I landed a very handsome perch. We were passing the ruins of an old castle, and just opposite this place the perch came in shoals.

I have never seen anything like it. I changed my artificial minnow for worm tackle, rigged the Senior up in like manner,, and having anchored the boat, we caught fine perch, from ¼ lb. up to 1½ lb., literally as fast as we could put our lines in the water. "How some of our Thames fishermen would enjoy this," I said as I landed a green and golden beauty of a pound weight, and tossed him into the well to join his companions; and really such a show of perch has, I should imagine, never graced the club trays of any London angling society. Two hundred and seventy odd fish were in the boat at the close of the day, and even then the Senior was loth to leave off; but the rain began again, and we had a long drive before us, so we looked lingeringly and lovingly at the grey old castle and its surroundings, and paddled to the coach, which was waiting for us on the shore.

Quill Gnat.

H. S. HALL'S EYED HOOKS FOR FLIES.

We have received from Mr. Hall, in answer to our request, a description of how the eyed hooks should be knotted to the gut, and also a sketch to explain it. The accompanying engraving is a copy of the sketch, and shows very clearly the extremely simple and only proper way in which the fastening should be made. If the gut is simply passed through the eye, and knotted without being first made to embrace the shank, the hook will hang limply and loosely. By Mr. Hall's plan the hook stands out straight from the end of the gut. Messrs. Hutchinson of Kendal make these hooks specially from Mr. Hall's designs, and have taken the greatest pains to get them correct, and they may be said to be perfect in shape and temper. Messrs. Alfred and Son, of 20, Moorgate Street, have, at our suggestion, decided to make flies on Mr. Hall's hooks (Mr. Hall, by the way, has no pecuniary interest in them whatever), and say they do not see any difficulty in selling them at their regular price for their best trout flies, viz., 2s. per dozen. The illustration is drawn on a large scale in order to show details more plainly; the smallest midge flies are dressed on these hooks.



Method of fastening Hall's eyed hook to the gut.

Directions.

Take the hook between finger and thumb of the left hand, and push the gut through the eye *upwards* (as shown by the arrow); take a turn round the shank, and back again through the eye *downwards*. The end A, which should be not less than 1¼ inch long, is then tied in a single knot *round* the long end of the gut. If the gut is well wetted, and a gentle pull given, the single knot will slide down to the eye, and form a perfectly secure and rigid fastening, and the gut will stand out in the direction of the shank of the hook. The superfluous end of A may be cut off quite close to the eye.

THE EDINBURGH INTERNATIONAL FISHERIES EXHIBITION.

As will be seen from our advertisement columns, this fine exhibition will be opened on the 12th. The efforts of the London Committee of the exhibition have resulted, we are delighted to say, in securing between two and three hundred cases of specimen fish from London clubs and private anglers, and also the cream of the fish collection bequeathed to the nation by the late Frank Buckland, which has been kindly lent by the authorities. Both the London and Edinburgh Committees are indebted to Sir Philip Cunliffe Owen, C.B., Director of the South Kensington Museum, for the trouble he has taken in securing the loan of the exhibit.

When seeing Sir Cunliffe about the matter, he informed us that China was going to send a magnificent and most expensive exhibit—connected particularly with pisciculture—to the London 1883 Exhibition. We look forward to this exhibit with the greatest interest.

SALMON WEIGHED-IN AT THE PISCATORIAL SOCIETY.

In the account of the Piscatorial Society's last meeting, published last week, it was stated by an error that Mr. Thomas weighed-in salmon. It should have been Mr. Thomas Huggett, as this gentleman was the captor of several fine Irish salmon. He has sent us an interesting account of his trip, which will appear next week, under the title of "Angling in Ireland."

NOTICES OF BOOKS, &c.

HANDBOOK TO THE RIVERS AND BROADS OF NORFOLK AND SUFFOLK. By G. Christopher Davies, Author of "The Swan and her Crew," &c., with large map.

MESSRS JARROLD AND SONS, 3, Paternoster Buildings, London, have sent us an early copy of this work, which they are publishing at the very moderate price of one shilling and sixpence. With each copy is given a large coloured map of the rivers and broads, and we can assure our readers that this map is alone well worth the price charged. A year or two ago we suggested to Messrs. Jarrold, that a good map and guide to the Norfolk and Suffolk waters was much wanted, and we congratulate them on securing the services of Mr. Davies, an enthusiastic angler and lover of nature, and a most charming writer. It is not too much to say that never before have all the delightful attractions offered by the endless streams and broads of East Anglia, been so pleasantly described.

Comparatively few anglers are aware of the superlative ease and comfort with which they may get first-class angling in Norfolk and Suffolk. Mr. Davies has done good service in so clearly describing the various fishing-stations, the pleasant rural inns, the kinds of fish to be met with, and we can testify from long experience that his book supplies a want. Often have we had to answer inquiries about the fishing he describes both in the GAZETTE and privately, and in future we shall simply refer inquirers to his excellent book. Any one who has not had the fortune to stay for a week or two amongst the broads and rivers of Norfolk and Suffolk, can have no idea of the manner in which they grow upon and charm one. Taking advantage of the facilities offered by the Great Eastern Railway, in a very few hours the London angler finds himself getting out of his train at some rural spot on the banks of the Yare or Bure or Waveney. A few minutes' walk brings him to the river-side inn, a quiet comfortable house, where, in most cases, he will get all the accommodation an angler requires. When strolling out whilst the ham and eggs and tea are being prepared, he probably makes inquiries about the swims, and from his front door our host can point out half a dozen noted swims to him. Over there, under that high bank of reeds, he will find from five to ten feet of water, frequented by heavy roach and rudd; a little higher up opposite the water-mill, is a grand place for perch—but you cannot go very far wrong, fish where you will, as long as you get a quiet deep place out of the way of the wherries and yachts. Having ordered a boat and some groundbait to be got ready, you do justice to the homely but fresh fare, and then step into the boat with your friend, and pull off to the spot you may have selected. Getting one of the long poles down well into the ground, about twelve or fifteen feet from the hedge of tall reeds lining the bank, you fasten one end of the boat to it, and then put down the other pole at the other end, and a like distance from the reeds—for you fish broadside to the stream—a few balls of ground-bait are thrown in, the rods are got ready, pipes lit, and in a few minutes down goes the heavily shotted fine line into ten feet of water; and when you commence very shortly to catch heavy bream, or roach, or rudd, you wonder why you have wasted so many holidays, and paid so much, to get the poor sport which is, as a rule, afforded by our metropolitan over-fished streams. Here your fishing costs you nothing but 1s. or 2s. a day for the use of the boat; the scenery is lovely; the air comes fresh from the North Sea, which is only a few miles off; and you will probably be often treated to one of those glorious sunsets which seem peculiar to this peculiar country, with its immense expanse of sky always in view. Fish of all kinds are so abundant in these rivers and broads that they have been wisely exempted from the operation of the Freshwater Fisheries Act, so that the fortunate anglers of this favoured region can go out any day in the year and fish for fish in season. But we hope we have said enough to send our readers to Mr. Davies' invaluable guide, and would merely remind them in conclusion, that if they do go and fish in this paradise for anglers, they must not forget to contribute something to the Preservation Associations, through whose exertions netting has been made illegal, and the interests of all fair anglers are so well looked after.

THE ANGLERS' POCKET DICTIONARY OF TROUT-FLIES, AND THEIR SYNONYMS. By William Sang. Published by W. Ward, Printer, Barnard Castle. Price 6d., post free, 7d.

THIS is a second and enlarged edition of a most valuable little work, which we noticed last year, and which, we are glad to hear, has been in great demand. It cannot fail to do much to reduce the confusion which at present exists respecting the names of trout-flies, and every trout angler should keep a copy in his fly-book, for which purpose the small size of the dictionary well adapts it. But it is not a mere list of flies under their various names—Mr. Sang gives useful advice as to best time of year and kind of weather to use the flies, and other valuable notes.

CLUB AND OTHER JOTTINGS.

By L. B.

THE London Committee of the Edinburgh International Fisheries Exhibition have received application for space for between 200 and 300 exhibits, including specimens from the Piscatorial Society's splendid collection, samples from the Hammersmith United, from the Hoxton Brothers, the Good Intent, from Messrs. Brookwell, Da Casta, De Winton, and many others. First-rate arrangements have been made with a well-known firm of Messrs. Lickfold and Co., who will collect and pack the fish so that the vans can be placed on the railway trucks bodily, and the exhibits need not be touched till the exhibition buildings are reached; they will be duly returned in the same manner and are full insured against all risks by the Edinburgh Committee. The authorities of the South Kensington Museum, in answer to an appeal from Mr. R. B. Marston have generously consented to loan a portion of the valuable Buckland collection, so that altogether the metropolitan contribution will make a very decent show. I almost forgot to mention that Mr. S. Morgan goes down in charge—not merely to prevent the scaly ones, in their glass and wooden homes from feeling lonely in a strange land—but to represent the London exhibitors generally.

The members of the Hammersmith United Angling Club are to have their annual dinner at their club house, the Builders' Arms, Bridge Road, Hammersmith, on the 27th—Mr. P. Geen in the chair. Several gentlemen, well known in the piscatorial world, have accepted invitations to be present, and a goodly muster of members is confidently anticipated.

A special meeting of the committee of the West Central Association will take place at the Portman Arms, Great Quebec Street, Baker Street, on Friday evening, April 14, and in view of the important business to be transacted on the next meeting night (annual) committeemen are earnestly requested to attend.

On Monday evening, April 3, the usual monthly meeting of the United London Anglers Central Committee was held at the Bald Faced Stag, Worship Square, Finsbury, Mr. S. Morgan presiding. After reading and confirming the minutes of the previous meeting, the chairman handed over to Mr. W. H. Brougham, who attended on behalf of the Thames Angling Preservation Society, the sum of £10 10s., being this committee's annual donation to the funds of this important society. Mr. Brougham duly acknowledged the same in a practical speech, during which he briefly noticed some of the principal tasks recently accomplished by his society, or at present engaging their attention, and requiring their utmost efforts to carry to a successful and practical result.

The secretary, Mr. R. Ghurney, next gave a brief report of the capture, through the instrumentality of the police, of two netters at Ware, and their conviction and fining by the magistrates. The sum of £1 each, being unanimously voted to the two constables concerned.

Mr. Chambers was next elected, by a large majority, to audit the accounts of the Anglers' Benevolent Society.

Mr. Kidd, the delegate from the Dalston Angling Club, followed with some remarks about the advisability of making a fresh application to the authorities of the South-Eastern Railway, with the view of obtaining concessions for cheap travelling on that line. The recent formation of a preservation society at Maidstone—the Maidstone and Medway Angling Preservation Society—being also touched upon, and several letters put in and read.

Mr. R. Murphy gave notice of motion concerning a stretch of water extending from Carthagena Weir to Smith's Lock, formerly rented by Mr. Benningfield. Some discussion also took place concerning the dates of the Eastern local and general visits.

The election of an honorary London bailiff, to replace Mr. George Oram, deceased, was adjourned till next monthly meeting night.

A committee of twelve was next elected to meet an equal number from the West Central Association to take into consideration the question of yearage for the coming season; invitation to send representatives to the meeting to be also issued to No. 3 association. A vote of thanks to the chairman concluding the proceedings.

Mr. R. Ghurney had brought up a portion of the net recently captured at Ware, which, amidst much fun and laughter, was cut up into small portions, many piscators taking away scraps of it as trophies. Apropos of this net, in my Notes last week I should have written "forfeited," not "forwarded;" also the words "Mr. Hoole recently wrote a letter," which immediately precede "*re* gross-weight," should have been followed by "to the authorities of the Great Western Railway, asking that the privilege of cheap travelling to this station (Tylehust) might be granted the London anglers; but the company's answer is not yet to hand." I think the mistake is entirely mine this time, not the printer's.

The annual supper of the Cambridge Trinity Angling Society will take place on Thursday, April 13th, at the society's club house, the Rent Day, Cambridge Street, Edgware Road.

The No. 2 District West Central Association visit was paid the Bloomsbury Brothers Angling Club, the Rose and Crown, Broad Street, Bloomsbury, on the 5th inst. The chair was occupied by Mr. Seymour, faced in the vice by Mr. L. Bonvoisin. Some capital songs were well rendered by Messrs. Scott, Morley, Tarling, Raynor, White, Sherman, Pink, Sawyer, F. Pink, Davidson, and others. Upon the roll being called by Mr. Bonvoisin, the district officer, it was found seven clubs in the district were represented, viz.:—Amicable Waltonians, Bloomsbury Brothers, City of London, Good Intent, Reform, Trafalgar, and West Central; and three out of the district, viz.:—King's Cross United, Westbourne Park Piscatorial, and North-Western. Full notice of next visit will be duly given. A vote of thanks to the chair and vice bringing a most jolly evening to a close.

RIVER REPORTS.

MID-THAMES.

"None but the brave deserve the fair."

The opening day of trouting was simply a howling one of wind and hail from the east, but for all that a brave or two turned out at most stations to do battle with the spotted beauties, which for days and days had been flashing their comely outlines before envious and jealous wooers. At Maidenhead Harry Wilder, sen., got four decent fish—his son three fish, and G. Wynn two others of takeable size. At Marlow Mr. C. Foottit got two fish, and Dr. Bloxham one trout of 4½ lb., and therewith a rod offered for the best fish of the day taken in the association's water. At Henley a fish of 3½ lb. has taken flight, and the whereabouts of two or three screamers marked down. Weather fine, with wind shifting from the east. Marlow Buzz.

Dove.

We have had rain and cold east winds all the week, and, consequently, there have been but few anglers out. Sport has been of a moderate character and that is all. Trout are not rising so freely as one could wish, but they are sure to improve in this respect immediately the weather mends, which may now be expected every day. There is very little fly on the water, the cold winds having swept it into the water, drowned, or killed it outright. The best basket I can hear of this week was secured with the cowdung and cockwing flies on the length below Ashbourne. I see an effort has been made to place Mr. M. J. Ellison on the Trent Fishery Board, but Mr. Nesfield, the gentleman who acts as agent to the Duke of Rutland, and holds many of the rights over some of our Derbyshire waters, objected, and the result is that Mr. Ellison has not been elected on the Board. For my own part, knowing the interest Mr. Ellison has (as the agent of the Duke of Norfolk) in the various waters over which the Trent Fishery Board have powers, I don't think any gentleman was more fitted to occupy a seat on the Board, and it would have been better if Mr. Nesfield had not acted so objectionably.—The Splodger.

Ilfracombe.

A gentleman lodging here brought with him, from Southmolton, on Monday, a basket of splendid trout; and Mr. Slack, a visitor, took from the reservoir, on Wednesday, one very large trout. Sea fishing—A pilot, whiffing off Lundy last week, caught a quantity of mackerel, in fact the sport was so good that he forgot all about his piloting. We hope soon to hear of some good sport off Ilfracombe, when the weather is moderate enough for boats to go out, they get fair catches of tamlin, cod, whiting, pout, and pollack. On Saturday night last it blew a heavy gale from the N.W. On Sunday morning our lifeboat put out to try and rescue some of the crew of the s.s. *Pelton*, that had sunk between Lee and the Bull; however, their efforts were fruitless. They succeeded in getting two life-buoys, one marked s.s. *Pelton*, of Newcastle, the other *Uzziah*, of Salcombe; in the latter was the body of a man dead but quite warm. Some good sport has been had this last week from the jetty with rod and hand lines for small whiting and dabs.

Streams are now in good condition for trout fishing, I heard of a trout 3 lb. weight being caught last week from a stream that runs from Longleigh through Forrs Park, the rod was broken in landing it. Three boys, on Saturday, caught forty trout, and on Tuesday eighty, averaging about five to the lb., these were all caught in the streams leading from Chambercombe through Francis bottom. Sea-fishing is very slack at present, only a few tamlin, cod and whiting being caught. There is some good sport to be had of an evening with rod and line from the jetty for pollack and whiting pout. Weather at present very mild.—E. Comer.

Medway (Tonbridge).

Dragging a Lake with the Tonbridge Angling Club.

With a view of providing sport for the devotees of the gentle art when they are precluded by Act of Parliament from following their charming recreation, the committee of the Tonbridge Angling Club have inaugurated a series of days out, pond dragging, in order to obtain stock fish for the waters of the Medway. Various landed proprietors in the neighbourhood have kindly placed old ponds and lakes at the disposal of the committee, which have not only provided several pleasant days in the country, but have yielded a valuable stock of fish to add to the sport to be obtained in the club waters. On Friday last a visit was paid to the North Frith Estate, near Tonbridge; E. Hale, Esq., having generously given the club permission to drag his large lake. The party, a right merry one, started from the Rose and Crown Hotel at 10 o'clock, and arrived at the water at 11 o'clock. Here Grounds and Son had placed one of their largest nets in the water ready for a start. As one side of the lake was fringed with willows there was only one way in which to get the net along, and that was to go in for it. Mr. Flood, one of our members, who is ever to the front, at once plunged in, and after an hour's hard work the net was hauled up on the other side. There was great disappointment—as it was supposed that there would have been a very heavy haul of fish—when it was found that there was only some two or three hundred bream, roach, carp, and perch. After the net had been prepared for dragging through again, a call was received for luncheon, which had been laid out in a wood close by. The repast was generously provided by Mr. E. Greenwood. We need hardly say that ample justice was done to the viands, which were washed down by an excellent glass of ale. Away we went to search again, and dragged the huge net through the lake again, with, however, only the same success as before—hundreds of small fish, but not a large one. Mr. Hale was very much surprised, and came to the conclusion that the lake, which is in a very isolated position, must have been terribly poached. After another draw the work was given up. The result was the capture of 1005 fish, the majority being bream; and these were safely conveyed to Tonbridge, and turned into the river opposite the castle. The result, from a stocking point of view, was unsatisfactory, but all enjoyed the outing, and many were the hearty thanks expressed towards Mr. Hale for his great kindness, for it was felt that nothing would have given him greater pleasure than to have seen a big haul. We may mention, in conclusion, that Mr. E. Greenwood, as usual, lent all the necessary apparatus and canvas for the removal of fish.—Ye Medway Otter.

Norfolk.

The magnificent weather of the past few weeks has greatly encouraged and tempted anglers from their homes, and fish have been well on the feed, for even those who have been heartless enough to try for jack have so far succeeded wonderfully well, as I have just heard that a gentleman belonging to one of the piscatorial societies in the city caught no less than ten fine fish with the spoon between Horning and Ranworth on the Bure. This is most unsportsmanlike, and certainly does not reflect much credit upon him. There is a deal of revision required respecting the laws relating to the taking of jack from our waters, as has been evinced by the controversy which has of late been carried on through our local papers. "Out of evil cometh good," and thus so far the members of the E. A. P. S. have achieved a success, for it has resulted in the owner of Horeton Broad giving his promise to put a stop to all illegal fishing on his preserves in future. But what of Wroxham Broad, where this kind of thing is practised so extensively? Surely Mr. Chamberlin must be cognisant of the fact, and as he is one of the secretaries of the "Bure Preservation Society," he certainly ought to set his face very decidedly against this nefarious practice. As many as a hundred liggers have been floated in one day during the past season by certain gentlemen from Norwich, but whether by permission of Mr. Chamberlin or his worthy son I am unable to state; but certain it is, if one attempts to angle on the Broad it won't be more than ten minutes before he is requested to hand over 2s. 6d. for his "little go." I am sure Mr. C. will not object to inform your readers what these liggerers pay for their day's sport; and, as the money goes to the funds of the N. and N. Hospital, I trust he did did not forget to lay it on. However, in the interests of all anglers, I am sure Mr. Chamberlin will do his utmost to preserve Wroxham Broad from the ravages that have of late been carried on. Those gentlemen who are amongst the favoured few who have done their utmost to destroy, are well known to me. I shall watch them very narrowly when the season comes in; and should I by any chance meet with them in their cowardly avocation, I shall certainly expose them. Also a little more straightforwardness of speech at the next meeting of the Yare Preservation Society from a certain gentleman would be more satisfactory, for although he has very rightly designated those who used liggers as "thorough scamps," possibly he might have forgotten what a "jolly" day he had on Horeton Broad soon after the E. A. P. S. got themselves into notoriety, and although he, with his two friends, did not "collar" any fish, yet his intentions were just the same. But I trust, like the members of the E. A. P. S., he is reformed, and that, ere this, his liggers have been consigned to the flames. There is good perch-fishing now to be had on the Bure, and I saw a very decent lot shown one day last week. The best class of fish I have seen were some roach taken by a member of the Loyal Beehive Club. There were about nine fish, each averaging 1¼ lb., and in splendid condition. Some good bream are also being got in the vicinity of Norwich, but what I have seen are rather sickly, apparently without any amount of life in them. The prospectus of the New Boating Station has been issued, and the shares are being rapidly taken up. Undoubtedly the venture will develop itself into something of greater magnitude, as the company propose not only to make it a fishing station, but also pleasure gardens; and they also propose to establish a gun club, a want that has long been felt by the sporting fraternity of Norwich. A smaller concern has, I believe, been started near the company's grounds; but I am informed their object is more for the purpose of advertising than anything else.—Angler.

North Lincolnshire Trout Streams.

The prevalence of cold easterly winds since my last report has been against the hatching of spring flies, and but few anglers have visited the water-side. I had about two hours one evening after tea and caught six, the largest of which was seventeen inches long, and weighed a good 1¾ lb., two others were about ¾ lb. By far the best fly just now is the March brown (male), dressed as follows: body, grey hare's ear ribbed with straw-coloured silk; legs, partridge's back feather; wings, grey partridge's tail; tail, two fibres of the same; hook, No. 3 sneck bend. The following flies may also be used as soon as the weather moderates: Royal Charlie, blue dun, iron blue, drake, checkwing and saw fly. They are all standard killers.—Thomas Ford.

Severn (Shrewsbury).

The river has been in very poor condition for angling, there having been rain on Sunday, which coloured the river a little, but it is now getting into fly-fishing order again, and I hope that by Friday it will be in such a condition as to amply repay anglers for their patience. Only three of our members have weighed anything in since I last wrote. Mr. Ellis, sen., showed three good trout, weighing respectively 1 lb. 2 oz., 1 lb. 9 oz., and 10 oz.; Mr. Ellis, jun., one of 6 oz. Mr. L. Price has just weighed three nice dace weighing 1¼ lb. I hope to report some heavy baskets next week.—F. H. M.

Severn and Teme (Worcester).

The Severn is in good order for angling with the worm or minnow; it is rather of a whey colour. It may do at the head of the river for the fly. The Teme is fine, also the brooks, and many of our local anglers are looking forward to a day or two's good sport the coming holidays. There is a good chance, for it is the opinion of many that the trout are forward this season and in numbers upon the small streams. An angler who is known as the "Otter" took thirty-two brace upon a small stream with the fly. The fish run small. Mr. Joseph Thorne and a friend caught with the worm twelve perch, some weighing over 1 lb.; the worm brandling was the bait used. Amos Bosworth landed a few trout and chub. I may here say that the Teme is exempt from the Fresh-water Fishery Act, those fishing with a trout licence can take any kind of fish, except salmon and grayling, all the season. Wind north-east and cold.—J. A. Griffin.

Swale.

The weather has been too cold for fly-fishing, but a few local anglers have been out with the minnow and worm. Mr. Barker, of Reesh, caught the finest dish since my last report, namely, 24 good fish, all with the minnow. Hackled flies kill well on this river—notably, woodcock and orange, snipe and purple, snipe and crimson, dotterel and yellow, snipe and orange, &c.—Thomas Ford, Caistor.

Taw and Tributaries (N. Devon).

Water risen considerably; large streams too thick; east wind. Good fishing if not too heavy rains in three days. Easter week water will be in better condition than for years. Some good trout fishing has been had in the Lynn, Yeo, Bray, and Mole. One catch in the Yeo forty-six, another three dozen. Sir W. Williams got two dozen and six fish Monday, Mr. Dennis two dozen, Mr. Paine two dozen. Now the salmon fishing is in. Water on Saturday, although high, not too much discoloured; some salmon were caught. One or two fresh run fish at Southmolton Road; eight salmon landed. A salmon was caught in the tidal water with fly and gut collar attached; the owner can have it by applying to me. Trout catching with rusty red, blue upright, March brown; salmon with large cow hair and rusty blue tackle, and the minnow.

Thames (Goring).

Water in good order. Could not be better for trout-fishing. Nothing has been done here. No one has been here to try for trout. At Pangbourn they are doing well. On Saturday last they took thirteen trout, one of 6 lb.—JOHN RUSH.

Thames (Windsor).

The east wind which has favoured us since the opening of the trout season has been greatly against the chance of a good run with decent fish. Out of seven fish taken in this neighbourhood the largest only scaled 2½ lb. In Windsor Weir, a fish supposed to be about 6 lb. was run but lost, and on Tuesday a good fish was lost in Boveney Weir. As I mentioned some weeks back, this weir certainly has a good stock of trout, for all seven fish mentioned above were had in it, and a little below, James Gray had a nice little fish on Wednesday of 2½ lb., with a patron; and he tells me he saw several feeding in the open. These, of course, with a little patience and livebait fishing, are to be had, but to throw a spinning bait about in quieter waters than a weir the chances are against the angler, not that I am an advocate for livebaiting, far from it, but at present they will have it no other way. At the Ferry, Windsor side, an old acquaintance of mine has been showing himself—lucky is the man who gets him—I have never been favoured with a run from him, but should I get one, doubtless your readers will hear all about it, as I only know of one fish in the neighbourhood that will come anywhere near his weight. Should the wind alter, some good fish will be had if anglers try them, at least, this is the opinion of your correspondent,—B. R. BAMBRIDGE.

P.S.—The two first trout taken at Boveney Weir were caught with Bambridge's split tail spinner.

Wharfe.

The trout-fishing opened here 1st April, in the river Wharfe, under bad circumstances for fly-fishing, the river being more suitable for minnow and worm. There were a few tried fly, the takes being about 6 brace each. A few trout were also killed with artificial minnow brags and Devon. The killing flies were March brown, waterhen, partridge, freckled dun, and snipe.—W.B.

Wye and Derwent.

Both the Wye and Derwent have been well patronised by anglers during the past week; and I am pleased to say, as a rule, there have been some excellent baskets of trout killed lately in the Wye, and also off the Derwent, chiefly with the artificial fly and by trolling, with the well-known "Derby Trout Killer," on the Derwent. This is the very best bait out for taking large trout, especially when the water is slightly discoloured. One angler here, in Matlock, has already this season killed over thirty brace of good-sized trout with it. The worm is still followed, with good results, in various parts of the Derwent, the streams being the best places to kill fish in; and both the small cockspur and brandlings are the best kind of worms that can be used. Bumble point furnace 1st drop, and February red 2nd drop, are killers. I hear of several good trout being killed in the deeps at Matlock Bath with tight lines, baited with both minnows and lob-worms. Both rivers are now in first-class condition for angling, and there is every appearance of the Easter holiday piscators having a first-class time of it.—G. J. EATON, Starkholmes, Matlock Bath.

CLUB REPORTS.

ANCHOR AND HOPE ANGLING SOCIETY.

The members of this society met in good numbers on Wednesday, the 29th ult., Mr. C. Daniels in the chair. After a long discussion it was decided to abolish Rule 22. During the evening the quarterly prizes were distributed, the following being the successful members: Mr. A. Glass, gross weight of jack and largest roach; Mr. A. Shakel, gross weight of roach, &c.; Mr. W. Streeton, handsome timepiece; Mr. R. Smith, superior fishing, box and tackle; Mr. B. C. Booth, a very pretty teapot; Mr. D. Davis, fishing tackle; Mr. T. Bowling, fishing tackle.—D. DAVIS, sec.

April 3.

ANGLERS' BENEVOLENT SOCIETY.

At the request of several friends of the above society, the drawing for the picture presented by Greville Fennell, Esq., will be postponed till after Friday. April 21st. Tickets not paid for by that date will not be drawn for.—R. GHURNEY, sec.

April 5.

CAMBRIDGE FRIENDLY ANGLING SOCIETY.

The annual dinner of the above society will take place on Thursday, the 13th inst.—W. SUTOTN, sec.

April 5.

CROWN PISCATORIAL SOCIETY.

This promising society held its first meeting on Thursday, March 30, the comfortable club room being fairly filled with brothers of the rod. There were fifteen members made; five of these were members of the Original Clerkenwell Piscatorials. The two members that were expelled from that society have nothing whatever to do with this new club; and if Mr. Lucy, senior, secretary of that society, intended justice to the angling community, he should have inserted the names of those members that were expelled for unfair fishing, viz., Mr. Lucy, junior, and his friend, Mr. Burke. By inserting this you will be doing justice to the anglers at large.—W. H. BURWASH, jun., sec.

April 5.

DE BEAUVOIR ANGLING SOCIETY.

Mr. G. Colls weighed a trout from the Thames of 7 lb., and Mr. Starkey a fish of 1¼ lb. from the Lea.—A. Z.

April 4.

DUKE OF CORNWALL.

The next return visit of No. 1 District will take place at the Duke of Cornwall, Lismore Circus, Haverstock Hill, N.W., on April 11 (Easter Tuesday) when the members will be pleased to see the representatives of any society in or out of the district. Midland trains to Haverstock Hill, North London to Gospel Oak, King's Cross trams and 'busses from the West End, will bring members within two minutes of the club house. —J. HECKFORD, sec.

April 4.

GRESHAM ANGLING SOCIETY.

The meeting of this society on Thursday last, which we briefly reported last week, was of exceptional interest, many useful suggestions being made in the course of the customary discussion on the society's work. The society is now thought to be sufficiently strong to rent water, in addition to that at Waltham, and Messrs. Alfred, Frost, Jardine, Brett, and Godwin were chosen as a sub-committee to look after the society's requirements. Mr. Jardine offered a pike rod and Nottingham reel, Mr. Brett giving other accessories for the best pike caught by a member in public waters next season, an offer which was received with much applause. The attention of members just now is of course more specially devoted to the trout, of which it is hoped some good shows will be made. Mr. Wheeldon, whose genial presence is ever welcomed at the society's gatherings, presents "the best rod that money can buy for the largest Thames trout caught spinning this season," and to make the equipment complete Mr. Frost adds the line and winch, and Mr. Field the landing-net. Dr. Brunton followed with the gift of a fly-rod for the largest trout caught with a fly, and landed without net, gaff, or other assistance. Mr. Jardine, Dr. Brunton, Mr. Wheeldon, and others, gave interesting details of their piscatorial experiences, for which they were heartily thanked by the members present. The society will be represented at the national competition on Loch Leven next month by Messrs. Frost and Slater, than whom it would be difficult to find more skilful representatives. Mr. Frost presented the society with a very handsome and valuable fac-simile copy of "Ye Art of Fishing with an Angle," by Dame Juliana Berners, for which a vote of thanks was also quickly passed. The respect in which the society is held in the provinces was shown by the warm and hospitable reception accorded to Mr. Crumplen, in company with Messrs. Jardine, Brett and Towse, at the meeting of the Reading and District Angling Association, held at the Great Western Hotel, Reading, on Saturday last. "Prosperity to the Gresham Angling Society" was duly given and honoured, coupled with the names of Messrs. Jardine and Crumplen, to which both gentlemen made suitable replies; Mr. Jardine very ably pointing out the necessity of doing away with gross-weight competitions, the injurious character of which he thought beyond question. Mr. Crumplen followed, explaining some of the purposes of the Gresham, and thanking the society for their very friendly greeting. "Success to the International Fisheries Exhibition, 1883," followed, to which Mr. Towse responded; Mr. Jardine advocating the claims of the exhibition upon the angling world with his accustomed eloquence and wit. Considerable interest was evinced in the particulars given by Mr. Towse, whose earnest work in furtherance of the objects of the exhibition cannot be too highly commended. The Reading Association will be sure to respond liberally to such an appeal. Several important papers will shortly be read before the Gresham, and these, with sundry modifications of rules and other matters, will fully occupy the society during the next two or three months.

HOXTON BROTHERS.

The above society have now removed from the Jane Shore, High Street, Shoreditch, to the Cherry Tree, Kingsland Road, one minute's walk from the North London Railway Station, Shoreditch, where the members will be happy to receive a visit from their brother anglers to inspect their handsome and commodious club room.—R. GHURNEY, sec.

LENTON ANGLERS' ASSOCIATION, NOTTINGHAM.

The half-yearly dinner and distribution of prizes of the above association took place on Saturday last at the house of Mr. John Walker, the Black's Head Inn, Lenton, when about twenty-four members sat down to partake of a substantial repast provided by the host and hostess. After the cloth was drawn the prizes were distributed as follows:—Chub.—Mr. Geo. Tilley, 1st prize, 5 lb. 12 oz.; Mr. Miles Leake, 2nd, 3 lb. 3½ oz.; Mr. Thos. Sylvester, 3rd, 1 lb. 15 oz., two shot. Bream.—Mr. Hy. Hudson, 1st prize, 3 lb. 15¼ oz., three shot; Mr. E. Tomlinson, sen., 2nd, 3 lb. 11½ oz.; Mr. E. Perry, 3rd, 3 lb. 2¾ oz Roach.—Mr. A. Hazard, 1st prize, 1 lb. 7½ oz.; Mr. T. A. Hudson, 2nd, 1 lb. 7½ oz., less one shot; Mr. Thos. Stevenson, 3rd, 1 lb. 14¼ oz., less three shot. Dace.—Mr. F. Ludwig, 1st prize, 1 lb. 6¾ oz.; Mr. S. Mather, 2nd, 1 lb. 6½ oz., two shot; Mr. W. Mathews, 3rd, 1 lb. 5¾oz., one shot. Perch.—Mr. E. Tomlinson, jun., 1st prize, 1 lb. 12¼ oz.; Mr. J. Walker, 2nd, 1 lb. 7¾ oz., less one shot; Mr. J. Roper, 3rd, 1 lb. 4½ oz., two shot. After the prizes were awarded to the successful members the remainder of the evening was spent in harmony, and a hearty vote of thanks accorded to Mr. G. Tilley, the hon. sec., Mr. F. Ludwig, the president, and the host and hostess, Mr. and Mrs. Walker, brought a very enjoyable evening to a close.

P.S.—It should he mentioned that Mr. Miles Leake, a member of the above association, caught a barbel while chub-fishing at Shardlow on January last, which weighed 9 lb., and in splendid condition. The fish has been set up by Mr. Stanley, of Nottingham, and is now on view at the club-house.

GEO. TILLEY, hon. sec.

ORIGINAL CLERKENWELL PISCATORIAL SOCIETY.

On Monday last a concert took place at the above society under the management of Mr. Willcockson, and they will be continued during the fence season, commencing at eight o'clock. Hoping to have the pleasure of meeting old faces.—THOS. WM. LUCY, Sec.

April 4.

SHREWSBURY SEVERN ANGLING SOCIETY.

We had a very full meeting last week, at which it was decided to have our first outing on Easter Monday, when there will be several valuable prizes fished for. The inaugural supper will take place the same evening, when we shall, I have no doubt, spend a most enjoyable time of it. I am happy to say that the society is increasing daily, and that by the end of the year I hope we shall form a strong club.—F. H. MORGAN, hon. sec.

GEORGE JAMES EATON, of Starkholmes Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required from gentlemen who can fish to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies, 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—[ADVT.]

ANSWERS TO CORRESPONDENTS.

V. August, Newcastle.—We wrote to address given in yours, but letter is returned "not known." You can have it if you send correct address. We insert no annonymous correspondence.

CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

CULTIVATION OF GRAYLING AND TROUT.

Sir,—It may interest some of your readers to have an account of an attempt to introduce grayling into the Colne, which I believe is likely to prove successful. Last year I obtained from the Peak Forest Club, Leeds, two thousand grayling fry, on the 28th May. The fry were delivered at King's Cross, were taken in a cab to Paddington, from thence by rail to West Drayton, and were then driven two miles to Delaford Park. On arriving at the riverside not one single little one was found to be dead. The fry were at that date certainly not three quarters of an inch in length, and they were introduced into a side ditch from whence they gradually worked their way through a grating into the main river Iver, which is a branch of the Colne. During the winter a keen lookout has been kept for the youngsters, and the keeper and several sharp-eyed piscine amateurs at various times declared that they could distinguish grayling amongst the young trout, dace, and minnows, which abound in the Iver; nevertheless, positive proof of success was wanting to my mind. The keeper, however, on March 18th endeavoured to catch a small jack with a cast net, just in front of the Delaford Manor House, and to his great delight brought to land a grayling, which on the following day was exhibited alive to the admiring eyes of Messrs. Victor Emanuel, Ernest Turner, and Edwin Gosling, all well known fishy enthusiasts. The fish was in splendid condition, and when placed on a piece of paper proved to be exactly five inches long, which all present considered to be a wonderful growth to have taken place in less than ten months, and which I think proves that the Colne and its branches are probably, as I have long thought, well adapted for that handsome, elegant, and toothsome fish, *salmo thymallus*. I need not point out that it would prove most important and interesting to all lovers of fly-fishing if the grayling could be introduced successfully into the many admirable trout streams which exist within a radius of thirty miles of the metropolis. Our keeper, Sergeant Beck, has this season erected some hatching boxes on a small branch of the river, in which he has just succeeded in bringing to life some 150,000 young trout, which I am sure he would willingly show to any of your readers who may be interested in pisciculture, and who may happen to be in the vicinity of West Drayton. These young trout are all obtained from Colne and Wycombe fish, and as they are all born in a natural running stream I expect very good results. It is proposed, however, not to permit them to escape into the main river until they are six or eight months old. Should any one desire to obtain any of these fine strains of fish for stocking, there will probably be more than will be required for the Iver.—I am, &c., Llewelyn Thomas.

[We most heartily congratulate Dr. Thomas on the gratifying success which he is able to describe already in connection his attempt to introduce grayling into the Colne. We know the water, and feel sure the fish will prosper.—Ed.]

TROUT IN THE THAMES.

Sir,—Your correspondent B. has misapprehended my remarks. Far be it from me to behave uncourteously to a gentleman like Mr. Forbes, who has spent time, labour, and money in endeavouring to benefit anglers. My remarks were intended for those preservation societies who apply to the general angling public for subscriptions to preserve the rivers, and then spend the money in purchasing trout fry. I am sorry to be obliged to differ from your correspondent B. when he tries to prove the success of trout rearing from the fact that 278 were turned into the river. No one disputes the turning of trout into the river. To prove the success, it is necessary to show how many come out of the river. Your correspondent R. D. E. says that during twenty years the experiment has been tried, and he admits that, as far as brook trout are concerned, the experiment has been a failure. What would be the simplest and most effectual way of propagating the Thames trout proper? Next to seeing a great improvement in keeping the Thames free from impurities, it would be necessary to net out jack and perch as far as possible. Now I always endeavour, as far as I can, to conscientiously represent the opinions of the great body of the club anglers, and I think I don't misrepresent them when I say that what gentlemen may do in the way of trout rearing at their own expense, they (the club anglers generally) have no wish to interfere with; but they don't want to see any fish netted from the Thames to make room for trout, nor to see funds they subscribe for the preservation of the river applied for the propagation of trout of any description.—I am, &c., A. J. Marriott.

March 30.

[The Thames trout can take care of itself as far as pike and perch are concerned, and no one would dream of attempting to make the Thames a trout preserve. If Mr. Forbes can rear Thames trout and place them of a good size and in any quantity in the river, he will be doing all anglers a benefit. We presume no angler considers a trout beneath his notice if he happens to catch one when perch or roach or barbel fishing, and the more trout we have the more chance will there be of all getting a share of them.—Ed.]

THAMES TROUT-FISHING.

Sir,—Could you, or any of your readers, kindly inform me whether the weirs on the Thames are all free for trout-fishing, and whether spinning a dead bleak, or fishing with a live minnow or worm, can be used; or is the angler strictly confined to artificial bait-spinning and fly-fishing? If dead bleak may be used for spinning, is it illegal to angle for bleak in the Thames for bait, or where can they be obtained?—I am, &c., Z. A.

[Most of the Thames weirs are open to the public. You can angle for Thames trout in any way you like, but spinning a dead or artificial bait, or fly-fishing, are the only sportsmanlike methods in our opinion. Nearly all the fish are, however, taken by live baiting—a monstrous method. You can spin a sprat as easily as a bleak. The fisherman can generally procure you bait. It is not illegal to take bleak for bait, but you must be able to prove convincingly that you are doing so for that purpose.—Ed.]

LINES MADE OF HUMAN HAIR, THE ACME LINE, &c.

Sir,—Will "Creel" give some further information concerning the fishing qualities of his friend's lines, made from human hair (*vide* the account of those made from the hairs of an Abyssinian woman). I have in early days made for myself several lines by the method he describes, which is very good, but very slow work; yet where the superior quality of a particular line is a consideration, the time is not wasted—especially as it will be impossible to purchase such lines as he describes made from human hair.

Will "Creel" kindly say (1) What relative strength a human-hair line bears to ordinary fine trout lines made of eight-plait silk, and waterproofed? (2) How it is for stiffness in casting the fly. (3) How does it wear as regards the chafing consequent upon friction through the rod rings—which is almost incessant in fly-fishing? (4) Its weight per yard as compared with lines above mentioned. (5) Its tendency to rot from age or long use. The great desideratum in a perfect line for casting the fly is permanent stiffness in use, and a constant given weight. In silk and horse-hair lines this is constantly varying in proportion as to whether the line is wet or dry, and is a great hindrance to correct casting. The waterproofed eight-plait silk lines vary less in this respect, but they often soon lose their protective covering, and the denuded silk line becomes soft, limp, and "waterlogged," and soon ceases to answer to the spring of the rod as when new. The new "Acme" lines brought out by Mr. Foster (at the original suggestion of the writer) are a great improvement in this respect over any other lines I have used, they are very fine eight-plait silk lines, waterproofed, but stiffened by a fine softly annealed copper wire plaited into the body of the line. This gives the desired permanent stiffness, no matter whether the line be wet or dry, old or new, and the further advantage that a thinner line can be used, giving the same weight for casting with less resistance from the air, and a greater power of throwing the fly in the case of adverse currents of wind. As a new article, it remains to be proved by use whether these lines will wear as well as the old ones, but I see no reason why they should not do so. They are exceedingly strong and pleasant to fish with, and the "cast" can be made much longer than with any other line, an advantage where fine and far off fishing is necessary.

As the lines are advertised in your paper, anglers can try them for themselves.

I have an idea that a good tapered line made from rather coarse human hair might, however, prove the finest article in existence for fly-fishing, and I should feel obliged to "Creel" for any information on the subject.

The Hampshire system of fishing with the dry-fly, as in common use on all chalk-stream trout fisheries, would probably be improved by the light floating property of lines made from human hair, as a line which lies lightly on the water is less calculated to drown the dry fly than a line which sinks quickly under water,—I am, &c, March Brown.

Leicester.

EYED HOOKS, &c.

Sir,—I am glad you liked the patterns I sent for your inspection, and I am much obliged for your favourable notice of the hooks. As to the knot, it is the simplest thing in the world, when seen, but it is not easy to describe it on paper without a sketch. If the enclosed description and diagram is of any use, I shall be glad if you will kindly make it known. I have had numberless letters on the subject, and I have met with anglers who strongly condemned the hooks because they could not tie them on properly. At Winchester, I once met a stranger who held up to scorn and ridicule my pet hooks, and I was greatly amused at his emphatic condemnation of "these beastly things," as he called them. As soon as I tied a fly on for him and showed him the knot, the case was quite altered. Last year, too, on the Usk, I met an angler, who had only one thing to say, and that was—"They must be very bad." If so, I have been wilfully using very bad hooks for four years, and I hope to persist in the same folly for a good many more seasons yet.

Since writing my last letter, I observe that one of your correspondents mentions Messrs. O'Handlen and Co., of Bristol. I know the shop well, and Mr. R. D. Frost, who is the manager of the business, has carried out many orders for me in the most obliging way. I so rarely buy flies anywhere, that I have had no dealings with Mr. Frost in this department for a long time, but he is largely patronised by anglers in the West of England; and I expect he would be found a good authority on Devonshire flies.

When I wrote before, I had no idea that flies on the eyed hooks were to be obtained in Bristol, or I should certainly have mentioned Mr. Frost. I have had large stores of choice hackles and other feathers from him, and amateur fly-tyers will find his table-vice a very cheap and handy little tool. I have recently got three of them for different friends.

Mr. Frost's address is 48, Victoria Street, Bristol, and he is a practical angler of wide experience. No one can go into the shop without admiring his beautiful preserved fish—nearly all captured by himself.—I am, &c.,

H. S. Hall.

Clifton.

[We have had a woodcut made of the sketch, showing how the eyed hook is knotted to the gut, and print it elsewhere, with Mr. Hall's description. It is the simplest thing, when once known, but no other knot answers the purpose of keeping the hook standing out stiff on the gut.—Ed.]

SPECIMEN FISH AND GROSS WEIGHTS.

Sir,—L. B. asks for a definition of the terms "specimen fish" and "gross weights." I understand "specimen fish" to be fish of exceptional size or weight, shown to a society by a member as the best samples of his take, the smaller fish being returned to the stream. Societies adopting this principle fix their minimum standard higher than ordinary, that no inducement may be offered for the depletion of our rivers by the capture of small fish.

By "gross weight" I understand the system which encourages a member to weigh-in every fish coming up to the society's scale, however low their standard may be; a system which, to my mind, is injurious to the true interests of anglers. This, however, is a matter of opinion, on which L. B. and myself must agree to differ at present. Time will inevitably show which is right.

I fully agree with him that "poor Joe Smith or Bill Brown" is as true a sportsman as may be even the wealthiest member of any angling society in existence, subject only to one proviso. That proviso is, that "poor Joe Smith" fishes for the love of the sport, and not for the sole object of beating his neighbour and taking a prize. I have met many a true sportsman among ordinary club anglers, and I know that their leaders have the best interests of the craft at heart. They are worthy of all honour, but I do regret the tendency which now and then unconsciously appears (in one or two instances only) to set class against class, instead of uniting heartily for the common benefit of all.—I am, &c., T. Crumplen.

ANGLING CONTESTS AND ANGLING CLUBS.

Sir,—In reply to J. M. D., I can assure him that the bad sport in the portion of the Trent to which I referred is entirely owing to the gross-weight system, and public and private competitions.

By private competitions I mean two or more members of any given club pitting themselves against each other, or against members of other clubs, for the express purpose of seeing who can kill the greatest weight of fish in a given time for a small stake—literally, for a small steak. Why cannot these ambitious gentlemen go in for sticklebacks and minnows, numbers only to count?

On many days throughout the season from 80 to 100 so-called anglers visit this part of the Trent, and are called "club" men; many, I have no doubt, very decent, respectable, and fair fishermen, but by far the greater portion what I should call the stickleback and minnow brigade, their great ambition being to clear the expenses of their outing by selling the fish on their return to town. Before doing this, they of course, weigh-in the best at the club, keeping back the small fry.

And I simply say—after fishing this part of the Trent for thirty-four years, and after having noted every species of club men, from the old general who would throw you off the scent as to where he caught such a number of barbel, to the most inexperienced recruit—I can say, without the slightest hesitation, they stick at nothing to gain this object. I believe the great mass of the London club men are quite above this kind of thing; but J. M. D. must know there is a good deal of betting going on as to the result of these individual and club competitions, for which the poor finny tribe in the shape of the "small fry" have to suffer

How often we read in a certain paper (at least I have):—"The long talked-of roach match for £10 a side came off on Thursday last in the river Lea, between Messrs. Perch and Dace; and, after a rare struggle, Mr. Dace proved successful by 9 oz. N.B.—It is said a good sum of money changed hands over the affair." I suppose you know why a good sum of money changed hands over this affair, Mr. Editor? Of course you do, though J. M. D. may plead ignorance. I will quote the same paper on another of these occasions, and perhaps that will enlighten him; "a good deal of surprise was expressed at Mr. Eel being so easily defeated." Upon my word it is most amusing.

"But," says that all-powerful and wonderful potentate, the secretary, when you approach him in all the majesty of office, "undersized fish are not weighed-in on these occasions, sir." All I can say is, I am very glad to hear it, Mr. Secretary; but, if they were, I suppose you could make a rule to prevent such competitions taking place between members of YOUR club, or between *your* club and other clubs. If you could, why, in the name of all that is wonderful, don't you?

I am told that *some* of the London clubs give prizes to be fished for every other Sunday throughout the season. Where does the money come from to pay for all these prizes? I dare say this question will raise a laugh; but you see I am labouring under great disadvantages; I never belonged to an angling club; *ergo*, perhaps, I am not a fit and proper person to talk about such matters. Rather green, in fact, and mayhap prating about that of which I know nothing. But on the principle that those who look on see most of the game, I have ventured to make these few observations.

I say "ventured," because we know what to expect when we begin to knock over the idol a man worships, no matter how imperfect it may be. I can tell J. M. D. one thing, the stickleback and minnow brigade have made it so very warm one way and the other on the portion of the Trent to which I refer, viz., between Carlton and Crunwell, on the western side of the river, that the land owners—who were glad to see me in days of yore—now not only refuse to smoke a pipe with me, but charge me one shilling for a day's fishing; with strict injunctions (delivered in tones "not loud, but deep") not to break down the fences. J. M. D. can draw his own conclusions. In conclusion, let the secretaries and committees of all fishing clubs (1) prevent members making gross-weight matches with each other; (2) prevent members making gross-weight matches with members of other clubs; (3) stop the excessive teapot, tobacco pipe, German flute, and tin whistle prize gifts; (4) publish the name of any member obtaining a prize unlawfully; (5) only give prizes for specimen fish, and those but seldom. Hoping J. M. D. and others will profit by these remarks, is the earnest wish of yours truly, MARK ANTONY.

[Quite right, "Mark Antony"; anglers must set their faces against the prize-fishing, pot-fishing, and betting elements.—ED.]

ANGLING DURING THE FENCE MONTHS.

SIR,—I should feel obliged for your opinion of the following affair:—I am a member of an angling society not 100 miles from the Old Kent Road, and last week it was coolly proposed, seconded, and carried that the following rule be abolished:—"Any member found fishing during the fence months shall be excluded and forfeit all moneys paid." The reason given was that one or two members had chances of some fishing in private waters. My contention is that public or private waters make no difference. Fish are in the same unhealthy condition during this part of the season, and it is a most unsportsman like proceeding on behalf of the club abolishing the best law of the society. I think, if the association with which we are connected knew of such a proceeding, they would certainly interpose in the matter. I shall decline having anything to do with any angling club which allows such a state of affairs.—I am, &c.,

JAMES BODELL.

147, Farmer's Road, Wyndham Road, Camberwell.

[As far as our experience goes, we should say the fish will always be in a very much more unhealthy condition in June than they will be in March or April. The only fish which spawn early are the jack, dace, and perch. In our opinion there is nothing "unsportsmanlike" in fishing for roach, chub, bream, carp, tench, gudgeon, &c., fully a month longer than the Act allows. It is much more unsportsmanlike to take them in the condition they usually are when the fence time ends.—ED.]

THE WELSH HARP.

SIR,—Will you kindly inform me if the Welsh Harp fishery is open to the public during the close season or not, and, if so, please inform me the fee for bank-fishing a day.—I am, &c., C. J. TURNER.

[It is open. The charge is 1s. per day. Bream are the chief fish, and they will be in season for another six or eight weeks.—ED.]

Re THE WARWICKSHIRE AVON.

A DIFFICULT QUESTION.

SIR,—Many thanks to your reply to my query of March 22.

Your closing remark, "you hope we do not wish to take fish out of season," is exactly what we are most anxious to avoid; but as the Act stands we are positively compelled to do so or wait four months before commencing to fish. For when June 15 arrives all or nearly all the fish we catch will be in a wretched state, hence our desire to know if we may avail ourselves of the alteration. If so, we should simply make the close time a month or six weeks later, leaving us the two best months of the year. As regards our water, we are still in doubt as to what constitutes a private fishery. Our landlord holds a lease for one side of the river only, the opposite side belonging to a different owner; that being the case, has he the right to give us permission to alter the time? An early answer will oblige.—I am, &c., T. DEAR.

[The landlord has the right over the fishing from his side to the middle of the stream only.—ED.]

YARE PRESERVATION AND ANGLERS' SOCIETY.

SIR,—The annual dinner of the above society will be held on Wednesday, May 3rd, at the Royal Hotel, Norwich; C. L. Buxton, Esq., president, in the chair. As the number must necessarily be limited, the committee have agreed to confine the sale of tickets to members only until April 19th, after which date tickets undisposed of may be obtained by any gentleman desirous of attending the dinner.—Yours, &c., C. J. GREENE, hon. sec.

54, London Street, Norwich, April 3rd.

THE OXFORD ANGLING SOCIETY.

SIR,—On Wednesday evening, March 29, a meeting was held at Mr. Beckley's, Pheasant Inn (Mr. Sheriff Wheeler in the chair), for the purpose of forming an angling society for the city of Oxford; when, as about seventy gentlemen intimated their willingness to join, it is hoped to make the affair a great success. Several rules were carried by the company, but it was suggested, before printing them, I should write to you to allow us, through the medium of your capital paper, to ask any member of a fishing club if he would favour us with a copy of rules, as we wish ours to be as perfect as possible.

If any gentleman will so oblige us, we shall be very grateful, as one of our difficulties will then be smoothed over.

Apologising for thus troubling you.—I am, &c.,

The Pheasant Inn, St. Giles, April 3. THE HON. SECRETARY.

[Some time ago we printed fifty or sixty rules, which we selected from the books of rules of the chief angling clubs. We afterwards gave a prize at the Norwich Fisheries Exhibition for the best essay and code of rules for management of an angling society; and we afterwards printed the prize essay in the GAZETTE.—ED.]

TROUT FOR CEYLON.

SIR,—I beg to send you a copy of a letter received from Ceylon giving an account of a box of trout ova sent to that island, which, under all the circumstances, I consider favourable. I now hope that the streams of Ceylon will be fully stocked with magnificent trout, and that this experiment will induce others in other parts to follow my friend's example; as I think it is now fully proved that eggs can be sent, with small loss, anywhere in the world.

Cray Fishery, Foot's Cray, Kent. CHAS. C. CAPEL.
April 5, 1882.

[COPY.]

"St. John's, Uda Paselava,
"Ceylon, March 4, 1832.

"DEAR SIR,—I have much pleasure in announcing to you the safe arrival of the trout ova they reached their destination on March 1, in what, I imagine, would be considered a wonderfully healthy condition.

"On unpacking them, we threw away not more than 8 per cent. of the whole number. We have placed them in our troughs; which, however, were not quite large enough to receive the whole amount, and we therefore have distributed the surplus (about 1800 ova) part in two boxes placed in running streams, and part we placed in the main stream itself, leaving them to take care of themselves. The second day we threw away fifty dead ones from the troughs, the third day fifteen.

"I will give you further news of them as we go on; in the meantime, you are welcome to make any use of this letter you please.—Yours sincerely,

"(Sig.) HUGH L. HUBBARD."

MARLOW TROUTING.

MORE enthusiasm was shown, and more sportsmen were out, on the opening day at Marlow than has been the case for years. A fishing contest had been arranged and a prize rod secured for the successful competitor. Terms—Two in a punt with fisherman, heaviest trout to take the rod. Weigh-in at the Complete Angler, 6 p.m. Some half dozen took part in the sweepstake and good luck visited most of those entering. A nasty east wind with choppy water prevailed all day, but neither prevented the lunch baskets and bottles coming back empty. Five good trout were taken and sundry little ones, while pike would hook themselves. Mr. Gus. Astley-Bloxam took the rod with a 5-pounder, closely followed by Mr. Bedford's 4½ lb.; Mr. Scott secured one up to this weight. Mr. Footlit was unfortunate with a 10 or 12 pound fish, after ten minutes' careful play in a strong stream. The party dined together with a contingent of friends at the Complete Angler, when Mr. Bloxam took the chair at a capital feed; the rod, which is a handsome one, by Young of Oxford Street, was duly presented and acknowledged. As this little matter brought several new members to the association, the dinner, sport, and all, was declared a success and conducive to the interests of anglers generally. Another fishing match has been started for June 16th, opening general fishing. The fishermen employed were not forgotten, but were provided with a dinner at which a convivial evening was enjoyed, as a good beginning after the inaction and consequent low funds of the fence months. Several good fish have been taken since the the first, and the water is in good condition.—SPOTS.

GREGORY'S SPINNING BAITS. "The Gregory," the "Flexible Cleopatra," the "Oxford," and the "Colorado," pronounced by all Anglers and the Press the best baits invented for salmon, trout, pike, and perch. To be obtained from all respectable fishing-tackle shops in the world, and wholesale from Messrs. S. Allcock and Co., Standard Works, Redditch. Flattering testimonials speaking of the efficiency of the baits have been received from the Right Hon. John Bright, M.P.; Mr. William Bailey, Nottingham; the Rev. E. C. Holt, Teddington; Sir William Calder, Kingston-on-Thames, &c. Gregory's registered Archimedean spinning tackle for pike and trout, now ready, is pronounced by the press the best ever invented. For use with dead bait. The tackle is complete in every respect, and can be adjusted to suit bait of any size. Has been tried with remarkable success.—See that the name "Gregory" is impressed on the Archimedean fins, as inferior imitations are offered for sale, and people are thereby disappointed and deceived Address, James Gregory, Vyse-street, Birmingham.—[ADVT.]

RAILWAY ARRANGEMENTS FOR THE HOLIDAYS.

THE Great Eastern Railway have made special arrangements for the convenience of holiday makers, as will be seen from their advertisements and programmes. The G.E.R. opens up the almost limitless angling facilities afforded by the rivers and broads of Norfolk and Suffolk; in fact, so abundant are fish of all kinds that these two counties were specially exempted from the operation of the Mundella Act, and rod-fishing can be enjoyed all the year round. Of course, no angler worthy the name would take fish out of season merely because the law allows it; but there can be no objection to fishing all the year round only for fish in season. For particulars of the fishing-stations on the G.E.R., we refer our readers to Mr. C. Davies' "Guide to the Rivers and Broads of Norfolk and Suffolk," which we have noticed elsewhere this week.

THE CANAL AND CONFLUENT STREAMS.

"CHUB CHAVENDER," allow me to extend a kindly greeting across the waters to one who has found the value of Hertfordshire fishing. We little dreamed, when we wrote of the splendid trout to be found in the little Gade, that another correspondent of the GAZETTE would so aptly describe the fishing in the vicinity of Boxmoor. Even our courteous editor feared we were drawing on our imagination, or the fishing had changed with the lapse of years, when we urged the claims of these waters as good fishing grounds; but memory has not proved treacherous, nor the esparto broth killed all the fish.

We know these waters; our boyhood and early manhood was spent in the vicinity of these streams, and for years we lived at one of these mills. Your description has brought back old memories in a long train. We presume "Absence has made the heart grow fonder;" yet there has crept into your letter some errors which may mislead another. We know every spring, every brook and beck, even many of the trout holes and the favourite spots where the big jack were found. We guess you will return to Boxmoor again when the season opens and circumvent some of those big roach and perch and bring them in out of the wet.

Suppose when you visit Boxmoor again you spend part of one day exploring the little Bourne, from the point where it strikes the fishery at the saw-mills (Foster's). It drops down and runs under the canal through a culvert; here, as long as memory stretches back, we boys used to go to catch minnows for bait, where these minnows are found there you may rely on finding trout in the vicinity. We have seen the lordly trout with his broad tail fin lying just under the shadow of the arch, lazily fanning the cool waters and remaining just stationary out of the sunlight. We have followed the brook down to the brick bridge that crosses here for the road to the station; under this bridge with its deep shadows, we have seen good trout lying; under the willows that grow on the far side of the brook from the moor, lay trout. We have crept softly on the little bridge (just opposite the Baptist Chapel) and lying down have espied trout lying along its dark cool shadow. Let a stone drop, and off they go, like a flash, up stream. Just below, between the meadow that is shut in with a brick wall (old C——'s we boys used to call him), and the point where you strike the moor again, was a splendid stretch of trouting water; often we have seen trout by the dozen. The property on either side was leased from Boxmoor trust We never knew this water fished by a fly, but it had the reputation of being fearfully poached.

From the point where the foot bridge crosses—this is a single plank—along down to Two Waters mill, is an open stretch of water, shallow and broad, not many fish here; but we have seen trout lying in hiding behind masses of dog-tail moss, waiting for some unsuspecting minnow to come along and provide him a supper. Where the two streams meet and form the head race of Two Waters mill, was always a good spot to make a long cast with live bait, either small dace or gudgeon. We have seen some fine long noses (jack) taken from this spot, but it was a great privilege to be allowed to fish this water. G. W. Hayes, Esq., sometimes permitted anglers to have one day's fishing there. For eels this mill-head was a fine place; when the sluice gates were open on Sundays to let the water pass, eels quite often washed down the sheeted sluice-way. Below the mill was a willow bed; along the roots of the large trees on a clear gravelly bottom have we seen trout lie, and remember seeing a London angler deftly sweeping his pliant rod and landing his flies close to the roots of the trees. His judgment was correct, and a few casts brought out as handsome a trout as ever swam the Two Waters.

Let the angler turn back with me to the towpath where the Gade crosses the canal, we will take the road until we reach the little bridge opposite Mr. Balderson's wharf. Use well your eyes as we skirt this stream; there has always been trout in it, and if this stream was provided with properly constructed fish-passes—the fish in the upper reaches of the stream would often be seen here, but a mill-dam shuts them all in the upper stream, thus giving the privilege of trouting to the favoured few. At Pottoe's Bridge it is open water. Under this bridge, was always a hiding place for trout; for years we saw them daily during the summer and autumn of each year.

From this point there is a culvert running under the moor which carries the waters of two or three springs under the wall and into the private grounds of Mr. Balderson. Here there was at one time a lovely fishpond; it was reported that at one time many trout inhabited it. This explains how the trout reached the waters in front of the Bell Inn. From the pond the water emptied itself into a deep walled drain, into a culvert that run under the canal. From this point it was a dark, sharp running creek, almost covered with willows to the point where it joined the water from the waste gate at Two Waters mill; here was another little bridge and a deep hole that every Sunday, Monday, and Tuesday, was expected to contain one or two good jack. The stream ran behind some cottages, widening and deepening as it went; here under the wide spreading alders on the meadow side, and willows on the other, the trout often lay hiding, but the footsteps would start them out. We have seen them caught there and know they were trout.

In that hole at the foot of the foreman's garden at Frogmore Mills we have caught many a jack and some big perch; we used to fish and spark the foreman's daughter at the same time. She would be apparently working, while I would read to her, glancing occasionally at my float. It was the old story over again.

> "So we sat down by the sunny dyke,
>   Where the white pond-lilies teeter;
> And I went fishing like quaint old Ike,
>   And she like Simon Peter.
> And when the time for departure came,
>   The bag was as flat as a flounder;
> But I had neatly hook'd her game,
>   A hundred and seventy pounder."

While she, to-day, is as fond of fishing as I am, and isas proud of her own fishing tackle as a thorough going fisherman, and as eagerly looks forward to the opening season and the mid-summer holidays as the other half of the family do.

But "Chub" has got a little mixed when he says this hole can be reached from the public path, there was a meadow about 100 yards wide between the pathway and this hole. A pretty long cast, even for the longest tackle?

Did this gentleman know that within a couple of hnndred yards of him was a deep hole, where the waste water of the mill was discharged, that was rarely without a big fish in it. A lively little stream emptied into the same pool and kept the water in a regular swirl. Plenty of minnows came into it in shoals; then there was fun, to see a big trout dash into them and scatter them before returning to the big stones where he hid, to digest his supper and await the massing of the minnows again, when he would repeat the charge. Sometimes a long snoot would be found in the pool, then Salmo was missing. We have tried to catch him but failed, we saw one there that must have been nearly two feet long, and believe it was finally wired by a gang of men that were always looking for chances to get him.

If "Chub Chavender" or L. B. fishes in the neighbourhood of Boxmoor again, let them look out for those back cuts and small creeks; they often lead into some deep hole or quiet running stream that would pay for inspection. Above all, they should take down with them a pair of wading pants or long wading boots, and if they intend staying three or four days, spend a little time in getting better acquainted with every brook and stream, for some of them contain fish that fishermen never dream of.

I can endorse what your valued correspondent says about the beauties of this busy Hertfordshire valley, its fine scenery from the common, the many bye-paths through the fields and along the hill-sides, along which the lads and blooming lasses wander at eventime; the two streams meandering through the valley, looking like threads of spun silver; the quiet of these hill-sides relieved only by the bleating of some sheep, the chirp of the cricket, the evening song of the woodland thrush, or the trilling melody of the nightingale, until the big red-faced sun sinks behind the western hills, and a gloaming creeps o'er the valley below you. At this moment sharp and clear comes the chimes from the parish steeple, flooding the air with music.

> "Those evening bells, those evening bells,
>   How many a tale their music tells,
> Of youth and home and that sweet time,
>   When last I heard their soothing chime."

We have wandered far, and amidst many beauteous scenes, but prominent above them all comes the quiet memories of evenings spent on the hill-sides of this neighbourhood, or besides the stream or canal, attempting to beguile the fine fishes.

We have wondered why some fishing club has not discovered these waters before this time and secured a lease of them, and commenced stocking them with the fry of coarse fish, such as are found in the waters at this time. NORMAN.

Chicago, February 28, 1882.

VASELINE.

THE Cheeseborough Manufacturing Company, have sent us a box of their exquisite soaps, pomades, creams, sweets, &c., for notice. It is somewhat out of our line to criticise such articles, but these various preparations are so thoroughly genuine, pleasant to use, and inexpensive, that we can speak in the highest terms of them. The Vaseline ointment we have used for the last two years and found it invaluable for sun-scorching, bruises and sprains, or anything that requires a perfectly pure ointment which never gets rancid. The Vaseline Soap makes the best shaving soap we have ever used. The angler-tourist will find a tablet or two of this soap and a small pot of vaseline most useful. One of the best testimomials this Vaseline, or Petroleum Extract, could possibly have is the fact that since it was introduced, it has come into general use in place of lard as a medium for making ointments of all kinds. Messrs. Yarde and Dalton of 60, Lamb's Conduit Street, Holborn, keep all the Vaseline preparations in stock.

NEW "KATHLEEN MAVOURNEEN."

Kathleen Mavourneen, the grey dawn is breaking,
 The birds in the buckwheat are whistling "Bob White,"
The maids in the kitchen my sandwich are making—
 Oh, don't keep me waiting—it's hardly polite.
It isn't the day to be taking a nap on;
 The yellow leaves whirl in the pale, slanting sun;
And see, I have put my corduroy cap on,
 And am snapping the locks of my breech-loading gun.
All day we will roam through the mild autumn weather,
 And find in the gloaming the bonny brown broods
Of dappled-wing quail, as they huddle together;
 For I know that my beauty delights in the woods.
At the whirr of a partridge you'll half lose your senses,
 And when the moon rises, hungry and wan,
We'll eat the raw turnip on ancient stone fences—
 At least, I will eat it and you may look on.
You'll prove yourself worthy the bright silver whistle
 You took at the show; but I can't understand
Why you don't come a-dancing, like down of the thistle,
 And leaping around me and licking my hand.
Come out of your kennel! You'll find that you'd better,
 Or the whip in my pocket will cause you to wail;
Oh, Kathleen Mavourneen, my red Irish setter,
 I'm off for the uplands to knock down the quail.

—Selected.

1st AWARD MELBOURNE EXHIBITION, 1881.

DAY, SON AND HEWITT'S
STOCKBREEDERS'
MEDICINE CHEST.

FOR ALL DISORDERS IN HORSES, CATTLE, CALVES, SHEEP, AND LAMBS.

In this chest are the following matchless and world-renowned remedies, all that a Farmer can require to cure disease amongst his Stock and keep them in fine, healthy, and buoyant condition:—

"CHEMICAL EXTRACT," for Wounds, Swollen Udders, and Ewes Lambing.
"GASEOUS FLUID," for Colic, Scour, and Debility.
"RED DRENCH," for Cleansing Cows and Ewes, &c.
"RED PASTE BALLS," for Conditioning Horses.
"BRONCHOLINE," for Husk, Hoose, or Cough.
'GASEODYNE," for Heaving or Paining.
"ALCOHOLIC ETHER," for Colds and Chills.
"CARMINATIVE CHALK," for Diarrhœa in Lambs and Calves.

Price of Chest, with "Key to Farriery," £2 16s. 6d., carriage paid. Each article can be had separately.

Patronised by Royalty, and used for over 40 years by the Leading Agriculturists of the British Empire.

CAUTION.—See that the Name of DAY, SON and HEWITT is on all Bottles and Packets.

DAY, SON AND HEWITT.

Of setting the Angling on

BALLYNAHINCH FISHERY.

The fishing extends from Lough Inagh to the sea, a distance of fifteen miles, and comprises the rivers and lakes of Inagh, Derryclare, Ballynahinch, Ballynafar, Glendalough, Attery and Orrid, The season commences on the 1st February, and closes on the 31st October. The stock of fish, which has been largely increased, is now most abundant.

Tickets will be issued at the following rates by G. J. Robinson, Esq., Roundstone, via Galway. Tickets for the whole season £50, tickets for the lunar month, £8; ticket for the week, £2 10s.; ticket for the day, 10s. Tickets are to be paid for when taken out, and are not transferable. The price of a ticket includes the use of a boat, but not the wages of boatmen, which are not to exceed 2s. per day each.

Applications for tickets will be treated according to priority, but a preference will be to applicants for "season tickets." Boats for angling and stands on the river will be allotted by the head keeper, and no angler will be permitted to use a boat or fish a stand that has not been so allotted. Superior accommodation can be had on application to Mr. T. MULLARKEY, at Glendalough Hotel, Recess, Galway. Anglers are requested to take out their licences in the Ballynahinch district, as by doing so they increase the fund for the preservation of the district.

No men can be employed as boatmen except the Water Bailiffs as arranged by head keeper.

Application to be made to

GEORGE J. ROBINSON, Esq.,

ROUNDSTONE via GALWAY.

FISHING IN THE NORTH AND WEST RIDINGS.—Anglers contemplating a visit to the Aire, Wharfe, Ribble, Greta, Wenning, Yore, Wensley, or other rivers in the North and West Ridings of Yorkshire, and desirous of obtaining information as to Fishing, Lodgings, &c., should make their wants known through the medium of the

Craven Herald

(published at Skipton-in-Craven),

which has the most extensive circulation in the neighbourhood of these rivers.

Views of the Wharfe, Bolton Abbey, &c., may be obtained at the office of this paper.

THE GRAND HOTEL,

CHARING CROSS, GLASGOW.

First-Class. Moderate Charges. Contains 200 Apartments. Telephone. Passenger Elevator. Pronounced by all its Patrons to be the most Elegant and most Comfortable Hotel in Glasgow.

- W. G. DAVIDSON, Manager.

THE RIVER DOVE.

Wanted, a few Rods to join an Angling Club on the river Dove.

It is well stocked with Trout and Grayling only.

Apply in first instance to A. K., Post Office, Ashbourne.

Post free on receipt of 2s. 2d. in stamps.

OTTER'S MODERN ANGLER.

A PRACTICAL GUIDE IN ALL KINDS OF FISHING, INCLUDING SEA FISHING.

With many Illustrations of Fish and Tackle, and a Large Coloured Map of the Thames.

"This is the best cheap general book on angling we know."—*Fishing Gazette.*

"Otter is well qualified to produce a practical work like this."—*Field.*

Post free on receipt of 1s. 2d. in stamps.

OTTER'S GUIDE TO SPINNING AND TROLLING FOR PIKE, TROUT, PERCH &c.

Fully Illustrated.

"Most valuable and practical."—*Fishing Gazette.*

The above can be had, post free, by sending stamps, as above, to the Manager of the FISHING GAZETTE, 12, Fetter Lane, London.

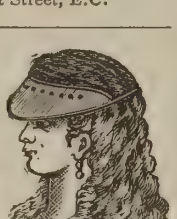
"CLEANSE THE BLOOD."

OLD DR. JACOB TOWNSEND'S SARSAPARILLA.

Highly recommended for all kinds of **Blood and Skin Diseases, Pimples, Eruptions, &c.** The best Spring Medicine. Sold by all Druggists.

CAUTION.—GET THE RED AND BLUE WRAPPER, WITH THE DOCTOR'S HEAD IN THE CENTRE. No other is gennine. In bottles, 2s. 6d., 4s. 6d., and 11s.

Dean, Steel and Co., 131, Fleet Street, E.C.



THE glare of the Sun has spoilt many a day's sport of the disciples of Isaac Walton. The anglers' headache will now be a thing of the past, as the GELATINE EYE SHADE becomes known and used. They are light and small, yet as effective as the largest, being anatomically adjusted.

Sold by all Opticians and dealers in Fishing Tackle. Samples sent. Elastic Holders, 2s.; fine steel hows, 4s. 6d.; to

HARRISON and SON,
OPTICIANS,
40, HATTON GARDEN, LONDON.

INDIA-RUBBER STAMPS For Marking Linen, Books, &c. Stamping Club Papers. Printing and Dating Notices, and all business purposes.

Stamps complete from 2s. 6d. each.

By Post from

220, HIGH HOLBORN, LONDON, W.C.

INDIA-RUBBER STAMPS. For Endorsing Envelopes, Cheques, and Postal Cards, Heading Note Paper, Marking Linen, Stamping Monograms, Crests, and Facsimiles of Signature.

THE "PREMIER" DATING STAMP.

With Solid Rubber Dates or ten years, from 18s. 6d. each.

THE NEW POCKET STAMP.

From 2s. 6d. each.

Price and Pattern Sheets free on Application.

JOHN BERKLEY,
6, LIVERY STREET, BIRMINGHAM.

S. BIGG,

FISHING ROD AND TACKLE MANUFACTURER,

33, RUSSELL ST.,
COVENT GARDEN.

PRIVATE DOOR

BUY OF THE MAKER.

East India Mottled Cane Rods, Winch Fittings, Brazed and Tongued, Two Tops and Bag, 7s. 6d., 8s. 6d., and 9s. 6d. Greenheart Fly Rods, Two Tops, Landing Handle and Top Case, Division Bag and Spear, 15s. Not to be equalled. The best Flies in London at 1s. 6d. per dozen. "Alexandras," 2s. and 2s. 6d. per dozen. The cheapest house for repairs of all kinds. The worn ends of Spinning and Fly Lines, Waterproofed, 6d. per score yards.

THOMAS H. CHUBB,

Manufacturer of FISHING RODS, ROD TRIMMINGS, FLOATS, REELS, TROLLING SPOONS, Brass and Wooden Landing Net Frames, Camp Chairs, &c. Also turned stock of ash, lancewood, hornbeam, &c, furnished to pattern.

ADDRESS:

THOMAS H. CHUBB,
POST MILLS, VERMONT, U. S., AMERICA.

Send for price List on post card. (Foreign post cards can be had at any any Post Office for 1½d. each.)

HOLBROW AND CO,

111, JERMYN STREET, ST. JAMES'S, S.W.

Every kind of Fishing Rods and Tackle of the best quality, and flies specially dressed for all parts of the world. Speciality in glued-up cane rods. Separate department for Polo.

BY SPECIAL APPOINTMENT.

POLLACK, BASS, MACKEREL:

HEARDER AND SON,

Deep Sea, River and Lake Fishing Tackle Makers to H.M. Government, H.R.H. Prince of Wales, H.R.H. the Duke of Edinburgh, and exploring expeditions,

195, UNION STREET, PLYMOUTH.

Established 1770.

Mounted lines for cod, conger, hake, whiting, bass, pollack, mackerel, and all kinds of fish at home and abroad.

Specialities for foreign fishing. Inventors of the celebrated silver spinners, spinning sand eel and sole-skin bait for pollack, mackerel, and bass.

Eleven prize medals, including Berlin Fishery Exhibition 1880. *Illustrated Catalogue gratis.*

(THE DEVONSHIRE RIVERS.)

FISHING TACKLE, &c.

DEVONSHIRE FLIES (GOOD in ANY STREAM), 1s. 6d. per dozen. Flies made to pattern. A large stock of Rods and Tackle of all kinds. Some choice SPLIT CANE RODS by "Copham;" bargains. The Devon and other artificial Baits, Reels, Lines, Gut Casting Lines, Fly Books, Wading Stockings and Trousers, Baskets, and every other requisite. Address, WILLIAM MUDFORD, Fore Street, Tiverton, Devonshire. Ticket depôt for the Tiverton Fishing Association.

THE CHEAPEST ROACH ROD,

Used by all Noted Anglers.

BOOTH'S FIVE-JOINT BAMBOO ROACH ROD, 12 feet stand-up rings. The lightest rod in use. Winch fitted Brass Bottom and Bag complete, packed in Box.

Price 4s. 8d. 14½ feet, 6s. 6d. Carriage paid for 6d. extra.

H. BOOTH,
Fishing Tackle Maker,
88, PROSPECT STREET, HULL.

WANDLE TROUT FOR SALE.

SOME thousands of the young Fry of these celebrated fish will be ready for removal about the end of April. Price £4 per thousand.

Apply to H. N. G., hon. sec. W. F. A, the Cottage, Mitcham.

The Fishing Gazette.

SATURDAY, APRIL 15, 1882.

OPENING OF THE EDINBURGH INTERNATIONAL FISHERIES EXHIBITION.

THE International Fisheries Exhibition, in the Waverley Market, Edinburgh, was formally opened on Wednesday, under the most favourable auspices, the ceremony having been performed by the Earl of Rosebery. An hour before the opening took place, the public were admitted to the market, and in a short time several rows of reserved seats, placed on three sides of the raised platform, which occupied a central position, were filled, chiefly by ladies, and all the available space behind these seats was taken up by a large assemblage eager to secure the most advantageous position possible for witnessing the proceedings. During the hour also the band of the 3rd Royal Dragoons performed a selection of music, and twelve women wearing the Newhaven Fishwife costume took up a prominent position facing the platform, and their picturesque appearance seemed to attract the notice of the strangers present. The Executive Committee had issued a large number of invitations, and these were very largely responded to. The Lord Provost, Sir Thomas J. Boyd, and the Executive Committee received Lord Rosebery in a side room at a quarter to one, and precisely at the hour their lordships ascended the platform, preceded by the magistrates of the city, who wore their official robes.

The Earl of Rosebery, who was received with loud cheering, said:—My Lord Provost, my Lords, Ladies, and Gentlemen. It is a very high honour which you have thought fit to confer upon me, in asking me to open this most interesting and valuable exhibition, and here I cannot but express, what I know is in all your hearts, the regret that the Prince who takes his title from this city was unable at the last moment to perform the opening function as president. I can only hope humbly this, that though he would have done it with greater illustration and greater grace, he could not do it more concisely than I hope to do it on this occasion. ("Hear," and laughter.) In the first place, my lords and gentlemenn, it seem to me that we owe a word of recognition to your committee and its subordinates. It is only in consequence of their exertions by day and by night—I believe all through last night—that this exhibition has been brought to its present beauty and perfection. (Cheers). Now they have collected, as it seems to me in glancing over the catalogue, an unrivalled exhibition. They have got products from Siberia to Italy, from Sweden to America, and when I mention Sweden I must be allowed especially to call attention to that unrivalled Swedish collection which under the auspices of the distinguished Oscar Dickson has been brought to this country. (Cheers). In this exhibition, if it acts up to its promises—and eye-witnesses tell me it will act fully up to its promises—in this exhibition we shall see the fish, as it were, from the cradle—I was going to say to the grave—(laughter)—but I would rather say to the dish. (Renewed laughter.) We shall see the exertions of their friends, who bring them into life and preserve them when living, and more particularly preserve and tin them when dead. We shall see the enemies of fish and of fishermen in the shape of the fish-eating bird and the Belgian devil. (Laughter). I do not know if there are any products or specimens here bearing on the gradual disappearance of that doomed monster, the whale, or of the seals, but we shall have products bearing on the pestilence of the royal salmon, and on the increasing seclusion of the solitary and gregarious oyster. (Laughter and cheers.) Gentlemen, in this connection I must rejoice to see that there is a collection of the literature and the records of fishing. That literature is collected and devoured by a people who never saw a hook or a fly, but who simply do so that in those fresh pages they may breathe again the crisp air of the morning, and hear the whirling of the brook. There is further the more gloomy collection of literature connected with pisciculture and fishing. I mean those blue-books with an ancient and fish-like smell which are constantly produced for the benefit of Parliament. (Laughter.) I have no doubt the latest addition to that literature, the production of my friend who is here present, Mr. Duff, on the Herring Brand, will be in the collection, and all those annual volumes which are produced by the exertions of Mr. Huxley and Mr. Walpole, who have come from the south to give their blessing to this exhibition. (Hear, hear, and cheers.) Well, gentlemen, all this literature is interesting and fascinating enough, but there is a literature connected with fisheries of a more tragic kind. We see in this exhibition models for improving the homes and increasing the safety of fishermen. We none of us can forget n this connection that tragic blast which, coming to us n the middle of last October, made so many women widows nd childless. It will be the great object of this exhibition, if understand it right, to promote all that may increase the safety and well-being of those who go down to the seas and do their business in the great waters. Well, gentlemen, this leads me to conclude by remarking on what seems to me to be the two main objects of this xhibition. There is, firstly, the object of gratifying curiosity, of giving us some insight into what underlies the endless mystery of the sea, in giving us some knowledge of what the real inhabitants of the oundless ocean may be. But, secondly, there is the most serious nd the most weighty side of this exhibition—I mean the incalculable ractical benefit of it. We have developed much of our fisheries, but much remains to be done in the way of promoting and increasing the supply of fish, and in the way of preventing waste of fish. Already the rivers of different parts of the globe exchange their various fishes. Much remains to be done in that way; but besides all that we have to secure the swiftest means of transmission and the most available means of distribution for all the products of the wave, and above all and beyond all, as I said a moment ago, to secure increased and improved means of safety and refuge in the shape of boats of a superior kind and harbours of an improved model. (Applause). Well now, gentlemen, in the way of developing the welfare of our fishermen and those connected with them, in the way of developing for the increasing millions of the world the food that lies at present in the deep, in the way of supplying from the ocean the increasing populations that live upon the globe—I say in the work of making the products of the ocean subserve the inhabitants of the earth—in these ways there is ample scope for this exhibition, and none who consider it in that larger and wider and more useful sense can fail to see the world-wide importance of this exhibition which you, my Lord Provost, have called on me to open to-day. (Applause.)

The Earl of Stair, in moving a vote of thanks to the Earl of Rosebery, said he rejoiced that this exhibition promised to be a great success, and he trusted it might prove extremely useful, more especially to our gallant and hardy fishermen, whom he saw so beautifully represented in the front row. (Laughter and cheers.) They would find much that was useful in connection with the implements of their craft, so that for the future they might be able to carry on their dangerous calling with greater safety, and at the same time they might hope more profitably for themselves and families (Cheers.) He trusted, as he said before, that sooner or later some harbours of refuge would be given them in Scotland.

Three cheers were then given for the Queen. The band of the 3rd Dragoon Guards played the National Anthem. A procession was then formed of the noblemen and gentlemen on the platform who had taken part in the opening ceremony, and they visited the different sections.

THE LONDON EXHIBITS AT EDINBURGH.

WE are glad to hear that Sir James Maitland, Bart., and Mr. Cook, the hon. sec. of the Edinburgh International Fisheries Exhibition, have most warmly congratulated the London Committee on the "magnificent display" made by the cases from the London clubs and private anglers. It is the largest collection, it was the first completed, and every case is in its place without a single breakage. The Frank Buckland Collection from the South Kensington Museum, sent to Edinburgh through the exertions of the London Committee, is also attracting great admiration amongst our Scotch friends, who have really got a most beautiful and valuable exhibition together in a wonderfully short time. We shall keep our readers well posted in all that may be novel in the exhibition.

THE SPAWNING OF FISH.

SO many questions arise as to the period when fish spawn, it is desirable to give information when any particular specie begins to discharge its ova; but it is said much depends upon the mildness or severity of the winter. When the winter has been a mild one, like the last, the fish are expected to spawn very much earlier; but I do not think this has been the case with the perch, as, from past experience, they have usually spawned about this time of the year in the Thames. In "Otter's Modern Angler," the author says: "They appear to spawn at various times; in some places in March, in others not till May or June." They are never so late as the two latter months in the Thames, at least as far as I know: and I have known them to spawn at the end of March. At the end of last week, the perch commenced to deposit their ova on the boughs in the backwater at Walton; and that old and successful fisherman, George Hone, was full of excitement, for it is generally believed he never sleeps until the whole of it has gone safely into life and out of the reach of the swans. This is an example for other fishermen to follow who take an interest in the river, and are anxious to give their clients a good day's fishing. In addition to Hone's watchfulness, his efforts are admirably supplemented by Mr. H. E. Wood, the piscatorial proprietor of the Angler's Hotel, who is always on the look-out in his boat, and he has been seen in the small hours of the morning rowing about the river looking after the swans. I think we are improving very much in the angling character of the river-side hotel proprietors. The old house on the Egham side of the river at Staines, called the Swan Hotel, has lately changed hands, and the new host, Mr. Currie Banfield, has initiated his desire to look after the anglers by enrolling himself as a member of the T.A.P.S. This example has been followed by about three others during the last week. It is safe to predict from this movement, that if we get an earnest feeling amongst the hotel proprietors, for the protection and preservation of the fishery, they will in their own districts take an interest in looking after it: whether it is at the present time in protecting the perch ova; at other times in preserving the fish from unfair practices; and generally to uphold the true principles of fair fishing. And they may rest assured, so long as they do this, the anglers will accord them liberal support. B.

THOUGHTS ON THE THEORY OF FLIES.

By Robert Balderston.

ONE of the greatest points of disagreement amongst the angling brotherhood is the matter of flies; so much is this the case that very fiery episodes have at various times transpired between the advocates of rival theories. Head of his clan, the name of "Ephemera" may be ranked on the one side—a name that has won for itself undying laurels in many piscatory works—whilst, on the other, Stewart, Stoddart, Wilson and Pennell are found as the exponents of heterodox doctrines. This being the case, and as there are several various shades in the hues of falsity emanating from the different orbs of fluviatile learning, it may, perhaps, be as well to review the opinions flowing from these different centres.

I. The most deft craftsmen, almost with one consent, acknowledge that certain imitations are more deadly than others; whilst the lethal qualities of these vary with the season of the year, one fly being at times more deadly, whilst at others it is a distinct variety which assumes the killing qualities. In addition to this, it is held that the seasons during which any kind of fly manifests its slaughtering power are pretty nearly constant, each month of the year yielding its own peculiar insects; and the corresponding imitations being only useful during the time of existence of the real flies. These imitations are likewise believed to be true and good representations of the insects after which they are named. Shape, size, and colour are all closely copied; and in employing the bait the angler either endeavours to imitate the floating passive state of the insect, or may, by some of the actions of manœuvring, try to represent the struggling, darting, or fluttering movements of various flies when in or just over the water; and sometimes, in order more fully to depict these appearances, the fly is dressed 'buzz,' the hackles and wings being laid on the hook in a spreading manner, so as to be more easily acted on by the water, under the influence of which the feathery fibres open and close as if moved by a living power.

II. There are other anglers who uphold the opinion that the shape and size of the bait are the only matters worthy of attention, the colour and mottling of the wings and hackles being points of little moment.

III. Another group of the fraternity, especially found in Scotland, uphold the use of five flies only, these merely varying in size. Colour here is the all-important feature: a black, a red, and a light blue hackle being the three standard hues, to the two former of which a woodcock's feather may be attached for wings, making, in all, three hackles and two winged flies. A great point in this case is the material of which the flies are made; soft, yielding fibres of the starling or landrail, easily moving in the water, and not sheltering the point from impinging on the piscine jaws, being objects kept forcibly in view.

IV. There are, however, other Scotch anglers who, out of mere simplicity, rest their unswerving faith on the "harelug"—this being a very Protean organism: at one time it is the real blue dun of many shades; at another it is nothing less than a yellow dun; again it is the little pale blue of the same group which is depicted; whilst even the whirling and some of the smaller duns also find a place in the list—the blue tint of the wing and the amount of blue, yellow and ruddy silk, with the usual admixture of hare's ear fibres, being slightly varied. Even the March brown and other flies may be found amongst the number, if a wing of an entirely different shade be substituted. Thus all these glorious duns, and even other flies, may be represented, whilst still the lure passes by the vague name of "harelug," more or less varied by certain additions, as hare's ear and blue, hare's ear and yellow, harelug and partridge wing. Despite all this, the angler on whose cast such flies are found, may depose that he is an unbeliever regarding blue and yellow duns, March browns, and all the other mimic insects employed by anglers of more skill; albeit he is the same time using flies, the actual copies of the insects he abjures—dressed perhaps, more rudely than, and not quite so true to nature as, the patterns which he scorns, yet without doubt the same.

V. Some angling authorities have been bold enough to advocate the use of only three flies, maintaining that general shape, general colour, and size, are the conditions to be observed; that exact shape and colour cannot be imitated, and that it is, therefore, on this presumption, needless to attempt precise representations; especially as these opinionists conceive it impossible for trout, to observe all the minute shades, markings, and peculiarities of flies upon or below the water. Moreover, they maintain that such discrimination is contrary to known facts; for fish are taken by means of poor imitations, which are far worse representations of any known insects than any one of the three flies by which they swear. These flies—which, to the fishes, are meant to be as the three Fates, spinning the piscine destinies—have the general form of spinners, or duns dressed "buzz;" whilst the colours of each are unmixed, one being yellow, another claret-brown, and the third, a dark green.

VI. Lastly, there are a few altogether heretical anglers who presume to declare that trout do not mistake the artificial fly for any insect whatever, but are deceived by the life-like movements of the hackles into believing it to be something living, and therefore something suitable for food. This latter group of fly-fishers may be summarily dismissed; for, apart from all the many facts witnessed daily in the practice of the art, and which plainly, expose the absurdity of such a supposition, there are many anecdotes of casual mistakes which have been made by other animals, clearly showing that what appeared to be beautiful imitations in the eyes of the long experienced angler, are really no mean mimics, but actually assume the forms of the flies which they are meant to represent. Swallows, insectivorous birds, keen of sight and constantly seizing their minute prey when gliding swiftly on the wing, are not likely to be so blind as the prejudiced angler, or so foolish either, as to be deceived by the work of the practised fly-tyer, unless the workmanship be good and the thing of silk and feathers insect-like indeed. But it is undeniable that swallows are not unfrequently deluded by such a combination, and brought fluttering to the angler's feet after having seized the hook in mid-air, beguiled by its deceptive coverings. The strutting farmyard cock has gripped the feathery lure hanging from a rod left by its owner, reared against the wall of a house the angler had entered. The faithful dog, the sagacious companion of man, when plashing in the water and snapping at floating flies, has seized the hook, and, distraught with fear, rushed across river and fields beyond, with an obese and panting angler in full chase with rod in hand, who, fearing lest the fragile top succumb 'neath such a monstrous foe, lets line run from the whistling reel, whilst labouring with all the fund of hastily-summoned ingenuity to guide the terror-stricken brute clear of all hindrances in front, near which both man and captive had to rush. It is thus apparent that not only many human intelligent beings deem the artifice a good counterfeit, but also that brutes and different kinds of birds have been so deluded by it as to be hooked by the barb enclosed in the angler's lure. Is it, then, astonishing, when fish so wary as trout are daily caught by such baits, that the lover of the contemplative man's sport should at once conclude that the delusion likewise extends itself to fish—which are, without doubt, with one consent acknowledged to be lower in the scale than birds and beasts as well as human beings—particularly when that bait is specially contrived to represent a fly, the favourite food of trout, and is moved in a manner made to correspond, as closely as skill can devise, with that of the natural insect, in places where such creatures are habitually found, and where no other living organism for which it can be possibly mistaken is in the habit of moving. When, however, it is a well-known fact that fish often show a decided preference for some particular fly upon the cast, and when this is certainly due neither to the position on the cast nor the absolute colour of the bait—as may be proved, in the former case, by changing the relative places of the droppers and stretcher; and, in the latter, by removing the favourite and selecting some other good fly for the season, which happens to be of an entirely different colour—this second fly may be on the water at the time, and now being represented on the cast, may, like its predecessor, assert its pre-eminence above the other lures still left upon the link,

If trout were to take the artificial fly merely under the idea that it is a living thing, and therefore fit for food, they would show no preference whatever for any kind of fly, but would only seize those most readily perceived; yet this is not the case, for at times the colours most easily detected are rejected, and those not nearly so conspicuous are ravenously sought; whilst at others both display an equal amount of killing power.

It is thus sufficiently plain that fish do mistake the artificial fly for a living, drowning, or dead insect; and not only that they make an error, but also that they exert a considerable amount of selective power when rising at the angler's cast.

The fifth group of anglers who advocate the use of only three flies—green, claret-brown and yellow—whilst adopting no other form of body than that of spinners or duns dressed buzz, or rather without wings, and only keeping in view general colour, shape and size, with a great exaggeration in the intensity of hue and number of hackles, evidently make a mistake, depriving themselves of many first-rate killing flies belonging not only to the land but also the water. The blue dun and watercricket are discarded, and even a general form and colour for these two good flies is not spoken of, although the former is one of the very deadliest on the angler's list. The blue-dun shade, varying from pale to iron blue, and the black of the watercricket, therefore, pass unheeded, the latter colour being also characteristic of the black palmer and black gnat, two of the standard dressings on the list. A reddish orange shade is also neglected, and the general form and colour of such flies as the cowdung, cinnamon, sedge and sand flies, are likewise despised, the tint of the very best red or orange palmer hackle being amongst the same rejected hues. In fact, one form only is taken as the type to be used by such anglers, and three colours for this single shape; so that a single cast can likewise be made to include all the varieties employed, and half-a-dozen stintings will permit all the conceivable variations of position in which the limited number of baits can be arranged, as the anglers' whim, or that of the fish, may require.

This system of fly-fishing is delightfully easy; few troubles assail the angler; once the cast has been fitted up no more changes need be made; and the various manœuvres of the art are performed heedless whether the flies employed are really the best—but fondly hoping that this is the case. If fish do not come to the creel, it is the fault of the trout; if a fair burden is obtained, it is by the deadliness of the flies; but the innocent minds of such anglers seem never to suspect conditions the reverse of the foregoing.

The spinner form adopted for these flies is very good, but the want of wings is a defect, as the great abundance of hackles is meant to represent moving legs rather than flying organs. The colours assuredly are neither the most general or most natural; in fact, the dark green and claret-brown, are very uncommon hues, and cannot, therefore, be even spoken of as general. For deep water, the yellow spinner, which, though of a natural colour, is not very common, although more frequently met than the two other hues, may at times do well; as it is easily perceived, and trout may occasionally take it owing to its greater visibility, when some sombre and common fly is passed unheeded —overlooked, rather, because unseen, than because of inferior killing power; this occurs when fish are not ravenously on the feed, and are lying deep in pools or lakes; but during "the time of taking," the more faithful mimic will certainly assert its pre-eminence, although less gaudy or conspicuous; and, as a rule, this is the case at all times, and in all waters, where the latter can be clearly perceived.

The fourth class of anglers, who denounce all flies except the rude and rustic harelug, and who see in it no resemblance to insects on the water, or to the lures employed by their less bigoted brethren of the rod, are strangely blind; for not only is there a likeness to the natural food of the trout, but a still greater degree of semblance to the baits of their rival compeers; insomuch that the hare's ear, or hare's ear and blue, may fairly pass as a blue dun, the hare's ear and yellow as a yellow dun, the harelug and partridge wing as a March brown; and though these are not such perfect imitations as those which commonly bear the name in the angler's list, yet in colour and form they sufficiently approach their types as to pass muster with many anglers and fish for the insects so denominated. When, therefore, a man declares that trout will take fabrics unflylike and nondescript, whilst at the same time avowing he is in the habit of using such unlike structures—adducing these varieties of the harelug, the claret-brown, green, yellow, red and black hackles, as examples of the life-like organisms of some unknown or unheard-of group of animals—one may laugh at the folly of his declaration; knowing its untruth, one may perceive that he is the whole time employing rude imitations of real insects. So, whilst rejecting most of these caricatures as inferior patterns, or using them if no better be at hand, one may leave him to his own devices, as his mind is too dull and dark to allow truth to crush his long-cherished prejudice.

The third section, or other body of Scotch anglers which founds its faith on red, blue and black lures, or, in other words, the land-rail and light or dark starling hackles, either with or without the woodcock wing, seems equally anxious with the two foregoing groups to limit the varieties of flies to a number readily attached to a single cast; five is the number which finds favour in this case, whereas the hairlugists deem three sufficient—a yellow, blue and brown, the hare's ear and yellow, hare's ear and blue or partridge; whilst yellow, brown and green are the colours of the spinnerist fraternity. These three casts are made to suit the whims of the three idle sections of fly-fishers, each keeping in view one important point, the colour of the fly; and, on this account, the whole trio may not inappropriately be called colourists—numbers three and four considering form as a matter of little or no importance, in theory at least, though practically not quite so deluded; whilst number five adheres to one standard type, rejecting all others. Some of these colours are natural; others, if not unnatural, are, at least, very rare. Hues equally as good, and others much better, with various combinations infinitely more deadly, such as the black gnat, black palmer, red palmer hackle, cowdung, redfly, cinnamon, blue duns, dressed naturally, and not with hairy bodies, March brown, cochybonddu, hawthorn, orange dun, red and black ants, bluebottle, yellow and whirling duns, green drake and gravel bed, are abjured; each of these flies, when properly dressed on good hooks, far surpassing the foregoing imperfect and faulty copies of nature, even though the hooks be equally good, and the gut as clear and fine. How, then, is it that there are so many anglers who positively assert that one or other of the three combinations advocated, is all that is needful for securing for the fly-fisher the best of sport? The great reason for the number being so large, is the ease with which such vast quantities of small trout are caught in some rivers with very inferior flies; the employers of these patterns deeming, on this account, that no other lures could be more deadly, either in such waters or others in which trout are less abundant. The idleness of the anglers themselves partly explains the matter; for there are those who would be only too glad were there but one fly in the catalogue of insects, and that fly perhaps a red, a black, or blue hackle. In this case no uncertainties regarding the choice of baits would disturb the inert sportsman's serenity. With a dozen or more flies of this particular pattern in stock, two or three casts ready for work, the river's bank might be sought with no changes of lure needful till such times as the fly, worn out with work, should happen to be carried off by some more bulky trout than heretofore. What need of long experience when a tyro can discern the killing fly as easily as the old practitioner! To dispel such a grateful cloud of ignorance, from about unsuspicious youth or stubborn age, may be an ungracious task, but is an act which will no doubt in after years bear a more pleasant fruit. Few, however, have the presumption to assert that there is a single fly, an all-powerful kill-devil, a miraculous combination of silk and feathers that can, in all waters, and seasons, slaughter more fish than a judicious selection of standard imitations faultlessly suited to the water, hour, weather, and season. There are, however, many "general" flies which are named after some place in which, or some noted anglers by whom, the patterns have long been used. These flies need no special notice further than to show that many of the numbers are nothing less than patterns of the naturalist angler's list re-named; whilst others so closely resemble well-known orthodox dressings, that they may be esteemed mere varieties or bad pourtrayals of real insects. When a bait is fly-like and well manœuvred it is certain to kill fish where trout are numerous or hungrily on the feed. In such places, or at such times, few scruples on the part of the trout are entertained as to what is the exact species or genus of the individual presented to it, so long as it evidently belongs to some family or order in the insect world. It is not at such times that the fly-fisher's skill and discrimination are put to the test; for when fish are famishing their bellies must be filled, and any fly, or anything endowed with fly-like form and motions, will be greedily gulped down, unless very harsh experience in the shape of pricking hooks and thick glistering, affrighting gut, stir up unpleasant memories of "Auld lang syne;" aye, in forsooth, of perhaps a very recent date.

At what other times, then, is it that such knowledge and discrimination come into play? In many streams where the fly-fisher's avocation is in vogue, trout not only are scarce, but are also well-fed; besides this, there are so many daily presentations of the artificial fly for their inspection, that their knowledge of the properties of fishing tackle is not very limited, and the peculiarities of gut and hooks have given birth to memories, by no means vague, which linger in the piscine brain. Things are otherwise in the rapid mountain burns, becks and rivers of Scotland and Wales, where fish are numerous and unsuspicious, or are famishing, owing to their vast numbers; and where three struggling victims on a cast at once are no uncommon feat, whilst encreeling a hundred or two troutkins in less than half-a-day.

The deep and more sluggish southern streams, containing many coarse fish, much food of all kinds, and few trout, must not be compared with such mountain brooks; even if the fish are not more sought, yet there is no doubt they are poisoned to the same extent, and in most cases infinitely more. Having been pricked once or twice by the hook they are rendered cautious; there is an abundance of food, and no need for trout to be rash or uncircumspect; neither are they, for, once wounded, the second time finds them wary, and a third or fourth teaches them a not easily forgotten lesson, and afterwards a suspicious-looking bait is entirely rejected; even other objects are often carefully inspected before a decision on the matter is made. On the other hand, in rapid prolific rivers, the same fish may be raised and touched three or four times in succession, and perhaps, after all, take the bait in earnest. In southern sluggish rivers, therefore, fish are soon rendered extremely wary, and not only are they cautious, but there is no need for them to be rash, even though the likeness of the bait to reality be very great, as they are not brought to that extremity of hunger when the pangs of emptiness compel one, despite all warning or knowledge, to seize on something to fill the empty paunch; and, being wary, they only deign to notice the real fly, or something so nearly like it that a human being, not knowing what was placed before him, might, at the distance of a few feet or yards, make a mistake regarding its identity, and this when in a state of quiescence and not endowed with all the lifelike motions of quivering hackles and of moving wings.

(*To be continued.*)

THE LION, FARNINGHAM.

TROUT-ANGLING OPENING DAY, 1882.

LIKE many another toiler in the human hive of London, who had been waiting for the Easter holidays to arrive with a boy-like eagerness to indulge in some favourite pastime, I, a humble member of the "gentle craft," reached down the "Anglers' Diary" from its honoured shelf—where it associates with the writings of the immortal Father Isaac, and others of a kindred nature—in order to see where to go, having already decided that the *where* must be near to London, the fishing free, or nearly so, and the accommodation of such a reasonable character, monetarily, as to suit my not inexhaustible pocket. After wading alphabetically through that concise and very useful little work, I decided that Farningham should be scene, and the Lion the abode, from whence to commence operations, as I was informed, that it would meet all my views—the distance being only twenty miles; the return fare from Victoria, available for four days only, 3s. 2d.; the hotel charges most reasonable; and the fishing, especially early in the season, fairly good. Just the thing. I packed up my traps and started by the 9.15 p.m. train from Victoria, on Thursday evening, arriving at Farningham Road station, and from thence by 'bus to the Lion, in time for supper, and a peep at the river, before the hotel closed its hospitable doors. Although the worthy host, Mr. Scaddan, had a full house, and another angler besides myself attacked him so unexpectedly, and so late at night, he at once found us rooms in a neighbouring cottage, and did everything in his power to make us comfortable. There is a certain bond of goodfellowship existing among members of our craft, no matter of what degree, that cannot be traced in and other society or association, and mv late arrived companion and self were at once old friends, although strangers half an hour before. So we had a night-cap together, and retired, with a view of both being up first in the morning. The window of my room faced the east, and immediately overlooked the river, so that I got the first streak of dawn, when I awoke, and having donned waders and brogues turned out to work—and what a dawn it was—as I stood upon the old-fashioned bridge and gazed around. The sun was just peeping out as if from the bowels of mother earth, and the thrush, the blackbird, and the lark, warbled forth their welcome as if heralding its up-rising. The scene and the music to an hermetically-sealed town-bred bird like myself was most enjoyable. The situation of the hotel, nestling as it does at the foot of one of a range of surrounding hills, is most picturesque. The hill is surmounted by a magnificent wood, which takes its name from the village, and wherein the botanist may range and find some of the richest treasures of which his science speaks; or the victim of the *dolce far niente* may idly wander and cull at his pleasure some of the choicest of England's wild flowers; or the lovers may dally and listen to the thrilling note of the nightingale, the cooing of the wild dove (emblematic of themselves), or the warblings of all the other species of Kentish songsters. The stream skirts the lawn in front of the hotel for some hundred yards or so, and then meanders through meadow after meadow to Dartford. The fishing rights of the hotel are about three quarters of a mile in extent; the charge for a daily ticket is 2s. 6d., but free to those residing in the hotel itself.

Good Friday is the opening day, and I was the first on the lawn. The water was very low, and as clear as gin, and with a biting north-east wind blowing nearly half a gale. The prospect of getting fish was not very promising; so, choosing the finest collar of gut I possessed, and using a small-dressed coch-a-bondhu for tail, and a blue dun for drop flies, I wetted the first line of the season on that water, and was presently rewarded with the first fish of about three to the pound. The next was a trifle smaller, and then rapidly followed several brace, but all so small that they were immediately returned to the stream to "live to fight another day" to some more fortunate angler. I changed fly after fly in the hope of raising something better, but without success, and was about to give it up as hopeless, when a little fellow of eleven years appeared on the scene with his rod, and tried his hand for the first time with the fly. I remembered my first attempt, and watched him with great interest, and presently he succeeding in hooking, and I netted for him, a nice little fish under a quarter of a pound. As this was the little nipper's first trout, his delight was great, and it must have been an act of great self-denial to return it to the water, as he did of his own accord, and is worthy the emulation of anglers of maturer years. That youth took three brace that day, all of which had to be returned.

The wind got stronger and keener, and we gave up for a time and strolled through the village, when I was accosted by an old boy with "Any luck, Sir?" On telling him there were only minnows in the river, he said "There be plenty of fish, and big 'uns, as he had seed 'un; and one gent as always cum' down was a demon, and could ketch 'un." Being anxious to see the "demon," and get a wrinkle, I returned to the hotel, and hearing the bell-like voice of an old acquaintance, who turned out to be the demon; and if skill in handling the rod, with the finest judgment as to the likely haunt of the trout is requisite to gain such a reputation, the demon has fairly earned his title. But the personal appearance of the demon savours more of the camp than the stream, and the use of the Lochabar axe than the gentle rod. This gentleman is well acquainted with the Darenth, having fished it for some years, and he says it is almost impossible to catch fish on that river in such weather as we were then having; for there had been several degrees of frost during the previous night, and the meadows and hedges were bleached with it in the morning, added to which there was a piercingly strong east wind, with now and then strong gleams of sunshine, and that it was the worst weather for an opening day that he remembered. At dinner that evening, out of about twelve rods, only some six brace of allowable fish were found to have been taken; the largest, caught under the chesnut tree on the lawn, turning the scale at one and three quarter pounds; it was a long fish, and not in the best of condition, as for its size it ought to have weighed two and a quarter lb. The early morning of Saturday was better, and a few brace of good fish were taken, but, as the morning advanced, the wind increased, and put an end to all the sport.

In justice to the proprietor of the hotel, I must admit that many good fish were seen on both days, and as the season advances they must be captured by some more fortunate anglers who may try their luck. In the event of the elements spoiling sport for a time, there are many accessories connected with the establishment of the Lion to enjoyably kill that enemy, in the way of an excellent bowling-green; a well appointed smoking room, supplied with most of the leading daily, weekly, comic, and sporting papers; and last, though not least, a good billiard table. The local habitues of the hotel are always ready to give visitors any information, and try in every way to make them feel at home in Farningham. In the evenings, after dinner, the usual angling and other yarns are spun, at which the "demon" is an especial adept, his latest, called "Olivette," scoring tremendously. On our return journey, although the fishing was, on account of the weather, not a success, it was admitted by all hands that we had spent a most enjoyable holiday, and that the Lion Hotel, Farningham, was one of the best places to spend one.

The hotel changes hands on the 14th instant, when a complimentary farewell dinner will be given to Mr. and Mrs. Scaddan who retire, as a token of the respect and esteem in which they have been held by the local gentry and friends, and anglers from London and other parts, during their proprietorship.

Whilst regretting the loss of Mr. and Mrs. Scaddan, all angling friends will be glad to hear that good things are in store for them, as the new proprietor, Mr. A. B. B. Baker, has intimated that he will immediately re-stock the water with good-sized trout. Mr. Baker is a well-known cricketer, plays for his county, and is also one of the best rifle shots in the kingdom; late a lieutenant of the London Rifle Brigade, and one of Sir Henry Halford's English Eight who shot for and won the Elcho Shield, and other trophies. He will be assisted in the management by his fair young wife, who, I am sure, will leave nothing untried to make the inner management of the establishment conducive to the comfort of its patrons. May they be successful.

London, April 10, 1882. CHAPEAU ROUGE.

[We are very glad to hear Mr. Baker is going to stock the water, and I trust he will do so either with Cray or Wandle or Wycombe trout.—ED.]

NOTICES OF BOOKS, &c.

POCKET-BOOK OF ANGLING (TASCHENBUCH DER ANGELFISCHEREI). By Max von dem Borne. Second revised edition, with 291 Illustrations. Berlin: Paul Parey.

HERR MAX VON DEM BORNE, so well known as one of the most enthusiastic of pisciculturists, is also a most enthusiastic angler, and has done more to extend a love for angling amongst the German-speaking races than any one since Izaak Walton. In his preface to this new edition he says, "The first edition of this little book appeared, under the title 'Illustrated Handbook of Angling,' in the year 1875. The size is considerably diminished, the contents increased, as well as the number of illustrations, and the price reduced from ten to three shillings. The little work is no longer intended merely to have a place in the library, but also in the pocket of the angler, and to accompany him on his angling rambles on the plains, amongst the mountains, and on the sea. It is to be hoped it may also contribute to increase the love of sport amongst the educated and influential classes, and thereby create a general interest for fishing, and secure its protection and improvement."

The work is so complete in every way that it cannot fail to carry out the intentions of its author to a very great extent. The illustrations are very good indeed, and if many of them, as well as much of the subject matter, are taken from English and American works this is not to be wondered at, seeing that nearly all that is of value connected with the art of angling is of British origin. But the most skilful English or American angler will find this little work not only interesting but valuable. We prophesy for it a very large sale on the Continent, and congratulate German anglers, both present and future, on the appearance amongst them of such a trustworthy and useful guide.

GILLETT'S NEW LINE.

MESSRS. GILLETT AND CO., of 40, Fetter Lane, sent us, some time ago, one of their new dressed braided silk lines, and, after giving it a good trial both in spinning and fly-fishing, we can unhesitatingly recommend it as one of the strongest, smoothest, and best dressed lines we have ever used or seen. Messrs. Gillett have only recently introduced it, and we understand they have not a large number of lines made yet, though the stock they have is in all sizes, from salmon down to the finest trout line. An Irish salmon angler, who purchased one of these lines, speaks of it as "a superb line." The price is extremely moderate. We certainly consider it one of the best and certainly the cheapest line in the market, and would especially recommend it to fly-fishers. The dressing is smooth and pliant, and not in the least "cracky," so that kinking and tangling are almost impossible.

CLUB AND OTHER JOTTINGS.

By L. B.

THE subjoined letter from Mr. P. Geen, the president of the West Central Association of London and Provincial Angling Societies, to Mr. Walker, of the Sheffield Angling Association, seems to me of such importance that I have asked our editor to allow me to utilise the bulk of the space kindly placed at my disposal in this week's GAZETTE, to its reproduction:—

"Lowther Lodge, Lonsdale Road, Barnes, March 28, 1882.

"Dear Mr. Walker,—I was pleased to receive yours of the 27th February, asking for information respecting the proposed amendments to the 'Fresh Water Fisheries Act, 1878,' and suggesting certain needed reforms omitted to be considered by the meeting which I had the honour to preside over at the Society of Arts' room, on June 27th, 1881. I think we may now take it for granted that the anglers are all of one mind as to the necessity of some alteration in the laws affecting our waters and fish. Sir Joseph Bailey, Bart., M.P., who has given great attention to the fisheries laws, expressed the opinion, and the Right. Hon. A. J. Mundella concurred, that "The first object to be achieved by a new Bill should be to repeal those portions of the 1878 Act, which apply to coarse fish, and from thenceforth to keep our legislation separate from the laws affecting the salmonidæ.'

"The ground being thus clear, we have to ask ourselves what it is that we desire to achieve; and here we have for our guidance the experience gained by the working of the 1878 Act, and the resolution passed at the Society of Arts. But first, let me call your serious attention to the growing necessity of our following in the footsteps of many a smaller country than ours which has had for many years past a Fresh-Water Fisheries Inspector, whose duty it is enforce the laws and assist to make the inland waters as productive as possible. If this step was a wise one for any country to take, surely it must be a very important and necessary one for us, whose rivers are in many instances made filthy and poisonous to fish-life in direct defiance of our laws.

"The present Parliament is alive to the necessity of another Pollution Act and one is about to be brought before the House. I would suggest that we should press for the appointment of an inspector who would strive to purge our rivers of their filth and generally encourage the cultivation of our fish. The connecting links between such an inspector and our fisheries would be the various preservation societies that would spring up all over the country were the first of our resolutions to become law, viz:—

"(1) It is desirable to empower any fish protection society to appoint by writing, under the hand of their chairman, a sufficient number of water bailiffs who would be authorised to search, seize, summon, &c.

"The other resolutions are as follows:—

"(2) Netting should be abolished in all public waters; and in private waters it should be illegal to net without the written permission of the owner, such permission to have been signed and dated within three days, inclusive, of the day of netting. The possession of nets on or near any water should subject the nets to seizure and the owners to penalties.

"(3) Any one having in his possession a wire, spear, gaff or other like instrument at any time or place under such circumstances as shall satisfy the court before whom he is tried that he intended at the time to catch or kill fish by means thereof, shall be liable, &c., &c.

"(4) The period between the first day of March and the thirtieth day of June, both inclusive, should be the close season for pike and perch.

"(5) The period between the first day of April and the thirtieth day of June, both inclusive, should be the close season for all fresh-water fish other than pike and perch.

"(6) If any person during this close season buys, sells, or exposes for sale, any fresh-water fish, or has in his possession any fresh-water fish (unless he shall satisfy the justices that such fish in his possession were taken with the consent of the owner of a several or private fishery) he shall, on summary conviction before two justices, be liable to a fine not exceeding forty shillings.

"(7) After every conviction under this section, the person or persons convicted shall forfeit all fish so caught, bought, sold, exposed for sale, or in possession, and shall be liable at the discretion of the convicting justices to the forfeiture of all instruments used in the taking of such fish.

"(8) It is unnecessary and undesirable to interfere with fishing for eels and flounders with rod and line in tidal waters; but it should be illegal to fish for either of these two fish in any other than tidal waters. If any person or persons at any time or season sells, or has in his possession for sale any of the following fish, of less dimensions than—jack, 18 inches; dace, 6 inches; barbel, 13 inches; perch 7 inches; chub, 10 inches; carp, 8 inches; roach 9 inches; bream, 9 inches; tench, 8 inches—he shall be liable, &c., &c.

"Here will follow the exemption clauses permitting the capture and retention of bait and aquarium fish, &c., &c.

"We hold our annual meeting in April, when definite plans will be drawn up respecting the action to be taken.

"We have a number of M.P's. who have promised us their support, and as we appeal to both sides of the House we can select good men to undertake our little measure. Mr. Mundella told me that his official duties would prevent his undertaking it but that he would do all he could for us.

"I much regret that I have been unable to send you a more fully matured outline or draft of a Bill, but your interest in the subject will enable you to understand the objects which we desire to achieve. You will, I am sure, make allowance for my having recently removed from Addlestone to the above address; my papers, and, I fear, my thoughts, are somewhat mixed, and this I plead as my excuse for the delay, which shall not be repeated

"I am not yet sure that I shall not follow close upon the heels of this letter and be present at the meeting of your association. I should very much like to confer with your members upon other piscatorial matters, such as the propagation question; but failing my coming you will kindly remember me to Styring, Guest, and all Sheffield friends, and believe me.—Yours faithfully, P. GEEN."

A West Central, No. 3 district, visit will be paid the Brunswick Angling Society, Brunswick Arms, Stamford Street, Blackfriars, on Wednesday evening, April 19th.

The following circular has been issued by Mr. Hoole to the secretaries of all enrolled societies. It is hoped Messrs. Spreckley and Brougham will be present during the evening.

"West Central Association of London and Provincial Angling Societies.

"Portman Arms, Gt. Quebec Street, Baker St., W.,
4th April, 1882.

"Dear Sir,—I am instructed to inform you the yearly meeting of the association will take place on Friday evening, the 21st inst., when the following business will be brought before your notice, viz.:—

Election of officers for ensuing year.
Rewards to river keepers.
Subscription to the Thames Angling Preservation Society.
Propagation of coarse fish.
Renting private waters.
Enrolment of new societies, &c.

"Mr. P. Geen, Hon. President, will take the chair punctually at nine o'clock.

"As this is the most important meeting throughout the year, it is particularly requested that your society be represented; the committee will feel obliged by your instructing your delegates accordingly.

"Please make the following corrections in your new list of clubs:—Erase the Blackfriars, Barnsbury, Havelock Brothers, and Bolingbroke. Insert a * against the Kentish Brothers and South Essex. Hoxton Brothers' address is the Cherry Tree, Kingsland Road, N. Mr. J. J. Holmes, 104, Blackstock Road, is secretary to the Globe A. S. Old King's Head, Marsham Street, Westminster, is the address of South Belgravia. In the Society of Caxtonians please insert the letter *x* for *s*.

"The railway authorities insist that members, when applying for their railway tickets, must produce their tackle when required.

"N.B.—The fares to Yarmouth, Lowestoft, and Wroxham, quoted upon our list of fares, refers only to the summer months.—I am, &c.,
"T. HOOLE (hon. sec.)."

Re Gross Weight. I thank Mr. Crumplen for his courteous explanation in last week's GAZETTE; but, as he says, we must at present "agree to differ." One thing, however, must be clearly apparent to any one perusing the piscatorial reports—viz., that there is a vast difference between the theory and practice of some of the most zealous advocates of the abolition of "gross weights," if huge individual takes (albeit of all-sized fish), duly shown, weighed, and chronicled, count for anything. As for the accusation brought by "Mark Antony" against our Trent-side anglers, they are most serious, and, if proved, those who are guilty of such practices are not worthy the name of anglers, or to be admitted to the society of true Waltonians. I, however, hope we may yet have an explanation from Trent-side club-men, if such can be given; they owe it not only to us, but to themselves, and until an opportunity for giving such has been afforded them, I shall continue to hope "Mark Antony's" information has been derived from an unreliable source.

RIVER REPORTS.

MID-THAMES.

Thames trouting is jogging along in a little more satisfactory manner than usual, as several good hauls have been had at Windsor, Maidenhead (three brace here), Cookham, Marlow (seven brace being divided between Messrs. Foottit, Englefield, Bloxham and Co.). At Hambleden, as I anticipated, some half-dozen good fish have been taken, chiefly by strangers to the water. Thursday evening.—The river is now in grand trim. The wind got a little away from that horrid east; so fish should reward the toiler and spinner.—MARLOW BUZZ.

Ballynahinch.

The above waters have only been fished four days this last week. Mr. R. Mecredy, sen., on the 29th ult. caught four salmon, three of them weighing 12 lb. each and 10½ lb.; on the 30th Mr. J. C. Deverell caught two weighing 11½ lb. and 10¾ lb.; same date Mr. Saint George one 11 lb., on the 31st Mr. J. C. Deverell one 11¾ lb., same date Mr. Saint George two 11¾ lb. and 11 lb., on the 4th inst. got one on Derryclare Butt 10½ lb. Since Friday 31st ult. we have had a constant east and north-east wind, blowing quite a gale some days; water getting low.—WALTER BLACKADDER.

The above has again only been fished four days this last week. On the 8th, Mr. R. Mecredy, sen., got one salmon 13½ lb.; and on the 10th, two, weighing 10 lb. and 11 lb. respectively. Since last reports, we have had east and north-east winds, until yesterday, when we had it blowing from south and south-west. Water getting low, but every appearance of rain.—WALTER BLACKADDER.

Chichester.

On Good Friday a working contingent of the Brighton anglers joined the Cicesterians with nets and a large tank, the task of netting the lower pond commencing at noon. Some thousands of fish, principally bream and roach, were placed in the tank, and conveyed to the upper water. On Sunday night the dam gave way, but the outer lock gate at Birdham being closed the fish were prevented from reaching the lower reach. A new hurdle dam was placed across the canal at Birdham, and what fish came down were on Monday taken in landing nets and conveyed to Donnington. More than one hundred bream, averaging 3 lb. each; some fine fish of over 5 lb. among them. The canal is now clear of weeds and obstructions. The water will be let into the lower reach this week, the whole work being carried out in a highly satisfactory manner. A good season is anticipated.—GEORGE F. SALTER.

The piscatorial work in connection with repairs of lock is proving satisfactory. On Monday the water was let out from the dam to the lock, when nets were deemed impracticable owing to the quantity of drifting weed. After the first rush a dam was made with hurdles, but the majority of fish headed the stream or mudded. There still remains about eighteen inches of water in the channel, and from two to three feet in the bridge holes, which will obviate the necessity of removing the fish. Some heavy bream and carp are to be seen, and the fears entertained on Monday of a paucity of sport for next season entirely removed, the water teeming with life. It is proposed, with the consent of the landowners on either side, to net the lower reach this day (Friday) and thus secure what few fish have gone through. Mr. Kerwood has, with Mr. Richie, been indefatigable with the landing net, some thousands of good fry and large specimens being assisted over the dam. It is expected the work will be completed on Saturday, weeds removed, &c., when the water will be let in.—GEORGE FRANK SALTER.

Coquet (Weldon Bridge).
